Clarke, and the Minister of Inland Revenue, respecting the extension of the franchise of the Windsor, Detroit and Belle Isle Ferry Company. Presented 3rd February, 1908.—*Mr. Clements*.. .. ..*Not printed.*

99. Return to an order of the House of Commons, dated 29th January, 1908, for a copy of all correspondence, telegrams, or reports, respecting the refusal of the lieutenant governor of British Columbia to give his assent to a bill passed by the legislature of that province in 1907, respecting immigration and commonly referred to as the Natal Act. Presented 3rd February, 1908.—*Mr. Smith (Nanaimo)*.. .. ..*Printed for sessional papers.*

100. Return to an address of the House of Commons, dated 11th December, 1907, for a copy of all papers and correspondence between the government of Canada and any of its ministers with reference to the establishment of a fast line of steamship communication between Great Britain, Australia, New Zealand and Canadian ports. Presented 3rd February, 1908.—*Mr. Foster*.. .. ..*Not printed.*

101. Return to an order of the House of Commons, dated 11th December, 1907, for a copy of all correspondence, enclosed clippings, agreements, statements, &c., between the government or any member thereof, and especially the Minister of Marine and Fisheries, the Minister of Railways, the Minister of Agriculture, the Minister of Militia, and Sir Wilfrid Laurier, and one F. E. Williams, of St. John, New Brunswick; one W. H. Trueman, of St. John, and any other person or persons whatsoever in relation to the establishment of a bait freezer and cold storage established in St. John, New Brunswick. Presented 5th February, 1908.—*Mr. Foster*.. .. ..*Not printed.*

102. Return to an order of the House of Commons, dated 11th December, 1907, showing the expenditure by the Dominion Government on (*a*)wharfs; (*b*) harbours and river improvements; (*c*) dredging; (*d*) public buildings; for each year since 1896, in the counties of Digby, Yarmouth, Shelburne, Queen's, Lunenburg and Pictou, Nova Scotia, specifying the works by name, with amounts expended thereon. Presented 6th February, 1908.—*Mr. Foster*.. .. ..*Not printed.*

103. Return to an order of the House of Commons, dated 20th January, 1908, for a copy of letters, telegrams, and reports, regarding complaints made by John Franklin and Stapleton Brothers, with respect to Indian Agent Yeomans. Presented 6th February, 1908.—*Mr. Foster*.. .. ..*Not printed.*

104. Return to an order of the House of Commons, dated 20th January, 1908, showing the amount paid each year for provisions for the Royal Military College, for the Halifax Garrison, and the Permanent Military School in Quebec, the average number of men provisioned each year of the above institutions, and cost per man per day. Presented 10th February, 1908.—*Mr. Foster*.. .. ..*Not printed.*

CONTENTS OF VOLUME 18—*Continued.*

105. Return to an order of the House of Commons, dated 11th December, 1907, showing the number of fishing licenses issued by the Government for any of the lakes in the province of Saskatchewan, to whom issued, and on what lakes. Presented 10th February, 1908.—*Mr. Chisholm (East Huron)*.. .. ..*Not printed.*

106. Return to an order of the House of Commons, dated 15th January, 1908, showing what lands have been sold, leased, given as homesteads, transferred or set apart in any way by the Government to each: individuals, companies, syndicates, or other organizations in the Peace River Valley, or along or near tributaries thereof, in the Northwest of Canada; when each area was allotted; the terms between the Government and the various parties or organizations concerned; what prices per acre were realized from these transactions; with whom the Government conducted negotiations in each case; the regulations governing the securing of land in the Peace River Valley; and how far it is from Edmonton to Dunvegan. Presented 11th February, 1908.—*Mr. Hughes (Victoria and Haliburton)*.. .. ..*Not printed.*

107. Return to an address of the House of Commons, dated 22nd January, 1908, for a copy of all orders in council, reports, memoranda, correspondence, documents, plans, tenders and advertisements of every kind, nature and description, relating to the proposed acquisition under lease of certain car work shops with railway sidings at Moncton, New Brunswick. Presented 12th February, 1908.—*Mr. Barker*.. .. ..*Not printed.*

108. Return to an order of the House of Commons, dated 16th December, 1907, showing all coal lands leased, sold or otherwise disposed of from the 1st of March, 1907, to date, giving the area disposed of, the party to whom, the consideration therefor, the assignments made, if any, the date thereof, and the name of the assignee in each case. Presented 13th February, 1908.—*Mr. Ames*.. .. ..*Not printed.*

108*a*. Return to an order of the House of Commons, dated 26th February, 1908, showing, in respect of each of the undermentioned blocks disposed of as coal lands by the Government, viz.: Section 13, of township 9, range 4, west of the 5th m.; section 16, township 10, range 3, west of the 5th m., section 15, township 11, range 4, west of the 5th m.; section 20, township 12, range 4, west of the 5th m.; section 5, township 13, range 4, west of the 5th m., section 21, township 19, range 7, west of the 5th m.; when and by whom the first application was made for right to acquire; when and to whom the original grant of mining rights was made; what transfers of rights have been recorded, the date of transfer, and date of registration of same; who the present owner or occupant is, as known to the department; and the name and address of each company or person above referred to. Presented 16th March, 1908.—*Mr. Ames*.. .. ..*Not printed.*

108*b*. Return to an address of the House of Commons, dated 2nd March, 1908, for a copy of (a) an order in council of the 19th May, 1902, and the regulations therein referred to and approved for the disposal of coal lands, the property of the Dominion Government, in Manitoba, the Northwest Territories and British Columbia. (*b*)A copy of all orders in council altering, amending or cancelling any such regulations for the aforesaid purposes, and the said amended or other regulations. (*c*)A copy of all orders in council approving, amending or cancelling regulations as regards the Yukon for the purposes aforesaid, and the said regulations and amended regulations. Presented 24th March, 1908.—*Mr. Barker*.. .. .. *Not printed.*

108*c*. Return to an order of the House of Commons, dated 26th February, 1908, showing, in respect of each of the undermentioned blocks disposed of as coal lands by the Government, viz.: sections 2, 4, 9, 15, 17, and 28, of township 7, range 3, west of the 5th m., when and by whom the first application was made for right to acquire; when and to whom the original grant of mining rights was made; what transfers of rights have been recorded, when such transfers were dated, and when registered with the department; who the present owner or occupant is, as known to the department; and the name and address of each company or person above referred to. Presented 24th March, 1908.—*Mr. Ames*.. .. ..*Not printed.*

CONTENTS OF VOLUME 18—*Continued.*

108*d*. Return to an order of the House of Commons, dated 26th February, 1908, for a copy of all inquiries, applications, leases, contracts, agreements, assignments, correspondence and papers of every description, in connection with or referring to the granting of coal mining privileges in section 11, township 8, range 4, west of the 5th meridian. Presented 27th March, 1908.—*Mr. Ames*.. .. ..*Not printed.*

108*e*. Return to an order of the House of Commons, dated 16th March, 1908, showing: 1. What leases for coal lands in the Northwest Territories were granted by the Government in the years 1903 and 1904. 2. To whom, and on what dates the same were granted, and the amounts paid therefor. 3. Whether the person to whom the lease was granted was the original applicant. 4. Whether any assignment of such leases has been made, when, and to whom. 5. Who the present holders are of said leases. Presented 1st April, 1908.—*Mr. Boyce*.. .. ..*Not printed.*

108*f*. Supplementary return to 108*e*. Presented 6th April, 1908.. .. ..*Not printed.*

108*g*. Return to an order of the House of Commons, dated 16th December, 1907, for a copy of all applications, reports, correspondence, leases, contracts, deeds, sale and documents of every description in connection with the purchase of coal mining lands either on their own behalf or on behalf of clients. by the firm of Hough, Campbell & Ferguson, or by any individual member of said firm, together with a copy of the regulations governing the sale of such rights at the time of purchose. Presented 30th April, 1908.—*Mr. Herron*.. .. ..*Not printed.*

108*h*. Return to an order of the House of Commons, dated 19th February, 1908, setting forth in respect of the following coal lands: 1. The name and address of the first applicant and the date thereof. 2. The names and addresses of all subsequent applications, with date thereof, in the order of application. 3. The name and address of the party to whom the mining rights were granted, with date of sale or lease by the Government. 4. Price paid per acre, sale or lease. 5. Date and amount of first payment on account of purchase price. 6. Dates and amounts of each subsequent payment on account of purchase price. 7. Total amount paid as purchase price and balance, if any, still unpaid. 8. How long reservation was made by the department in favour of the grantee or his assigns. 9. The name and address of all parties to whom assignments were made, with date of each assignment, and date of its registration with the department. 10. The name and address of present owner of said mining rights. 11. A copy of all correspondence in reference to the same: Township 7, range 3, west of 5th m.; sections 1, 2, 3, 4, 5, 6, less the s.e. ¼; section 7, less e. ½; section 8; section 9; section 10, less s.w. ¼; section 11, less s.e. ¼; section 14, less e. ½; section 15; section 16, less n.e. ¼; section 17; section 20, less e. ½ of n.e. ¼; section 21, less s. ½ and n.w. ¼; section 22; section 28; section 27, less e. ½; section 32, less e. ½; section 33; section 34, less e. ½. Township 7, range 2, west of 5th m.; section 18, 20 and 21 Township 6, range 3, west of 5th m.; sections 27 and 28; section 32, less w. ½; sections 33 and 34. Presented 22nd April, 1908.—*Mr. Ames*.. .. ..*Not printed.*

109. Return to an order of the House of Commons, dated 22nd January, 1908, showing on what dates since June 30th, 1906, advances were made on account of travelling expenses to Honourable L. P. Brodeur, to Mr. Wiallard, his private secretary, and to Napoléon Potvin, his messenger, respectively, for what amounts, and to what accounts they were severally charged; also what refunds, if any, have been made on any of these several advances, and on what dates. Presented 14th February, 1908.—*Mr. Foster*..*Not printed.*

109*a*. Return showing all advances to Ministers of the Crown and their private secretaries, on account of travelling or other expenses in connection with the Imperial Conference of 1907, the date of such advances, and the appropriation against which it was charged. Presented 2nd March, 1908.—*Mr. Foster*.. .. ..*Not printed.*

CONTENTS OF VOLUME 18—*Continued.*

109*b*. Return (as far as the Department of Inland Revenue is concerned), to an order of the House of Commons, dated 22nd January, 1908, showing the advances made each year since July 1, 1904, to December 31, 1907, on account of travelling expenses to Honourable L. P. Brodeur and his private secretary and messengers, the date and amount of each advance, and the appropriation to which it was charged, the dates at which each advance was finally accounted for, and the dates on which any repayments were made to the treasury, and the amount of such repayments, and all correspondence with the Auditor General's Department in connection therewith. Presented 2nd March, 1908.—*Mr. Foster*.. .. .. .

CONTENTS OF VOLUME 18—*Continued.*

ment of the Interior and any of its officials, and A. Samovici, H. Bolocan, and any other person or persons in regard to the n.w. ¼ section 20, township 22, range 13, west 2nd m., including applications for cancellation, protections, homesteads, inspectors' reports, &c. Presented 18th February, 1908.—*Mr. Lake*.. .. ..*Not printed.*

117. Return to an order of the House of Commons, dated 11th December, 1907, for a copy of all correspondence between the Departments of the Marine and Fisheries and Justice of Canada and the Attorney General of Nova Scotia, or any official acting under his authority, in connection with the suit in the Supreme Court of Nova Scotia of the King by Dr. Tait, of Cheticamp, in the county of Inverness, Nova Scotia, versus William Ancoin. Presented 18th February, 1908.—*Mr. McLennan*.. .. ..*Not printed.*

118. Return to an order of the House of Commons, dated 18th December, 1907, for a copy of all contracts for food for men at the volunteer camps throughout Canada for the season of 1907; also for the regular troops at Halifax, Quebec and other places. Presented 18th February, 1908.—*Mr. Smith (Wentworth)*.. .. ..*Not printed.*

119. Return to an order of the House of Commons, dated 3rd February, 1908, for a copy of all correspondence between the Railway Commission and the Department of Railways and Canals, or the Intercolonial Railway, and between the Railway Commission and the Canadian Pacific Railway, and the Grand Trunk Railway, and between the Railway Commission and the Fredericton Board of Trade, in reference to the alleged discrimination against the city of Fredericton in the matter of freight rates; and also for a copy of all other papers and documents on file with the Railway Commission in relation thereto. Presented 19th February, 1908.—*Mr. Crocket*.. .. ..*Not printed.*

120. Return to an order of the House of Commons, dated 16th December, 1907, for a copy of all offers, reports, valuations, plans, deeds of purchase, correspondence and other papers of every description in connection with the purchase of site for the new Montreal examining warehouse, together with a statement of all expenditure and all indebtedness incurred to date in this connection. Presented 19th February, 1908.—*Mr. Ames.*

Not printed.

121. Return to an order of the Senate, dated the 30th January, 1908, showing: 1. Title of each Bill by years sent by the Senate to the House of Commons, from 1867 to 1907, inclusive, that was (*a*) amended by the Hous of Commons, or (*b*) rejected. 2. Title of each Bill by years sent up by the House of Commons to the Senate, from 1867 to 1907, inclusive, that was (*a*) amended by the Senate, or (*b*) rejected. 3. The total number of Bills for each year as above to be tabulated in four periods, (*a*) 1867 to 1873, inclusive; (*b*) 1874 to 1878, inclusive; (*c*) 1879 to 1896, first session, inclusive; (*d*) 1896 to 1907, inclusive. Presented 19th February, 1908.—*Hon. Mr. Ross (Middlesex)*.. .. .. ..*Not printed.*

122. Report of the commissioners appointed to inquire into a dispute between the Bell Telephone Company of Canada (Limited) and the operators of the said company at Toronto, with respect to wages and hours of employment, etc. Also copy of evidence taken under Royal Commission in the dispute between the Bell Telephone Company of Canada and its operators, in February, 1907. Presented 24th February, and 11th March, 1908, by Hon. R. Lemieux.. .. ..*Not printed.*

123. Return to an order of the House of Commons, dated 17th February, 1908, for a copy of the contract and all correspondence relating to a payment of $3,900 to the Midland Towing and Wrecking Company, as set out at page P—32 of the Auditor General's Report for 1906-7, and of the advertisement calling for tenders. Presented 10th March, 1908.—*Mr. Bennett*.. .. ..*Not printed.*

124. Return to an order of the House of Commons, dated 18th December, 1907, showing what sums have been expended or voted for the dredging of the Rivière à la Graisse, at Rigaud; to whom the contracts were given; and what sums have been voted or paid out for dredging Dorion Bay, Vaudreuil station. Presented 24th February, 1908.—*Mr. Bergeron*.. .. ..*Not printed.*

CONTENTS OF VOLUME 18—*Continued.*

124*a*. Return to an order of the House of Commons, dated 18th December, 1907, showing what sums have been voted or expended for the dredging of the river bottom between Charlemagne and Terrebonne; since when the dredging has been going on there; what sums have been voted or expended for wharfs at Terrebonne and at St. François de Sales; and who obtained the contracts. Presented 24th February, 1908.—*Mr. Bergeron.* *Not printed.*

124*b*. Return to an order of the House of Commons, dated 11th December, 1907, showing: 1. What harbours or rivers in the province of Ontario were tenders invited for dredging work by the Department of Public Works during the present year. 2. The names of the successful tenderers at each of the said places for which dredging tenders were invited in Ontario in 1907, and the prices asked by each party respectively. 3. Amounts of the tenders respectively of the different persons tendering at each of the foregoing points. 4. Also at what points new tenders were invited, and when the first tenders were accepted. Presented 9th June, 1908.—*Mr. Bennett*.. .. ..*Not printed.*

124*c*. Return to an order of the House of Commons, dated 6th of April, 1908, for a copy of all the correspondence exchanged between the Government and Messrs. T. B. Mongenais, Hugh McMillan and others, relating to dredging work done in the River Rigaud, formerly the River Graisse, up to the year 1890. A copy of the reports and correspondence relating to the construction or purchase of the Graham wharf. A copy of the report and correspondence relating to the dredging done at Como up to 1900. A copy of the reports and correspondence relating to the dredging done at Vaudreuil Village, and also those relating to the construction and repair of the wharf situated in that village since 1867. And also a copy of the report and correspondence relating to the deepening of the River St. Louis at Beauharnois. Presented 30th June, 1908.—*Mr. Boyer*.. .. ..*Not printed.*

125. Return to an order of the House of Commons, dated 3rd February, 1908, for a copy of all correspondence, telegrams, engineer's reports, &c., in the hands of the Government or any member or official thereof, respecting proposed repairs to the wharf at Little Sands, in Prince Edward Island. Presented 25th February, 1908.—*Mr. Martin (Queen's).* *Not printed.*

126. Return to an order of the House of Commons, dated 12th February, 1908, for a copy of the report made by John Fraser, of the Auditor General's Department, on the 7th January, 1898, of a special examination held by him of the financial affairs of the Montreal Turnpike Trust. Presented 10th March, 1908.—*Mr. Monk*.. .. .. ..*Not printed.*

126*a*. Return to an order of the House of Commons, dated 22nd January, 1908, showing: 1. The present indebtedness to the Dominion Government of the Montreal Turnpike Trust (*a*) on capital account, (*b*) for arrears of interest. 2. The amounts collected at each toll gate belonging to the said Turnpike Trust during the three years ending 31st December, 1905, 1906, 1907, respectively. 3. The names of all parties who have commuted their tolls during each of the above-mentioned years, 1905, 1906, 1907, and the amount of the commutation money paid to the Trust in each case. 4. The amounts expended on each section or road division, under the control of the said Trust, during each of the said years, ending 31st December, 1905, 1906, and 1907, respectively, and the contracts given out during each of the said years, with the name of the contractor and the date and amount involved in each case; and a statement in each case also as to whether the contract was awarded after tender called through the newspapers. 5. The amount paid out during each of the said three years, 1905, 1906, 1907, at each toll gate for salaries of day and night guardians, and any other expenditure at each of the toll gates maintained. 6. The names of all parties holding passes for free use of the roads under control of said Trust, during each of the said three years above referred to, 1905, 1906, 1907, with a statement in each case of the reason why the pass was so granted. 7. The expense of the said Trust during each of the said years, for rent, salaries of the

CONTENTS OF VOLUME 18—*Continued.*

office, inside or outside service, giving name and remuneration of each official. 8. The actual present indebtedness in detail of the said Trust outside of its bonds due to the Government of Canada. 9. The amounts collected, by said Trust, year by year, since the 1st February, 1905, from municipalities under special agreements made as to their share pro rata of the bonded indebtedness of the Turnpike Trust. 10. The names of all those members of the Trust appointed or elected to represent the bondholders since the 1st July, 1896, with the date of the election in each case. 11. The amounts paid by the Trust to any of its members or officials during each of the said three years, 1905, 1906, 1907, whether as travelling or personal expenses, or indemnity for attendance or for any other reason whatever. 12. The name of the auditor of the Trust, and the date of the audit made of the company's affairs, in each of the said three years, 1905, 1906, 1907, respectively. 13. A copy of the agreements between the Trust and any municipalities on the Island of Montreal, by which the Trust ceded to said municipalities any portion of its roads, said copy to be certified by the president and secretary of said Trust. Presented 20th March, 1908.—*Mr. Monk*.. .. ..*Not printed.*

127. Return to an address of the Senate, dated 24th January, 1908, for a copy of the different tariffs in force upon the Intercolonial Railway, in 1896-7 and 1906-7, between Quebec and St. Flavie, and all intermediate stations between those two points, for the carriage of passengers or of goods, under the operation of the winter-tariff and under that of the summer-tariff. Presented 24th February, 1908.—*Hon. Mr. Landry*.. ..*Not printed.*

128. Statement of the affairs of the British Canadian Loan and Investment Company, Limited, for the year ended the 31st of December, 1907. Presented 25th February, 1908, by the Hon. The Speaker.. .. ..*Not printed.*

129. Return to an order of the House of Commons, dated 19th February, 1908, showing how much money has been paid since 1896 to the Eclipse Manufacturing Company of Ottawa; how much each year; and the general character of the supplies furnished. Presented 27th February, 1908.—*Mr. Blain*.. .. ..*Not printed.*

130. Return to an order of the House of Commons, dated 10th February, 1908, for a copy of all correspondence between Mr. A. E. Dyment, M.P., and the Department of Marine and Fisheries as to granting of pound net licenses in 1905 to Messrs. Low & Roque, of Killarney, as also to any other persons; also a list of persons to whom pound net licenses were granted in that year. Presented 27th February, 1908.—*Mr. Bennett.*
Not printed.

131. Return to an order of the House of Commons, dated 12th December, 1907, showing: 1. The number of disputes dealt with under the Industrial Disputes Investigation Act, 1907, to the 1st of December, 1907. 2. The dates at which the several applications for the operation of the Act have been received. 3. Names of the parties concerned in the several disputes. 4. Name of the party making application. 5. Locality of dispute. 6. Number of persons affected. 7. Nature of dispute. 8. Names of members of board of conciliation and investigation where same has been established. 9. Date on which board was established. 10. Date of sittings of board. 11. Result of the reference of the dispute under Act. Presented 27th February, 1908.—*Mr. Smith (Nanaimo).*
Not printed.

132. Return to an order of the House of Commons, dated 12th February, 1908, for a copy of correspondence, plans, and other data in connection with the flooding of roads above the dam at Wilberforce, in Haliburton County, and the proposals, if any, for improving said roads and the bridge so as to prevent obstruction of traffic. Presented 27th February, 1908.—*Mr. Hughes (Victoria and Haliburton)*..... .. ..*Not printed.*

133. Return to an order of the House of Commons, dated 17th February, 1908, for a copy of reports, plans, surveys, and other data, in connection with the proposal to construct a branch canal from Balsam Lake, on the Trent Canal, to the head of Gull River waters, in Haliburton County. Presented 27th February, 1908.—*Mr. Hughes (Victoria and Haliburton)*... .. ..*Not printed.*

CONTENTS OF VOLUME 18—*Continued.*

134. Return to an order of the House of Commons, dated 11th December, 1907, for a copy of all correspondence received by the Department of Agriculture in connection with the inspection of meats and the regulations in connection with the Inspection of Meats and Canned Foods Bill. Presented 27th February, 1908.—*Mr. Clements*.. .. ..*Not printed.*

134*a*. Return to an order of the House of Commons, dated 9th March, 1908, for a copy of all correspondence, telegrams, reports and recommendations in possession of the Government, with respect to the inspection of packing houses, or the Meat Inspection Act, including the appointment of inspectors. Presented 25th March, 1908.—*Mr. Armstrong. Not printed.*

135. Return to an order of the Senate, dated 26th February, 1908, for a detailed statement of the expenses incurred during the past three years, in connection with the synoptical reports of the debates of the Senate, furnished by the special reporter of that House, as well as a statement of the nature and particulars of the agreement with the present reporter. Presented 27th February. 1908.—*Hon. Mr. Wilson*.. .. ..*Not printed.*

136. Return to an address of the Senate dated 11th February, 1908, showing the amount of imports of oxide of aluminum during the years 1903, 1904, 1905, 1906 and 1907, with the values of such imports for each one of said years separately. Presented 28th February, 1908.—*Hon. Mr. Ellis*.. .. ..*Not printed.*

136*a*. Return to an address of the Senate, dated the 11th February, 1908, showing the amount of aluminum exported during the years 1903, 1904, 1905, 1906 and 1907, with the values of such exports for each one of the said years separately. Presented 28th February, 1908.—*Hon. Mr. Ellis*.. .. ..*Not printed.*

137. Regulations in virtue of the provisions of the Act 6-7 Edward VII., chapter 16, "The Electricity and Fluid Exportation Act." Presented 17th March, 1908, by Hon. W. Templeman.. .. ..*Not printed.*

Return to an order of the House of Commons, dated, 11th December 1907, for a copy of all correspondence in connection with the application, granting, operation or renewal of license and lease conveying the privileges of fishing in Cedar, Moose, Cormorant and Clearwater Lakes; also a copy of said license and lease. Presented 3rd March, 1908.—*Mr. Ames*... .. .. ..

CONTENTS OF VOLUME 18—*Continued.*

148. Return to an order of the House of Commons, dated 17th February, 1908, showing the individual name and place of residence of the captain and crew of each of the Government steamers *Lansdowne, Aberdeen, Druid, Brant, Lady Laurier, Minto* and *Stanley*. Presented 5th March, 1908.—*Mr. Stanfield*.. .. ..*Not printed.*

148*a*. Return to an order of the Senate, dated the 5th of February, 1908, for a statement showing, in so many columns: 1. The names of the officers actually employed on board of Government vessels or of vessels hired by the Government for the season of navigation in the River St. Lawrence. 2. The amount of wages or salaries paid monthly to each of them for the period of their annual engagement. 3. The amount of wages or salaries paid monthly to those who are only employed for a part of the year. 4. The amount of wages or salaries paid monthly to those who, over and above their real service, are paid a part of their wages or salaries during the months in which the vessels are laid up for the winter. Presented 20th February, 1908.—*Hon. Mr. Landry.*
Not printed.

149. Return showing what changes have occurred in the House of Commons branches of the Clerk of the House and the Sergeant-at-arms' service since 1st July, 1907. Presented 5th March, 1908.—*Mr. Owen*.... .. ..*Not printed.*

150. Return to an order of the House of Commons, dated 10th February, 1908, showing: 1. How many Returns or Sessional Papers have been presented to Parliament in answer to motions for the same, since the 1st of January, 1906. 2. How many of these Returns were taken out of the Office of Routine and Records, and the Journal Office, by members of this House, since the above date, giving also the name of the member to whom delivered. 3. For what length of time such Returns were retained by the members who obtained them. 4. How many of these Returns had not been returned to the proper officer of the House of Commons on the 1st of January, 1908. 5. In the case of those returned, how long they were out with the members. 6. How many of these Returns are still in the possession of the members, and how long they have had them. 7. The means usually adopted by the Clerk of Routine and Records and the Clerk of Current Sessional Papers to have outstanding returns retransferred to their possession. 8. The average cost to the country of preparing these Returns by the various departments interested, during the above period. Presented 6th March, 1908.—*Mr. Johnston.*
Not printed.

151. Return to an order of the House of Commons, dated 16th December, 1907, showing: 1. The number of fishing licenses, the names of the parties to whom issued, and also the amounts of the revenues received from each license, on any or all of the lakes in the province of Saskatchewan. 2. For a copy of all correspondence in connection with each license so issued and in force, or about to be issued. 3. Also for a copy of the different forms used for fishing licenses in the province of Saskatchewan. Presented 9th March, 1908.—*Mr. Chisholm (East Huron)*.. .. ..*Not printed.*

152. Return to an order of the House of Commons, dated 20th January, 1908, for a copy of all correspondence, documents and papers, in the investigation into the case of Mr. O. S. Finnie, chief clerk in the gold commissioner's office, Dawson, Y.T. Presented 6th March, 1908.—*Mr. Thompson*.. .. ..*Not printed.*

153. CONTENTS OF VOLUME 19.

154. (Vol. 2.) Royal Commission Quebec Bridge inquiry. Minutes of proceedings. Evidence and exhibits.. .. .. *Printed for both distribution and sessional papers.*

154*a*. Return to an address of the House of Commons, dated 12th December, 1907, for a copy of all orders in council, correspondence, reports, memoranda, papers and documents, since the 1st day of January, 1900, relating to the Quebec Bridge, including all reports and orders in council, relating to the plans and specifications for the works of the undertaking, or to any approval thereof by the Governor in Council, or by the Department of Railways and Canals. Presented 26th May, 1908.—*Mr. Borden (Carleton).*

See No. 154.

154*b*. Return to an address of the Senate, dated 29th Januray, 1908, for a statement showing: 1. If the Quebec Bridge and Railway Company has fulfilled the obligation which was imposed upon it by clause 4 of the agreement made, between it and the Government, on the 19th day of October, 1908, which clause reads as follows: "4. The company will procure subscriptions for additional stock to the amount of $200,000, such new stock to be issued at a price not below par and to be immediately paid up in full, the proceeds to be applied in the first place to the payment of the discount at which the bonds of the company were issued as aforesaid, to wit the sum of $188,721." (Being exactly the difference between the sum of $472,000, the amount of bonds issued, and the sum of $283,279, for which these same bonds were accepted.) 2. When did the company so furnish subscriptions for additional work to the amount of $200,000. 3. Who are the persons or the companies who divided among them this additional stock to the round sum of $200,000. 4. On what date and for what amount did each of these persons or each of these companies become owner of the aforesaid stock. 5. On what date did each of the aforesaid persons or companies pay into the hands of the company the price (in part or in whole) of the stock so subscribed. 6. And if this amount of $200,000 was paid in full and in what manner, distinguishing the amount paid in cash from the amount paid in promissory notes or in any other ways. Presented 2nd June, 1908.—*Hon. Mr. Landry*.. .. ..

CONTENTS OF VOLUME 19—*Continued.*

poses, since 1896; the location and amount in each case, specifying townships, sections, half or quarter-section; to whom it has been sold, or alienated, and on what terms of settlement; the price per acre, on terms of payment, and the nationality of the settlers in each colony; when the land was sold, alienated, reserved, or set apart, for such purpose, in each case; and how many of these companies have complied with their contracts, and to what extent. Presented 9th March, 1908.—*Mr. Sproule*... ..*Not printed.*

155*a*. Return to an order of the House of Commons, dated 26th February, 1908, showing what lands, if any, have been reserved for grazing purposes or for acquisition by means of irrigation within the tract described as follows: Townships 12 to 19, inclusive, in ranges 15 to 21, west of the 4th meridian; and when such lands were so reserved, and for how long it is the purpose of the Government to continue such reservation. Presented 16th March, 1908.—*Mr. Lennox*.. .. ..*Not printed.*

155*b*. Return to an order of the House of Commons, dated 11th March, 1908, for a copy of all correspondence, telegrams, reports, applications, surveyors' plans and maps, in reference to the homestead entries for the southwest quarter of section 27, township 18, range 10, east, in the province of Manitoba. Presented 27th March, 1908.—*Mr. Staples.* *Not printed.*

155*c*. Return to an order of the House of Commons, dated 29th January, 1908, for a copy of all correspondence, applications, recommendations for patent, and all papers in any way relating to the disposal of or granting of privileges in connection with the s.e. ¼ of section 2, township 8, range 2, west of the 5th meridian. Presented 3rd April, 1908.—*Mr. Herron*... .. ..*Not printed.*

155*d*. Return to an order of the House of Commons, dated 23rd March, 1908, for a copy of all correspondence, applications and all other papers and documents relating in any way to any and all applications for or in connection with or relating to the southeast quarter of section 14, township 12, range 6, west 4th meridian. Presented 6th April, 1908.—*Mr. Herron*.. .. ..*Not printed*

156. Return to an order of the House of Commons, dated 2nd March, 1908, showing who made the seizures under the Inland Revenue Department in the fiscal years 1906 and 1907, in Cornwall, London, Ottawa, St. Catharines, Toronto, Joliette and Montreal, and what the seizures consisted of; the name of the party or parties from whom the material was seized; the amount realized by the sale of such seized material; and how this seized material was disposed of. Presented 9th March, 1908.—*Mr. Barr.* *Not printed.*

156*a*. Return to an order of the House of Commons, dated 26th February, 1908, showing the number of seizures under the Inland Revenue Department in the years 1906 and 1907; the name of the party or parties making the seizure; the description and quantity of material seized; the name of the parties from whom the material was seized; how the seized material was disposed of, whether by public auction or by private sale, and what the amount realized thereon was. Presented 9th March, 1908.—*Mr. Barr*...*Not printed.*

156*b*. Return to an order of the House of Commons, dated 9th March, 1908, showing the number of seizures made by the Customs Department for the fiscal years 1905, 1906 and 1907; the reason for each seizure; the disposition of each case; the amount received by the Government, and by the party seizing or giving information in each case; and the names of the ports at which such seizures took place. Presented 23rd April, 1908.—*Mr. Cockshutt*.. .. ..*Not printed.*

156*c*. Return to an order of the House of Commons, dated 4th May, 1908, showing the names of all officers employed in the Customs Department at the ports of Niagara Falls, Port Erie, Sarnia and Windsor; the rank and duties of their respective appointments, their salaries at the time of appointment, present rank, and increase of salary to any of these officers since date of their appointment. Presented 4th May, 1908.—*Hon. W. Paterson*.. .. ..*Not printed.*

CONTENTS OF VOLUME 19—*Continued.*

157. Return to an order of the House of Commons, dated 8th January, 1908, for copies of all documents, petitions, memoranda and correspondence received by the Government since 1904, to this day, regarding the amendments to be made to the Inland Revenue Act for the purpose of encouraging and protecting still more the Canadian tobacco industry. Presented 9th March, 1908.—*Mr. Dubeau*.. .. ..*Not printed*

157*a*. Return to an order of the House of Commons, dated 12th February, 1908, for a copy of all correspondence between the collector of customs at Charlottetown, Prince Edward Island, and the Minister of Customs, or the Commissioner of Customs, including declarations or statements in writing made by Messrs. Donald Nicholson and Evelyn B. Harnett, of the Hickey & Nicholson Tobacco Company, Limited, respecting alleged infraction of the provisions of the Inland Revenue Act, and of the regulations in respect of tobacco and cigars and tobacco and cigar manufactories, by Messrs. T. B and D. J. Riley, of Charlottetown, or one of them. Also a copy of the reports of William Caven and other officials and collectors of Inland Revenue; and of all correspondence, letters and telegrams between the said T. B. and D. J. Riley, or either of them, and the Government, or any department, or officer thereof; and of all correspondence between the officers of Inland Revenue in Charlottetown and the Government or any department or official thereof, respecting said alleged infraction of said Act or regulations; and all other correspondence, statements and information in possession of the Government relating to the matter aforesaid; together with a statement of the moneys paid voluntarily or otherwise in settlement or otherwise of penalties for such infraction of the law, to whom paid, and the date of payment. Presented 16th March, 1908.—*Mr. McLean (Queen's)*.. .. ..*Not printed.*

158. Papers relating to Trade Conference at Barbados. Presented 10th March, 1908, by Hon. W. S. Fielding.... .. ..*Not printed.*

159. Return to an order of the House of Commons, dated 29th January, 1908, for a copy of all applications, tenders, correspondence, telegrams, or written communications of any kind, in connection with the sale of certain lands in the Ocean Man, Pheasant Rump, and Chasastapsin Indian Reserves, on the 15th November, 1901; together with a copy of advertisements of sales, the names of the newspapers in which they were inserted, and the dates of insertion. Presented 12th March, 1908.—*Mr. Lake*.. .. .. ..*Not printed.*

160. Return to an order of the House of Commons, dated 22nd January, 1908, showing how many fire extinguishers were purchased by the Government for the different departments of the public service since the 30th June, 1906, to January 1st, 1908; from whom they were purchased, and at what price; and the total amount paid for the same. Presented 12th March, 1908.—*Mr. Taylor*.. .. ..*Not printed.*

160*a*. Supplementary Return to an order of the House of Commons, dated 22nd January, 1908, (as far as the Department of Marine and Fisheries is concerned), showing how many fire extinguishers were purchased by the Government for the different departments of the public service since the 30th of June, 1906, to 1st January, 1908; from whom they were purchased, and at what price; and the total amount paid for the same. CIVIL SERVICE COMMISSION

1908

REPORT OF THE COMMISSIONERS

PRINTED BY ORDER OF PARLIAMENT

OTTAWA
PRINTED BY S. E. DAWSON, PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1908

[No. 29*a*—1908]

SPARKS CHAMBERS,
OTTAWA, March 17, 1908.

SIR,—We have the honour to send herewith our report on the operations of the existing Civil Service Act and kindred legislation together with observations regarding the efficiency of the public service as called for by His Excellency in the commission appointing us as Commissioners for such purpose. We also inclose two appendices in connection therewith.

Appendix A. Letter from Mr. A. Blue, Director of Census and Statistics, regarding the increase in the cost of living.

Appendix B. Proposed draft Act to allow the granting of pensions.

We have the honour to be, Sir,
Your obedient servants,

J. M. COURTNEY,
THOS. FYSHE,
P. J. BAZIN.

Hon. W. S. FIELDING,
Minister of Finance.

COMMISSION.

CANADA.

[L.S.]

C. FITZPATRICK,
Deputy Governor General of Canada.

E. L. NEWCOMBE,
Deputy of the Minister of Justice,
Canada.

EDWARD the SEVENTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India.

To all to whom these presents shall come or whom the same may in anywise concern.

GREETING :

WHEREAS, in and by an order of our Governor General in Council, bearing date the eighth day of May in the year of our Lord one thousand nine hundred and seven as amended by a subsequent order dated the ninth day of the same month, provision has been made for an inquiry of our Commissioners therein and hereinafter named into and report upon the operation of the Civil Service Act and kindred legislation with a view to the proposing of such changes as may be deemed advisable in the best interest of efficiency in the public service as upon reference to the said Order in Council (a copy of which as so amended is hereto annexed) will more fully and at large appear.

NOW KNOW YE, that by and with the advice of our Privy Council for Canada, we do by these presents nominate, constitute and appoint:

JOHN MORTIMER COURTNEY, of the city of Ottawa, in the province of Ontario, Esquire, C.M.G., I.S.O.

THOMAS FYSHE, of the city of Montreal, in the province of Quebec, Esquire.

PHILIPPE J. BAZIN, of the city of Quebec, in the said province of Quebec, Esquire, to be our Commissioners to conduct such inquiry.

To have, hold, exercise and enjoy the said office, place and trust unto the said John Mortimer Courtney, Thomas Fyshe and Philippe J. Bazin, together with the rights, powers and privileges and emoluments unto the said office, place and trust, or right and by law appertaining, during pleasure. And we do appoint the said John Mortimer Courtney to be the Chairman of our said Commissioners.

And we do hereby, under the authority of Part I. of the Inquiries Act, Chapter 104, Revised Statutes, 1906, confer upon our Commissioners, the power of summoning before them any witnesses and of requiring them to give evidence on oath, or on solemn affirmation if they are persons entitled to affirm in civil matters, and orally or in writing and to produce such documents and things as our said Commissioners deem requisite to the full investigation of the matters into which they are hereby appointed to examine.

And we do hereby require and direct our said Commissioners to report to our

Governor General in Council the result of their investigation together with the evidence taken before them and any opinion they may see fit to express thereon.

In testimony whereof we have caused these our letters to be made patent and the Great Seal of Canada to be hereunto affixed.

WITNESS, The Honourable Charles Fitzpatrick, Deputy of our Right Trusty and Right Well Beloved Cousin the Right Honourable Sir Albert Henry George, Earl Grey, Viscount Howick, Baron Grey of Howick, in the County of Northumberland, in the Peerage of the United Kingdom and a Baronet; Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, &c., &c., Governor General and Commander-in-Chief of our Dominion of Canada.

At our Government House, in our city of Ottawa, this eighth day of May in the year of our Lord one thousand nine hundred and seven, and in the seventh year of our reign.

By Command,

J. POPE,
Under Secretary of State.

P. C. 1108.

Extract from a Report of the Committee of the Privy Council, approved by the Governor General on May 8, 1907.

On a memorandum dated May 7, 1907, from the Minister of Finance, stating that while the general principles of the Civil Service Act are regarded as satisfactory, there are matters connected with the operation of the Act and the services and compensation of officials of the government which require more careful inquiry and consideration than can be given by the ministers of the several departments and, therefore, it is desirable that such matters be inquired into by a Commission composed of gentlemen specially chosen for such purpose.

The minister, therefore, recommends that the following gentlemen,—J. M. Courtney, C.M.G., Ottawa, chairman, Thomas Fyshe, Montreal, and J. G. Garneau, Quebec, be appointed Commissioners, to inquire into and report on the operation of the existing Civil Service Act and kindred legislation with a view to the proposing of such changes as may be deemed advisable in the best interests of efficiency in the public service.

That such inquiry should include the following subjects :—

1. General operation of the Civil Service Act.
2. Classification of the service.
3. Salaries.
4. Temporary employment.
5. Technical employees.
6. Promotions.
7. Discipline, hours of service, &c.
8. Efficiency and sufficiency of the departmental staffs.
9. Retiring allowances.
10. Any other matter relative to the service which in the opinion of the Commissioners requires consideration.

That while the service at Ottawa should be the first subject for the consideration of the Commissioners, they be authorized and requested to extend their inquiry to any portion of the outside service that may come under their observation and which the time at their disposal may permit them to take into their consideration.

That the Commissioners be requested to proceed with the inquiry as rapidly as possible with a view to the presentation of their report at the next session of parliament.

That the Commissioners be appointed under the provisions of the statute respecting inquiries concerning public matters and have power to summon witnesses, to require them to give evidence under oath orally or in writing or on solemn affirmation if they are persons entitled to affirm in civil matters and to produce such documents and things as the Commissioners may deem requisite for the full investigation of the matters into which they are appointed to examine.

The minister further recommends that Mr. Thomas S. Howe be appointed secretary to the said Commissioners.

The committee submit the same for approval.

(Sgd.) F. K. BENNETTS,
Asst. Clerk of the Privy Council.

P. C. 1122.

Extract from a report of the Committee of the Privy Council, approved by the Governor General on May 9, 1907.

On a memorandum dated May 8, 1907, from the Minister of Finance, submitting with reference to the minute of council recommending the appointment of Mr. J. G. Garneau, of Quebec, as on of the Commissioners to inquire into and report on the operations of the existing Civil Service Act,—that he now finds it will be impossible for Mr. Garneau to undertake the duties of the Commission.

The minister, therefore, recommends that Mr. P. J. Bazin, of Quebec, be appointed a member of the said Commission, *vice* Mr. J. G. Garneau.

The committee submit the same for approval.

(Sgd.) F. K. BENNETTS,
Asst. Clerk of the Privy Council.

The Honourable,
The Minister of Finance.

REPORT.

To His Excellency the Governor General of Canada in Council.

May it Please Your Excellency:—

The Commissioners appointed under the Commission from Your Excellency to enquire into and report upon the operation of the Act respecting the Civil Service of Canada and kindred legislation; the services and compensation of officials of the government; and other specified subjects including any matter relative to the service which, in the opinion of the Commissioners, requires consideration, have the honour to report as follows:—

The Commissioners in undertaking the inquiry felt greatly the responsibility and importance of the duty placed upon them, and, as their investigations proceeded, they became more and more conscious that they had undertaken a work of no ordinary magnitude, involving far reaching consequences should the conclusions arrived at by the Commissioners and their recommendations receive the approval of the government and the sanction of parliament. The responsibilities of the Commissioners and the magnitude of their task have not been lessened by the fact that three sets of Commissioners have previously reported on the same general subject. Notwithstanding these reports each succeeding year has seen some measure placed on the statute book dealing directly or indirectly with the subject.

The Commissioners report that in the short and possibly inadequate time at their disposal it has become very evident that in the present state of the development of Canada important changes are required to maintain the Civil Service as an efficient, contented and useful part of the machinery of administrative government.

The Commissioners at the outset felt it necessary to procure from some authoritative official a statement showing the advances in prices in Canada of commodities during the last fifteen years. They therefore requested the Director of Census and Statistics to kindly have prepared and favour them with such a statement. The statement is published as an appendix to this report. In taking this course the Commissioners considered that, as part of the report presented by the Civil Service Commission of 1892 (fifteen years ago) consisted of a draft Act of Parliament laying down certain scales of salaries, it would be desirable that steps should be taken to ascertain the relation of the cost of living between the years 1892 and 1907, in order to obtain a ratio for any increase in the scales of salaries if it were deemed requisite and necessary that such increase should be made. In connection with this statement from the Director of Census and Statistics, the Commissioners respectfully refer to the carefully prepared statement from the Civil Service Association at Ottawa, printed with the evidence and appendices, and also to the statements made by the several witnesses from places outside of Ottawa.

The Commissioners in the next place considered it desirable to take the evidence of Messrs. Thorburn, DeCelles and Glashan, the members of the Board of Civil Service Examiners, in order to ascertain the course adopted to satisfy them as to the necessary requirements from candidates for admission to the public service in regard to age, health and moral conduct; and further, to ascertain whether the examinations on the several papers prepared by and under the direction of the Examiners were such as to secure the best candidates for admission to the service. Two of the members of the Board have held office since its establishment in 1882; the third, Dr. Glashan, well known in connection with educational affairs, has held office

for some twelve years. The evidence given by the three Examiners is interesting and instructive.

The Commissioners considered that it would be probably beyond their powers to ask that members of the staffs of the Senate and House of Commons and of the Supreme and Exchequer Courts should come before them, seeing that in 1892 the Civil Service Commissioners were authorized to extend their enquiries to the staffs of the Senate and House of Commons but on constitutional ground the clerks of the two Houses objected thereto. Having finished the work referred to in the preceding paragraphs, the Commissioners procured the evidence of the deputy heads of the several departments at Ottawa. This the Commissioners considered advisable as they were of opinion that the work of administration lay largely with the deputy heads, and that it would be as well not only to procure their several opinions as to the operation of the Civil Service Act, but also to obtain information as to the kind of work absolutely performed in each department, in order that the same might be on record and that Parliament might be in a position to know the extent of the duties and their widely varied character, the several departments are called upon to perform.

In addition to the examination of the several deputies the Commissioners deemed it advisable to let all the members of the public service know that they would be glad to receive any statement or information which was considered advisable to lay before them, and all the members of the public service who wished to have a hearing were invited to come before them. Moreover, as a reference was made in the Commission to the advisability of inquiries being made, if time permitted, into the working of what may be called the outside service, the Commissioners considered it advisable to go outside of Ottawa. They therefore visited Montreal, Quebec and Toronto. They exceedingly regret that the short time at their disposal prevented them from going to other places—more particularly to Winnipeg and the cities in the Northwest Provinces and British Columbia—as it was represented to them that the difference in the rates of living in the Northwest Provinces and at the coast was considerably greater than the cost of living in the east. Fortunately the Commissioners were enabled to have a delegation of representative members from Winnipeg come before them.

Before leaving this branch of the report your commissioners beg to point out that, in the printing of the evidence, they have departed from the chronological order in which the witnesses appeared, and have grouped the evidence of witnesses from the several departments together, so that anyone desiring to refer to the Post Office Department or any other department might find everything that was presented to the commissioners from the members of the department concerned. In collating the evidence the departments have, as far as possible, been put alphabetically—as agriculture, customs, finance, &c. In this way reference can be easily made to any department by those who desire information thereon.

The number of officials who came before the commissioners to give testimony was somewhere about 218, composed of officers of all grades in the public service, of all departments and of both the inside and outside services. The Commissioners, from having been brought into contact with such a large number of officials, consider that in many instances they carry on their work with commendable zeal and often with scant remuneration.

Your Commissioners, in the opening paragraph of the Order in Council upon which the commission was issued, find that the minister states in his report upon which the order was founded that 'while the general principles of the Civil Service Act are regarded as satisfactory, &c., &c.'

Your Commissioners, while deferring to an expression of opinion from so eminent a source, have had impressed upon them all through the course of their investigations that in some respects certain features of the Act, and features involving principle, might be simplified and improved.

SESSIONAL PAPER No. 29a

THE CIVIL SERVICE ACT, R.S.C., 1906, CHAPTER 16.

The Commissioners beg to point out certain sections which might with some propriety be amended. Generally speaking it is the opinion of the commissioners that the Act is too long and too involved; that it deals with many subjects of varying importance, from the examination of a candidate for admission to the service to the keeping of attendance books and the granting of leave of absence. The commissioners consider that dealing with principles the Act might be amended in the direction of simplification.

Beginning with the several sections, taking first section 3, the definition of the Civil Service appears to the Commissioners as rather complicated and might be improved. They consider that subsection 2 of section 3 might be eliminated as they cannot see any reason why there should be special legislation for one department.

In section 6, where the Governor in Council is given authority from time to time to determine the number of officers in each department, the Commissioners consider that it would be desirable to add these words 'on the reports of the deputy heads of the several departments' after the words 'required for the working of the several departments in each division of the Civil Service.'

Coming next to the several sections dealing with examinations the Commissioners wish to direct attention to section 20, subsection (*b*) as follows:—

That a candidate to be admitted to the preliminary or qualifying examination must satisfy the Board 'that he is free from any physical defect or disease which would be likely to interfere with the proper discharge of his duties.'

As it often happens that a successful candidate may not enter the public service for some time after having passed the examination, it would seem to the Commissioners that there should be a limited time at least for which medical examination should run, and that after a year fresh evidence of good health should be submitted to the Board of Civil Service Examiners. The Commissioners also beg to point out that besides a certificate of good health no person should be admitted to examinations unless his character is such as to qualify him for employment in the service. As only one certificate as regards moral character is required by the Board of Civil Service Examiners it is quite within the bounds of possibility that there may be collusion between the candidate and the giver of the certificate. The Commissioners consider that, as in the case of examinations for the Imperial Civil Service, three certificates as to character should be submitted to the Board at the time of examination. By section 21 there is an arbitrary time when the preliminary and qualifying examinations shall take place. It might be that in the general interests of the service examinations should be made more often. As it frequently happens there is a delay in examination and there is a tendency as a result to admit persons to the several departments for a temporary period until they shall have passed the examination.

APPOINTMENTS.

The Commissioners come now to the matter of appointments. It is laid down that no person shall be admitted to the inside departmental division of the Civil Service other than a deputy head, controller of the railway mail service, on probation or otherwise, whose age exceeds 35 years, or who has not attained the full age of 18 years.

This can be shown to be too inflexible by one example, the recently appointed Assistant Deputy Minister of Finance, a qualified barrister necessary to the department, for whom a special vote of parliament had to be taken before he could enter the service. This might be partly covered by section 37, but as a rule there is a disinclination to use the powers contained in that section.

PROMOTIONS.

The Commissioners cannot see why the special legislation required in sections 44 and 45 should be included in the Act. They have grave doubts as to the utility of special legislation in a general Act of Parliament. In sections 46 and 47, providing for promotions and promotions on probation, it is stated that the head of the department 'shall elect' or 'may reject.' The Commissioners are of opinion that in these two sections the words should be included 'on the report of the deputy head of the said department.'

DEPUTY MINISTERS.

The Commissioners are of opinion that the limitations in the appointment of the Deputy Minister of Justice, the Deputy Minister of Finance and the Deputy Minister of Railways and Canals, as shown by sections 53, 54 and 55, should be struck out. The Commissioners cannot see why efficient officials who have grown up in the service, such as the present Deputy Minister of Finance, should be debarred from receiving the full amount placed by parliament as the proper remuneration of that department. It has been pointed out, and it seems reasonable, that these special provisions placing a higher value upon other qualifications than upon the training of the department itself are not calculated to inspire the members of the service with enthusiasm in the discharge of their duties.

CLASSIFICATION OF THE SERVICE.

As this was a special subject referred to the Commissioners they desire to defer making any remarks until the observations on the Civil Service Act be concluded.

MESSENGERS, PACKERS AND SORTERS.

With regard to sections 79 and 80, relating to the appointment of messengers, packers and sorters, the Commissioners think it would be well that the office of permanent messengers should be restored. As a matter of fact, messengers are really permanent and the practice of obtaining periodically, through the Treasury Board, authority from Council to employ them seems to delay public business.

PRIVATE SECRETARIES.

In the departments which have been brought prominently to the notice of the Commissioners, no redundance appears in the staffs by reason of private secretaries having been placed on the roll of the departments. But where changes in the ministry occur frequently, and where each new minister introduces a new private secretary, it becomes a matter of difficulty sometimes to find employment for the private secretary, and to regulate his emolument after his chief vacates his office. It has been suggested that while the private secretary holds office he should be paid at an established rate and that when he ceases to be private secretary his connection with the department should cease. in other words, that the private secretary should not be regarded as a member of the departmental staff. The provisions of section 81 for paying $600 a year additional to a member of the Civil Service while acting as private secretary should be repealed.

SALARIES.

As this is a special subject referred to the Commissioners they desire, as in the case of the classification of the service, to refrain at this part of the report from making any comment.

TEMPORARY EMPLOYEES.

The same remark would apply to this subject.

LEAVE OF ABSENCE.

The Commissioners deem it puerile to have provisions dealing with this subject placed on the statute book. Very few officers in the public service are entrusted with the same duties. Some officers may be engaged in purely routine work, while others have constantly to attend to high-class duties in the several departments and frequently for long periods of the year to be at the beck and call of the minister of the department when parliament is sitting. The Commissioners consider that anything relating to leave of absence might be struck out of the statute and dealt with by rules laid down by the Treasury Board.

ATTENDANCE BOOKS.

The same thing might, in the opinion of the Commissioners, be applied to the mandatory sections regarding attendance books. No doubt these books are kept in a way, but as in some departments it would be utterly impossible for any deputy to keep such a book, and as no doubt a great deal of the work is perfunctory, the Commissioners consider that it would be more desirable to do away with the section relating to the attendance books and have regulations on the subject made by the Treasury Board.

Your Commissioners have so far dealt with the paragraph in the order of reference stating that 'while the general principles of the Civil Service Act are regarded as satisfactory, &c., &c.'

From the inquiries made by the Commissioners and the evidence submitted to them they are constrained to declare that they are unable to agree with the expression of opinion contained in the order of reference, and they are of opinion that the repeal of the Act is really the best course to pursue in the public interest. What should be given in its place the Commissioners will state when they come to that part of the report in which they make recommendations.

To begin with, the principles laid down in the Civil Service Act are that in the minor positions the preliminary and qualifying examinations shall be passed for entrance into the public service, but several appointments and many promotions are exempted from the provisions of the Act.

In the appropriations granted by Parliament for the year ending 31st March, 1906, during the last session of Parliament, over fifty votes were passed with the saving clause 'Notwithstanding anything to the contrary in the Civil Service Act'; and as it is known to the Commissioners that many of the votes not having that clause attached to them now have had it in previous years, it is the belief of the Commissioners that hardly a vote to pay the several classes of the public service has been passed, during one session or another by Parliament, without adding the limitation already noted.

The Commissioners find that in the working of the public service there is a constant attempt to evade the examinations by grading under other names certain classes of officials whose classification is not laid down in the Civil Service Act—as, for example, the officials called examining officers in the outside service of the Customs Department. The Commissioners also find that in order to meet the pressure brought upon the several departments by influential politicians to take on assistants, officials who have not passed the examinations are employed temporarily and are called labourers. Patronage seems to run more or less through every department of the public service. It was the universal feeling amongst the officials who gave evidence before the Commissioners that this patronage evil was the curse of the public service. Many of the witnesses were very frank on this subject, and the Commissioners earnestly recommend that all persons who are interested in the maintenance at a high state of efficiency of the administration of the affairs of the Dominion should very carefully consider the evidence submitted on this point with this report.

It would seem that in the four post offices examined into by the Commission

letter carriers were employed to do high grade duty and duties of clerks ; that they are still designated on the pay list as letter carriers ; that in consequence of a desire on the part of the officials not to bring these letter carriers in their uniforms to the public notice, they to their loss have been deprived of their uniforms as well as their street car fares. In that special branch of the public service politics was found, as a rule, to play an important part. The Commissioners consider from the evidence submitted to them that on the part of responsible officials of the several departments, especially in the outside service, there is a dread of the politician, and every bit of strategy is resorted to to circumvent the carrying out of the patronage system.

The Commissioners also found in one department a clerk who is employed to do certain work in the accountant's branch. This clerk came into the service under a special clause, was utterly unfit to do the duty entrusted to him, and his work has to be done in spare moments by his immediate superiors. As a consequence the work is steadily and gradually going behind. The Commissioners have no reason to doubt but that the same result obtains in other departments and that many officials have been appointed to do work for which they are unfit.

The Commissioners have to draw attention to another set of circumstances which has cropped up during the last few years and that is the great redundance of women appointed to the junior branches in the inside service. The Commissioners have not the figures relating to the numbers presenting themselves for examination during the month of November last, but one of the Commissioners who visited the House of Commons found that that Chamber had been set aside for women, while a great proportion were distributed in other rooms of the building. In Ottawa in 1906, out of the 206 candidates who passed the qualifying examination, 121 were women. The lower grades of the Post Office, where there are 366 employees altogether, and the lower grades of the Department of the Interior where there are some 500 employees, are practically filled up with women. While the Commissioners readily acknowledge that many women are thoroughly entitled to succeed in the public service, yet the influx of such a large number must, if continued, in the course of time utterly swallow up the lower grades of the service and by limiting the field for promotion to the higher classes prove detrimental to the development of the higher and more responsible branches of the service ; for it can hardly be admitted yet that the work devolving on the departments can be carried on with a staff composed entirely of women.

The Commissioners have had it brought painfully to their notice that in the great development which has taken place in the last few years in the Dominion, the character and quality of the male candidates entering the service has declined. Having no inducements held out to them to remain in the service the better class of men stay but a short time and leave to better themselves. The Commissioners see with regret that in many parts of the Dominion able and worthy young men attracted by high emoluments have left the service. It is becoming more and more difficult to fill their places.

The Commissioners have also to point out that as far as regards the Civil Service Act the officials embraced in the terms of the Act are limited in number. At Ottawa 350 employees of the Department of the Interior are outside the terms of the Act. A very great number are also outside the provisions of the Act in the Departments of Agriculture, Marine and Fisheries, Public Works and Railways and Canals. This prevails more or less in the other departments. Only three departments in the outside service—Customs, Inland Revenue and Post Office—are included in the schedule under the Act, and while, as has been pointed out, many officials in Ottawa are excluded, the same remark applies with greater force to the members of the public service employed elsewhere than at Ottawa. No Dominion Lands Agent, no Indian Agent, no officer of the Intercolonial Railway, no outside officer of the Public Works Department is under the provisions of the Act, and members of the Northwest Mounted Police, together with many other sets of officials, are excluded from its provisions. In fact, the terms of the Act only bring under review a very limited

number of the members of the outside service and probably about one-half of the members employed at the seat of Government.

The Commissioners also beg to point out that in the list of passed candidates published in the *Canada Gazette* no attention is given to merit. The candidates are gazetted alphabetically. No doubt it has happened that the candidates who have just fluked through the examination by means of greater political influence have received appointments over the heads of more worthy and better qualified candidates.

In the matter of promotions the same patronage fear is apparent. Your Commissioners found in their rounds that a collector of customs, a city postmaster, a post office inspector and others were appointed politically. The recent appointment of a postmaster at Kingston was on the recommendation of the Patronage Committee; the last appointment to the postmastership at Montreal, the most important in the Dominion, was given to an aged member of parliament, 67 years old.

As the almost universal practice is that no person is promoted out of his district and transferred to higher duties in another place, and that with few exceptions no person is promoted out of his class, it follows that young men, entering the public service in the several divisions to which they have been appointed, see that however hard they may work, and whatever intelligence they bring to bear upon their duties, there is no chance of getting out of the class to which they are appointed. Your Commissioners have been told and believe that promotions have been made as a matter of politics, not in every case, but in many cases, and that people have been brought in from the outside over the heads of men who have given their lifetime to the departments, to fill the few positions of any superiority in the public service. For these and other reasons your Commissioners are of opinion that the general features of the Civil Service Act cannot be regarded as satisfactory.

With these remarks by way of preface the Commissioners beg to take up the several points which have been specifically referred to.

GENERAL OPERATION OF THE CIVIL SERVICE ACT.

In the previous remarks your Commissioners have pointed out that in their opinion the principles underlying the Civil Service Act are not in the public interest. In the report of the Royal Commission of 1892 the Commissioners observed that: 'It is possible that public sentiment in Canada may not as yet be ripe for open competition generally, and it may not be possible as yet to eliminate altogether the power of politics in making appointments; but if the recommendations of your Commissioners be accepted and strictly adhered to, the public service at Ottawa will, they are convinced, in the course of a few years, be better for the change.'

The Commissioners at that time only took into account the public service at Ottawa. They left in their draft bill in the report the provisions of the former Act relating to the outside service. Your Commissioners regret to state that in their opinion the hopes of the members of the former Commission have not been realized. The provisions of the Civil Service Act and its amendments have not made the service any better; in fact, the Act has been so amended, reamended, and whittled down, that the public service, the Commissioners believe, not only at Ottawa but elsewhere throughout the Dominion, has fallen back during the last fifteen years.

In making these remarks the Commissioners do not wish it to be considered that any blame is to be attached in particular to either of the political parties who in turn have administered the government. It is the political element in the Act which, from time to time, has become more aggressive and which has steadily tended to deteriorate the public service. It would seem to the Commissioners that the great prosperity of the country during the last fifteen years has been such that able men, who were formerly attracted to the service of the state have now ceased to look to the rewards of that service and have turned their attention to other avocations in which they see prospects of higher emoluments, with the result that inefficient and inferior men, unable to obtain better positions in the outside world, through political

operations and other means, have been brought into the service; whatever the cause the tendency is more and more to lower the standard of the Civil Service with the consequent detriment to the business of the state.

Your Commissioners do not consider it necessary to dwell long on this subject, but will now take up the second point in the reference.

CLASSIFICATION OF THE SERVICE.

Taking first the inside service, your Commissioners beg to observe that in their opinion the uniform idea of classification for all the departments has failed in the working. The scheme of classification of the officers coming under the working of the Civil Service Act as at present laid down is deputy head, chief clerks, first class clerks, senior and junior second class clerks, third class clerks, temporary employees and temporary messengers. In the examination of the several witnesses one deputy head frankly declared that he disregarded and took no account of the classification at all. In the department in question, the Department of Justice, where the chief officers are barristers of talent, called upon to advise upon the highly complicated affairs involved in the administration of the several departments, a classification would naturally be presumed to exist differing from that required for the many officers employed in the oversight and administration of the 11,000 odd post offices administered by the department of the Honourable the Postmaster General. It would therefore appear that what might be good and useful in the present system of classification in some of the larger departments might not be altogether as useful or proper in the administration of departments having fewer officials, such as the Department of Justice, Department of the Secretary of State, or even the Finance Department. Taking it all in all, while the present system of classification might be held sufficient for some of the larger departments where the work is not of a special class, some provision should be made to adapt it to other departments differing in the character of the work to be done and the nature of the staff required. The only common official of every department is the deputy head—that office is of course a necessity.

With regard to chief clerks, the Commissioners found that while in some departments these officials are entrusted with duties of the highest character, in others the chief clerks seem to have been appointed simply from length of service without change of duty and without being given any work of a higher character than that which they had previously performed. It will be found, for instance, that a chief clerk in one department may have the review of all the capital cases of the several courts of justice on whose report the life or death of criminals may depend. In another a chief clerk may be found whose sole duty is to dole out the forms and stationery in use in the department. The same remarks in a great measure may be applied to the first and second-class clerks. Frequently officials are promoted to the higher grade without change of duty, simply as a recognition of long service, and with the amiable intention of adding to their emoluments. In other departments the several grades are classified as in a regiment. Probably in one department there may be five or six chief clerks with a total staff of forty officers, while in the Post Office Department, where there are nearly 400 officials of all classes, there are ten or a dozen chief clerks.

Your Commissioners are of opinion that the classification should be placed on such a basis that each department should be graded according to its wants and requirements. Generally speaking your Commissioners are of opinion that while the higher officials should be treated by themselves, the vast majority composing the public service should not be merely, as at present, classified in grades which cannot but tend to bury individualities, but the principle should never be lost sight of that promotion and pay should in every case depend on individual merit, and that, therefore, every individual in the service should, as it were, be under continual appraisement and be eligible for promotion to any position in any division of the service.

SALARIES.

Your Commissioners now come to the third point in the reference, the question of salaries. On this point the Commissioners have had very grave anxieties in arriving at a conclusion. It may be said, as was the case in 1892 when the late Commission reported that the men of the higher classes of the public service are paid less in proportion to the value of the work than they would have received had they been employed by the railways, banks and the large mercantile corporations. Probably it may be still the truth that the percentage of officials enjoying salaries in the middle rank from $1,000 to $2,400 is larger in proportion in the service than is obtained in the outside world. Your Commissioners consider that, taking all in all, the percentage of those employed in the public service in the lowest ranks are paid less than they would have received had they been employed in outside occupations, and less than modern conditions demand. In making these observations the Commissioners are only taking into account the salaries and emoluments drawn by male clerks in the service.

Your Commissioners have found in their examinations that as a rule the salaries laid down in the Civil Service Act have been pretty constant for the last 30 years. Thirty years ago the present fiscal policy of Canada was not in existence and its introduction since has unquestionably largely increased the cost of living. Owing to the small mileage of railways and to the lack of communication, most of the necessities of life raised in the different localities were consumed locally. Butter, eggs, meats, food-stuffs and articles entering into daily consumption were produced in the locality in which they were consumed. The same characteristic feature was applicable to domestic servants employed in the households of the officials in the public service. A generation ago there were no means by which the farmers' daughters could remove easily from the locality in which they were born, and as the supply of domestic servants was then greater than the demand, the wages paid were comparatively small. Now, through extended communication the classes of domestic servants can find wider fields, and, as a consequence, the demand is much greater than the supply, and the rates of wages have gone up by leaps and bounds. The civil servant in those days, although not in receipt of a large income, had his wants satisfied cheaply and without stint. In these days of cold storage and rapid transit, the products of the farm find their way to the motherland and distant countries, and the civil servant, rejoicing still in the same salary which was paid 30 years ago, finds his purchasing power sadly diminished, and is forced to face circumstances which are sometimes cruel in their operation, especially in the case of the younger members having families. Your Commissioners have heard from officials and from groups of officials, one after another, the most harrowing details of the privations endured by them in providing for those dependent on them. And as nothing so unfits a man for the faithful performance of his daily work as the constant worry over money matters, your Commissioners consider that in dealing with the question of salaries greater consideration should be shown to the very different circumstances existing at the present time than existed thirty years ago.

Reverting to the higher officials and taking the salaries of the deputy heads, your Commissioners find that while the salary of a deputy head is laid down in the Civil Service Act as $4,000, yet in a late vacancy in one of the departments the deputy selected could only be appointed by giving a much greater remuneration ; in fact, an arrangement was made whereby the deputy head in question was allowed a remuneration of $7,500 a year. Only one other deputy has an annual salary greater than that laid down in the Act, and that is the Deputy Minister of Justice who receives a salary of $6,000 a year. With the exception of these two deputies—the Deputy Minister of Railways and Canals and the Deputy Minister of Justice—all the other deputies have salaries of $4,000 per annum or less; for, like other officials, the deputy receives an annual increment until the maximum is reached. Your Commissioners

are of opinion that in the case of deputies the annual increment is a mistake. Looking at the importance and class of work entrusted to them and the responsibility attendant on their position, your Commissioners consider that no highly efficient deputy head, doing his duty thoroughly, should be paid less than $5,000 a year. Your Commissioners have to point out that in the very great stress laid upon the minister a deputy head has more and more to take the responsibility of administration upon his shoulders, and when it is borne in mind that deputies are entrusted with such business as the development and settlement of the Northwest; the control of the finances involving a turn over of a million dollars a day ; the administration of over 11,000 post offices ; the looking after the patent laws and copyrights, besides the other work proper of a Department of Agriculture ; the supervision of an expenditure aggregating eighteen millions annually, together with the administration of the canals and railways of Canada under Government control, and the supervision of matters relating to railways throughout the land ; not to mention others whose work is also of very great importance, your Commissioners have arrived at the conclusion above stated.

Coming now to the chief clerks, the first class clerks and other officials employed in the daily work of the several departments, not including what are called technical officers, such as engineers, &c., your Commissioners have the following remarks to make :

With regard to the salaries paid to these officials your Commissioners have to remark that in the examinations which they have held they find that in some departments promotions have taken place as a rule for other causes than the necessities of the service. This was enlarged upon by the Commission which sat in 1892. The Commissioners have also found that in some departments there seems to be an inordinate amount of detail, while in others the service seems to be performed without unnecessary superfluity of detail. Your Commissioners are of opinion that while with the large body of officials making up the public service it may be necessary to arrange them into classes, yet it is desirable as far as possible to encourage talent wherever it may be found ; and for this reason the increments should be adjusted or proportioned as much as possible to the varying ability and efficiency of each officer whether senior or junior, and that in most cases, where a growing efficiency on the part of the officer is admitted, an annual increase of $100 should be given until a maximum is reached.

Your Commissioners do not see the necessity of elaborating the classes that are now in existence ; in fact, they wish to emphasize the remarks already made respecting individuality in the service. Of course, in the remarks which are now being made the Commissioners are limiting themselves to the conditions in the inside service. With regard to the lower grade officers and their salaries it is difficult to obtain proper assistance at a minimum salary of $500 unless the service is altogether recruited from Ottawa. This would be disadvantageous to the public interests, your Commissioners consider, and they would recommend that instead of a minimum salary being mandatory for entrance to the public service, a certain amount of relaxation of this rule should be allowed, and if it were necessary to obtain assistance at the rate of say $700 per annum it should be within the reach of the department to obtain such without asking Parliament for a special vote.

TEMPORARY EMPLOYMENT.

Your Commissioners have now to come to the fourth heading, namely, temporary employment.

The theory of temporary employment is that in times of emergency and pressure, when extra assistance is required, such as the distribution of letters at Christmas, temporary employment should be given to people qualified to do the work. In the examinations made by the Commissioners this idea of temporary employment only occurs in the instance above cited. So-called temporary clerks are constantly admitted to the service and remain in the service until their death. There are temporary employees at Ottawa who have been there for over thirty or forty years.

In other instances of temporary employment people who have failed to pass the necessary examination, through political pressure or otherwise, have been unloaded on the departments when help is necessary and to overcome the provisions of the Act are graded as labourers or some such designation.

In Canada where expansion must be the rule for many generations to come, the business of the Government must constantly extend, and the idea of people being employed for temporary emergencies is contrary to fact. At the same time it is desirable for a lower grade appointee to be employed in a probationary capacity until after a period of service, and his fitness for work has duly been proved and certified to by the proper authority. All these temporary employees might be grouped under the heading of what is called in Great Britain the 'writer class.' But as vacancies occur in the higher divisions by selection or promotion a duly qualified member of the 'writer class' should have an opportunity to advance to a higher grade.

TECHNICAL EMPLOYEES.

Coming to the next subject, that of technical employees, your Commissioners have given it grave consideration. This class is continually enlarging its borders Formerly it was confined chiefly to engineers, architects and surveyors. Now it also includes officers as the Director of the Experimental Farms, Director of the Census and Statistics, Superintendent of Insurance, the Dominion Archivist and officers of public health, immigration service and officers above the other grades and classes too numerous to mention. In the progress and development of Canada the services of technical officers will be more and more employed, and even in the departments themselves such officers will be in the future appointed to act between deputy heads and other officials. That these men should be well paid for the services they perform should go without question, and not only should their emolument bear some proportion to their sphere of duties, but steps should be taken to render their office stable and not liable to change.

How to arrive at the proper emoluments to be paid to such a diversified class as technical employees is rather beyond the subject of the present report. The only suggestion your Commissioners can make is that each case should be taken and considered on its own merits, and by some means or other the whole of the technical officers in the employment of the Dominion of Canada should be brought under the survey of the Acts and rules governing the Civil Service.

PROMOTIONS.

This subject was dealt with by the former Commission of 1892 and forms a paragraph in their report.

In Canada there exists a system of promotion examination which is not in use in Great Britain. So far as your Commissioners can find the same process prevails now in regard to these promotion examinations, even to a greater extent of undesirability, as prevailed in 1892 when the last Commission reported. In some cases strict examinations under the regulations laid down by the Civil Service Examiners have been made when promotions were considered necessary. In others only what is absolutely legal has been required, and the examinations have been held in only one or two subjects, such as 'duties of office.' Your Commissioners consider that in many cases promotions have been forced on the several departments owing to political influence; that the officials promoted do the same work as they performed in the lower grade, and, as has been mentioned before, promotions have taken place as a rule for other causes than the necessities of the service. In the recommendations which will follow at the conclusion of this report your Commissioners will indicate what they consider necessary under this head.

DISCIPLINE, HOURS OF SERVICE, &c.

Without going so far as to say that the official who has been appointed through political influence and whose friends are in power is not amenable to discipline, the Commissioners have found in certain instances that officials appointed by virtue of political patronage and remaining under its ægis have taken to themselves the idea that their services are altogether beyond the control of the higher officials; that, in fact, except from observance of office hours, their country or their chief is of no consideration. That the annual increase will follow is a matter of course, for their immediate superior in his report would not say absolutely that they were disobedient. Your Commissioners are agreed that in the expansion that has occurred in Canada in recent years, which has been followed by a large increase in the ranks of the Civil Service, the later arrivals do not actively respond to regulations laid down in the government of the several departments.

An official entering the public service should be made fully to understand that when once he becomes an official any attempt to obtain or use political influence must be abandoned.

In 1879 a Treasury Board minute was promulgated to the effect that in the case of an official using political influence it would, if discovered, be tantamount to the handing in of his resignation to his superiors. It would be as well, your Commissioners consider, that this minute should again be promulgated, that each officer in the public service should be made to sign it and that officials should be given to understand that not only was it to be obeyed in the spirit, but in the letter.

With regard to the hours of service, the Commissioners find that in almost all the departments the higher officials and those attendant upon them, such as their stenographers, &c., leave when the day's work is accomplished, and that officials of this character frequently put in a tiring and exacting eight hours a day's work or more. With regard to the officials employed in the inside service at Ottawa on ordinary routine work, it is desirable, in the opinion of the Commissioners, that the several departments should manage each its own affairs. It is not desirable to lay down fixed hours or to compel officials to remain in the department when their day's work is done. The work of departments differs as to the manner and time in which it can be done, and different seasons require different regulations. In the summer when parliament is not in session and the days are long, it is desirable that the day's work should not be prolonged beyond a reasonable hour. But when Parliament is in session and a greater amount of work has to be performed, and returns have to be answered, it would not be without reason that the officials be called upon to give a greater number of hours in the day's work than would be necessary during the summer. It seems to the Commissioners that the method adopted by the Auditor General in dealing with his staff might be recognized by the several departments in the inside service.

EFFICIENCY AND SUFFICIENCY OF THE DEPARTMENTAL STAFFS.

In dealing with this subject your Commissioners have to submit that in the vast service such as exists at Ottawa, in the limited time at their disposal, it has been absolutely impossible for them to inquire fully into the efficiency of the officials in the several departments. There are probably, including labourers, some three thousand employees at Ottawa. In the Department of the Interior alone there are five hundred employees. In that department the junior branches are made up almost entirely of women. As has been pointed out, in Ottawa seven hundred women are now employed. That is a fact that must be taken seriously into account in considering the future of the service. It would take many months to examine the work of the Department of the Interior alone, and when so many officials are engaged in the several branches it would be hard to gauge with accuracy the extent or character or style of the work turned out by each. Generally speaking your Commissioners have found that the several officers who have appeared before them are gentlemen

possessed of proper training, sensible of their responsibilities and anxious and desirous of giving their best services to the interests of the state. But it is useless to put aside what has been brought prominently before them by almost all the witnesses, and that is that owing to the development of the country it has naturally become more difficult to attract good men to enter the public service and devote themselves to it. The newcomers are in general not found to be as reliable or as efficient as the employees of previous years.

As regards the question of efficiency, while the Commissioners do not for one moment insist that the work is not done, yet in their opinion the work in many of the departments might be better done.

RETIRING ALLOWANCES.

At the outset your Commissioners consider it a subject of regret that the Superannuation Act, which had been in force for over twenty-seven years, should have been repealed, and the present Retirement Act put in its place. To the Commissioners the repeal seems most illogical; when it is found that within a few years after its repeal Pension Acts have been placed on the statute book providing for pensions to the members of the Northwest Mounted Police, the staff of the Intercolonial railway, the members of the Permanent Corps and Headquarters Staff, and other employees under the Militia Department, as well as to their widows and families, it would seem that the action in abolishing the Superannuation Act was not only illogical but hasty and inconsiderate. So many papers have been written and so much has been said on the subject of superannuation that your Commissioners do not consider it necessary to expatiate at length upon it. A lengthy memorandum upon the matter was prepared and submitted with the last report on the Civil Service made by the Royal Commission in 1892. It pointed out that not only was the system of superannuation in the best interests of the state but economical in practice, leading to stability in the working of the service; for without any superannuation system it simply means that it is impossible to get rid of the aged members, and men would be retained in the public service to an advanced age and long after their usefulness had departed, for the reason that it would be hard and cruel to discharge them. This would result not only in the abnormal increase of the staff of each department in course of time, but the older being necessarily the higher paid, their retention would serve to prevent the active staff, on whose shoulders the bulk of the work would fall, receiving the higher scales of remuneration to which they would be entitled. In modern days a pension system is recognized as a necessity by almost all banks and large corporations; and even religious bodies provide for the old age of their ministers. Amelioration has also been granted to judges on their retirement. In many cases judges can be retired on their full salary; and in the face of this does it not seem wrong and cruel that, except in the case of a few favoured officials, there should be no provision for sickness, debility or old age throughout the public service except the Retirement Fund, which is no provision at all ? The present progressive conditions of life in Canada will undoubtedly continue, although from unlimited speculation or an occasional bad harvest there may be times of temporary retardation; but from all appearances the cost of living does not promise to decrease, and the salaries of public officials being barely sufficient to pay necessary expenditures, will prove insufficient to provide for their dependents after death. Owing to these considerations your Commissioners are of opinion that it would be desirable that not only should a Superannuation Act be re-enacted, but its sections should include provision for the support of the widows and orphans of deceased public servants. An Act drafted to this effect has been placed at the disposal of the Commissioners and will be appended to their report. It has been pointed out over and over again that not only is it the tendency for inefficient men to enter the public service, but the effective members who have essayed the service and who see but little hope of the future, having no superannuation in view for their declining years, abandon it to better themselves. Not

only do the young and enterprising officials leave, but some of the chief officials, men of well known character and ability such as Messrs. Bain, Riley, Ruel and Stewart of the Interior Department have abandoned the service for outside employment, and it seems hard that men who are engaged in the construction work of the Dominion, who give their best endeavours to their country in the responsibility of carrying through great public works, the development of agriculture, and all the services which go to building up the Dominion, should have nothing to look forward to when old age overtakes them and their work is over, while the favoured few and the police of Canada should be carefully protected, and not only themselves but their widows and children. The sooner, in the view of the Commissioners, a Pension Act is placed on the statute book, the better it will be for the interests of the Dominion.

Your Commissioners have had the services of Messrs. Fitzgerald and Grant of the Insurance Branch of the Finance Department to aid them in devising an Act, and the rate of abatement has been fixed and based upon the average at which employees enter the inside service. Of course, when men well advanced in years are appointed postmasters and collectors of customs it would follow that the average age for the outside service is much higher than the average age for appointments in the inside service; but until the political element is cast aside from the public service that condition of affairs will always prevail.

Your Commissioners have had brought to their attention a clause in the Superannuation Act which enabled the government to add a term of service not exceeding ten years to officials who, after the age of 30, entered the public service for special or technical reasons. Your Commissioners find that with one exception the advantages of this provision have not been extended to any retiring official within the last ten years. The practice in the case of deputy heads and high officials was universal in the past and its extension is still legally applicable. It was well understood that when officials appointed to high positions for special or technical reasons came to be superannuated additional terms of years would be granted to their service. Your Commissioners are only aware of three or four instances at the present moment in the public service which would fall within this category. First, the King's Printer, who for very special reasons, was called upon by the government to re-organize the Printing Bureau in 1891, then being over 50 years of age. His case was pointed out individually in the report of the Civil Service Commission of 1892. Second, the Deputy Minister of Trade and Commerce, who entered the service as assistant commissioner of customs, having left the bank in which he had become a manager; the third is that of the Superintendent of Insurance, who was absolutely promised that he would be treated in the same manner as his predecessor was treated when he retired from the service; that is to say, that a term of years should be added to his service. Your Commissioners trust that if in the near future any of these officials should find it necessary to retire from the service the circumstances under which they entered the public service should be taken into consideration, and that such length of service should be added to their actual service as would enable them to be retired according to the promises made to them on their appointments.

Your Commissioners have now to consider the advisability of naming a fixed age at which officials should leave the public service. Compulsory retirement at a fixed age is the practice in Great Britain, the age laid down being 65 years. The fixed age has two great advantages. First, it relieves the state or the minister from the importunities of officials who wish their services to be kept on after their faculties are impaired. And second, it prevents the retirement of men under the age to make places for political officials. So strict is the rule in Great Britain that there are only three reasons for which the services of an official can be retained beyond the age of 65 years, and even then an extension can only be made for one year, and a report has to be made to parliament of the official whose services are extended together with the reasons therefor. For instance an official may be retained because he is engaged in some important work which it is desirable to complete; or he is doing some work which is in course of transfer to some other part of the system; or for very grave

reasons of state and very great urgency his retention is necessary. Your Commissioners have to point out that during the Boer War, when the treasury of Great Britain had to raise large sums of money, the secretary of the treasury, Sir Francis Mowatt, arrived at the age of retirement. It was decided then that the requirements being so urgent his services should be retained for one year; but only for such grave reasons can the period be so extended.

Before leaving the subject of superannuation your Commissioners beg to observe that, should it be decided that a superannuation Act be introduced into parliament, it should be taken into consideration that in the event of an official dying before being retired, if no better provision could be given, it would be only just and equitable that the abatements deducted from the salary should be paid to his widow or representatives. Many cases of hardship have occurred since the Superannuation Act was placed on the statute-book in 1880. A recent notorious case occurred in Toronto where Mr. Patteson, the late postmaster, after having paid in $80 a year for about 28 years, died while still in harness, and the sums so deducted from his salary became part of the Consolidated Revenue of Canada without any benefit to his widow and orphan. Your Commissioners further consider that in the event of an Act being placed on the statute-book it should have a retroactive effect and due regard should be given to officials of a permanent character who are not under any Retirement Act. Many officials performing duties of great responsibility are under neither the Superannuation nor Retirement Acts. As in the course of time their services will become of less value it is respectfully suggested that early steps should be taken to bring them under a Superannuation Act, if, as was said before, it be determined that a Superannuation Act be introduced into parliament.

Although not pertaining to the subject of superannuation, your Commissioners have had brought to their attention the cases of a class of employees of the Dominion Government whose services are more or less of a hazardous character, such as railway mail clerks, guards of penitentiaries, inspectors doing duty in out of the way places, lighthouse keepers, inland revenue officers engaged in the manufacture of fulminate of mercury and others whose duties entail risk of life or limb. Officials of this class should, in the opinion of your Commissioners, be protected in addition to the superannuation allowance by means of accident policies. In such a large service as that of the Dominion of Canada, where so many officers are employed in hazardous duties, no doubt the rates chargeable collectively would be moderate compared to the rates paid by individuals. Possibly the government might devise a scheme to do its own insurance. Your Commissioners beg to point out that the British parliament has passed an Act under which compensation is guaranteed to employees suffering injuries in the performance of their duties, and this also applies to public servants. With this example before them your Commissioners consider that the question of accident insurance is one of great importance.

A WIDER AND BROADER QUESTION.

Leaving the question of superannuation your Commissioners wish to refer again to the question of efficiency and sufficiency of the service. In addition to the efficiency in the administration of the departments a wider and broader question is raised and that is how far the departments are efficient in looking after the best interests of the Dominion as respects their several expenditures. With this view your Commissioners, in the examination of the several witnesses, asked questions regarding the administration of the several departments, all of which questions are founded on blue books and public records. Your Commissioners have to apologize for dwelling as they propose to do upon the question of the method of granting supplies by parliament in Canada as compared to the mother country, and to the consideration of expenditures in Canada also as compared to the mother country.

Owing to the good times which have recently been prevalent and the large revenues received from Customs, the old-fashioned notions of frugality and living

within one's means have to some extent been departed from, and instances have been found of departments giving orders for stores and other services to be delivered within a year in excess of the vote granted by parliament. Large amounts have been spent at several places in the Dominion for supplies bought from those enjoying political patronage at what may be called retail rates. Heavy expenditures have been incurred without necessary consideration or supervision, and while no doubt the several officers have thought themselves justified, owing to the expansion of the revenues, yet such conduct is contrary to the public interests and, in the opinion of the Commissioners, ought to be restrained.

In Canada the ministry of the day brings down the estimates of the departments. These estimates show the increases and decreases as compared with the supplies granted at the previous session. The supplies are duly voted in the customary course often at the end of the session in the small hours of the night by jaded members in a tired House. When the supplies are granted and released to the several departments the expenditures are made. These expenditures in the course of time are reviewed by the Auditor General and his report is presented to parliament and referred to the Committee on Public Accounts, which is composed of over one hundred members of the House.

In Great Britain the estimates are brought down in a similar manner, but in very recent years these estimates have been accompanied by a memorandum from the Secretary of the Treasury pointing out rather in detail the reasons for the several differences. The supplies are then voted, as in Canada, and in like manner the departments make the several expenditures which are reviewed by the Auditor General and reported upon to parliament. They are then referred to the Public Accounts Committee which, in a House of over 600 members, is made up of fifteen members only, the chairman always being a member of the opposition—generally an ex-Secretary of the Treasury. These fifteen members take the whole of the public expenditure 'seriatim' and spend from 30 to 40 days examining most carefully into the several expenditures and report thereon to the House.

In Canada, during the present session, at the first meeting of the Public Accounts Committee, six members moved for 41 sets of papers. There is no doubt whatever that all these papers moved for are demanded for party purposes and in the expectation that campaign literature may be derived therefrom. Of course it is needless to say that the six members are all opposition members.

Your Commissioners in thinking the matter over have come to the conclusion, and respectfully submit for consideration that, as in Great Britain, the estimates should be prefaced by a memorandum from the Finance Department showing the several increases and decreases in greater detail and with general explanations. Your Commissioners would suggest, though it is not the case either here or in Great Britain that from the House of Commons a small committee be created to be called the 'Estimates Committee' to whom the estimates might be referred for examination before being passed upon by the House, and that such committee should have power to call for persons and papers if considered desirable; the committee to be in the nature of an examining committee to ascertain full particulars of the several votes asked for and any explanations that may be desired. This procedure would in all probability relieve the House from the delays now occurring in committee of supply and would tend to shorten the sessions. It would seem desirable to point out in what manner the Public Accounts Committee of the British parliament perform their duties. In the first, second and third reports of the Public Accounts Committee of the last session in Great Britain, two of which are concerned with the examination of the Navy and Military expenditure, and the third with the remainder of the public expenditures, nothing has been too small to report upon, and almost all the reports, which are well worthy of notice, deal with matters of principle. For instance, the admiralty had been supplied by contract by the same firm since 1890 with what are called lettered hat ribbons. The amount involved was not very great, but in 1905

fresh tenders were invited when lower prices were obtained. In spite of this the admiralty continued for a time with the old contractors until attention was called to the irregularity.

Attention was also called to one of the naval depots where a sum of between six and seven hundred pounds was paid to four stewards to examine and pass ready-made clothing received from a contractor. This was a commission of five per cent. When it was discovered, the men pleaded that they were doing what their predecessors had done, and the contractors stated that it was the custom. An Act of Parliament has been passed called the Prevention of Corruption Act, 1906, which will render similar proceedings very hazardous in future. It was also shown that in the process of manufacture, canvas, which purported to be of pure flax, was found to be adulterated with hemp. The effect of this is that when a manufacturer has been found engaging in such methods his name is removed from the list.

The principle of the lowest tender is rigidly enforced. A question was raised in connection with the contracts for H.M.S. *Invincible, Inflexible* and *Indomitable,* for which (without Treasury sanction) no competitive tenders were invited. The Admiralty stated in explanation that it was 'desired to keep the designs of this class of vessel secret.' The Public Accounts Committee pointed out that 'When any such departure from the usual practice is proposed the sanction of the Treasury should be sought, and if the arguments urged in favour of the proceeding are not good enough to influence the Treasury at the time, they can be of little value when offered as excuses after the event.' In rare cases urgent expenditures have been incurred without previous parliamentary sanction but with Treasury authority, and all this has been pointed out by the Public Accounts Committee as irregular and contrary to the public interests.

In Canada it has been found that articles have been procured (such as cement) by two different departments, one of which procured it on more reasonable terms than the other. The Public Accounts Committee in Great Britain, having found that the Admiralty purchased goods from a firm which was supplying the War Office, made the following minute thereon:—

'Attention having been drawn to a case in which the Admiralty purchased goods from a firm which was supplying the War Office with similar articles on more advantageous terms, arrangements have been made and rules drawn up to ensure a mutual exchange of information on such matters. Your committee are of opinion that this should lead to economy, and suggest for the consideration of the Treasury, that it might be advantageous to extend the system to other departments which have to buy large quantities of stores.'

The Public Accounts Committee in Great Britain also draw attention to the comparison of estimates and expenditures, and the variation between the forecast and the actual outcome of expenditure. The chief department where variations occur is the War Office. The excuse is that under the new system difficulties have occurred and it was stated that 'There is a most extraordinary desire on the part of the Military Headquarters Staff to effect reductions.' But the committee observe that as regards the future 'They are without assurance that the same satisfactory result may be expected. For it has been explained to them that the military directors (who now frame estimates and control the progress of expenditure) are transient officers who come to their post with very expensive notions, and only get to know their work thoroughly by the time they have got to go; and that, as was admitted by the representative of the War Office, the financial shortcomings now under notice may be repeated again, possibly periodically.'

They go on to state that 'It is not for your committee to indicate what administrative steps, if any, are necessary to ensure an efficient system. They confine themselves at the present time to saying that the importance of accurately estimating expenditure and forecasting liabilities cannot be too strongly insisted upon, and that

they hope that the responsible minister of the day will take every means necessary to secure that end.'

The Public Accounts Committee of Great Britain also call attention to payments made under the Military Works' Loan Act in respect of contracts placed without competition, and also to what they consider the high ratio which the cost of the staff bears to the works carried out for the Admiralty. They also draw attention to irregularities in accounting, particularly in a case in which an officer employed on the staff of the Military Loan Works made his accounts balance by putting a savings of one vote against an excess on another and *vice versa*, transferring the sum saved in one item to meet an expense in another. Of course, like other matters of the same character, this was discovered by accident because no receipt was forthcoming for a bill for stone, and an investigation by a court of inquiry was set about. The General Officer Commanding and the authorities of the War Office arrived at the conclusion that it was a most serious irregularity though not a question of fraud, and the officer should be reprimanded. The Public Accounts Committee in commenting on this could not see how falsification of accounts, which in civil employment would have been promptly visited with dismissal, should, in the military service, be punished only by a reprimand. They were informed that a reprimand was a very serious punishment. The committee then go on to observe that uneasiness aroused by this case lies in the fact that an officer of field rank, with a good record, and no idea of fraud, had such a distorted view of his responsibilities and duty that in his letter of explanation, he stated 'I considered that it was quite justifiable to transfer day work from one item to another in some cases so as to adjust the accounts. I did so in the interests of the public service to get the accounts closed.' The committee observed that if such views were prevalent in the service no system of accounting would be of any value.

Your Commissioners have to apologize for these lengthy quotations from the proceedings of the Public Accounts Committee of Great Britain, but in view of the large expenditures in progress in Canada they considered it desirable to point out that in the mother land, where expenditures are much greater, these expenditures are so watched that no contract can be let without public tenders; no expenditure can be incurred unless voted by parliament; and no expenditure can be exceeded without parliamentary appropriation; that the system of accounting should be proper and that generally all expenses incurred should be strictly in accordance with the votes of parliament and with the rules and regulations of the Treasury, and to the observations made by the Public Accounts Committee in their several reports which have been adopted and confirmed by parliament.

The consideration of the efficiency of the Civil Service in dealing with the appropriations granted by parliament brings up another question, and that is the purchase of stores. By the evidence of the several officials who are concerned in the purchase of stores it has been conclusively shown that large amounts of money are paid over each year to merchants whose names are on the *patronage* lists in the several localities. It has been pointed out in the most simple way that this practice has been followed by everybody and it could not be altered. Your Commissioners, however, consider that while the practice was always bad, yet through the great development of the country the extent was not so great as to become serious until of recent years. When one witness stated that his expenditure has increased threefold recently, and it is a well known fact that the public expenditure has increased in the last twelve years about 50 per cent or more, in the opinion of the Commissioners, the time has come when this practice of paying retail prices to a few favoured merchants in each locality should be discontinued. Before suggesting a remedy your Commissioners wish to point out how these expenditures are managed. In the first place there is the question of certificates. These certificates are in general terms, that the articles have been received, that the articles are necessary in the public interests, that the

prices charged are according to contract, or that the prices are fair and just. In reference to the question of certificates the Auditor General in his evidence pointed out that in one department he did not believe in the certificates received. This is a very serious affair. Generally speaking the Commissioners are of opinion that the certificates should be given in the first place by the officer who really receives the goods; or to quote a witness of the Commission of 1892 'Who is responsible for and cognizant of the services performed.'

The Auditor General, in his examination on the question of stores, informed the Commissioners that he really audited and took stock of only two public departments. He examines, through his officers, the accounts in connection with the Printing Bureau and also the stores in connection with the government railways, but not the stores of the militia or any other of the departments; and even if he did, while no doubt it might be found that in the great majority of the departments the stores would represent the balances as shown in the different stock books, neither the Auditor General nor his officers could certify as to the quality of the stores detailed in the several stock books or whether the prices for which payment had been made were proper or excessive. Your Commissioners are of opinion that in many instances stores are ordered unnecessarily, and it may be doubtful that a good quality is always delivered. Mr. Pottinger states in his evidence that it is his opinion that the amount paid by the Intercolonial railway for coal was higher than it ought to be. In instances which have been brought to the notice of the Commissioners stores have been received which were not wanted and which it is difficult to get rid of. In fact, at different points stores have been shelved where in all probability they were unnecessary. The Commissioners of 1892 dwelt on this matter and stated that they had had under consideration the question of having a director general of stores or a supply agent to purchase supplies for all services, but they had not had an opportunity of developing the subject. Your Commissioners have come to the conclusion that the time has now arrived when it would be desirable in the public interests that purchasing agents, probably three, should be appointed at good salaries to make all purchases of goods required for the public service, and that all purchases required by the several departments should be procured by this means. In this connection your Commissioners respectfully beg to recommend that inquiry be made as to the working of the Prevention of Corruption Act of the Imperial Parliament passed in 1906 and the bribery clause in connection therewith.

THE OUTSIDE SERVICE.

In the reference to the Commissioners it was laid down that 'While the service at Ottawa should be the first subject for the consideration of the Commissioners, they be authorized and requested to extend their inquiry to any portion of the outside service that may come under their observation and which the time at their disposal may permit them to take into their consideration.'

Acting on this suggestion, as previously stated, your Commissioners visited three places, and they only regret that the time at their disposal prevented them from pursuing their inquiries at other points. The information procured was most interesting and instructive, and even the Chairman, who had spent nearly forty years in the public service at Ottawa, had no idea of what constituted the outside service until he visited the several localities.

As a rule your Commissioners found in the outside service that politics enter into every appointment, and politicians on the spot interest themselves not only in the appointments but in subsequent promotions of officers. While at Ottawa the departments generally are administered with a good consideration for the public interest, yet in the outside service the politics of the party is of greater importance in making appointments and promotions than the public interests of the Dominion. Practically in no

case is it possible to fill a vacancy in one locality by a transfer from another. Each locality is separately guarded, and as the high appointments are all political and the subordinate classes are so graded that it is difficult to get rid of the entanglement caused by multiplication of grades, and, as generally speaking the people who enter the outside service of the several departments are considered as fixed in the several branches in which they have entered, promotion in that part of the service has become almost a nullity. How to get over this troubled state of affairs has become one of the problems to which your Commissioners have given most serious attention.

In the outside service those who have the 'political pull' use it for all it is worth; they pass by their superior officers and bring pressure to procure anything that may prove to their advantage. To get over the difficulties which constantly arise and to circumvent the politicians, the higher officials, being in constant dread of the latter, have evaded the terms of the Civil Service Act by employing officials designated as labourers or examiners or some other title, and have tried to get their several offices into good working order. As a rule the officials in the outside service are without hope, and the majority of them are in dire need. Details thereof brought to the notice of the Commissioners have been pitiful in the extreme. The Commissioners have had printed with the evidence of each department the memorials of officials who have pressed for recognition of claims. The examination of their grievances the Commissioners have not considered to fall within their functions, but they earnestly commend to the chief officers of the several departments at Ottawa the consideration of the memorials attached to the evidence with a view to inquiry and rectification if desirable.

Before leaving this branch of their inquiries your Commissioners have to draw attention to the fact that while in the older provinces of the Dominion the struggle for existence is the lot of the average official, yet in the provinces of Manitoba and British Columbia and in the Northwest provinces the struggle is intensified. With the long hard winters and the high prices charged for fuel, and also in consequence of the increased rentals caused by the great boom which has struck the Northwest, your Commissioners have had reported to them that the lot of the civil servant in that part of Canada is much more pitiable than that of the civil servant in the older provinces; and whatever may be the result of these inquiries, your Commissioners earnestly commend to the attention of the government the condition of employees in Manitoba and the Northwest.

Your Commissioners, before making any general remarks, desire to call attention to circumstances connected with some of the departments.

PRIVY COUNCIL.

In this department your Commissioners have found attached to the staff the Clerk of the Crown in Chancery. To have the officer who issues writs for the elections attached to any one of the departments seems to the Commissioners an anomaly. True, this has been going on for thirty years, but it seems to the Commissioners that the officer in question should be detached from the Privy Council office and attached to the staff of the House of Commons.

AGRICULTURE.

In this department there are many independent branches administered by the minister, such as Experimental Farms, Census and Statistics, &c., &c. The position of the deputy head in regard to these branches seems to be incongruous. He is the deputy of the minister and has to act during the absence of the minister; he is, moreover, a professional man and *ex-officio* Commissioner of Patents, yet in point of emolument he is in an inferior position to the heads of the branches under the jurisdiction of the department. In the event of anything being done in connection with the Department of Agriculture, the Commissioners consider that the position of the deputy head should have attention. The Minister of Agriculture also has under his jurisdiction the

care of the Public Records, and the Commissioners suggest that the valuable historical documents scattered amongst the departments be as quickly as possible transferred to the Dominion Archivist and stored in the new Archives building.

CUSTOMS.

This is one of the three departments whose outside service is recognized by the Civil Service Act. The salaries of officers in the outside service are duly scheduled, but, unlike the other two departments (Inland Revenue and Post Office), no annual increments have been given. The chief positions in the outside service of this department are political appointments. Every collector of customs has been appointed from the ranks of the party in power at the moment. Many of the inspectors are in a similar position, and, under a clause in the Civil Service Act waiving the examination of persons appointed to positions requiring special and technical qualifications, almost all the appraisers in the outside service of this department have been appointed without undergoing the Civil Service Examination. By no chance can an officer of the Customs Department (outside service) be removed from one point to another. If a vacancy occurs in a collectorship at any one point no capable officer can be sent to fill the position from any other point. In the service of this department there are many anomalies and incongruities. In order to avoid the necessity of examinations a new class has been created under the name of 'examining officers,' a class not found in the schedule to the Civil Service Act. In Montreal no officer is graded as 'cashier'; in Toronto there is a cashier. At the last session of parliament the Minister of Customs obtained a grant of $100,000 which has been distributed in amounts of $100 or $150 to officers within the limits of salaries laid down by the Civil Service Act. No officer at the apparent maximum of his class participated in the bounty. The salaries in the outside service seem to have been graded by the amount of revenue received. A first-class collector, say of Montreal or Toronto, receives $4,000 per annum. It would appear that if the revenue was quadrupled no increase of salary could be given. The salaries of the other employees in the Customs seem to have been graded proportionately to the salary of a collectorship.

Curious facts were brought to light in the inquiries into the outside service. At Montreal, for instance, there were found two 'landing waiters,' one appointed in 1871 and the other in 1891, the one doing duty at the Bonaventure Station and the other at the Dalhousie Square Station, both equally good men. The officer appointed in 1871, according to the last Civil Service list, after 36 years of service, obtained a salary of $750. The officer appointed in 1891, with twenty years less service, obtained a salary of $1,000 ; and when inquiry was made the Collector informed the Commissioners that a most prominent, influential citizen of Canada who could not be refused had been approached by the friends of the officer who was appointed in 1891, and, having inquired into the matter, insisted that his protégé should have an increase in salary.

In Toronto your Commissioners found that the senior officer in point of service who was appointed in 1869 was the fourth in point of seniority. The collector, surveyor and cashier were all his juniors although drawing larger salaries than he receives. There is no question of the integrity and ability of the officer in question. The only suggestion which the Commissioners can make in regard to the outside service of the Customs is to have the department absolutely divorced from political influence, and have all the appointments put upon the basis of merit.

Before leaving this part of the subject the Commissioners beg to call attention to the memorandum from the officers of the Port of Montreal, pages 110 and 111 in the evidence printed with this report, from which it will be seen that the classification of officers of the outside service of the Customs Department involve thirteen grades and in many instances the designations are misnomers, the rank of the officer having no relation to the character of work performed. The officers recommend a different classification and your Commissioners commend it to the consideration of the proper authorities.

INLAND REVENUE.

The Commissioners find that this is another department scheduled, as far as the outside service is concerned, under the Civil Service Act, but unlike the Customs, annual increments are granted to its officers. To some extent, but in a very minute proportion, there has been a removal of officers from some of the districts to other districts. They are few in number, but a precedent having been established the practice might be extended. Of course in the Inland Revenue Department political appointments, as in other branches of the public service, prevail, and as a rule the officers in one district are confined to that one district. In addition to the officers employed in the matters of excise are the inspectors of weights and measures, gas and electricity. Your Commissioners have found that in occasional instances the districts marked out by this department are rather haphazard—the district under an inspector of gas might not cover the same ground as the inspector of electricity. As far as possible your Commissioners recommend that the districts should be made co-terminal. Your Commissioners also recommend to the serious consideration of the department the many memorials and statements submitted by officers who have come before the Commissioners, and especially do they recommend that consideration be paid to the evidence of Dr. Barrett, Inspector at Winnipeg.

POST OFFICE DEPARTMENT.

Your Commissioners find that this is the third of the big departments scheduled under the Civil Service Act. As far as the Commissioners can ascertain the working of this department is conducted in a good businesslike manner, and except for the intervention of politics and, possibly, the desire to run the department too cheaply, no fault can be found with the administration. Your Commissioners consider that the credit for placing this department on a business basis is largely due to the efforts made by the former Postmaster General, Sir William Mulock. He gave deep consideration to the department as a whole, especially to matters relating to the outside service. In every place visited by the Commissioners representations were made by the letter carriers in each district respecting their position. Your Commissioners find that a few years ago the laws regarding the employment of letter carriers were considerably altered. The letter carrier was changed from an official drawing a yearly salary to an official drawing a daily salary, and in cases of absence through sickness or otherwise, deductions of pay were enforced. No doubt in the best interests of the service these laws require to be rigidly enforced. Nothing comes so much into the daily life of the community as the delivery of the mail. It is a service requiring prompt and efficient action. In certain places favouritism is alleged on the part of high officials towards certain letter carriers who were allowed leave of absence with pay, but others of the same class were fined. Your Commissioners do not, however, think this worthy of attention, but they are of opinion that it would be desirable as far as possible to bring the service of letter carriers to an eight-hour a day service. They would also suggest an additional week's leave of absence be allowed this branch of the service, and on consideration they recommend that at least the schedules of salaries laid down by Mr. Ross, Superintendent of Post Offices, should be adopted. Mr. Ross has filed an extensive memorandum which is to be found appended to his evidence.

Your Commissioners were informed at each place they visited and also by delegates from other places, that in almost every post office letter carriers are employed graded as letter carriers but engaged in doing clerical work, and thereby deprived of their uniforms as a consequence. To deprive these men of their uniforms also deprives them of their street car fares. This seems incomprehensible to the Commissioners and they suggest that the officers of the department should inquire into this matter, and that steps should be taken to discontinue the practice in future. Probably there may be a difference in the wage between the minimum of a clerk in the post office and the maximum of a letter carrier so that if the latter were to have his position changed

to that of a clerk he would in the beginning suffer from a decrease of salary. If this be the case, your Commissioners are of opinion that steps should be taken to remove any disability of this character as no one on promotion should suffer pecuniarily. Your Commissioners found that in all the post office branches officials were employed who had failed to pass the examination laid down by the Act, and who were designated as labourers although in many instances doing clerks' work. If the Civil Service Act is to be of effect your Commissioners are of opinion that this incongruous state of affairs should be brought to an end as quickly as possible.

Your Commissioners have now to draw attention to a deserving body of men who carry on their work at great hazard to themselves, namely, the railway mail clerks.

A railway mail clerk suffers many hardships in his daily avocation. He is placed in a car next to the engine. This car has only two sets of wheels. Although the vibration may not be greater than it would be if the car were otherwise placed, yet the ceaseless strain in his daily work tends to the shattering of his nerves and leads to other physical diseases. The Commissioners recommend that the Railway Commissioners be authorized and requested to have plans prepared for proper standard mail cars to be placed on the several lines of railway in Canada. These railway mail clerks work at all seasons. The end of the car next to the engine is a blank wall without outlet, the light is accordingly imperfect from the position of the car, and frequently in the varying seasons the clerks have to take in and remove their mail sacks in blinding snowstorms or pelting rain, often at a considerable distance between the platforms and stations. The approach to the car is as a rule by short perpendicular ladders and generally the mail clerk has to jump on or off at the last moment. It is a service in which accidents frequently happen and it has been shown over and over again in the evidence produced that the health of a railway mail clerk is seriously affected at a comparatively early age and as a rule he has to retire long before he arrives at the age of sixty. But a great defect in the outside service which strikes your Commissioners is the utter inability to give promotion to deserving officials. Once a letter carrier always a letter carrier. Once a railway mail clerk always a railway mail clerk. Your Commissioners have grave doubts whether the present plan of keeping officials constantly in one branch of the service is advantageous, and they would recommend to the department whether a gradual shifting about of the several employees might not prove desirable. But the main fact of a detrimental character in the Post Office service is that promotion is more or less unattainable. Every postmaster is appointed politically and the number of what are called city post offices is small. Hundreds of post offices are used for the benefit of politicians rather than the benefit of the state. Only recently has it been pointed out in the public papers that the postmastership at Kemptville has been vacant for six months, and your Commissioners are of opinion that until the political system in use in the outside service is entirely abolished, notwithstanding all the business methods adopted by the department, efficiency will not follow.

The Commissioners would recommend to the serious attention of the department that now as a free mail delivery is to be extended to what are called accounting offices, whether these offices, of which there must be some hundreds in the Dominion, should not be included in the system of city post offices. At present there are under twenty city post offices. In each post office the appointments are confined to the places where the office is situate. No person, as a rule, in the post office can go outside his own district. Your Commissioners find that this idea of local concentration is not fostered alone for political reasons, but in some cases the local officials have resented the appointment of officers from other places, who have been appointed to positions in other localities on account of their tried service and proved ability. Your Commissioners would recommend to the serious consideration of the Postmaster General whether offices such as Guelph, Woodstock and many others, should not be added when vacancies occur to the jurisdiction of the Post Office Department, and that these offices, together with existing offices, should be divorced from all political pat-

ronage, and by a series of promotions the congestion which is now the apparent curse of the outside service of the Post Office Department might be removed.

Your Commissioners are aware that this is rather in contradiction to the recommendation made by the Commissioners in 1892, but as they are informed that a system of mail delivery is to be carried out in these accounting offices, it would seem to them desirable to bring the whole service in these localities to the same position as Ottawa and other cities.

Your Commissioners cannot conclude their report respecting this department without dwelling upon the pay of the post office inspectors. At the time the last Commission sat inspectors were allowed, when absent on duty, the sum of $3.50 per diem to cover their living expenses. A few years after this the per diem allowance was abolished and only the actual out-of-pocket expenses as certified by the inspector and approved by the department have been allowed. Most of the inspectors have to visit their several districts periodically and they have to go to out-of-the-way places in the Dominion. This is frequently the case, for one of the earliest features of a new settlement is the establishment of a post office, and it is the duty of the inspector to initiate the postmaster. The post office inspectors are called upon to travel in places of the Dominion where the accommodation is indifferent and with much discomfort, especially in winter time. To encourage them to do their work gladly the Commissioners suggest for the consideration of the department that the old per diem allowance be restored as in the judgment of the department might appear reasonable. The Commissioners wish to draw attention to the fact that the classes at the several city post offices receive less pay than the officers of the same grades in the inside service of the department. It seems extraordinary that officials brought in contact with the public and receiving public moneys should draw lesser salaries than the officers engaged in examining their accounts.

RAILWAYS AND CANALS.

Your Commissioners do not propose to make any specific remarks about this department, although it is a great expending department and also has large revenues derived from the government railways. The present Deputy Minister of Railways, who has not been long in office, has established a new system of bookkeeping on the Intercolonial Railway, and it would seem probable that improvements will be effected generally. The Commissioners beg to call attention to the evidence given by the several lockmasters, and would suggest to the department that some method be devised of paying these poor officials at some time before the middle of the month following the pay day. It is very hard for employees who are only paid for six months of the year to wait, especially at the beginning of the season, for a fortnight or more after their first pay becomes due. Your Commissioners have not visited this department, believing that other departments required more immediate inspection.

INTERIOR.

The same remark to a certain extent applies to the Department of the Interior. With its large staff of 500 employees at Ottawa, it would require months to thoroughly inspect the work and see that the several officials are properly employed.

The Commissioners regret extremely that with the short time at their disposal they were unable to visit the Northwest, much as they desired to see how the land, and more especially, the timber sales are effected.

MARINE AND FISHERIES.

This is one of the three departments in which expenditures have considerably increased. In this department two of the Commissioners, Messrs. Fyshe and Bazin, have spent considerable time, and the following report is theirs :—

SESSIONAL PAPER No. 29a

Your Commissioners have spent a large amount of time in trying to get an insight into the general administration of the government business, as shown in the management of this department. They found that, to make any efficient inspection was a matter of enormous difficulty, owing to the system in vogue of distributing all the correspondence of the department in files according to their subjects—a new file being started as every new matter comes up; and sometimes a separate file for each branch or section of a subject. There are now in existence nearly 30,000 of these files.

This system seems to have been adopted partly to meet occasional demands from the members of the House of Commons for complete files of letters connected with some matter which the House was inquiring into. When such a demand is now made the requisite file of letters can be produced at once. The system is also a convenience to the officer conducting the correspondence, since it enables him with the least possible trouble to see the whole previous history of the matter being dealt with. But if it has these advantages they are much more than counterbalanced by greater disadvantages. There can never be a certainty, in looking over a file, that all letters which have been written in connection with the subject are before you; and letters may be practically lost, at least temporarily, by being placed on the wrong file when there is no file number marked on them. A much greater objection, however, is that by this system anything in the shape of an efficient inspection of the department becomes all but impossible. To overhaul the management of even one of the agencies of the department from the head office might mean the necessity of wading through hundreds or even thousands of files.

If there is ever to be any adequate provision made for the periodical inspection of this department, or others like it, which your Commissioners think is an absolutely necessary addition required for the machinery of administration, it will be necessary to have some changes made in this respect, to the extent at least of having all the letters to and from the different agencies consecutively numbered, and filed in chronologcial order. If it be deemed absolutely necessary to continue the present system of filing, on account of the requirements of parliament, it can easily be done by using copies only.

Your Commissioners have taken up, and at great labour have followed through some of the files in this department, making extracts as they went along, which have been rewritten, as nearly as possible in chronologcial order, and which are now available and can be examined if required. The judgments they have formed are based largely on those extracts and on what they have seen in the offices.

These files have reference to the repairs of the *Anticosti* lightship, with some of her previous history; to challenged accounts; to the proceedings of the Lighthouse Board; to contracts of various kinds, principally in connection with the building of lighthouses in re-enforced concrete ; and to the new types of buoys and beacons recently adopted by the department.

The department is practically swamped with correspondence, 100 to 120 letters a day being about an average. Each letter has to be put on the file to which it has relation, and that means a day's work of the records staff of the department, which consists of six officers. Next morning the files are distributed among the different officials for the new letters to be answered. This means the enforced delay of at least one day, which might often be serious in the case of important business. When answers are prepared to the letters they are presented for signature to the Deputy Minister, who is assumed to know all about them, but which is practically impossible. In not a few cases letters are written, signed by the deputy and despatched, notwithstanding that they may be in conflict with previous correspondence or instructions on the same subject, and therefore calculated to bring reproach and discredit on the department.

No effort seems ever to have been made with a view to cutting down this enormous

mass of correspondence, a large amount of which with better organization could in our opinion be done away with and the rest of it more effectively handled.

There are officers enough in the department, both inside and outside, to do all the work efficiently, if they were properly trained and organized; but there is no efficient organization. The only attempt at it is the appointment of men whose titles would seem to indicate what their duties are: but those duties have never been specifically defined. There is no record of anything of the kind, and there are no written or printed rules and regulations known in the service, which your Commissioners think is lamentable.

It is practically impossible to fix responsibility on anybody. The deputy is supposed to shoulder responsibility for everything as his signature shows; but that means that he speaks for 'the department,' and 'the department,' like the King, can do no wrong. There seems to be a huge redundancy of work which proceeds in a lumbering, haphazard way, giving rise to constant blundering and confusion. There is no sign visible of a single directing head, or an intelligent purpose, unless it be that of spending as much money as possible. Zeal for economy and good management, or pride in the work, is not visible. Perfunctory and mechanical discharge of duties is the rule, with apparently no perception of any need for improvement.

The lack of organization and of organizing power in the department has recently been very conspicuously and painfully illustrated by the fact that the Accountant's or Bookkeeping branch had apparently fallen into such confusion that expert accountants had to be called in to put things to rights, and create some intelligible system. After months of work by these highly paid experts the result has been at least greatly improved books as far as mechanical form is concerned, but probably little else; and this achievement has been accomplished at an almost fabulous expense.

There is not only a lack of efficient organization and method in the department. There would also seem to be a lack of conscience. In connection with the enormous expenditures which are deemed necessary, the word 'discount' never appears. It is tacitly assumed that there is no such thing; but the whole commercial world knows otherwise. If no one gets any benefit from trade with the government except the trader, then it must be clear that in these great purchases made for the government, without discount, its officers must be assisting the trader to get better prices from the government than he can get anywhere else; for, everywhere else he has to give discount. In other words, some of the government's officers are serving two masters, and apparently succeeding with both—scripture notwithstanding.

It seems amazing that this question has never been courageously faced and dealt with. There is evidently a power in the hands of responsible officers of some of the departments which they can exercise without the necessity of giving any account of it, and with the most demoralizing consequences all round. It is certain that under such a state of things it must be impossible to develop high character in the service, or rather to prevent the deterioration of what character there is.

The extracts from the 'Challenged Accounts' file show constant inquiries from the Auditor General as to prices, but there is always some more or less unsatisfactory explanation, ending with whatever certificate may be necessary, and further investigation is baulked.

A list of prices paid in Quebec was, in February last, submitted to the manager of the shipyard at Sorel, for comparison with the prices which he was paying there; and in his reply he stated that the prices generally were about 50 per cent higher than the prices being paid at Sorel. One item objected to was the purchase of a certain brand of flour at $6.95 a barrel. When this was inquired into at the instance of the Auditor General the agent replied: 'These are ——'s prices, and the same prices are charged by every flour dealer in Quebec for the same brand of flour. These brands cannot be bought for less here. If as good flour can be bought in Halifax for $5.20 per barrel it would pay the department to import it from there. There are other

brands of flour that can be bought in this market from —— and others at $6 upwards, but not less than $6, suitable for our purposes. Our people generally choose the best, for the reason that it is subject to changes of temperature which might cause it to harden or sour, as has often occurred with ordinary flour.' And he adds later on: 'Referring to the matter of flour, there is but one flour dealer on the patronage list. I beg respectfully to suggest that you place one or two more on the list of such dealers.'

Your Commissioners took the trouble to inquire of the makers of the particular brand of flour in question what price they were selling it at in Quebec at the time of the purchase referred to and were informed that the price was $4.50 per barrel, at which price they would only have been too glad to sell to the department. It should hardly be necessary to make any comment on this.

Your Commissioners are informed on the best of authority that this state of things has been going on ever since pre-Confederation times. As some evidence that the heads of the department have been quite aware of it, we find on one of the files a memorandum by one of the officers dated 31st May, 1905, regarding expenditures in connection with lighthouses. 'I am of opinion that in the Quebec Agency alone a saving of at least $25,000 per annum can be made by compelling the agent to obtain authority for his expenditures over ordinary supplies and maintenance. If this is not carried out, the department can look for an overdraft for the next fiscal year of from $50,000 to $100,000.'

The cure suggested is too ludicrous to be taken seriously; but, as evidence of the condition of things, and the department's knowledge of it, this memorandum is significant. It was marked approved and initialled by the minister at that time.

In another memorandum dated 5th March, 1906, we find the following: 'The maintenance stock is fairly large, although nearly everything is also purchased in retail. The only improvement I could suggest would be to appoint a storekeeper, and not let anything go out of the store unless a requisition is signed by the agent. I may also add that if you had a good storekeeper, articles which are often required could be purchased wholesale instead of retail, and thus a considerable saving could be effected—a saving of $8,000 or $10,000 a year could be made. I think it would also be advantageous to have the shops better equipped so as to be able to make repairs to machinery of the steamers, &c. Now, we have to go to——or some one else for every little repair. From 1st July to this date we have already paid $59,131.66 to —— alone for repairs of all kinds, and we still have four months to run to the end of the fiscal year.'

Another curious memorandum appears on file, dated September last. It is in reference to a letter from a contractor at Prescott complaining that his contract to supply anthracite coal for the depot there, for one or three years, involved a loss to him of 50 cents a ton. Contract price was $5.75 and cost price $6.25, and he begs for consideration. 'I am willing,' he says, 'to continue the furnishing of the coal, under the circumstances, at cost price.' The memorandum is as follows: 'I recommend that the contractor's offer be accepted ; and as he has furnished coal at a loss in the past, that 5 per cent profit be allowed him for coal in future. Anthracite coal in Ottawa costs from $7.25 to $7.75 and the regular price at Prescott is $7 per ton.' This was agreed to.

These are comparatively small matters, but they are not small in the aggregate ; and they are not small as symptoms of the disease the department is suffering from.

A great part of your Commissioners' time has been given to the files connected with the buoy service, which is one of the most important branches of the department. About three years ago the department took a new, and apparently vigorous, departure, in the effort to supply new and improved aids to navigation. This work, which had been under the charge of the Chief Engineer, was divided up, and a Lighthouse Board was established, apparently with the idea of effecting better results by making a specialty of this branch of the department. A new officer was appointed in connection

with it called the Commissioner of Lights, whose whole time is now given to its management, which includes the management of a lighthouse depot established at Prescott, where a great variety of work is carried on connected with the lighthouse and buoy service. Your Commissioners have to report that in their opinion this new departure has been a most unfortunate one so far as the efficiency of the special work is concerned ; and it certainly has not added to the general efficiency of the Marine and Fisheries Department.

The Lighthouse Board consists of six members:

Lt.-Col. F. Gourdeau, Deputy, Marine and Fisheries Department, chairman.
Lt.-Col. W. P. Anderson, Chief Engineer, Marine and Fisheries Department.
Commander O. G. V. Spain, Marine and Fisheries Department.
J. F. Fraser, Commissioner of Lights, Marine and Fisheries Department.
Hugh A. Allan, Montreal, Allan Line of Steamships.
Capt. J. W. Troupe, Victoria, B.C., Manager Canadian Pacific Railway Steamship Lines in British Columbia.

Four of these gentlemen are the senior officers of the Marine and Fisheries Department, while the other two represent the shipping interests. This Board seems to have no duties but the giving of their decision upon all applications for new or improved aids to navigation coming to them from all parts of the country, from the Straits of Belle Isle and Newfoundland in the East to British Columbia in the West. Whatever importance their decisions may have (and they mean much when expressed in dollars) it does not concern them. Figuring as an impartial and skilled tribunal, passing upon all demands for government money under the plea of necessary aids to navigation, they can do so without the slightest sense of responsibility, for they absolutely incur none. The responsibility for all consequences is immediately assumed by the Marine and Fisheries Department, although the head of that department is not a member of the Lighthouse Board and personally cannot be considered responsible for them.

Between June, 1905, and June, 1907, this Board approved of and passed applications for new and improved aids to navigation amounting to $1,691,813. With the voting away of this vast amount of money the responsible minister had nothing to do. He was simply asked to initial the minutes of the different meetings of this most powerful but irresponsible board. The effect of this state of things is disastrous. It means practically the removing of all responsibility from those to whom extensive powers of administration and expenditure are granted.

When one realizes the enormous pressure being constantly brought to bear on the government of the day in favour of grants and bounties of all kinds, from one end of the country to the other, it would surely seem to be a most unwise thing to create a board with extensive powers, which can be and are used in sympathy with this universal outside pressure, and without being accountable to anybody.

The two outside members of this board simply represent the shipping interest, which is their own. They cannot serve the country and themselves equally well in the same matter. The other members of the board are government officials, who, whatever their standing may be, personally or officially, are not independent of political influence or departmental pressure. They are in no proper sense qualified to fill such a position of trust as a seat on this Lighthouse Board should mean—where the most absolute sense of justice, with complete independence, is called for; with a keen desire to administer the people's money with the utmost economy and good judgment, and with all personal considerations sunk.

If the board is intended to be a permanent institution it should be reorganized; and the Minister of Marine and Fisheries should be a member of it, as being chiefly responsible for the finding of its expenditures.

There can be very little question that the Lighthouse Board has been the means of greatly increasing the expenditure of the department, and that much of the increase has been wasted.

Your Commissioners regret that they have been unable to investigate the condition of things in some of the other departments. But to do the work with any pretensions to thoroughness would take much more time than would probably be agreeable to the government. They have been able to go over only a very small section of even the Marine and Fisheries Department. If they had had time it would have been most desirable to have inspected the work of the department at the agencies—Quebec, Sorel, Halifax, St. John and Prescott—particularly Quebec and Halifax.

But from what they have seen they are fully convinced that some system of continuous inspection, either under the Auditor General's Office, or under an independent and permanent Civil Service Board, is absolutely necessary to create, or to maintain when created, a civil service worthy of the country, and fully equal to the duties required of it. No private corporation of even half the magnitude of some of the government departments could be carried on successfully without such a system of inspection.

Your Commissioners have to confess that the general conclusions which they have formed regarding the administration of the department are most unfavourable. It seems to have few redeeming features: although there are some, one of which is the presence in the department of some good men, chiefly, but not wholly, in the lower ranks. With a better organization and better methods these might form the nucleus of a good staff. The trouble is not of recent origin but has been long continued and is the result of evil methods and practices persisted in for many years. Organization, discipline, zeal for the public service, and regard for economy are all conspicuous by their absence. Money is wasted in small things as in great because no one seems to have any motive to do otherwise. While there is no real punishment for the most outrageous blundering or the most incompetent service, there is at the same time absolutely no means for the discovery of merit and the promotion of talent. It seems to have been the same under all administrations, and government departments, like private corporations and private individuals, having once acquired a distinctive character find it impossible to change it by any impulse from within.

The political pull has much to do with this; and no radical improvement need ever be expected until the political pull is completely eliminated from all branches of the service.

The question of salaries is of course the main one with the employees, but the question of quality and value of service requires just as much consideration from the other side. It is true that the salaries of most of the civil servants are not equal to what they were thirty or forty years ago, in consequence of the greatly increased cost of living, the obvious and logical result of our wasting, impoverishing and demoralizing system of protection. As there is no prospect, however, of much relief from our self-imposed burdens taken up in our endeavours to improve on nature, the least we can do is to try and redress the injury which has been wrought to the fixed salary class, prominent among whom are the civil service employees. That it is our clear duty to do. The chief sufferers have been the lowest paid officers, and they should have the largest proportionate increase.

N.B.—Messrs. Courtney and Bazin, while of opinion that the increased cost of living is largely due to the fiscal policy in force in the Dominion, consider that the descriptive remarks respecting protection are unnecessary for the purposes of this report.

MILITIA AND DEFENCE.

The expenditure in this department is going up by leaps and bounds. In 1903-4 the total expenditure, both in capital and consolidated fund, was in the neighbourhood of three and a half million dollars. In the estimates lately submitted to parliament for the fiscal year ending March 31, 1909, appropriations are asked for aggre-

gating $6,500,000. That is to say, in four years and three-quarters the expenditures will have increased, if the supply asked for is granted, to the extent of three million dollars. Your Commissioners have made a comparison between these two years for specific reasons. In 1904 there was introduced into parliament an Act respecting the Militia and Defence of Canada, which in many particulars was a new departure from the former Act. In the Act of 1904 by section 6 it is enacted:—

'The Governor in Council may appoint a deputy of the minister and such other officers as are necessary for carrying on the business of the department, all of whom shall hold office during pleasure.'

In all the Act, which has over 140 sections, no other reference is made to the deputy, and it is a curious circumstance that while certain officials have their appointments permissive, yet in certain others they are mandatory: as, for example, it is stated in the revised Act, section 30, that 'there *may* be appointed an officer to be charged with military inspection of the militia.' Section 32 states 'there *shall* be an adjutant general. Section 33 'there *shall* be a quartermaster general; section 34 'there *may* be a master general of ordnance'; and in section 36 it is stated: 'In and for each militia district there *shall* be appointed by the Governor in Council an officer called the district officer commanding.'

Your Commissioners cannot explain the seeming difference in the appointments of these officers, but leaving that aside they have to draw attention to the fact that by section 7 of the Act it is enacted that—

'The Governor in Council may appoint a Militia Council to advise the Minister on all matters relating to the militia which are referred to the Council by the Minister * * * * * *'

That is to say, apparently the powers of the Council will only refer to matters in which the Minister of Militia requires advice. Be that as it may, very shortly after the Act was assented to the Militia Council came into existence and two reports have been made before parliament from that body for the honourable the Minister of Militia and Defence. In each of the reports, in the presentation to your Excellency, it is stated that in presenting the report of the Militia Council for the specific year 'such report being that of the Department of Militia and Defence, &c.' It follows, therefore, that the Militia Council have the full control of the department; that it is in effect *the* department; and in presenting the report the department as an entity is swallowed up by the Council. In the first report of the Militia Council, that for the year ended December 31, 1905, in the fourth paragraph it is stated that 'An important question under the present system of administration is the control of expenditures. With the institution of the higher commands, held by officers having larger powers of administration, the question of financial decentralization is receiving careful consideration. If adopted, the powers to be given of authorizing expenditure of public funds will be clearly defined by explicit regulations both as to details and extent.'

It follows, therefore, that the control of expenditure is in a great measure the business of the Militia Council, and in gauging the efficiency of the department attention should be given to the composition and powers of the Council. The Council is modelled on the Army Council of Great Britain which was created as a result of the outcome of inquiries into the army by the Esher Commission. The Army Council of the mother country is made up of the Secretary of State for War, who presides; the Chief of the General Staff, the Adjutant General, the Quartermaster General, the Master General of Ordnance, the Political Under Secretary of State for War, the Financial Secretary of War, also a member of the administration, Mr. Buchanan, M.P. It will be seen, therefore, that the Army Council of Great Britain is made up of the professional together with the political element of the War Office; that the War Office is kept entirely distinct; and the only connection between the War Office and

the Army Council is that the permanent Under Secretary of State for War is the secretary of the Army Council—much the same as the Deputy Minister of Finance in Canada is the secretary of the Treasury Board—but the functions and duties of the War Office are kept entirely apart from the Army Council. The control, especially of expenditures, is under the purview of the Director General of Finance in the War Office. As has been pointed out in dwelling on the difference between the Public Accounts Committee of Canada and the same committee in Great Britain, one of the three reports of the committee in Great Britain deals entirely with the War Office, and the committee were very severe in their report as to the method of keeping accounts, going so far as to say that if the views held by the War Office were prevalent throughout, no system of accounting would be of any value.

In Canada the Militia Council is made up of seven members—the Minister of Militia and Defence, four military members bearing the titles of Chief of the General Staff, Adjutant General, Quartermaster General and Master General of Ordnance; the titles also borne by the professional members of the Army Council in Great Britain—but the other two members of the Canadian Militia Council are the deputy head of the department and the accountant. That is to say, the Militia Council in Canada differs from the Army Council in Great Britain in that the department is swallowed up in the one and entirely distinct in the other.

Your Commissioners have to call attention to the evidence of Colonel Fiset and Major-General Lake. It will be seen from it that the members of the Militia Council have officers to assist them in the performance of their duties bearing the titles of Directors, being the same title as is given to the assistants of the Army Council in Great Britain. The headquarters staff in Canada numbers about forty. In addition to the Council an officer has been appointed, called the Inspector General, at a salary of $6,000 per annum. In Great Britain the appointment of Inspector General was made for reasons which do not exist in Canada; but as the Inspector General in Canada has only to report, your Commissioners are very doubtful, however valuable the reports may be, that the retention of an officer at such a large salary is beneficial and altogether in the public interests. From past experience, it would seem as if this office were being made a stepping stone to the retirement of high military officers in Canada on large allowances. The Inspector General is unlike the Auditor General, in that he has only to report; he has no powers of dismissal or control, and while the Commissioners have very great respect for the present able official who occupies that position, they are of opinion that when the office becomes vacant it need no longer be filled up. While on this subject, your Commissioners have to point out that throughout the entire public service of Canada there are but few officials who rejoice in a salary over $4,000 per annum, or even, with the exception of deputies, are in receipt of that much. In fact your Commissioners can only recall at the moment the Deputy Minister of Justice, who receives $6,000; the Deputy Minister of Railways and Canals, who is in receipt of $7,500, and the General Superintendent of the Intercolonial Railway, who receives $6,000 per annum; also, possibly, the General Superintendent of Experimental Farms, who receives $4,000 and a house. Yet in the service of the Department of Militia and Defence there are two officers receiving $6,000 per annum, three members of the Militia Council receiving $4,000 and an officer in one of the commands receiving $5,200, besides other officers receiving salaries and allowances far beyond the average official. In fact, for the service performed, the Militia Department awards to its officers pay vastly higher in proportion than any other of the departments under the Crown. Since the formation of the Militia Council several adjuncts to the militia service have been created. This will be seen by reference to the evidence of Major General Lake. Your Commissioners are not prepared to say whether the Ordnance Store Corps, or the Army Service Corps, or other corps are necessary, but one particular corps your Commissioners regard as unnecessary and undesirable. Your Commissioners refer to the staff of paymasters. In the evidence

before the Commissioners of 1892, the then General Officer Commanding, Major General Herbert, was asked this question: 'As respects paymasters in the district staffs mentioned a moment ago?' Answer—'I confess I do not see the object of having district paymasters in these days when the transmission of money can be made so easily by means of a cheque. I see no reason why a cheque should not be sent directly from the deputy minister to the person who requires it without the intermediary of a third person.' In consequence of this evidence the old system of paymasters was abolished, but again, with all its defects, the system is being re-introduced. The Auditor General in his evidence shows the evil effects of this system. Large sums are sent to the district paymaster, portions of these sums are sent to the sub-paymasters, until at one time as much as $60,000, according to the Auditor General, was held by the paymaster at Halifax. The expenditure disbursed by the paymasters is scarcely more than a third of the total expenditure of the department. The reason given by Major General Lake for the re-introduction of the system of paymasters was that he could not see how an army in the *field* could get on without paymasters. This seems to your Commissioners to carry to the extreme the principle of being prepared for war in time of peace. The reason given by the deputy head of the department is that it saves trouble, and frequently before the system of paymasters was introduced two or three hundred cheques were sometimes issued from the department in a day. But if the Intercolonial Railway, with its 9,000 employees, can manage their payments by cheques, and the Post Office Department, with 11,000 odd postmasters, can do the same, it does seem to the Commissioners that with its limited payments and comparatively small number of persons dealt with by the paymasters, the necessity of creating this corps is not apparent.

Your Commissioners made a computation of the number of officers employed at headquarters and with the officers of the permanent corps they number over 200. The number of men in the permanent corps is somewhere under 3,000. In the first Militia Council report to the 31st December, 1905, it is stated that the strength of the permanent corps on the 31st December, 1904, was 959, and on the 31st December, 1905, 2,058, or just 1,100 more. It would follow that the average strength of the permanent corps in 1905 was 1,509, and by the report of the Militia Council the number of desertions was 492 during that time, or just about one in three. In the second report of the Militia Council for the year closing June 30, 1906, it was shown that on the 30th June, 1906, the strength of the permanent corps was 2,267, the average strength during that time was 2,160. The desertions in that six months were 348, or somewhere about one in six. Your Commissioners have not seen any report since the 30th June, 1906, and are unable to give subsequent figures, but taking these figures from the official reports it would show a very grave state of affairs with such a large number of desertions from the corps. Your Commissioners can hardly think that the average Canadian, who presumably has as great a sense of regard for the oath of allegiance as the soldier of any other part of the empire, would willingly desert unless for grave reasons, and your Commissioners have come to the conclusion that the large percentage of desertions is to a great extent caused by the want of sympathy between the officers of the permanent corps and the men. It would seem that to a certain extent resentment is shown by the men on account of this want of sympathy by the officers in the daily lives of those under their command.

Your Commissioners have referred to the high rates of pay enjoyed by the officers in the service of this department. This is no doubt a cause of grave dissatisfaction to the members of the other departments in the public service, who, while occupied with grave questions relating to the government of the country, with their time fully occupied in the earnest pursuit of their duties, see in a favoured department people paid much better than themselves and working no harder, even if as hard, and in work of less paramount importance. The accountant of the Militia Department, who has an expenditure of six million dollars a year confined to a few appropriations, is much more highly paid than any of the accountants of the other departments. The account-

ant of the Railway Department has to adjust accounts relating to a revenue of six or seven millions and has also to do the bookkeeping in connection with the expenditure of eighteen millions a year. The accountant of the Public Works has under his control accounts connected with appropriations totalling ten millions a year, and numbering some hundreds. The accountants of the Finance Department, gathering up the details from all the other departments, have under their examination a daily turn over in cash of one million dollars a day, and the accountants of the Audit Office have under examination the expenditure of all the other departments. None of these accountants are so highly paid or so highly placed as the accountant of the Militia and Defence, and the result causes grave dissatisfaction. It is stated that the accountant of the Militia Department is the adviser, financially, of the minister; so also are all other accountants in the departments, and it would scarcely follow that the accountant in a department controlling however great an expenditure should be in a better position than those who are doing more arduous work. Conjointly with the title of Accountant of Militia is the title of Paymaster General, an outcome of the system of creating a corps of paymasters. This is an entirely misleading title. There is a member of the administration in Great Britain called the Paymaster General, a part of the political system there, but whose duties lie in connection with all departments. And not only is the title misleading, but when the initials only of the title are used it leads to confusion with a member of the government, the Honourable the Postmaster General. For the accountant of this department to be named the Paymaster General is incorrect, as he can only be the paymaster of matters in connection with militia expenditure. The misuse of names is not confined to the titles of officers, but is characteristic also of the Militia Council whose minutes are promulgated as minutes of the Minister of Militia in Council. Canadians have got into the way of appreciating the term "Your Excellency in Council," but in connection with the Militia Council it is hardly suitable to the case and throughout the Dominion is liable to be misunderstood.

Not only is this system of payment to the higher officials of the Militia Department beyond the ordinary, but it is a cause of great dissatisfaction even amongst themselves. The Deputy Head, Colonel Fiset, whose frank and manly evidence the Commissioners feel called upon to notice, stated very naturally in his memorandum that, compared with the other members of the Council, his salary of $3,500 per annum was not what he ought to be paid; and the accountant of the department, who is also a member of the Council, is not paid at the same rate as the ordinary members of the Council, which shows, therefore, that when once an unequal system of high payment comes into existence it causes dissatisfaction in the department as well as in the other departments.

Your Commissioners have noticed that it has been held to be of serious importance that the expenditure of the militia in Canada should increase with the growth of the revenue, and that when once the revenue has arrived at a hundred millions a year the expenditure should be in the same proportion to thirteen millions as thirteen millions is to one million, that rate being paid for conditions at the time of Confederation. It would follow, therefore, that with a revenue of $100,000,000 a year the expenditure should be at the rate of eight millions. How this can be adjusted with the various retardations which must occasionally happen through a bad harvest, stringency of the money market and other causes, the Commissioners cannot understand. It would seem that the militia expenditure would have to be cut down in proportion to the revenues. The better method, in the opinion of the Commissioners, is that the expenditures should be increased according to the growth of the population and be put on a per capita basis. In conclusion, your Commissioners have to point out that the expenditure has grown in a little over four years from three and a half millions to six and a half millions; that the Permanent and Headquarters Staff have increased to the number of about 220; that in addition to the general system

of high pay the favoured men of the militia service in Canada draw pensions not only for themselves but for their wives and children; that the staff is sufficient for a corps of one hundred thousand men, according to the evidence submitted; that the permanent corps are under three thousand men; that the desertions have been one in three; that the number of militia trained in the annual camps is about 40,000 men; that according to the evidence of Major General Lake the men attached to the rural battalions have no drill except at the annual camps, and it is arguable whether the city corps are as efficient as they were some years ago; that while only 40,000 men come out for drill of ages from 18 to 50, yet compared with the population of over a million men in Canada between the ages of 20 and 40 the proportion seems small. Whether with all the large expenditure of public moneys the result as detailed shows efficiency, your Commissioners leave to the consideration of Your Excellency. Your Commissioners have not gone deeply into the question of stores purchased for the militia service, as there is no means by which they could appreciate whether the amounts payable for sub-target guns or for Ross rifles are proper and just, but according to the evidence the contract for the Ross rifle was prepared by the counsel employed by the company, and no security was exacted.

If with all the consideration of the Public Accounts Committee and the War Office, the expenditure in Great Britain is such that the Public Accounts Committee consider it their duty to draw attention to expensive ideas, particularly amongst military men, and that grave irregularities are punished by reprimand, the system in Canada where the control is not as effective as in the motherland would seem to be more disadvantageous to the Dominion. While the Commissioners have felt bound to point out what they consider the several defects in the Militia Department, they are constrained to report that in some cases the officers employed by that department are men of high character and fully alive to their responsibilities.

PUBLIC WORKS.

This department has largely increased its expenditure during the last few years, although a large expenditure, that of the ship channel, has been transferred from the Public Works Department to the control of the Department of Marine and Fisheries. The expenditure of the Public Works Department in 1903-4 was, in round numbers, $5,000,000; and this is to be increased during the coming year, according to the estimates recently brought down, to about $11,250,000. In looking over the system adopted in this department it will be found that with the exception of a very few instances all the officials both at Ottawa and in the outside are not under the Civil Service Act. In Ottawa alone hundreds of labourers are employed and in the outside service there are engineers, architects, clerks of works, foremen and outside labourers to a very large number.

In certain cases there may be overpayments of wages such as the notorious instance which was brought to light about a year ago, when a clerk of works appointed by political influence was found to have sublet his work to another person at a much lower rate. Your Commissioners consider that some steps should be taken to organize the large army of employees in connection with this department, many of whom have served their entire lifetime in its employ, and bring them under the definite regulations so that their employment may be considered fixed and stable. Your Commissioners desire to point out that in this department the services of officials are often charged to several different votes. Your Commissioners are of opinion that in all cases the salaries of officials should be charged against one appropriation only; and that no allowances for extra services should be paid unless a sum for the purpose has been voted by parliament, not in a general clause merely, but individually and by name. This remark should be of general application to all departments. In all such cases parliament should be fully advised of the circumstances.

Your Commissioners are led to believe that in many cases works have been undertaken by the Department of Public Works at the instance of municipalities or bodies of people locally interested, in which the opinion of the outside officers of the department as to the desirability of the proposed works was not asked for. The only information sought for related to the feasibility of the works in question. The Commissioners of 1892 drew attention to the practice of building customs houses, &c., in small towns. With regard to this the Deputy Postmaster General at that time stated that not only did it tend to increase the charge to the department, for the reason that by moving to a public building the postmaster had to give up his own business, but in other ways by the employment of caretakers, &c., &c., it largely added to the cost of the service. Your Commissioners think it desirable again to bring under notice the observations made in 1892.

SECRETARY OF STATE.

Your Commissioners desire to call attention to the memorial submitted by the Under-Secretary of State in connection with the records relating to the external affairs of the Dominion, and submit that the time has come when regulations regarding such records should be promulgated.

Before proceeding to the matter of recommendations your Commissioners desire to point out a few matters which have come to their attention during the progress of their investigation which would seem to be worthy of attention.

Your Commissioners in dealing with the Inspectors of the Post Office Department, suggested that a system of per diem allowances should be reverted to. They wish to amplify the remarks in that connection, and before proceeding to other matters, they would recommend that a system of per diem allowances to public officials engaged in travelling on public business be instituted under regulations to be laid down by the Treasury Board at such rates as would accord with the position of the officials and the nature of the business to be performed.

In the preparation of the blue-books presented to parliament there seems to be a certain amount of overlapping and duplication. It is difficult, for instance, to know in what respect the blue books emanating from the Customs and Trade and Commerce Departments differ. The gist of the blue books is finally put together by the Director of Census and Statistics in the Statistical Year-Book of Canada, and it would seem to the Commissioners desirable to ascertain whether the blue books issued by the several departments could not be reviewed by some authoritative body with a view to their simplification and co-ordination, thereby increasing their value without increasing their cost. Your Commissioners believe that this might be done by, possibly, a joint committee of the two Houses of parliament entrusted with the printing of parliamentary documents.

In the next place your Commissioners notice that several departments are engaged in the matter of inspections in connection with the trade of the Dominion. The Department of Inland Revenue besides the adulteration of food is charged with the inspection of weights and measures, gas and electricity. The Department of Trade and Commerce is charged with the inspection of grain, hides, pot and pearl ash and the administration of the system of bounties. The Department of Agriculture is entrusted with the inspection of fruits, canned goods, &c. Your Commissioners consider that it would be a matter of economy and would lead to simplification if all these inspections were grouped together in one department under one responsible minister somewhat similar to the system adopted by the Board of Trade in Great Britain.

Another matter which at the present time is deserving of serious consideration is the matter relating to the public health of the Dominion. There seems to be a division of authority between the Dominion and the local governments on this question. The Dominion would undoubtedly have under its control the question of quarantine, and

the local governments have under their control matters relating to the public health in their several provinces, and jurisdiction over hospitals, &c. But still large questions of public health are dealt with by the Dominion Government. The Department of Inland Revenue is charged with the matter of analysis of food ; there is a Director of Health under the control of the Department of Agriculture, whose duties consist of the control of quarantine, the health of labourers employed in public works, &c. The quarantine is performed at places at some little distance from the ports to which the ships are sailing. When a ship with immigrants arrives at its port after quarantine further medical inspection takes place under the control of the Department of the Interior by medical men duly appointed for that purpose. The work performed by these men is always more or less under pressure. Dr. Pagé stated that at Quebec during the last season he had to pass some 5,000 immigrants in a day. Even after this, immigrants leaving Quebec, before reaching their several destinations, are placed under medical examination by other medical officers who board the trains in transit. Another medical officer, having the chief control of immigration, has also under the Department of Indian Affairs, the inspection of the health of the Indian community ; and the Marine Department has the charge of sick mariners and marine hospitals. Your Commissioners consider it desirable that, in view of the attention paid by the public in these days to the prevention of consumption and the formation of anti-tuberculosis hospitals throughout the Dominion, all these health officers should be brought under the control of one minister in one department, and possibly in addition thereto a national laboratory be established. Your Commissioners beg to point out the evidence of Dr. Montizambert and Dr. Pagé on this subject. If this suggestion is received with favour your Commissioners would consider it desirable that under this Department of Public Health the medical examination of candidates for entrance to the Civil Service should be conducted, and also the medical examination of officials applying for leave of absence on account of ill health. As has been pointed out in a previous part of the report no doubt many men under a daily wage suffer from their inability to employ a doctor to look after them on account of having to lose their pay for each day of absence.

Another important matter which is worthy of consideration is the preparation of maps required by the several departments of the Dominion Government. Under the system at present in vogue maps are prepared by the Departments of Railways and Canals, Marine and Fisheries, Public Works, Militia and Defence, Post Office, Geological Survey and the Department of the Interior. Much praise has been given to an Atlas of the Dominion lately prepared by the Geographer of the Department of the Interior. Your Commissioners would suggest whether it is not possible to group the several officials engaged in this one object under one department and one responsible minister.

Your Commissioners have now finally to bring to the consideration of Your Excellency in Council the conclusions at which they have arrived. It has been pointed out that as far as salaries are concerned the higher officials, such as deputy heads, are underpaid in proportion to the emoluments derived by persons in outside avocations. Your Commissioners have pointed out what they consider should be the normal salary of a deputy head, but even in the case of deputy heads, although it can scarcely be said that no one department is unimportant, yet there are degrees of importance amongst the departments; and while the salary mentioned should be, in the opinion of the Commissioners, the normal salary, yet in special cases the Commissioners consider special emoluments should be given.

Coming to the question of classification your Commissioners have already pointed out that the classification at present existing is mostly disregarded. Officials are made chief clerks from length of service without change of duties. In some departments the number of chief clerks is much in excess in comparison with other departments. In the opinion of your Commissioners there should be, below the deputy heads, a rank of officers having special and technical qualifications, such as the officers of the Experi-

mental Farms, engineers, architects, &c. Below these there should be a chief for each branch as Accountant, Chief of Correspondence, Contracts, Engineering, &c., or any other important special work. Below these there should only be the rank and file of clerks without any special name unless it be the Writer Class.

In the matter of pay and promotion, every officer in the service should be treated on his merits. When a young man of great efficiency, who gives indication of force of character, appears it is surely to the advantage of the country that it should get the full benefit of his capacity as soon as possible. To secure this he should have swift promotion instead of having obstacles thrown in his course by narrow official regulations and limitations. Each technical or special officer or agent should have his duties clearly defined and he should be held to a strict responsibility for their efficient performance. Letters connected with his special work should be answered and signed by him as if he were solely responsible, and only countersigned (if thought necessary) by the deputy. Moreover, the Commissioners regard it of great importance that in each department there should be framed a complete code of rules and regulations for the carrying on of all the work of the department, and every officer of the department should be required to make himself familiar with this code.

Your Commissioners are of opinion that the service should be entirely free from political favouritism or patronage; that appointments should only be made by merit after competitive examination; and, that for that purpose, a permanent Commission of three officials should be created to deal with the question of the service; that this Commission should be entrusted with all examinations in connection with the service; that they should cause different examinations to be made in the different subjects required by the several classes employed in the Civil Service. To illustrate the meaning and taking for instance, the Department of Agriculture, your Commissioners find that the Civil Service Commission in Great Britain require examinations from the veterinary staff in pathology and bacteriology and also into the Diseases of Animals Act; while in the Botanical Gardens they require examinations in systematic and structural botany; in the Customs there is required, in the case of a second class clerk, lower section, for port service an examination in inorganic chemistry with elements of physics; in the Inland Revenue in Great Britain, besides ordinary subjects, geometry and elementary chemistry are considered; in the Public Works office examinations in estimates and specifications, the use and properties of materials and survey and levelling are required. In a word, in every distinct service in the Imperial government an examination is instituted suitable to the particular service.

In addition to the examinations the Commissioners consider that it would be desirable that such commission should have power to inspect from time to time, say not seldomer than once a year, every department of the government service: such inspection to cover the whole management of each department, these inspection reports to be promptly considered by the Commissioners and such action taken thereon by them as they may deem necessary for the maintenance or improvement of the efficiency of the service both outside and inside.

Your Commissioners consider that appointments made under this system in the public service should be supplemented by a rigid system of probation.

Your Commissioners are of opinion that somehow or other the immediate question of salaries should be dealt with. They cannot recommend general increases, but they would suggest to Your Excellency in Council the advisability of at least taking votes for granting increases to deserving officials, and that for eastern Canada, both in the inside and outside service, such increase might be at the rate of 15 per cent for officials whose salaries are under $1,500 and 12½ per cent for salaries above that rate; and for the western provinces where no doubt a greater need prevails, these scales should be 25 and 20 per cent to the same proportion of incomes and all provisional allowances should cease. Your Commissioners suggest that such increases should only be granted on rigid examination, but as time goes on, if the suggestions of your Com-

missioners are carried into effect, these special increases should be abolished and a scale of salaries laid down suitable to each department and office in the public service.

Your Commissioners have in conclusion to point out that they are unanimously agreed that a comprehensive superannuation system should be placed on the statute book; and that this system in the present state of the Dominion should include pensions to dependents of civil servants, for there seems little doubt that with the exception of slight set backs the conditions of life in the Dominion are and are likely to be such that advances in the prices of commodities will be the rule, and it will be almost impossible for the average civil servant to effect any savings from his salary. With that view your Commissioners consider that the time has arrived when an efficient pension system should be put into force.

Your Commissioners have endeavoured to the best of their powers to thoroughly sift the conditions prevailing in the Civil Service. Possibly they have allowed their inquiries to extend rather beyond what might have been considered the limits laid down, but your Commissioners are of opinion that to get at the full knowledge required to make a report their inquiries should be as extensive as possible. With this view they construed the reference as to efficiency and sufficiency of the departmental staffs as including in its scope the control of the appropriations granted by parliament.

In fact your Commissioners could hardly have done otherwise considering how their attention had been directed to these matters by statements in parliament and in the public press.

Your Commissioners, in conclusion, cannot but express their sense of the high importance of the Civil Service and the necessity of doing everything possible to improve it. While there are many conscientious, hard working and efficient men in it, it cannot be denied that there are some otherwise. It cannot be doubted either that it is a much more difficult proposition to preserve a uniformly high state of efficiency in a government staff than in the ordinary work of the world carried on by money making organizations. This, your Commissioners think is generally recognized, but to achieve any real success in either field the supreme necessity is character which above all means conscience. No government can ignore this and live. While demanding the highest character they should do everything possible to develop it, and one of the first things necessary is to see that its servants can at least live in a moderate degree of comfort, and, that after that a career be opened to every one in the service in which the rewards will be justly proportioned to the value of the service rendered.

All of which is respectfully submitted.

J. M. COURTNEY,
THOS. FYSHE,
P. J. BAZIN.

Ottawa, Ont.,
February 28th, 1908.

APPENDICES

APPENDIX A.

At the request of the Royal Commission the undersigned respectfully presents the following statement in support of the claims of employees of the Dominion for greater liberality at the hands of government and parliament in providing for payment of the public service.

Nine tables have been prepared from official and other authentic sources to supply the Commission with evidence in the pursuit of its investigations.

Tables A, B, C, D, E, F and G relate to the prices of articles which enter into the cost of living for the period of fifteen years following the inquiry made in 1892, and tables H and I relate to the salaries and wages of the employees of manufacturing establishments in the same period.

Tables A and B are wholesale market prices of food stuffs, groceries, &c., in the cities of Montreal and Toronto, compiled from records of weekly quotations for the years 1892, 1896, 1901 and 1906. For the former city the quotations of the *Journal of Commerce* have been taken, and for the latter those of the *Monetary Times,* and the yearly averages show for each article the highest and lowest prices as computed from the quotations.

Tables C and D are average prices of articles prepared from the trade tables of imports and exports of the Dominion, computed from quantities and values for each year of the period. Import prices are shown for twenty-four articles, embracing dairy products, meats, groceries, coal, woollen and cotton goods and carpets; and export prices are shown for nineteen articles, embracing dairy products, meats, fish, breadstuffs, fruit and lumber.

Tables E and F are compiled from tables C and D to show average prices of the same kinds of articles for the five-year periods of 1892-96, 1897-1901 and 1902-1906, together with relative prices of the second and third periods, compared with the first taken as 100 or standard.

Table G shows the relative retail prices of thirty principal articles of food in the United States during the seventeen years 1890-1906, the average price for the ten years 1890-1899 being taken as 100 or standard, as compiled by the Bureau of Labour at Washington and published in its Bulletin for July of this year.

Table H presents the average wage earnings of all persons employed in the factory industries of Canada and the provinces for the census years 1891, 1901 and 1906, with percentages of increase of earnings in the periods; and table I the average earnings by sexes for officers and other employees for the census years 1901 and 1906 for the Dominion and the provinces, together with the per cent increase of earnings in the five years.

TABLE A.—Wholesale prices of food articles, &c., in the Montreal market for the years 1892, 1896, 1901 and 1906, compiled from the weekly quotations of the *Journal of Commerce*.

The Montreal and Toronto market prices are given for the years 1892, 1896, 1901 and 1906, being at intervals of five years, which show fairly the movements of prices for food articles over a period of 15 years. The figures are not complete for every article, but in almost every case they are given for one market or the other. Flour was slightly lower in 1906 than in 1892, the average decrease being about six per cent in Toronto and ten in Montreal. There was a small increase in the price of oatmeal in Toronto, but nearly 35 per cent decrease in Montreal. Butter shows an increase of about four cents per pound in Toronto and two cents in Montreal, and cheese 2½ cents in both markets. Fresh eggs were dearer in Toronto by 4½ cents and in Montreal by 5½ cents per dozen in 1906 than in 1892. All meats also show large increases in both cities—mess pork an increase of $4 per barrel in Toronto and $6.32 in Montreal; bacon, 3½ cents per pound in Toronto and 5 cents in Montreal; hams, 3½ cents in Toronto and Montreal, and lard 2 cents in Toronto and 3¼ cents in Montreal. The general increase in the prices of meats and other animal products in the two cities from 1892 to 1906 was about 30 per cent, ranging from 20 to 45 per cent. The prices of groceries were on the whole somewhat increased. It may be said, however, that the quotations are not in all cases strictly comparable, and that these deductions should be accepted with a measure of reserve. They are not mathematically accurate, but are safe for approximate conclusions.

Better because more complete data are supplied in tables C and D, being the average prices of imports and exports computed from the trade tables. These show that, beginning with 1900, prices of articles which enter into the cost of living have been gradually rising, except in the case of tea, coffee and sugar. Comparison of prices is more readily made in tables E and F, where averages are shown for three periods of five years each, namely, 1892-1896, 1897-1901 and 1902-1906. The averages of the first period being taken as 100—a standard or index number—it will be seen that prices of imports have increased for 17 articles out of 24 and of exports for 17 out of 19. For imported butter, cheese, bacon and hams, salted beef and pork in brine, the average of the five years 1902-1906 is higher than in the five years 1892-1896 by 14.3 to 33 per cent, and that for exported articles of the same class the corresponding prices are higher by 3.2 to 54.1 per cent. For eggs the increase is 33.1; butter, 6.4; cheese, 8.4; bacon and hams, 24.7; beef, 16.7; pork, 54.1, and canned meats, 3·2 per cent. Coffee, cocoa, chocolate, tea, sugar and molasses were below the standard of import prices in the last period of five years, but currants and raisins were above it by 18·5 and 54·8 per cent respectively. Anthracite coal increased by 17·3 per cent, woollen goods, except tweeds, by about 10 per cent, and cotton fabrics by 35.6 per cent. The export price of canned lobsters increased 57.3 per cent; beans, 18.5; split pease, 32·8; potatoes, 38·5, and green apples, 26·6 per cent. Flour of wheat fell 6.8 per cent and dried apples 12 per cent, but the price of planks and boards, the raw material of the house-builder, increased by 33.9 per cent.

The United States table (G) of retail prices embraces breadstuffs, meats, fruits, groceries, &c., to the number of 30 food articles. It covers a period of 17 years, and is relative in the sense that the average price computed for the ten years, 1890-1899, is taken as standard or 100, with which the prices of each year are compared. In the case of 18 articles the figures for 1900 exceed the standard, and from that year forward there was nearly a steady increase in relative prices. The following table shows the comparison for the years 1892 and 1906 with the standard of 100 for the 10 years, 1890-1899, together with the increase of 1906 over 1892, and of the standard or index number for 1890-1899.

Articles of Food.	Relative Prices to Standard in—		Increase of 1906 Prices over—	
	1892.	1906.	1892.	Standard or 100.
Apples, evaporated	99·3	115·6	16·3	15·6
Beans, dry	102·4	115·2	12·8	15·2
Beef, fresh, roasts	99·6	115·7	16·1	15·7
Beef, fresh, steaks	99·3	116·5	17 2	16·5
Beef, salt	99·5	110·8	11·3	10·8
Bread of wheat	100·3	102·3	2·0	2·3
Butter	106 8	118·2	11·4	18·2
Cheese	101·5	115·5	14·0	15·5
Chickens (full grown, dressed)	103·8	129·1	25·3	29 8
Coffee	103·8	94·7	—9·1	—5·3
Corn meal	105·2	123·2	18·0	23·2
Eggs	106·8	134·2	27·4	34·2
Fish, fresh	100·1	116·2	16·1	16·2
Fish, salt	102·2	116·8	14·6	16·8
Flour of wheat	105·1	108·1	3·0	8·1
Lard	103·6	128·0	24·4	28·0
Milk, fresh, unskimmed	100·6	108·9	8·3	8·9
Molasses	101·2	105·3	4·1	5·3
Mutton	101·0	124·1	23·1	24·1
Pork, fresh	100·5	137·7	37·2	37·7
Pork, salt, bacon	99·1	150·4	51·3	50·4
Pork, salt, dry or pickled	100·5	136·9	36·4	36·9
Pork, salt, ham	101·9	127·2	25·3	27·2
Potatoes	95·7	114·4	18·7	14·4
Prunes	113·5	85·1	—28·4	—15·1
Rice	101·3	105·7	4·4	5·7
Sugar	96·2	98 2	2·0	—1·8
Tea	100·2	105·5	5·3	5·5
Veal	100·0	123·2	23·2	23·2
Vinegar	102·7	102·6	—0·1	2·6

The minus sign (—) prefixed to numbers shows a decrease for 1906 as compared with the relative prices of 1892 and 1890-99. It occurs only in the case of four articles; all others show increases, ranging from 2 to 51.3 per cent over the 1892 and 2.3 to 50.4 per cent over the standard prices. In the case of four articles, viz.: eggs, mutton, fresh pork, and salt, dry or pickled pork, the relative increase of 1906 over the standard is more than 30 per cent; and of five, viz.: chickens, corn meal, lard, mutton, salt pork and hams and veal it is 20 to 30 per cent more; while in the case of nine articles, viz.: evaporated apples, dry beans, roast beef, beefsteak, butter, cheese, fresh fish, salt fish and Irish potatoes it is 15 to 20 per cent more. There are five articles, viz.: wheat flour, fresh milk, molasses, rice and tea in which the average increase of 1906 is 5 to 10 per cent more than the standard, two in which the increase is less than five per cent above the standard, and three in which the price is below it. The relative prices of coffee, prunes and vinegar are alone lower in 1906 than in 1892; those of fresh pork, salt pork and bacon, and salt, dry and pickled pork are 36.4 to 51·3 per cent higher; those of chickens, eggs, lard, mutton, salt pork, ham and veal are 23.2 to 27.4 per cent higher; and those of evaporated apples, dry beans, roast beef, beefsteak, salt beef, butter, cheese, corn meal, fresh fish, salt fish, and Irish potatoes are 11·3 to 18·7 per cent higher.

It is obvious therefore that according to all prices quoted from Canadian and American sources food articles have increased substantially in cost to the consumer in the fifteen years, 1892 to 1906. It is difficult to say definitely how much that increase has been, partly because true averages cannot be computed from such a variety of quotations—wholesale prices, retail prices and prices ascertained from the quantities and values of trade tables. But the increase price of food articles in the period

may be taken to range from 15 to 20 per cent*; and for other articles, such as rent, fuel, light, clothing. taxes, &c., the rate of increase has been fully as large.

A comparison of salaries is made as an example in the following table to show the averages paid to permanent employees in four of the principal departments of government in the years 1892, 1900 and 1905, viz., the Departments of Agriculture, Customs, Finance and Post Office, together with the per cent of increase in the periods in each department:—

Departments.	Average salary per employee in			Per cent of increase.		
	1892.	1900.	1905.	1892 to 1900.	1900 to 1905.	1892 to 1905.
	$	$	$			
Agriculture	1,111	1,232	1,273	11·0	3·3	14·6
Customs	1,046	1,223	1,157	16·9	−5·4	10·6
Finance	1,360	1,426	1,436	4·8	0·7	5·6
Post Office	898	959	941	6·8	−0·2	4·8

There are decreases in the average salaries of Customs and Post Office in the years 1900 to 1905; and while in the salaries of Agriculture there was an increase of 14·6 per cent in the years 1892 to 1905, there was an increase of only 10·6 per cent in those of Customs, of 5·6 per cent in those of Finance and of 4·8 per cent in those of Post Office, which are far below the rate of increase in the cost of living in the same period.

Tables H and I furnish another instructive comparison with the salaries of government employees and the cost of living in the average salaries and wages paid to employees of factory works in Canada, as shown for the census years 1891, 1901 and 1906.

The census of 1891 grouped under one head the earnings for salaries and wages, and therefore table H makes a comparison for the three census years in that form. It shows that for the whole of Canada the earnings of factory employees increased 21·0 per cent from 1891 to 1901, 26·94 per cent from 1901 to 1906 and 53·70 per cent

* The average per cent increase of 1906 over each of the ten years, 1892-1901, in the United States all food (30 articles) weighted according to family consumption was as follows :—

	Per cent.
1892	13·5
1893	10·8
1894	16·0
1895	18·3
1896	21·2
1897	20·1
1898	17·2
1899	16·3
1900	14·4
1901	10·0

Prices were highest in the second and tenth years of this period. The average for 1906 was greater than for any other year of the decade by 13·5 to 21·2 per cent, and greater than for six of the years by 16 per cent and over.

from 1891 to 1906. Percentages are given in the table in the same way for each province of the Dominion, from which it appears that in the two large manufacturing provinces of Ontario and Quebec the increase of average earnings of all employees in the 15 years was 44·96 per cent in Ontario and 50·51 per cent in Quebec.

Table I shows the earnings separately in the Dominion and each of the provinces for the two chief classes of officers and workers, and while the Commissioners are referred to the details in the table it may suffice to point out for the Dominion as a whole (1) that in the period of five years the average salaries per head of male officers, managers and clerks increased $83 or 10 per cent and of females $43.39 or 13·69 per cent; (2) that the average earnings of other employees (workers) increased $85 per head or 25½ per cent for males and $46.61 or 26½ per cent for females, and (3) that the average earnings of children under 16 years of age increased $42 per head or 39·83 per cent. These increases, be it noted, relate to the period of five years ending with 1905,—the last census of manufactures, taken in 1906, being for the calendar year 1905.

The force and meaning of this illustration are in the statement of it. Canada in all of its affairs is in a condition of large prosperity, and although it has been true during the last fifty years that the notion of public economy most strongly impressed upon the people relates to the cost of the Civil Service, it does appear to be reasonable that the persons chosen to conduct the business of the country and entrusted by government and parliament with that responsibility should be paid a wage commensurate with the quality of their labour, and with the needs of their lives in the conditions which environ them.

ARCHIBALD BLUE.

APPENDIX B.

AN ACT RESPECTING THE SUPERANNUATION OF PERSONS EMPLOYED IN THE CIVIL SERVICE OF CANADA.

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as *The Civil Service Superannuation Act, 1907-8.* Short title.

2. The Civil Service, for the purposes of this Act, includes and consists of— Interpretation.

(*a.*) All officers, clerks and employees in or under the several departments of the executive government who are employed continuously, and to whom *The Civil Service Act* applies; Persons under Civil Service Act.

(*b.*) All such officers, clerks and employees of the second or outside division of the Civil Service as the Governor in Council, from time to time, designates, and to whom *The Civil Service Act* does not apply, and who are employed continuously in an established capacity; Certain persons in the outside Service

(*c.*) The permanent officers and servants of the Senate and House of Commons, and the permanent officers and servants employed in the Library of Parliament, saving all rights and privileges of either House in respect to the appointment or removal of its officers and servants: Officers and servants of Senate and Commons.

Provided that the Civil Service for the purposes of this Act shall not include any person who by the provisions of Part II of the Royal Northwest Mounted Police Act is made subject to the application of that Act instead of this Act. Exception.

3. This Act shall apply to such officers, clerks and employees in the Civil Service as shall have been appointed on or after the first day of July, one thousand nine hundred and eight, and to such other officers, clerks and employees, appointed to the Civil Service prior to the said date, to whom the provisions of this Act are declared by any other Act to apply. Application.

4. In any case of doubt the Governor in Council may, by general or special regulations, determine to what persons the provisions of this Act do or do not apply, and the conditions on which, and the manner in which, they shall apply in any case or class of cases. Regulations.

5. The Governor in Council may grant a superannuation allowance not exceeding the allowance hereinafter authorized to any person who has served in an established capacity in the Civil Service for ten years or upwards, and who has attained the age of sixty years or become incapacitated by bodily infirmity from properly performing his duties. Eligibility.

2. The superannuation of any person to whom this Act applies shall not be deferred beyond the attainment by such person of the age of sixty-five years: provided that the Governor in Council may defer the superannuation of such person for a further period not exceeding one year, if he deems it in the public interest so to do. Limit of active service, age 65.

Breaks in service not to be counted.

6. If the service has not been continuous, the period or periods during which such service has been interrupted shall not be counted.

Preliminary inquiry by Treasury Board.

7. The superannuation of every civil servant to whom the provisions of this Act apply shall be preceded by an inquiry by the Treasury Board,—

(*a*) Whether the person it is proposed to superannuate is eligible within the meaning of this Act; and

(*b*) Whether the superannuation of such person will result in benefit to the service, and is therefore in the public interest; or

(*c*) Whether superannuation has become necessary in consequence of the mental or physical infirmity of such persons or by reason of such persons having reached the age of sixty-five years.

Report of Board.

8. No civil servant shall be superannuated unless the Treasury Board reports that he is eligible within the meaning of this Act; and no civil servant who is less than sixty-five years of age shall be superannuated unless the Treasury Board reports in addition that such superannuation will be in the public interest.

ALLOWANCES AND GRATUITIES TO CIVIL SERVANTS.

Rates of allowances.

9. The superannuation allowance hereinbefore mentioned shall be calculated upon the average yearly salary, during the last three years of service, of the person to whom such allowance is to be made, and shall not exceed, if the person has served for ten years, but less than ten and one-half years, an annual allowance of ten-fiftieths of such average salary, and if he has served for ten and one-half, but less than eleven and one-half years, an annual allowance of eleven-fiftieths thereof, and in like manner a further addition of one-fiftieth of such average salary for each additional year of service, similarly reckoned, up to thirty-five years, when an annual allowance of thirty-five-fiftieths may be granted, but no addition shall be made for any service beyond thirty-five years.

Ten years may be added.

10. The Governor in Council may, in the case of any person who entered the Civil Service after the age of thirty years, as being possessed of some peculiar professional or other qualifications or attainments required for the office to which he was appointed, and not ordinarily to be acquired in the public service, add to the actual number of years of service of such person, such further number of years not exceeding ten, as is considered equitable, for reasons stated in the order in council made in the case, and such additional number of years shall be taken as part of the term of service on which the superannuation allowance of such person shall be computed.

Diminished allowance if service unsatisfactory.

11. If the head of a department reports with respect to any person employed in his department, and about to be superannuated, from any cause other than that of ill-health or age, that the service of such person has not been satisfactory, the Governor in Council may, as to him seems fit, grant such person a superannuation allowance less than that to which he would have otherwise been entitled.

Gratuity when yearly allowance not earned.

12. If any person to whom this Act applies is constrained, from any infirmity of body or mind, to quit the Civil Service before the period at which a superannuation allowance might be granted him, the Governor in Council may allow him a gratuity not exceeding one month's pay for each year of his service; and if any such person is so constrained to quit the service before such period, by reason of severe bodily injury, received without his own fault, in the discharge of his public duty, the Governor

in Council may allow him a gratuity not exceeding three months' pay for every two years' service, or a superannuation allowance not exceeding one-fifth of his average salary during the then last three years.

Compensation if retirement compulsory.

13. If any person to whom this Act applies is removed from office in consequence of the abolition of his office for the purpose of improving the organization of the department to which he belongs, or is removed or retired from office to promote efficiency or economy in the Civil Service, the Governor in Council may, as compensation for his loss of office, grant such person, if his term of service is less than ten years, a gratuity not exceeding three months' pay for every two years' service; and if such person's term of service is ten years but less than twenty-five years, the Governor in Council may grant him, in addition to the superannuation allowance to which his term of service entitles him, a gratuity not exceeding one month's pay for each year's service; but no gratuity or compensation other than the superannuation allowance to which his term of service entitles him, shall be granted to any such person whose term of service is twenty-five years or upwards.

Receipts and payments.

14. The amounts deducted from salary under the terms of section 15 of this Act shall form part of the Consolidated Revenue Fund; and the superannuation and other allowances and gratuities granted under this Act shall be payable out of the said Consolidated Revenue Fund.

CONTRIBUTIONS.

Rate of contribution 4 per cent. Limitation.

15. A deduction shall be made from the salary of every civil servant to whom this Act applies at the rate of four per centum per annum on such salary; but such deduction shall be made only during the first thirty-five years of service.

Account No. 3 to be kept.

2. An account shall be kept, to be called the Civil Service Superannuation Account, Number Three, of all amounts received and paid out under the provisions of this Act, and the balance to the credit of the said account at the end of any fiscal year shall be at least equal to the present value of the prospective allowances and gratuities granted or grantable to persons subject, at the end of such fiscal year, to the provisions of this Act; such present value to be ascertained upon the basis of such standard or other tables of mortality as are, in the opinion of the Governor in Council, appropriate, and a rate of interest not exceeding four per centum per annum.

Provision for valuation.

COMPULSORY RETIREMENT.

When.

16. Retirement shall be compulsory on every person to whom the superannuation allowance hereinbefore mentioned is offered, and such offer shall not be considered as implying any censure upon the person to whom it is made; nor shall any person be considered as having any absolute right to such allowance, but it shall be granted only in consideration of good and faithful service during the time in respect of which it is calculated.

No absolute right to allowance.

Right of dismissal unimpaired.

17. Nothing herein contained shall be understood as impairing or affecting the right of the Governor in Council to dismiss or remove any person from the Civil Service.

DEATH BEFORE SUPERANNUATION; DISMISSAL.

Contributions may be repaid in

18. In the event of death before superannuation of any person to whom this Act applies, such person being at the time of his death a contributor

Event of death in certain cases.

under the provisions of section 15 of this Act, or having so contributed during thirty-five years of service, and no widow, or child below the age of eighteen years, surviving him, the Governor in Council may, on the recommendation of the Treasury Board, pay to the heirs of such person the whole, or such portion as is deemed expedient, of the amount so contributed by such person.

In event of dismissal.

2. The Governor in Council may, on the recommendation of the Treasury Board, pay to any person dismissed from the public service of Canada after the first day of July, one thousand nine hundred and eight, who at the time of such dismissal was contributing under the provisions of section 15 of this Act, or who had so contributed during thirty-five years of service, the whole, or such portion as is deemed expedient, of the amount so contributed by such person.

With interest.

3. The Governor in Council may also, on the recommendation of the Treasury Board, in addition, pay to the persons referred to in the first two subsections of this section, interest to the date of such death or dismissal, as the case may be, on the contributions so repaid, or any portion thereof, at such rate of interest, not exceeding four per centum per annum, and calculated in such manner, as the Governor in Council deems advisable.

In discretion of Governor in Council.

19. Nothing in the last preceding section contained shall be construed to confer upon any person any right to demand or enforce the repayment of any amount contributed by such deceased or dismissed person, or any interest thereon, and all payments made under the last preceding section shall be wholly in the discretion of the Governor in Council.

FORFEITURE OF ALLOWANCE.

In what cases forfeitable.

20. Every person who receives a superannuation allowance, and is under the age of sixty years, and is not disabled by bodily or mental infirmity, may be called upon to fill, in any part of Canada, any public office or situation for which his previous services render him eligible, and which is not lower in rank or emolument than that from which he retired; and if he refuses or neglects so to do, he shall forfeit his said allowance.

PROVISION FOR WIDOWS AND CHILDREN.

General conditions of grant.

21. Subject to the provisions hereinafter contained, the Governor in Council may, on the recommendation of the Treasury Board, grant an annual allowance for life to the widow, and an annual allowance until attainment of the age of eighteen to each of the children, of any civil servant to whom this Act applies, who at the time of his death was either actively employed in the public service of Canada, or was in receipt of a superannuation allowance.

Cases when allowance shall not be granted.

22. Such annual allowance shall not be granted in the following cases:—

(*a.*) If the person to whom it is proposed to grant the allowance is, in the opinion of the Treasury Board, unworthy of it;

(*b.*) If the civil servant married after being superannuated;

(*c.*) If the civil servant was at the time of his marriage over sixty years of age;

(*d.*) In the case of a civil servant who married after the first day of July, one thousand nine hundred and eight, if he was more than twenty years older than his wife;

(*e*.) If the civil servant died within one year after his marriage, unless he was manifestly in good health at the time of his marriage, and his death was caused by disease or injury not due to causes within his own control, and the Treasury Board is satisfied that there are no other objections to the granting of the allowance.

Rates of allowances to widows;

23. The annual allowance to the widow of a civil servant, if such civil servant has served for a period of twenty years or upwards, shall not exceed one-fourth, and if such civil servant has served for a period of less than twenty years, shall not exceed one-third, of the annual superannuation allowance which the civil servant was in receipt of, or to which he would have been entitled, as the case may be; and the annual allowance to a child may be fifty dollars but shall not exceed one hundred dollars; Provided, however, that the annual allowance granted to the widow of a civil servant shall not exceed six hundred dollars; provided, further, that the total amount paid during any one year to the widow and children of a civil servant shall not exceed one-half of the annual superannuation allowance which the civil servant was in receipt of, or to which he would have been entitled, as the case may be.

and to children.

Special allowance if child in great need.

2. Any provision of subsection one of this section to the contrary notwithstanding, there may be granted to the child of a civil servant, if such child be motherless and, in the opinion of the Treasury Board, in great need, an annual allowance not exceeding two hundred dollars.

Gratuity to widow.

3. In the event of a civil servant dying before the period at which a superannuation allowance might be granted him under the terms of this Act, the Governor in Council may allow his widow a gratuity not exceeding one month's pay for each year of his service.

Allowance to cease on remarriage of widow.

24. A widow's or a child's allowance shall be discontinued if she or it becomes unworthy of it.

2. If a widow remarries, her allowance shall cease from the day following that of her marriage.

REPORTS.

Annual to Parliament.

25. The Minister of Finance shall lay before Parliament within fifteen days after the commencement of each session thereof,—

(*a*) a statement of all superannuations and retiring allowances within the year granted under the terms of this Act, giving the name and rank of each person superannuated or retired, his salary, age and length of service, the allowance granted to him on retirement, the cause of his superannuation and whether the vacancy has been subsequently filled, and if so, whether by promotion or by new appointment, and the salary of the new incumbent;

(*b*) a statement of all allowances granted to widows and children of civil servants under this Act within the year, showing the name, age and sex of each person to whom any such allowance has been granted; and the name, age at death, salary and length of service of the civil servant to whose dependents such allowance or allowances have been granted;

(*c*) a statement showing the condition of the Civil Service Superannuation Account, Number Three, at the end of the last preceding fiscal year.

Order in council to be laid before Parliament.

26. The order in council made in any case of superannuation, or of granting an allowance, shall be laid before Parliament at its then current or next ensuing session.

FINANCE DEPARTMENT,
OTTAWA, CANADA, March 23, 1908.

J. M. COURTNEY, Esq., C.M.G., I.S.O.,
Chairman Civil Service Commission,
Ottawa.

DEAR SIR,—With reference to the report of your Commission, which was placed in the hands of the Minister of Finance on the 17th instant, I am requested by Mr. Fielding to call your attention to the remarks made by Messrs. Fyshe and Bazin, on page 33 (MS. page 59) thereof, on the subject of the Department of Marine and Fisheries:

'Your Commissioners have taken up and at great labour have followed through some of the files of this department, making extracts as they went along, which have been rewritten as nearly as possible in chronological order and which are now available and can be examined if required. The judgments they have formed are based largely on these extracts and what they have seen in the offices.'

I am now requested to say that as these 'extracts' appear to have an important bearing on the conclusions formed by Messrs. Fyshe and Bazin, it seems desirable that they should be included in the report. I have, therefore, to ask that you will be good enough to forward the extracts in question to me as soon as possible.

Yours truly,

T. C. BOVILLE,
Deputy Minister of Finance.

460 WILBROD STREET,
OTTAWA, March 24, 1908.

T. C. BOVILLE, Esq.,
Deputy Minister of Finance.

DEAR SIR,—In reply to your letter of yesterday, I now beg to forward the extracts made by my colleagues in connection with their remarks respecting the Marine and Fisheries Department in the report of the Civil Service Commission.

Yours very truly,

J. M. COURTNEY.

CHALLENGED ACCOUNTS, &c.

MARINE AND FISHERIES DEPARTMENT.

(Quebec, Montreal, St. John, Halifax, Victoria, Charlottetown.)

June 22, 1905.—Accountant Davison sent to Quebec to reorganize bookkeeping in conformity with system at Sorel and Prescott.

Memo. re *expenditures by M. and F.* re *Lighthouses—Extravagance and loose management at Quebec Agency.*

May 31, 1905.—I am of opinion that in the Quebec agency alone a saving of at least $25,000 per annum can be made by compelling the agent to obtain authority for his expenditures over ordinary supplies and maintenance. The undersigned is of the opinion that the same system should be adapted to each agency of the department, and begs to make the following recommendation:—1st. That Mr. Davison visit each agency of the department, so that a uniform system of accounting should prevail at each. 2nd. That he should determine the amount required for each agency for ordinary maintenance and supplies; and 3rd. That the agents be compelled to get authority from the department for any expenditure. If this is not carried out, the department can look for an overdraft for the next fiscal year of from $50 to $100,000. (Signed J.F.F. Approved, R.P.)

Telegram—Gregory to Department—Employees in distress for back pay.

September 8, 1905.—Sending back construction pay-lists to-day. Parent may not be here for 3 weeks. Office besieged with poor women wanting money. Pay-lists are correct. Parent will certify them when he comes back. Have telegram him pressing me pay them. Have no money pay with, nor return $5,000 advance, owing to every cent being out. Answer whether you will pay or not that can do so, or send people away empty-handed.

September 9.—Answer: Draw for amount of construction pay-lists. Show this telegram to bank as authority. B. of M. usually cash such drafts at par.—W. L. Magee, for Deputy.

September 13.—See Letter—Deputy.

September 20, 1905.—Gregory was instructed to incur no expenditure exceeding $100 without receiving approval from headquarters.

Irregularities at Quebec Agency.—Lost accounts.

December 21, 1905.—Deputy to Gregory: Severe arraignment of management of agency *re* lost accounts of Samson & Filion. I regret to state that this is but one more of the many irregularities connected with the Quebec agency, and I am advised that only in one case is a responsible officer's name connected with the orders given. But no doubt exists that the orders were given, and very probably the material was supplied. The cost of fitting up these fog alarm stations in Quebec has been so great that it has practically crippled the construction vote for two years.

December 26, 1905.—A. E. Parent's explanation? ? See Stumbles XX.

January 3, 1906.—Commissioner of Lights J. F. Fraser writes L. E. Côté, Technical Assistant Commissioner of Lights, about accounts received from Samson & Filion for pipes, valves, &c., for various stations below Quebec. Certified to by you. The bills are dated September and October, 1904. Please advise me if you are aware, either through a personal check or through that of your assistants, that the material billed was received. $3,685.06.

B.H.F. (Assistant Chief Engineer).—The material, so far as I know, was ordered by the Quebec agency on lists furnished by Mr. Côté. I knew nothing of the matter until the accounts were received, and a casual inspection shows that many things were ordered that were supplied by the Fog Signal Company and should not have been necessary at these stations.

January 3, 1906.—Deputy writes to Côté about same accounts.

January 9, 1906.—Côté replies. After so long a time I could not be expected to know if the material had been received. As far as I can remember now, the bills seem correct, and I return them after certifying them, as you instruct me to do. (Very inadequate explanation.)

Iron slab for moulding boat frames.

February 6, 1906.

March 14, 1906.—Depty writes Gregory about a perforated cast-iron slab, for moulding boat frames, 6 feet square by ¾-inch thick, $237.87, ordered by Gregory. Memo. by B.H.F.: 'Order should have been approved by Parent. Money was not available, and agent should have let it stand over till next year. 3rd. Amount more than he should have expended without authority from deputy, in view of his strict instructions. 4th. A glance at the requisition will show that the article is not properly described, nor is the price mentioned. Cannot judge of the price charged; but that a casting 6 feet square by ¾ inch thick should require 18 solid days in the planer seems to me ridiculous.

May 3, 1905.—Dear Mr. Gregory.—Young Willie Walsh, who represents McColl Bros. & Co., Montreal agents for Vesta Boiler Compound, has asked me to say a good word to you for him; and if the material is as good as represented, I hope you will place some orders in his way.—C. Fitzpatrick.

May 6, 1905.—Mr. W. Leo. C. Walsh, representing McColl Bros. & Co., will call on you, probably Tuesday, in reference to some oil. If you can give him an order, I will feel obliged.—R.P.

Kantslip.

March 14, 1905.—Letter from department, asking explanation of bill from McColl Bros. & Co. for Kantslip, $548. With the present information in my possession, I am inclined to believe that you have ordered a very large amount of this material for which the department has no present use.

March 16, 1905.—Gregory replies that stuff was purchased on direction of the Hon. R.P. on the wharf at Quebec, who directed me, then and there, to give a good order to the agent of McColl Bros. & Co., Mr. Leo C. Walsh, who stood beside him at the time. That was over a year ago. I gave an order to Mr. Walsh, as requested. and when the goods arrived, I was somewhat surprised at the size of the packages, and I refused to take them; and a lengthy correspondence took place between McColl Bros. & Co. and myself on the subject—in fact, I declined to give them any more

orders. Subsequently, I received a letter from the late minister, as well as another from Hon. Mr. Fitzpatrick, copies of which I herewith inclose. An opportunity some time after occurred when I saw the late minister here and spoke to him, as it seemed to me that that firm had taken advantage of his kindness about the matter. He told me to keep the goods and try to get rid of them to the best advantage, which I did by distributing them around where I understood the Kantslip could be used on belts, &c. If any has been sent where it was not really required, I shall see that it is removed where it can be used to advantage.

The new system now established of informing you immediately of any order I may receive from the minister or deputy minister verbally will avoid for the future any misunderstanding.

March 21, 1906.—See Gregory's letter.

Delay paying salaries.

April 2, 1906.—Gregory telegraphs: Please send cheques for salary staff and resident engineer—in great distress.

April 28, 1906.—Letter to Gregory shows a different spirit from what had prevailed formerly—indicating the change of head of department.

Prices extravagant.

June 30, 1906.—Auditor General calls attention to various accounts rendered during the current fiscal year by J. B. Côté, Quebec, for sundry lighthouse supplies amounting, so far as the vouchers sent me show, to nearly $5,000, and to inquire if the prices, certified in each case by Mr. Gregory, are the ordinary retail prices, or prices specially agreed upon, in view of the large quantities purchased.

July 11, 1906.—Letter from Auditor General: Reference to accounts rendered by J. B. Morin, Quebec, for plumbing and other repairs to lightships in Quebec district during last year, to amount of $2,122.79, and to inquire if prices charged were determined by contract or agreement between your department and Mr. Morin, or if they are merely the ordinary prices charged for work and material, irrespective of the amount involved.

Reply to this, September 24.

July 11, 1906.—Gregory's reply to Auditor General's letter, June 30. New work done by Côté at prices agreed upon, but repairing of oil tanks, lamps, &c., no prices can be fixed. When work is completed satisfactorily, prices are examined, and if found fair and just, the accounts are certified. All his work has been satisfactory and prices just.

July 12, 1906.—Letter from Auditor General. Accounts rendered by J. J. Murphy, Quebec, $4,075.08, for lumber, cement, &c., delivered at the Quebec agency for use in connection with maintenance of lights, and to point out that so far as the accounts show, the prices charged and certified to by the agent as fair and just, are merely the ordinary retail prices for which supplies might be obtained, irrespective of the quantities required or the amount involved.

July 13.—Similar letter about Samson & Filion's account for lighthouse supplies, &c., amounting to $10,000, nearly.

July 13.—Similar letter *re* Terrieaux & Racine's account.

July 16.—Letter from deputy to Gregory, saying Auditor General is calling attention to payments, amounting to $4,816.94, to C. A. Parent for lighthouse supplies, and wanting to know about prices—whether agreed upon or merely retail.

July 6.—Similar letter from Auditor General about accounts, La Compagnie Martineau, for lighthouse supplies amounting to $2,088.17.

July 6.—Similar letter *re* accounts Mechanics' Supply Company, Quebec.

July 12.—Gregory's reply. I have the honour to state that the prices charged by the Mechanics' Supply Company and La Compagnie Martineau are the market prices of goods they sell to contractors and dealers in their line. The prices for all iron are fixed every year, and prices have been settled with Messrs. Chas. A. Parent, Samson & Filion, La Compagnie Martineau, and others for bar iron, boiler plates and other goods in their line.

About prices—A.G.'s inquiries.

July 19, 1906.—Gregory writes about Auditor General's inquiry regarding prices. I beg respectfully to state that the prices charged by J. J. Murphy, Samson & Filion, Terreau & Racine, are all fixed and agreed upon in advance. (Query.—What evidence is there of this—say copy of agreement or correspondence thereanent). If lower rates are expected I have no idea how you can obtain them. There has been no other system in the service before or since Confederation, and it remains with the department to establish means of effecting a change.

July 19.—Similar letter regarding accounts C. A. Parent. The prices certified in the account as fair and just are prices agreed upon, and the same as given by other hardware firms on the list of patronage of this agency.

July 19.—*Re* Morin's account for plumbing. 'Prices charged by J. B. Morin are in perfect keeping with those charged by the other plumbers and tinsmiths on the patronage list of this agency, and I know of no means of making a contract between the department and a plumber.

July 27, 1906.—See deputy's letter to Gregory on next page, authorizing him to buy chemical fire extinguishers from P. E. Perreault.

Delayed Payments.

August 10, 1906.—Telegram from Gregory: 'Please send cheque $640.50 pay list Cape Bauld June last sent 20th ulto. Families in distress for want of money.'

Shocking delay in settlement of accounts.

August 13.—Letter from Mailloux, Acct. Quebec agency, in connection with certain 'accounts left here by you' to be arranged immediately and return them to you so as to enable you to have them paid before the 15th inst. G. T. Davie & Sons, F. X. Drolet. These acounts were forwarded to the department in the month of October last.

About prices—A.G.'s inquiries.

August 29.—Gregory replies to points raised by Auditor General as to prices and to deputy's letter in which he says: 'but you do not say whether you always purchase from the lowest tenderer for each article you mention on the list you send out for quotation.' (Gregory's reply avoids any reference to tenders. Evidently there are no tenders.)

As to lumber, I get prices for lumber from the different dealers. The foreman goes around the different lumber yards and chooses what he wants; then the one whose price is the lowest for the same grade of lumber establishes the price we allow any one; and if they do not accept that price we take it from the one who will do so.

I have never been ordered to adopt any other means to carry out the intentions of the department than those I have just mentioned.

Patronage.

August 29, 1906.—The same system is adopted for groceries, and prices have been approved of by the Department of Marine and Fisheries at Ottawa as per your letter of April 28, 1906. I have always been directed to divide the patronage amongst the different parties in my list and do my best to carry this order out.

Delayed pay-list.

September 13, 1906.—Gregory telegraphs: 'Please send funds pay-list ending with August to recoup me. September fortnight will be due Saturday and I have nothing on hand to pay with.

Seven different Letters to say what could have been said in one.

September 24, 1906.—Seven different letters by deputy to Auditor General about methods of fixing prices, referring to following names:—C. A. Parent, Samson & Filion, Martineau & Co., Mechanics Supply Co., Terreau & Racine, J. J. Murphy, Richelieu and Ontario Navigation Company, J. B. Morin.

Fire extinguishers.

July 27, 1906.—I have to inform you that if you consider that chemical fire extinguishers are necessary on board the vessels of the Quebec agency you are to purchase them from P. E. Perreault, 312 St. John St., Quebec. Mr. P. has been advised to call upon you in connection with this matter.

October 8, 1906.—Gregory writes about fire extinguishers bought from Perreault who is now an employee of the agency and has a lot of fire extinguishers on hand which he would like to sell to the department. Under the circumstances, as he is a poor man with a family and now unable to go out and solicit their sale. This was well understood by the late lamented minister, who was his friend, and fully recognized the worthiness of the said chemical fire enxtinguishers. I would recommend that the department take them off his hands, as we have several stations requiring such protection.

October 12, 1906.—Letter from deputy: 'With reference to fire extinguishers purchased by you from P. F. Perreault, I find no authority on file in the department for the purchase of these fire extinguishers and I notice that within the last couple of years large purchases have been made from this gentleman. In this connection I may say that in 1904-5 the late minister purchased from Mr. Charles Patton fire extinguishers to the sum of $9,000. If this number 142 were sent to Quebec for the use of your agency lighthouses and Dominion steamers. Besides that a number were stored in Montreal and are there still. If you had notified the department that fire extinguishers were absolutely necessary to put on board the Dominion steamers and to be used at lighthouses the required number could have been sent from Montreal. Instead of this it appears you made purchases from Mr. Perreault without any instructions or authority from the department. The minister would like to have an explanation in regard to this matter. He would also like to have a statement of how the fire extinguishers purchased in 1904-5 were distributed.

October 8, 1906.—Gregory writes to department in answer to their letters of October 4 and 5 returning P. E. Perreault's accounts for chemical fire extinguishers and asking me to inform you upon what authority the purchases were made. He refers to letter of July 27, 1906.

October 15, 1906.—In this letter Gregory says: 'I shall have a statement prepared by the Inspector of Lights as soon as possible showing how the fire extinguishers purchased in 1904-5 were distributed, and forward the same to the department.'

(This statement appears never to have been received by the department.)

MEMO. SHOWING DISTRIBUTION OF PATTON'S FIRE EXTINGUISHERS, QUEBEC AGENCY.

Received 50 from Dominion Lighthouse Depot, Prescott, Ont., May 8, 1905—Deliveries, 1906.

Amherst island lighthouse, 1; Anticosti, south point, 1; Anticosti, west point, 1; Anticosti, east point, 1; Anticosti, south-west point, 1; Belle Isle, west end, 2; Belle Isle, north end, 2; Bird Rocks, 1; Cape Bauld, 2; Cape Chatte, 1; Cape Despair, 1; Cape Gaspé, 1; Cape Magdalen, 2; Cape Norman, 2; Cape Ray, 2; Cape Rosiner, 1; Cape Etang du Nord, 1; Entry island, 1; Egg island, 1; Flowers island, 2; Fame Point, 2; Forteau, 2; Greenly island lighthouse, 2; Macquereau point lighthouse, 1; Martin river lighthouse, 2; Matane lighthouse, 1; Métis lighthouse, 1; Paspebiac lighthouse, 1; Perroquets lighthouse, 1; Plateau Rock lighthouse, 1; Points des Monts lighthouse, 1; Point Rich lighthouse, 2; Portneuf lighthouse, 2; Ste. Félicité lighthouse, 1; Seven islands lighthouse, 2; Bryon island lighthouse, 1.

October 30, 1907.—Gregory to deputy: Confirms following telegram:—'Only 50 Patton's fire extinguishers, not 142, received on May 8, 1905. Sending list by mail to-night where distributed.' List inclosed, as given on this sheet.

October 29, 1907.—Deputy to Gregory: Referring to your letter of October 15, 1906, relating to fire extinguishers, I have to inform you that in the last clause you promised to have a statement prepared by the inspector of lights as soon as possible showing how the fire extinguishers purchased in 1904-5 were distributed, and the statement forwarded to the department. A search has been made for the statement, but it does not appear to have reached the department. I have to request you to have it sent immediately or a copy of it. The Civil Service Commissioners are now looking into the matter at Ottawa and have requested the statement promised by you.

October 15, 1906.—Deputy said in letter to Gregory that 142 fire extinguishers were sent to Quebec in 1904-5 for use of agency lighthouses and Dominion steamers. Also a number stored in Montreal and are there still.

Blundering Correspondence.

September 21, 1906.—Gourdeau writes Gregory about account in connection with Governor General's trip on SS. *Minto,* in which a charge was made, apparently for wine, and which he was instructed to disallow as being contrary to previous instructions.

Gregory replied on September 24 that there was not a drop of wine put on board; that the expense was for wine glasses. Gourdeau replied, September 28, that explanation was satisfactory, and instructed him to forward original account for payment.

Gregory then writes, October 10, asking why F. T. Thomas & Co.'s account was reduced. Gourdeau replies, October 12: 'I beg to inclose herewith the account, and you will see that the reduction was made at your own office, for wine glasses.' Gregory replies, October 10, and refers him to his own letter of September 28, and to mine of September 29 returning the account as directed.

October 15, 1906.—Mailloux, accountant, at Quebec, writes to Boudreau, accountant's department: 'I beg to request that you will give me, as soon as possible, the information required by official letter to Col. Gourdeau, dated 10th ulto., copy inclosed, as it appears I cannot get this information in the regular way by the department.' On this letter was crossed in pencil: 'The information asked for was given some time ago. Please try to trace this letter on file.'

October 24.—Deputy writes that the accounts for which these cheques were issued were incurred by the steamer *Aberdeen* while in Quebec.

SESSIONAL PAPER No. 29a

Quebec Agency purchasing unnecessarily expensive lumber—Resident Engineer says he is not responsible.

October 31, 1906.—B. H. Fraser writes P. E. Parent, resident engineer: 'I inclose herewith accounts from J. J. Murphy for materials for various stations below Quebec. You will please explain why such costly lumber has been ordered for these works, and whether cheaper material could not be obtained and would not be satisfactory.

November 1.—Parent replies: 'I have to state that these qualities were wanted, as the timber was wanted for windows, frames, doors, friezes, &c., and other furnishing material for dwellings. Naturally when timber or other construction material is required, an order is prepared and handed to the agent, who tells us where the timber is to be purchased, and the agent also looks after the cost of those materials. I cannot, therefore, answer for anything else but as to the goods received and the quality wanted.

Neglect and Delay.

November 8.—Gregory acknowledges receipt of your letter of September 17 last returning cheque No. A 2750, altered as requested by my letter of September 14. Letter and cheque referred to were only received at this agency yesterday (November 7).

Restrictions on Gregory.

November 17, 1906.—Long letter from Gregory in answer to instructions that no repairs to government vessels or plumbing be hereafter made unless the same have first been approved by Mr. Beauchemin, assistant to Inspector Schmidt; pretends to be well satisfied, but evidently is not.

Delay in paying crews.

December 4, 1906.—Gregory telegraphs: Captains Irvine, Christensen and Leblanc need badly balance due them to pay off their crews. When can they expect cheques? See statement 192, voucher 1332.

Purchasing chairs for 'Montcalm' without authority.

Memo. for Deputy Minister by A. W. O.: I attach an account received from the agent at Quebec, dated October 6, for five large Morris chairs covered in plush at $18 for the *Montcalm*. I do not see any authority given to the agent for this order. I am to request you to be good enough to initial the account for payment, if correct.

Written across this in red ink: These were purchased for the Governor General's trip. He afterwards decided to take the *Minto*. 8-12-06, F. G. (Account paid, December 10.)

Delay with pay-list.

April 23, 1907.—Gregory asks when he may expect a cheque in payment of pay-list of clerks of this agency from December 16 to 31, 1906?

Excessive delay in paying accounts.

April 26, 1907.—Gregory writes about an account, F. T. Thomas & Co., $75 for chimneys' supplies—August last forwarded in my statement 119 voucher 906, October 12, 1906. Your communication of October 26, 1906, states that the account in question will be paid.

Gregory suggests that Department should state what prices in S. & F.'s account should be reduced to.

May 10, 1907.—Letter from Gregory *re* Samson & Filion's accounts. I return herewith Samson & Filion's bills in order that you may put down opposite each item the price which is considered should be paid for such goods. I will then bring the matter up before Samson & Filion in such a manner as you may think proper.

Reply—May 15 (evidently by Stumbles) repudiated suggestion and suggested reduction of 25 per cent.

June 21-26, 1907.—Quebec agency bought Harvest Queen flour at $6.95, and Shamrock at $6.90. The market price for this flour at which it could have been bought in any quantity at that time was $4.50 per barrel.

Chief Engineer objects to unneeded repairs.

July 31, 1907.—Anderson, chief engineer, asks Gregory for explanation of repairs to Prince Shoal lightship when Schmidt had reported no repairs would be required, $172.71, F. X. Drolet. Also $305.90, F. X. Drolet, for repairs to Red Island lightship when same report was made by Schmidt.

Samson & Filion's excessive prices—Agent must make the best of it, although Department convinced that they are unjustifiable.

July 25, 1907.—Deputy writes to Gregory: In reply to your letter 22nd instant, in which you state that S. & F. want their account paid ($1,085.54) and stating that the department reflects upon their reputation as merchants, I have to inform you that there was no reflection upon their reputation in any way or form. The department took steps to compare the prices for the same articles with the prices paid at Sorel, and the difficulty to a large extent rests on the fact that you certified their account at high prices. Under these circumstances, there is no other course to follow than for you to make the best arrangement you can with this company. The department is quite satisfied that the prices are not what is called reasonable and fair for the goods, compared with the goods purchased in other cities. I would like very much to have the matter settled as amicably as possible, but I cannot overlook facts that have been brought to my attention, and which I have gone to great trouble to rectify (verify).

Samson & Filion take no backwater.

August 3, 1907.—Letter from Samson & Filion: Having looked over our prices on manilla rope charged on the account of C.G.S. *Champlain,* we have to notify you that the price is correct. This rope is the purest manilla, and manufactured expressly to fill orders as given to us by Captain McGough. On packing, the prices are charged accordingly with the quantity chosen. Our globes and paint prices are charged accordingly with the quantity ordered.

(Subject reported on by Desbarats, Sorel, February 4, 1907.) See his report attached.

July 5, 1907.—Gregory's reply to letter from department asking what authority he had for making such large purchases without the sanction of the department, reference being particularly to supplies for Belle Isle, Seven Islands, Prince Shoal, Red Island and White Island lightships.—2 pages.

Only one flour dealer on patronage list.

September 5, 1907.—Letter from Gregory, 4 pages, in reply to department's letter of September 4, *re* accounts of F. X. Gagnon and Samson & Filion, complaining again of excessive prices—in which he explains in extenuation of the prices paid for flour that there is only one flour dealer on his patronage list. See typewritten letter attached, dated September 5, 1907.

Fresh restrictions on Gregory.

September 6, 1907.—Letter to Gregory giving new instructions with regard to bank account. The department requires that in future a copy of the storeman's or yardman's receipt for material and supplies be pasted to the back of the bills to which they apply, and thus forwarded to Ottawa. The same practice should be followed in connection with any bills paid at the agency. It is further required that the purchase order number appear on every bill, and the name of the person authorizing the purchase.

September 11, 1907.—Letter from acting chief engineer to resident engineer, Quebec, asking for information about two accounts for materials charged to construction.—No answer.

High-priced articles for SS. 'Champlain' ordered by Captain McGough.

September 24, 1907.—Memorandum about Samson & Filion's account goods supplied *Champlain*. Captain McGough being asked what quality of goods he had ordered replied that he had ordered the 'best,' as he considered the very trying work of the *Champlain* in winter required the very best. This being the case, I am of the opinion that Captain McGough is responsible for ordering so much high priced articles. The conclusion was that a deduction of 25 per cent should be made.

Memorandum for Deputy Minister: Dominion steamer inventories—March 5, 1906.

Construction material in store.
Maintenance material in store.
Druid—ship supplies, silverware, crockery &c., on board (2 sheets).
Aberdeen—ship supplies, silverware, crockery, &c., on board (7 sheets).
Montcalm—ship supplies, silverware, crockery, &c., on board (10 sheets).
Champlain—ship supplies, silverware, crockery, &c., on board (8 sheets).
Maintenance (4 sheets).
Construction (1 sheet).
Inentory of gas buoys, sinkers, &c. (1 sheet).

Improvident purchasing.

The maintenance stock is fairly large, although nearly everything is also purchased in retail.

I beg to say that Mr. O'Farrell, Superintendent of Lights, keeps his books very well, that he makes an inventory every fall of what is left with each lighthouse keeper, besides of what he has in stock; and this enables him to check the expenditure of his men.

Evidently no proper storekeeping—No efficient check of stores—Great Saving might be effected by prudent wholesale purchases and by having Department's own shops properly equipped to do its own repairs.

The only improvement I could suggest would be to appoint a storekeeper and not let anything go out of the store unless a requisition is signed by the agent. As it is at present the maintenance and construction materials are in the same building and the men in the shop can go and take what they need for their work, indiscriminately from one or the other, regardless of what it is for. I may also add that if you had a good storekeeper, articles which are often required could be purchased wholesale, instead of retail; and thus a considerable saving could be effected. A saving of 8 or $10,000 a year could be made. I think it would also be advantageous to have the shops better equipped, so as to be able to make repairs to machinery of the steamers, &c. Now, we have to go to F. X. Drolet or someone else for every little repair. From July 1 to this date we have already paid $59,131.66 to Mr. Drolet alone for repairs of all kinds, and we still have four months to run to end of fiscal year.

While I was in Quebec a circular was issued to all the merchants, &c., on the patronage list to forward their accounts monthly. This will enable the department to control the appropriations better.

A file is prepared on which yearly inventories of all stores owned by the department will be placed, and this will enable the officers in charge of the different votes to control more effectively the purchases. Circulars are being issued to agencies, &c., to forward copies of their inventories to the department and I would suggest that they be prepared either during December or January.

September 10, 1906.—Inventory of deck stores—Engineers and Stewards Departments:—

C.G.S. *Stanley,* J. B. Ferguson, chief engineer, 7 sheets.

C.G.S. *Minto,* J. S. Ferguson, chief engineer, 2 sheets.

C.G.S. *Aberdeen,* W. M. Stewart, chief engineer, 6 sheets.

Coal Contract for Prescott Agency.

September 13, 1907.—Letter from Jas. Buckly, Prescott, complaining that his contract to supply anthracite coal for depot there for one or three years involved a loss to him of 50 cents a ton. Contract price was $5.75 and cost price $6.25. Begs for consideration. I am willing to continue the furnishing of the coal under the circumstances at cost price—say $6.25 per ton.

Memorandum for Deputy Minister thereanent.—September 17, 1907.—(By W. W. S.): I recommend that Mr. Buckly's offer be accepted, and as he has furnished coal at a loss in the past, that 5 per cent profit be allowed him for coal in future. Anthracite coal in Ottawa costs from $7.25 to $7.75 and the regular price at Prescott is $7 per ton.

GOVERNMENT SHIPYARD,

Lt.-Col. F. GOURDEAU, SOREL, February 4, 1907.

Deputy Minister of Marine and Fisheries,

Ottawa.

SIR,—I am in receipt of your letter sending me unofficially a number of accounts for supplies for the steamer *Champlain,* and asking me to give my opinion on the prices charged.

It is evident that all this material has been bought at retail over the counter, and full retail prices charged. On a number of items, I am unable to form any judgment, as sufficient detail is not given in the accounts. I find, however, that as a rule, the prices are a shade higher than those which prevail in the retail stores at Sorel, and are generally about 50 per cent higher than the prices which we pay at the Sorel shipyard. In a few cases the difference amounts to 100 per cent. On the item of washing soda, we pay 85 cents per 100 pounds; the Quebec charge is $3. It can be bought in Sorel for $1.50.

For parafine candles we pay 9 cents; the Sorel retail price is 15 cents, and the Quebec price is 20 cents.

The cold-blast lanterns, we pay $4.50 per dozen; the Sorel retail price is $7.50, and the Quebec price is $9.

On Comfort soap we pay $3.65 per case, the Sorel retail price is $4.25, and the Quebec price is $5.

On parlour matches we pay $4.50 per case, buying them at retail at Sorel; the Quebec price is $5.

I append a comparative statement of the prices which we pay at the Sorel shipyard and the prices charged by Samson & Filion. Where their prices are not more than 50 per cent higher than our wholesale prices, I would consider their charges fair, but where they go beyond that, there was an over-charge, which might be due to some special circumstances, but which would call for an explanation.

On heavy material, such as rope, steel, iron, white lead, &c., the margin should be very much smaller than 50 per cent, and on these items, I find Samson & Filion's

prices quite fair. In stating that prices are fair, I am considering them as retail prices for small quantities.

As to your question about the paint, there is no doubt that paint could be mixed on board at a much smaller cost than that of the ready-made paint, but it requires a good man to mix paint well. We buy small quantities of Sherwin-Williams paint for special uses, but as a rule we mix our own paint

Yours obediently,

G. J. DESBARATS,
Director of Shipyard.

COMPARATIVE STATEMENT of prices paid to Samson & Filion, Quebec, and prices paid by Government Ship Yard, Sorel.

J. U. GREGORY,
Agent.

QUEBEC, June 18, 1907.

Lt.-Col. F. GOURDEAU,
Deputy Minister, Marine and Fisheries,
Ottawa.

SIR,—I have the honour to acknowledge receipt of your letter of the 17th instant returning Mr. Raoul R. Bergevin's account against the C.G.S. *Eureka*, and requesting me to inform you of the reason why such a large quantity of carpet was used on board this vessel.

I beg respectfully to state that by your communication of the 26th March last, No. 26336, you appeared to place this matter very much in the hands of Mr. Larochelle, President of the Corporation of Pilots, who directed the captain and steward to obtain what was necessary to fit the boat out for the service; the consequence was that he ordered from Mr. Bergevin what appeared to be required. For the quantity obtained the carpet and oilcloth appear to be at a reasonable price, and the boat undergoing a thorough outfitting appeared also to need all that was purchased. You will please bear in mind that there were many changes made to the *Eureka*, and really I am not aware that anything more than was required was given to the vessel.

Respectfully submitted,

J. U. GREGORY,
Agent, Dept. Marine and Fisheries.

OTTAWA, June 26, 1907.

The AGENT,
Dept. Marine and Fisheries,
Quebec, P.Q.

SIR,—The department is in receipt of accounts from J. B. Côté and W. R. Blakiston, amounting to $971.60 and $271.90, respectively, for supplies to Belle Isle, Seven Islands, Prince Shoal lightship, Red Island lightship and White Island lightship, the total amounting to $1,243.50, forwarded with statement No. 131, and before payment of the accounts is considered I am to request you to inform me if instructions were received from the department to make these large purchases. According to the orders given by the minister, no large purchases were to be made without first having received the sanction of the department.

In this connection I may say that it is impossible to control the appropriation when large amounts are expended at the agencies without any knowledge of the same being noted, and the minister has already intimated that he will not ask parliament for any supplementary vote for maintenance of lights if the appropriation is expended before the close of the fiscal year. I may say that a particular statement of all unauthorized expenditure is kept to present to the minister on his return from Europe.

Your obedient servant,

C. STANTON,
for Deputy Minister Marine and Fisheries.

QUEBEC, July 5, 1907.

Lt.-Col. F. GOURDEAU,
Deputy Minister, Marine and Fisheries,
Ottawa.

SIR,—I have the honour to acknowledge receipt of your letter of the 26th ultimo, No. 26239, requesting me to inform you if instructions were received from the department to make large purchases, and that according to the orders of the minister, no large purchases were to be made without first having received the sanction of the

department, these remarks referring to a statement involving accounts, to the amount of $1,243.50, from Messrs. J. B. Côté and W. R. Blakiston, for supplies for Belle Isle, Seven Islands, Prince Shoal lightship, Red Island lightship and White Island lightship.

I beg, respectfully, to state that I considered myself fully authorized to incur such expenditures, particularly as regards Belle Isle, Seven Islands and general purchasing of tanks, &c. (and beg to refer you to departmental correspondence on these subjects), so that we might be ready for the opening of navigation in the urgent and positive interest of the public service. I cannot see how my action will, in any way, cause the expenditure of this agency to overrun the amount asked to carry on the service, as I have every reason to believe that we will be considerably within my estimates, unless some extraordinary service is performed by the vessels under the control of this agency, such as has occurred sometimes and which could not be foreseen. The orders to carry on the work by Mr. Blakiston were issued by Captain Koenig, inspector of lights, and were all represented as being necessary to outfit the lightships for the services they had to perform very shortly afterwards.

The account of Mr. J. B. Cote for pans, tanks, &c., is also for the outfitting of the lighthouse service and fully authorized. These general supplies for outfitting lighthouses, lightships, &c., have never been questioned before and are absolutely necessary, and I do not know how to run this agency without providing for them at the proper time, and no one else can do so.

Please bear in mind that there is a yearly large increase in the number of lights and fog-alarms established in this agency, and every one of them requires equipment, and advantage must be taken of any opportunity to have the goods delivered in time by such means as are available. I surely will not exceed the amount asked to carry on the services of this agency, and even if it were slightly exceeded, it would not be due to me but to the increased requirements unforeseen by me when the estimates were made out.

It would appear, by our triplicate copy, that the endorsement on the account of Mr. J. B. Cote is not for the west end of Belle Isle, but for the northeast end. Please correct the original and duplicate copies sent to the department accordingly.

I trust that these explanations will be satisfactory.

Your obedient servant,

J. U. GREGORY,
Agent, Department of Marine and Fisheries.

OTTAWA, July 10, 1907.

ALFRED LAROCHELLE, Esq.,
President Corporation of Pilots,
Quebec, P.Q.

SIR,—I am to inform you that I am in receipt of an account furnished by Raoul R. Bergevin, amounting to the sum of $373.70, for carpets, oilcloth, bedding and kitchen utensils for the ss. *Eureka*. The account shows that 125 yards of carpet and 52 yards of oilcloth were purchased, and this appears to be a very large quantity for such a small vessel. I may state that the appropriation for administration of pilotage voted by parliament will not stand such large expenditures.

The agent of the department at Quebec, Mr. Gregory, states that the furnishings of the steamer were ordered by you, and I am to request you to inform me why it was necessary to furnish the vessel so lavishly and why such large quantities were required for such a small vessel.

Your obedient servant,

F. GOURDEAU,
Deputy Minister Marine and Fisheries.

Letter from Gregory as to this matter, dated 18th June in which he says the department placed it very much in the hands of Larochelle.

QUEBEC, July 11, 1907.

C. STANTON, Esq.,

For Deputy Minister Marine and Fisheries.

DEAR SIR.—Referring to No. 27999, I have signed the requisition of Capt. Lavoie, of *Eureka*. As she was overhall fore and aft in the dock every things on board was distroyed and she was to be refitted anew and all articles signed by me were useful for carpets oilcloth bedding a dozen beds for Pilots and the rest for the crew. I have been on board myself and I don't see any things lavishly, as for kitchen utensils and victuals I never had anything to do with it.

Your obedient servant,

ALFRED LAROCHELLE,
Superintendent of Quebec Pilots.

26913.

(Memo. for Deputy Minister.)

I have an account of Samson & Filion, Quebec, for packing for the steamer *Champlain*, amounting to the sum of $562.18. It appears to me that the quantity and the price charged for this packing is very excessive. There is a charge also for 50 pounds of tallow at 15 cents a pound. I just found out from Matthews & Co. by 'phone that they can supply any quantity of tallow at 9 cents a pound. In that case Messrs. Samson & Filion are making a good profit on the tallow. The prices charged and certified to by the agent, Quebec, are so excessive that I do not feel like issuing a cheque without receiving further instructions. This tallow is based on the price of beefsteak.

A. W. OWEN,
Accountant.

OTTAWA, August 21, 1907.

ACCOUNTANT.—This should be carefully looked into.—F. G.

27999.

OTTAWA, September 4, 1907.

The AGENT,
Dept. Marine and Fisheries,
Quebec, P.Q.

SIR,—I notice an account received in your statement No. 275, rendered by F. X. Gagnon for supplies for Cape Norman, in which there is a charge of $24 a barrel for pork, while an account received from Halifax shows that the best pork can be purchased at $17.50 a barrel.

With regard to flour, I may say that the best flour is charged at $5.20 per barrel in Halifax, while accounts from Quebec charge $6.95. Why is there such a difference between Quebec and Halifax when the freight rates to Halifax are higher than to Quebec?

There is an account rendered by Samson & Filion, statement No. 267, in which lard is charged at 15c. a lb. when the same article can be supplied in large quantities in Ottawa and Montreal at 9c. per lb. For small quantities F. X. Gagnon charges 12c. per lb., while Samson & Filion charge 15c.

Samson & Filion have rendered an account amounting to $563.18 for packing for the *Champlain*, and the department considers the amount and price charged very excessive.

These differences in prices cause the minister a great deal of trouble in the Public Accounts Committee, when he depends upon his officers to purchase goods at the very lowest rate. An explanation is required before payment of the accounts is considered.

Your obedient servant,

F. GOURDEAU,
Deputy Minister Marine and Fisheries.

QUEBEC, September 5, 1907.

LT.-COL. GOURDEAU,
Deputy Minister Marine and Fisheries,
Ottawa.

SIR,—Referring to your letters of the 3rd and 4th instant, No. 27999, in which you state that the differences in prices between Quebec, Halifax, &c., cause the minister a great deal of trouble in the Public Accounts Committee, when he depends upon his officers to purchase goods at the very lowest rate, and that an explanation is required before payment of the accounts is considered.

I beg to note the contents of your letters.

1. In statement No. 275, rendered by Mr. F. X. Gagnon, for supplies for Cape Norman, a charge of $24 for a barrel for pork, while an account received from Halifax shows that the best pork can be purchased there for $17.50 per barrel. I beg respectfully to state that the prices for the best province of Quebec mess pork, for family use, packed in Quebec, such as we always use, is now and has been at the rate of $24 to $25 per barrel and no less. The Chicago pork, which is not considered as profitable, has been sold and is now being sold, in this market, at $22 to $23 a barrel, and there has always been and there is yet a difference of $2 or $3 a barrel between Chicago pork and province of Quebec pork, the latter is the cheaper at the higher rate. As to the best pork being purchased at $17.50 a barrel, it would decidedly pay the department if they can get as good pork at Halifax for $17.50 as we pay $24 for, to buy the pork and bring it up here for the use of the steamers. I cannot do it, purchasing the same from friends of the administration or outsiders. There are several grades of pork, some barrels contain a portion of heads and feet and is thin pork and often called 'prime' pork. I have no doubt I can get such pork as that for $17 to $18 a barrel, but it is not suitable for our use.

2. The prices of 'Harvest Queen' and 'Shamrock' brand flours per barrel are $6.95 for the former and $6.90 for the latter. These are Messrs. E. M. Lennon & Co.'s prices and the same prices are charged by every flour dealer in Quebec for the same brands of flour. These brands cannot be bought for less here. If as good flour can be bought in Halifax for $5.20 per barrel, it would pay the department to import it from there. There are other brands of good family flour that can be bought in this market from Messrs. E. M. Lennon & Co. and others, at $6 upwards, but not less than $6, suitable for our purposes. Our people generally choose the best, for the reason that it is subject to changes of temperature, which might cause it to harden or sour, as has often occurred with ordinary flour.

3. As to the account of Messrs. Samson & Filion, I beg respectfully to remark that I do not know of any lard having been bought from that firm, at any price. I understood that a special quality of tallow was bought and selected by the engineers for the machinery of the C.G.S. *Champlain*. When I purchase tallow for the steamers, I get it from Mr. Jean Drolet, butcher, and allow 9 cents a pound for it, and no more. Messrs. Samson & Filion are very heavy dealers in the goods they sell. The Militia Department and the Department of Public Works purchase from that firm and appear satisfied of the manner in which they deal with them; they keep goods of several grades; we generally get the best, especially for our vessels running in salt water.

As to the balance of the bill of $563.18, packing, cotton wick, lamp wick, lanterns, chimneys, brooms, scrubbing brushes, tube cleaners, firing shovels, emery cloth, matches, manhold joints, door joints, &c., this large bill was made on account of the *Champlain* being away from Quebec the whole season, and, as customary, a large stock was supplied for the vessel before she left to go away from the source of supplies. If you will please notice, in Samson & Filion's accounts, as well as many others, you will find that we have marked off in red reductions we have made in prices charged, but occasionally an item may escape us and I shall always be thankful for the department bringing the fact to my notice in time so that I may make the correction.

Referring to the matter of flour, there is but one flour dealer on the patronage list. I beg respectfully to suggest that you place one or two more on the list of such dealers.

As to the tallow, I shall make it a point to inquire again why the engineer of the *Champlain* required a special kind of tallow. There may be a reason for this extra charge, as there has been reasons for soft soap being bought at 2 cents per pound and being bought at 10 cents per pound. It is all called soft soap, but there is a vast difference in its component parts.

Now, before writing this answer to your letter, I beg to state that I have made inquiries among the dealers in flour, pork, and all the other articles mentioned, not only among the friends of the administration but outsiders also, and the prices quoted are Quebec prices, and these prices, by tender as far as possible, were obtained from dealers in Quebec, friends of the administration, and submitted for your approval, by my letter of the 18th March ,1907. The same kind of correspondence has been carried on between this agency and every administration I have served under, whether Liberal or Conservative, before and since confederation. I have more than once stated that if lower prices were wanted to throw the supplying of goods open to public tender and you will get low prices, for I have no doubt that there are people in this market, on either side of politics, as the case might be, who will put their prices down very low, simply to take the patronage away from the others, and such offers have been made to me more than once.

Respectfully submitted,

J. U. GREGORY,

Agent, Department of Marine and Fisheries.

MORIN SHOAL—LIGHTHOUSE COMMISSIONERS' BOARD—LIGHTHOUSE BOAD MINUTES.

MORIN SHOAL.

Shoal discovered.

File 21159. 11785 / 26283

November 12, 1904.—Shipping Federation (Thos. Robb, manager) beg to acknowledge receipt of your telegram of even date notifying us that your engineers had discovered a dangerous obstruction directly in the channel opposite Murray Bay. Immediately on receipt of your telegram, our respective members were notified by circular letter.

November 15.—H. & A. Allan, telegraph deputy: 'Kindly ascertain and advise us crossbearings of shoal which has been discovered lately obstructing channel opposite Murray Bay. This information is necessary for safe navigation of channel.'

Deputy telegraphs F. W. Cowie to ascertain and advise H. & A. Allan of said crossbearings.

Spar Buoy placed.

November 12.—Gregory asks deputy to inform shipping authorities that I despatched *La Canadienne* this afternoon to place a horizontal striped black and red spar buoy over the patch discovered nearly opposite Murray Bay, as per information given by Mr. Cowie. This buoy will be put in position to-morrow morning at daylight.

November 14.—Gregory advises deputy that the spar buoy has been placed. Bearings and particulars will be supplied by Cowie. In connection with the matter it appears that a gas buoy will be required for next season. As we have now no spare gas buoys on hand, I would respectfully suggest 3 or 4 new gas buoys be provided for this agency. (Marked: 'Provision made 1/1/05. J.F.F.')

Mr. Cowie.

November 15.—Thos. Robb, of Shipping Federation to Deputy Minister. In further reference to your telegram of 12th inst., *re* a dangerous obstruction directly in channel opposite Murray Bay. 'The Executive Council of this Federation desire me to thank you for the prompt measures taken by you in locating as well as marking this spot with barrel buoys, and at the same time my executive desire me to urge you to take the necessary steps with a view of removing this obstruction, so that the channel may be clear when navigation opens next season. Trusting you will give this matter your immediate attention, I have the honour to be,—T. Robb.'

H. & A. Allan and Shipping Federation.

November 18.—H. & A. Allan write to W. L. Magee, Acting Deputy Minister: Owing to yesterday being a holiday, we did not advise you that we had received from Mr. Cowie a chart showing the position of the obstruction to navigation in the channel off Murray Bay, and Capt. Vipond of our ss. *Tunisian* took the crossbearings from the chart and communicated the information to the other masters of our fleet, and we in turn have passed on the information to the other lines here through the Shipping Federation.

November 16.—H. & A. Allan write deputy minister: We beg to acknowledge receipt of your telegram of the 14th inst. Mr. Cowie has never communicated with us, and as the *Tunisian* sails hence at 9 a.m. on Friday next, it is of the utmost importance that we should be advised of the exact location of the obstruction in the channel off Murray Bay. Will you please ask him to wire us as soon as possible?

November 19.—A notice to mariners required respecting buoy off new shoal opposite Murray Bay. Get particulars through Stewart from Cowie. I saw Mr. Cowie and he promised me this at once.—W.P.A.

November 18.—W. L. Magee, for deputy minister, wires to Cowie, at Sorel: Furnish the Allans, Montreal, by telegram immediately with information required in my telegram to you, 15th inst. : *Tunisian* ss. sailing this a.m.

November 18.—W. L. Magee to Allans, Montreal: Have telegraphed Cowie today to furnish you immediately by wire information required for ss. *Tunisian.*

November 18.—M. C. Blais wires to W. L. Magee (from Sorel): Telegram to Cowie received two hours after he had left for Montreal. Have wired Mr. Allan to watch his arrival for information wanted.

November 18.—Allan wires to Magee, viz.: Received information required concerning obstruction off Murray Bay from Cowie yesterday.

November 18.—F. W. Cowie writes to deputy minister, from Sorel, viz.: In reply to yours of the 15th inst., stating that you had wired me to send to the Allans, of Montreal, the location of the 'Morin shoal,' lately discovered opposite Murray Bay, and asking to report to the department the substance of my reply, I beg to give you a copy of the letter sent, as follows:—

'Messrs. H. & A. Allan,—I am instructed by Colonel Gourdeau, Deputy Minister, to furnish you with the bearings of the shoal, which we have called 'Morin Shoal,' discovered last week in the River St. Lawrence ship channel below Quebec.

'It was too late to place a gas buoy this season, but Mr. Forneret placed on Sunday last a red and black spar buoy to mark the shoal.

'As it is difficult to give you the information otherwise, I am sending by express my own copy of the chart from which you may locate the shoal on your charts, and return it to me at your convenience.

'I understand that President Morin, who was with us when making the investigation, has notified all the Quebec pilots.'

November 17.—H. & A. Allan write to Cowie, acknowledging receipt of his letter of 15th instant.

Thos. Robb asks for Information.

November 29.—Thos. Robb writes the deputy minister with further reference to a dangerous obstruction in the channel opposite Murray Bay: 'My executive desire me to ask if the department would favour them with copies of any reports they may have had from any of the pilots regarding this shoal.

'I may say that at our last meeting, it was suggested that there is part of a submerged wreck of a vessel that was laden with oak and took fire there some years ago.. Trusting to be favoured with this information.'

Deputy to Robb, Shipping Federation.

December 1.—W. L. Magee, for deputy minister, writes to Robb (Shipping Federation), viz.: I beg to acknowledge receipt of yours of the 29th ult., asking for copies of any reports the department has received from any of the pilots regarding 'Morin shoal' in the River St. Lawrence, opposite Murray Bay, and to state in reply that the matter is being referred to the superintending engineer of the River St.

Lawrence channel, with a view to furnishing you with any information that is on file in regard to the subject.

A note has also been made of the recommendation contained in yours of the 15th ult., that the necessary steps be taken to remove this shoal, so that the channel may be clear when navigation opens next season.

Copy of Robb's Letter sent F. W. Cowie.

December 1.—W. L. Magee writes to Cowie, transmitting copy of above letter of Robb (Shipping Federation) and asking him to furnish any such reports he may have. What is your opinion regarding this shoal being part of a submerged wreck? The Shipping Federation, in a letter dated November 15, recommend that the necessary steps be taken to remove this obstruction, so that the channel may be clear when navigation opens next season.

C.P.R. Steamer Manager writes Minister on Matter.

November 30.—A. Piers, C.P.R. SS. lines, writes the minister, viz.: 'With reference to my communication of the 15th September, in which I called attention to an obstruction which was struck by the ss. *Montcalm* in the navigable channel between Cape Goose and Cape Salmon on the 10th September last.

'I shall be glad if you will let me know what steps have been taken to locate and remove this obstruction, so that I may properly advise the masters of our ships which will be coming to this port next season.

'I need hardly call your attention to the urgency of this matter, as you are already aware that this obstruction has been struck several times in the past eight years.

Minister's Reply.

December 5.—Unsigned letter (copy), headed, Office of the Minister of Marine—to A. Piers, manager of C.P.R. SS., thus : 'Owing to my absence from the city, your letter of the 30th November is just to hand, regarding an obstruction between Cape Goose and Cape Salmon. I will refer this matter to my officers for a report and will communicate to you.'

Quebec Pilot's Evidence.

Copy of a letter dated September 14, from F. X. Dion, Secretary of the Quebec Pilots, reporting that on the 10th inst. (September) E. Larochelle, pilot, being in charge of the ss. *Montcalm,* believes to have touched what is supposed to be Morin shoal, and same thing happened on two different occasions, 1st in 1893, and 2nd again, August 14, this year (1904).

F. W. Cowie's Report for Minister's Information, 6/12/04.

December 6.—F. W. Cowie writes deputy acknowledging receipt of his letter of 1st inst., thus: According to your instructions, I beg to enclose a copy of the translated report from the secretary-treasurer of the Quebec Pilots, on which the examination was ordered to be made.

With reference to the question of this shoal being part of a submerged wreck or caused by such an obstacle, I beg to say that in my opinion it is simply a continuation of the formation of shoals and islands which occur in the middle of the River St. Lawrence below Quebec, and not caused by any silting around a submerged wreck. The engineers who made the examination reported that in the limited time which they had at their disposal, they defined the shoal to be at least three-quarters of a mile long, and the bottom fairly hard.

(Minister wishes this to be brought before Lighthouse Board.)

As this obstruction is in the direct course of steamers, steps will require to be taken to have it safely and distinctly marked by a gas buoy. There being deep water on either side, it will be quite unnecessary to remove this shoal, if it can be properly marked, so as to be avoided by vessels by passing on either hand.

(Passed upon by Lighthouse Board, 31/3/'06.)

The existence of this shoal in the direct track of ships for many years, with a depth of only 20 feet at low water where the chart shows over 66 feet, shows the absolute necessity of a new organization below Quebec

It has already been proposed that defined ship channel with proper shore marks and range lights be adopted and marked at suitable intervals with gas buoys. This course could then be swept and thoroughly examined by the ship channel staff with the new steamer for which provision was made in the estimates of last year, and then adhered to by all vessels.

It is impossible to sweep the whole of the river. By the adoption of certain courses marked by powerful range lights, however, the limits of the ship channel might be thoroughly examined, so that the recurrence of a ship touching on an uncharted shoal would be avoided.

February 6, 1905.—Capt. Koenig, of the ss. *Montcalm,* writes Gregory, saying that gas buoys would be required in the Traverse, also one to be placed on the shoal discovered last November off Murray Bay.

February 6.—Above letter transmitted by Gregory to the department at Ottawa.

Shipping Federation suggests Lighship.

February 10.—The Shipping Federation writes the deputy minister, viz.: That we are fast approaching the opening of navigation, calling your attention to Morin shoal, and suggesting some other aid more powerful than a gas buoy is necessary, and takes this opportunity of asking that a lightship may be located at this point, &c., &c. (Lighthouse Board, 15/2/05.)

Deputy suggests No. 7 Automatic Gas Buoys.

February 22.—Deputy minister, in answer to Gregory's letter of the 6th inst., says that there will be shipped from Ottawa to Quebec, for opening of navigation, from 15 to 18 No. 7 automatic acetylene buoys, which are better suited for swift currents than the gas buoys at present in service

Matter receiving Department's Attention.

March 9.—Deputy minister writes to Shipping Federation, in answer to their letter of the 10th ult., *re* Morin shoal, and informs them the matter is to receive consideration of the department.

May 3.—Shipping Federation (again) writes, as navigation has now commenced, I shall be glad to have your early decision regarding Morin shoal.

Shipping Federation replied to.

May 11.—Deputy minister writes to Shipping Federation: No lightship available to be placed at Morin shoal, but the department has developed a very large lighted signal buoy which will, no doubt, meet the situation; in the meantime a gas buoy will be placed.

Gas buoy placed by Capt. Gagnon and examined by Capt. Koenig.

May 15, 1905.—Capt. Koenig reports to Gregory that the Morin shoal gas buoy, was laid on May 2, by Capt. Gagnon in 4⅓ fathoms of water, and that he personally

visited the buoy on the 11th May, and found it properly moored and showed a good bright light. This was sent by Gregory to the department on May 16.

Meeting with Shipping Federation, who want a Lightship.

Morin shoal.—Memorandum of a meeting with Shipping Federation in Montreal, February 21, 1906.

The President of the Shipping Federation pointed out that nearly all the captains trading to the St. Lawrence are in favour of the establishment of a lightship at this place with fog alarm. This is a place they want to be able to run in a fog.

The deputy minister said he could see no objection to placing on this shoal at the opening of navigation, the spare lightship now in stock at Quebec. This was satisfactory to the Ship Federation, and the minister directed that special note be made of this for attention at Ottawa.

Attached is a copy of the notice to mariners with reference to the establishment of the gas buoy on this shoal last season, also a copy of the notice with regard to the discovery of the shoal.

April 3, 1906.—Memorandum by J. F. F. for deputy minister: With reference to the application of the Shipping Federation for placing a lightship or similar aid to navigation on Morin shoal, the undersigned calls attention to the discussion at the last meeting of the lighthouse board with reference to this matter.

J. F. F. —L. P. B.

A 2nd class lightship, if the expenditure is approved, would probably cost the department $30,000 or $40,000 wth a maintenance charge of $6,000 or $8,000 per annum.

No money available for a lightship, but $500 available for a gas buoy.—A.W.O. 5 4 06.

Before this matter is passed upon the undersigned is of the opinion that one of the large No. 11 lightship buoys should be especially adapted to this position by the addition of a 500 pound bell with modified American bell attachment and placed in position so that the Shipping Federation may decide whether it meets with the requirements of navigation.

The buoy necessary is available and the additional cost of providing the special bell attachment would probably not exceed $500.

As indicated above, before recommending the lightship the undersigned is of the opinion that the gas buoy referred to should be tried in this position.

The same remarks apply to the question of providing a lightship for the entrance to Juan de Fuca straits, British Columbia.

Deputy asks Willson what a large automatic buoy would cost.

May 10, 1906.—Deputy minister to T. L. Willson: With further reference to my letter asking you to furnish plans and estimates of cost of a large automatic buoy to be utilized in place of a lightship, I have to request you to give the information as soon as possible, as the department has been asked to place a lightship off Morin shoal, River St. Lawrence, and it does not feel justified in going to the large expense of first cost and maintenance which a lightship involves and it may be possible to meet the needs of navigation in the manner suggested above.

Deputy asks Willson when he can deliver special bell attachment for No. 11 lightship buoy for Morin shoal.

May 30, 1906.—Deputy minister asks T. L. Willson: When can you deliver to this department a special bell attachment for the No. 11 lightship buoys? I have to request you to be good enough to reply to my letter as soon as possible. The Shipping Federation urge the department to place a lightship on Morin shoal, and it is desirable

to test the No. 11 lightship buoy with special bell attachment before considering the question of the cost of a lightship.

Willson replies:—In about thirty days.

May 31, 1906.—Thos. L. Willson to Deputy Minister: Yours of May 30th, file 21159, received. In answer I have to state that I am making a special bell attachment for the No. 11 lightship buoys and as soon as the steel casting is received, for which the foundry now has pattern, I will be able to give you a definite date of delivery. At this date of writing it will probably be 30 days before delivery can be made.

Deputy advises Que. Agent of department's intention to ship No. 11 lightship buoy and give it a trial before considering a lightship.

August 9, 1906.—Deputy minister (C.S.) writes to Quebec agent: An application has been made to the department to place a lightship on the Morin shoal, River St. Lawrence.

Before considering the question of providing for an expensive aid to navigation such as the one asked for above it is the intention of the department to moor a No. 11 lighted whistling and bell buoy at this shoal.

I inclose for your information a blue print giving the dimensions of the buoy referred to.

Will you please advise me whether this buoy should be shipped to Quebec or Lévis. It can be towed into position by the *Druid*. The weight of the buoy charged is 16 tons and it carries a gas lantern with a lens of 375 mm.

Gregory says Capt. Koenig and the pilots see no use for anything but the buoy already in place.

August 16, 1906.—Gregory writes to deputy minister: Referring to above letter of August 9, I have the honour to state that I have called the attention of Captain Koenig, Superintendent of Buoys, to your communication and he stated that he had an interview with the president of the Corporation of Pilots, and he said that they never asked for a lightship on the Morin shoal near Murray bay.

The No. 11 lighted whistling and bell buoy, as shown by the blue print, is not at all suited for that locality. This buoy will draw over 26 feet of water, while there is really only 19 feet water at low tide on the shoal in question and the mariners have asked that the buoy be put right on the shoal, as now exists.

All navigators we meet here are of same opinion.

August 16, 1906.—All the navigators we come into contact with appear satisfied with what has been done. We have no idea whatever who could have asked for anything more. We cannot see the necessity for anything else than what is there at the present time, *i.e.*, buoy No. 102, 8 feet diameter, red and black horizontal bands, shoal water spar gas buoy.

Commissioner of Lights so Notifies Shipping Federation.

September 4, 1906.—Commissioner of Lights writes to Robb (Ship Federation) with reference to the proposed additional aid to navigation on Morin shoal: I have to inform you that the agent at Quebec and Captain Koenig of the *Druid* state that the Quebec pilots do not ask for any further aid to navigation on Morin shoal than the small gas buoy which is now in position. Will you please inform me if the Shipping Federation require a further aid at that point.

Shipping Federation very much surprised.

September 10, 1906.—Shipping Federation, Robb writes to J. F. F. as follows:—I beg to acknowledge receipt of your favour No. 21159 and thank you for same, informing us that the agent at Quebec and Capt. Koenig of the Canadian Government Steamer *Druid* state that the Quebec pilots would not ask for any further aid to navigation on the Morin shoal other than the small gas buoy which is now in position.

Your letter was submitted to a meeting of the executive council of this federation, and my executive were surprised to learn that the Quebec pilots were satisfied with the small gas buoy at present locating this shoal.

Are unanimously of a different opinion and are backed by many of the principal SS. Captains trading to the Port.

My executive are of the unanimous opinion that the present buoy is not sufficient to mark this shoal, as it lies right in the track of shipping, and in thick or hazy weather a ship would be right on top of it before the buoy could be seen, and that what is required here is a lightship with a good fog horn, so that a ship could get warning in time to avoid the shoal, and in coming to this decision we are supported by the following captains of the principal steamship companies trading to this port:—

Captain Jones, ss. *Canada;* Captain Ingham, ss. *Englishman;* captain of the *Huronian*; Captain Wallace, ss. *Hungarian*; Captain Lindsay, ss. *Jacona;* Captain Christie, ss *Manxman;* Captain Maddox, ss. *Ottawa;* Captain Harrison, ss. *Pomeranian;* Captain Outram, ss. *Pretorian;* Captain Fairful, ss. *Sicilian;* Captain Vipond, ss. *Virginian;* Captain Meikle, ss. *Woburn.*

In addition to this, at a deputation of this federation which had the honour of waiting on the Minister of Marine in February last, at which the chairman of Lighthouse Board, Lt.-Col. Gourdeau, was present, an assurance was given that one if the old lightships was available for this place and we have been anxiously waiting for that promise to be fulfilled, and as far as the pilots are concerned, from past experience my executive cannot place much reliance in their vacillating opinions, otherwise we would be practically in the same state as we were 10 years ago, when the conditions, as you are aware, were unsatisfactory to all concerned.

Deputy advises Gregory that a No. 11 lightship gas and whistling buoy with special bell attachment will be sent.

September 18, 1906.—Deputy Minister writes Quebec agent thus: Acknowledging receipt of your letter of the 16th ult., in which you inform me that you have consulted Capt. Koenig and the president Corporation of Pilots, relative to the necessity for a lightship or similar aid to navigation for Morin shoal, and that the opinion is expressed that no additional aid to navigation is required. I beg to state that your representations have been laid before the Shipping Federation and the manager and secretary advises me that it is the unanimous opinion of his executive that the buoy is not sufficient to mark the shoal and that in this decision the Shipping Federation is supported by the captains of the principal ss. companies trading to Montreal.

In view of this, I have given instructions to ship to you at Lévis, one No. 11 lighted whistling buoy with special 500 lb. bell attachment, and I have to request you to have this placed in position before the close of navigation in order that it may be tested. You will please advise me when you receive the buoy, in order that the department may send a foreman to supervise charging and placing the same.

September 18.—Deputy Minister gives instructions to T. L. Willson to ship to J. U. Gregory, agent of this department at Quebec, one No. 11 whistling buoy with 500 lb. bell, via G.T.R. and I.C.R. to Lévis. This buoy is intended for Morin shoal,

River St. Lawrence. Please advise me when this shipment is made and also advise the agent at Quebec.

September 21.—T. L. Willson to deputy minister thus: As requested in your letters of April 17, June 18 and August 8, we are now able to quote you on the cost of attaching a 500 lb. bell with our improved sealed bell-ringing device operated by hard steel balls 6 inches in diameter.

We hereby quote $1,050 each for these apparatus complete, including attaching to supports of No. 11 automatic gas and whistling buoy, f.o.b. Ottawa.

In cases where the lantern supports to which it is desired to attach these bells are not at Ottawa, it is understood that your department will deliver them to us f.o.b. cars Ottawa.

Fourteen days after the buoy was shipped.

October 2.—C. Stanton for Deputy Minister, writes to T. L. Willson, viz.: Acknowledging receipt of your letter of the 21st ult., quoting price for bell attachment for Morin shoal lighted whistling buoy, I have to state that your offer is approved and you are directed to place the attachment on the lantern support of the buoy referred to.

From Mr. Willson's Engineer.

October 9.—Copy of long report made by A. E. Small to T. L. Willson *re* No. 11 buoy Morin shoal, it was put into place. Pintsh buoy was left alongside, and the Pintsh light looked like a candle. 19, 10, '06.

H. and A. Allan write that one of their captains passed the light and found it not burning.

October 16.—H. and A. Allan write Deputy Minister thus: Captain John A. Fairful, of our ss. *Sicilian,* reports that he passed the Morin shoal buoy at dark when coming up the river on the 8th inst, and the light was out. He adds that as this patch is right in the fair way he does not think it is efficiently guarded by an unwatched light, and suggests that a light vessel be placed there.

October 23.—Deputy Minister writes Allans acknowledging receipt of letter October 16, saying lighted whistling and bell buoy placed on shoal October 10.

Captain Vipond found it burning.

October 24, 1906.—On file a letter of Capt. Vipond to the Allans: The Morin shoal light was burning bright when I passed upwards on October 20, but would suggest a lightship there in place of gas buoy.

October 24.—H. & A. Allen write inclosing above letter of Vipond, and again refer to lightship instead of the gas buoy.

Willson renders bill for bell attachment.

October 25.—Thos. L. Wilson to Gourdeau, Deputy Minister: As directed by you under date of October 26, we have placed the bell attachment referred to, on type 11 automatic gas and whistling buoy serial No. 589. We inclose herewith invoices in triplicate covering the same.

Capt. Koenig condemns No. 11 lightship gas bell and whistling buoy as too big. Could not get satisfactory information about bell and whistle.

November 9.—Gregory sends a long report of Capt. Koenig, inspector of lights and buoys, Quebec, who strongly recommends that in place of this large buoy (drawing 28 feet), a smaller one should be moored next year, and fitted with a 300 mm. lantern, which are very good lights and always seen at a distance not less than 6 miles. As to the bell and whistle, I could not obtain satisfactory information.

November 20.—Deputy Minister J. F. F. sends T. L. Wilson a copy of Capt. Koenig's report, with reference to Morin shoal.

No. 11 Gas Whistling and Bell Buoy condemned by Capt. Koenig and the Pilots.

November 22.—J. U. Gregory to deputy minister, viz.: I have the honour to acknowledge receipt of your communication of the 20th inst., No. 21159, referring to Capt. Koenig's report in regard to the lighted bell and whistling buoy recently placed on Morin shoal. I beg respectfully to state that the said buoy arrived here yesterday, 21st inst., at 9 a.m., in tow of ss. *Druid,* having been replaced by a spar buoy for the balance of the season of navigation as agreed between Capt. Koenig and Alf. La Rochelle, president of the Corporation of Pilots, as well as E. La Rochelle, superintendent of pilots here, which agreement was forwarded to the department on the 14th inst., Capt. Koenig informed me that the Morin shoal buoy was in tow of the *Druid* for 14 hours, and within the distance of her tow line the bell and whistle were rarely heard, and that each was very weak. The superintendent of pilots here informed Capt. Koenig that pilots had stated that they had not heard either the bell or whistle of the said buoy unless they were close to it. Capt. Koenig is under the impression that such a buoy on a sea coast, where there is a heavy swell and an undertow, the apparatus would be operated with very much more power than would likely be encountered with river influences.

Shipping Federation again recommend a lightship for Morin shoal, although only two of their Masters urged it.

December 7.—Robb Ship Federation sends in a synopsis of the replies received from several of the masters of vessels giving their views with regard to the new lights at Martin river, Gannet rock, Maugher's beach and Greenly island; and also the new gas buoy on the Morin shoal. You will note that eleven replies have been forwarded by masters, all of whom favourably report on the marked improvement of the lights at Martin river, Gannet rock, Maugher's beach and Greenly island, and five masters report favourably on the improvement to the light on Morin shoal. Two of them are strongly in favour of a lightship on the shoal, instead of a buoy.

Referred to Lighthouse Board, December 15.

December 13.—Recommended by Shipping Federation, December 3, that a lightship be placed to mark Morin shoal.

Lightship proposition passed by Lighthouse Board.

February 6.—One of the old lightships on Lake St. Peter is to be utilized to mark this shoal.

The above recommendation passed at a meeting of the Lighthouse Board held on February 6, 1907, approved by the Honourable the Minister of Marine and Fisheries, and now referred to the Commissioner of Lights.—20/2/'07.

This came up at a meeting of the Lighthouse Board, April 26, 1906, and was referred to the commissioner of lights for necessary action.

File 25172.

LIGHTHOUSE COMMISSIONERS BOARD.

Application to Trinity House, London, for any information which would be useful in forming the proposed Lighthouse Board.

October 30, 1903.—Deputy to secretary Trinity House, London: 'I have to request that you will be good enough to forward me any printed matter or information that you may have in reference to the formation of the Board of Commissioners of Lights. The Canadian government intend to form a board in Canada after the same lines,

and any information that you can give me on this subject will be much appreciated.' —(Initialled O. G. V. S.).

October 30, 1903.—Similar letter to Commissioner of Irish Lights, Dublin.

October 30, 1903.—Similar letter to secretary Commissioners of Northern Lighthouses, Edinburgh.

Letter from Commissioners of Northern Lighthouses, Edinburgh.

November 20, 1903.—Received the following from Edinburgh: 'I have pleasure in inclosing a book entitled, "Lighthouse History and Statutes," prepared by one of our staff, which, I think, you will find of service. I shall be very glad to give you all information in my power on any point which may occur to you during your perusal.

Lighthouse Board Appointed.—Members : Lt.-Col. Gourdeau, Deputy; Col. W. P. Anderson, Chief Engineer; Comr. O. G. V. Spain, J. F. Fraser, Comr. of Lights; H. A. Allan, Montreal.

January 14, 1904.—To His Excellency the Governor General in Council: With a view to meeting the rapidly increasing requirements of the service in connection with the construction and maintenance of lights and fog alarms, &c., throughout the Dominion the undersigned has the honour to recommend, under the provisions of chap. 70 of the Revised Statutes of Canada, as amended by 57-8 Vict., chap. 41, that a board, to be called the lighthouse board of Canada, be appointed to inquire into and report to him from time to time upon all questions relating to the selection of lighthouse sites, the construction and maintenance of lighthouses, fog alarms and all other matters assigned to the Minister of Marine and Fisheries by section 2 of chap. 70, Revised Statutes. The board to be composed of the following: Lieut.-Col. F. Gourdeau (chairman), Lieut.-Col. W. P. Anderson, Comr. O. G. V. Spain, J. F. Fraser (Comr of Lights), Hugh A. Allan, Montreal, W. C. Gordon to act as secretary. The undersigned also recommends that when any matters pertaining to aids to navigation within the Montreal or Quebec pilotage districts are under consideration by the board the president for the time being of the corporation of pilots for these respective districts shall, respectively, be *ex officio* a member of the Lighthouse Board when summoned by the chairman to attend such meetings. The members of the board other than officials of the Marine and Fisheries Department, to have their travelling expenses paid when attending meetings of the board, and in addition an honorarium of $5 a day.

B. H. Fraser Appointed Assistant Chief Engineer.

June 3, 1904.—To His Excellency the Governor General: B. H. Fraser to be appointed Assistant Chief Engineer of the Department of Marine and Fisheries, with authority to represent the Chief Engineer on the Lighthouse Board of Canada, and to act for him generally whenever that officer may be absent from headquarters. Memo. to that effect by W. P. A., June 2, 1904, initialled R. P.

W. H. Noble Appointed Assistant Commissioner of Lights.

July 24, 1905.—To His Excellency the Governor General: Recommend that W. H. Noble, Asst. Commissioner of Lights, be appointed Asst. Commissioner of Lights of the Department of Marine and Fisheries, with authority to represent the Commissioner of Lights on the Lighthouse Board of Canada, and to act for him generally whenever that officer may be absent from headquarters.

J. F. F. recommends that notice should be given beforehand to Members of Lighthouse Board of all new applications for Aids to Navigation.

September 1, 1905.—Memorandum by J. F. F.: 'With reference to applications for new aids to navigation which come before the Lighthouse Board, it has been observed in many cases that the members of the board learn of the application for the first time when the board meets. In many cases no member of the board has had an opportunity of visiting the locality where the new aids are asked for, and it is difficult at times to give any question the full consideration which its importance may merit. In order to obviate this difficulty the undersigned strongly recommends that instructions be given to the secretary of the board to prepare a precis with reference to the new aids asked for, and that a copy be given to each member of the board sufficiently in advance to the meeting, so that the matter can be looked into and considered in advance to the meeting.'

C. J. Smith, R. and O. Nav. Co. to Deputy re Meeting Lighthouse Board.

March 20, 1906.—Letter from C. J. Smith, G. M. R. and O. Nav. Co., to Deputy: 'Mr. Hugh Allan told me a day or two since that possibly there might be a meeting of the Lighthouse Board on Saturday next. As we have several matters to bring before the board may I ask that you notify me two or three days in advance of the meeting, in order that we may have an opportunity to be represented.' (This letter stamped as received March 21; written on upper left corner, 'Received 3.25 p.m., 23/3/06.')

March 23, 1906.—Deputy telegraphs C. J. Smith: 'Meeting of Lighthouse Board to-morrow at 12.30.'

March 23, 1906.—Wm. Sloan writes to minister in favour of having British Columbia represented on the Lighthouse Board.

March 30, 1906.—Minister replies.

Capt. Troup, of C. P. R., British Columbia, to be a Member Lighthouse Board.

April 5, 1906.—Memo. for Deputy Minister by L. P. B.: Captain Troup, manager C. P. R. SS. lines in British Columbia, is recommended to act on the Lighthouse Board for British Columbia matters. I am told that he would probably act without remuneration, and that even the cost of his trip east once a year or so would be defrayed by the C. P. R. Would there be any objection to his appointment.'

Memo. for the Minister by Deputy: After consulting with members of the Lighthosue Board, I consider it would be an advantage to have Captain Troup nominated as a member of the board, if his appointment will not involve any expense to the department.

Suggests that Chief Engineer be sent to British Columbia to consult with Captain Troup about whole subject of protection to navigation on that coast.

In view of the many proposals for improvements in aids to navigation suggested as a result of the *Valencia* disaster, I think it would be well to send the Chief Engineer of the department to British Columbia after the session to consult with Captain Troup and report to the minister on the whole question of protection to navigation on that coast, including the exact location of the proposed new fog alarm in the Strait of Juan de Fuca, the organization of a life-saving service, and improvement of telegraphic communication, &c.'

May 10.—Memo. for Deputy Minister by L. P. B.: Please prepare letter to J. W. Troup, Victoria, B.C., asking if he would accept a position on Lighthouse Board to represent the interests of British Columbia.

J. W. Troup appointed to Lighthouse Board.

May 12, 1906.—Deputy to Capt. J. W. Troup, Victoria, B.C., offering him position on Lighthouse Board.

May 23, 1906.—J. W. Troup to minister: Accepts on condition that he can make only one trip a year.

September 29, 1906.—Deputy telegraphs J. W. Troup 'Propose holding meeting Lighthouse Board Wednesday, October 10, when British Columbia matters will be considered. Will it be convenient for you to attend? If so, you are authorized to draw on the department for $200 expenses. Answer.'

October 2, 1906.—J. W. Troup to Deputy: 'Am arranging to be in Ottawa 10th inst., as per your telegram.'

Information wanted by English Royal Commission on Lighthouse Administration.

November 7, 1906.—Memo. received from Lord Elgin showing the points on which information is desired by the Royal Commission on the lighthouse administration of the United Kingdom, and to request you to invite your ministers to furnish answers to the several questions for the information of the Royal Commission.

December 13, 1906.—Memorandum (not signed): Can the deputy minister advise where the original minutes of the Lighthouse Board are filed?

Chief Engineer's Reply to above inquiry from England.

January 22, 1907.—Deputy to Governor General's secretary inclosing report by Chief Engineer as to matters inquired about by Royal Commission on Lighthouse Administration. Report as follows:—

I. The lighthouse administration and other aids to navigation in Canada are administered by the Department of Marine and Fisheries. Up to 1905 all these aids were under the sole control of the Chief Engineer's branch of the department, but in that year a commissioner of lights was appointed, who was given charge of the establishment of buoys, and of the maintenance of lighthouses, construction work only being left in charge of the Chief Engineer. A lighthouse board was also appointed, whose duty it is to report to the Minister of Marine and Fisheries on applications for new aids to navigation referred to them for consideration. The power of acting on the reports of the Lighthouse Board remains in the minister as representing the government of the country, and he also has authority to order the installation of aids not recommended or considered by the Lighthouse Board; in other words, the sole control rests in the government of the country, represented by the Minister of Marine and Fisheries. There are no semi-official commissions or committees, nor are any private lights maintained, with the exception of a few private wharf lights.

II. The Lighthouse Board consists of four officials of the Department of Marine and Fisheries and one ship owner. The officials are not paid, but the outsider is allowed travelling expenses. Other men having knowledge of shipping conditions are invited from time to time to attend meetings of the board at which matters affecting districts in which they are interested are discussed.

III. The only experts in connection with the department are the technical officers who have charge of the establishment of new aids to navigation: (*a*) The erection of new stations is under the supervision of the Chief Engineer of the department, who either in person or through resident engineers inspects localities where new aids are asked for and carefully locates the sites before plans are prepared; (*b*) The Chief Engineer has had an experience of 32 years in this branch of work, and is an acknowledged authority on location and erection of light buildings; the equipment of lighthouses is under the control of the Commissioner of Lights, a trained official; (*c*)

Putting out of contracts—Contracts for construction are invited through the Chief Engineer; contracts for maintenance and supplies are invited by other branches of the department; contracts are almost invariably awarded after tenders have been publicly invited, and all contracts are awarded on the minister's approval.

IV. The officials of the department are appointed under the Civil Government Act and hold office as civil servants for life. The Chief Engineer of the department receives a salary of $3,000 per annum and the Commissioner of Lights $2,500. No qualifications are required by law, but all the engineering officials of the department have engineering qualifications.

V. All lights are free to shipping, the expenditure being provided out of the general revenue of the country. The Privy Council of Canada allots the amounts to be expended on construction and maintenance accounts yearly. The expenditures are all authorized from the department, and are certified by the several officers. Accounts are audited by the general auditor of the Dominion.

VI. From the constitution of the department it is manifest that appeals can easily be made to the minister as the head of the department. He is responsible to the Privy Council and to parliament, and has full control of all departmental policy.

VII. The aids to navigation have been under the control of the Department of Marine and Fisheries since confederation in 1867, and the system has been found satisfactory. The only alterations made have been the appointment of the Commissioner of Lights and of the Lighthouse Board, as already explained, for the sake of distributing the work in consequence of the rapid growth of the country.

VIII. No remarks. This question was, 'Any other remarks?'

IX. In December, 1905, in the Dominion of Canada, there were 822 light stations from which 1,038 lights were exhibited, under the control of 837 light-keepers. There were 78 steam fog alarms, 15 fog bells and nine fog guns or bomb stations, 119 gas buoys, 53 whistling buoys, 43 bell buoys, and about 3,800 smaller buoys, under the control of the department, submitted herewith.

X. The whole of the coasts of Canada, including the Atlantic and Pacific seaboards, the great lakes and the inland rivers are under the control of this department for aids to navigation. I am not aware that the length of coast line has ever been estimated, but it covers a great many thousands of miles.

XI. The yearly expenditure of the department for the last published fiscal year, and a comparative statement of expenditure for many years past will be found in appendices 14-17 on pages 235-245 of the report.

Method of dealing with matters passed by the Commissioners of Lights.

April 6, 1907.—Memorandum for the Chief Engineer and the Commissioner of Lights: In future after the minutes of the Lighthouse Board have received the approval of the minister, the proper officers will prepare a report to council of all recommendations of $5,000 or over, giving detailed information in each case. A minute of each recommendation of $5,000, or over, will be prepared by the secretary of the Board and handed to the proper officers, so as to have the necessary reports to council drafted. Signed F. Gourdeau, Deputy Minister. Initialled, W. P. A., J. F. F., B. H. F., A. W. O.

April 17, 1907.—Memorandum for the chairman of the Lighthouse Board (by J. F. F., C. of L.): The undersigned desires to bring the attention of the Lighthouse Board to certain recommendations that have been passed at previous meetings, and for the purpose of inviting discussion on this point, moves, seconded by Commissioner Spain, that the board reconsider the following recommendations passed at a meeting held on February 26, 1907 :—

1st. East Head, Musquash—4th order apparatus and quick-flashing light, present lantern on a new tower, $5,000.

2nd. Cape Spencer—Illuminating apparatus, $2,000; fog alarm and tower, $13,000.

3rd. Cape Jourimain to be improved to a 4th order quick flashing light, $2,000.

4th. Miscou, Bay Chaleur—New lantern and central panels. 1st order flashing apparatus, $5,000.

5th. Escuminac, light to be improved to a 3rd order flashing light, to be used in present French lantern ; details to be arranged by commissioner of lights, $6,000.

6th. Flower Island—Central range, 3rd order apparatus to be placed in present lantern and tower. (?)

7th. Lepreau—3rd order flashing light, $7,000.

(Passed February 6, 1907, when chief engineer reported present, * * * * * * * except No. 7, which was passed at meetings October 10, 11, 1906.)

The point which the undersigned desires to raise is that in practically every case the recommendation provides that the existing lantern is to be used and that the central belt of the dioptric apparatus is to be provided. All these recommendations were passed by the Board during the illness of the undersigned, with the exception of the recommendation relative to Lepreau. This latter was concurred in at the time, and since the meeting of the Board at which the Lepreau item was passed, the undersigned has given consideration to the whole question raised above, and is of the opinion that if it is practicable to make any change whatever in the lights referred to, that it is not necessary to provide the apparatus and lantern complete, inasmuch as it does not appear reasonable to pay the major portion of the cost of the complete apparatus and only receive the central belt. The existing lantern cannot be used without eliminating the upper prisms of the dioptric lights which provide about one-third of the lighting power when incandescent mantles are used. The flat glazing of the existing lanterns is objectionable principally on account of the light reflected back into the lantern, and the possibility of false flashings being produced. Lanterns of the Canadian type are not used for dioptric lights by the most prominent lighthouse engineers in other countries, and the undersigned can see no reason for adopting a less efficient method for Canada, and asks that the above recommendations be reconsidered and the complete apparatus provided.

Memorandum by Chief Engineer for Minister, protesting against above memorandum by J. F. F.

April 22, 1907.—Memorandum submitted for the minister's information *re* New Lighthouse Apparatus, recommended by Lighthouse Board in connection with the Memo. prepared by the commissioner of lights, objecting to the action of the Lighthouse Board in proposing to place improved illuminating apparatus in the present lanterns at seven lightstations. The undersigned begs to submit his reasons to the minister for objecting to the conclusions of the commissioner of lighthouses. The present lanterns at the seven stations are as follows:—

1. At east head Musquash the lantern is a 10-foot cast-iron lantern of Canadian manufacture.

2. At Cape Spencer, there is a similar lantern.

3. At Cape Jourimain the lantern is a bronze lantern of either English or French make.

4. At Miscou, it is proposed to obtain an English lantern.

5. At Escuminac the present lantern is a first rate bronze French lantern.

6. At Flower Island the lantern is a 10-foot cast-iron one. Canadian make—both tower and lantern being new in 1899.

7. Point Lepreau—A new cast-iron Canadian lantern of improved design was furnished in 1899. This lantern has glazing 4 feet high.

The commissioner of lights wishes to condemn these lanterns and provide new English lanterns with illuminating apparatus, including upper prisms, and against this proposal I most strenuously protest on the ground that a change in the lanterns is not required, and that such change would not only entail very heavy expenditure for

new lanterns, but would also entail rebuilding most of the towers to carry the heavier and larger English lanterns. The commissioner objects to the central rings only being provided, on the ground that about one-third of the lighting power is lost by omitting the upper prisms. I deny emphatically that one-third of the light comes from the upper prisms. They only transmit a very small percentage of the light, and it has been the best practice of lighthouse apparatus makers to omit them altogether in many recent installations, on the ground that they are not worth the extra expense involved, and that the lantern was more compact without the extra height of glazing required to accommodate the upper prisms. I would point out the general objections made to our Canadian lanterns is the fact that they have vertical sash bars and flat glazing. The cry against our Canadian lighthouses has been raised by European makers of lanterns simply so that they could supply their own more expensive style of manufacture. As a matter of practical use of the lanterns there is no great difference in the efficiency of the flat glazing and the curved glazing. The lights under discussion are none of them main sea coast lights, most of them are in narrow channels where the distance to be covered is quite restricted. The centre prisms of 3rd order apparatus with incandescent lights in them are stronger than the old first order lights, and are amply sufficient to meet all requirements of navigation. Therefore the undersigned sees no reason to condemn lanterns and buildings that will serve every practical purpose, for the mere purpose of incurring useless additional expense. Respectfully submitted, W. P. Anderson, member Lighthouse Board. Stamped: 'Referred to chief engineer, May 21, 1907.' Note on margin: 'This should be laid before the Minister, W. P. A., 21/5/1907.'

LIGHTHOUSE BOARD MINUTES.

Quebec ($151,700).

June 15, 1905.—Cape Anguille, Newfoundland Coast—Complete new station, $30,000, illumining apparatus for same, $10,000; outward bound vessels have no warning should they make a land fall to the northward of Cape Ray ($40,000).—(Colonel Anderson dissenting.)

Cape Ray, Nfld.—New dwelling for keeper; old one practically uninhabitable in winter (this is chargeable to maintenance) ($2,500).

River St. Lawrence.—To provide for the manufacture of steel frames for permanent lighthouses. It is the intention to have these built at the department's works at Sorel and are for superstructures to be placed on permanent piers referred to in the estimates for ship channel ($15,000).

Belle Isle, north end.—To complete dwelling for the staff at this station ($5,000).
To complete the installation of machinery ($1,500).
This work will complete this station, which was started two years ago. Only four months work can be done each year owing to distance from base of supplies.

Algernon Rock.—To rebuild the foundation of lighthouse in concrete as recommended by chief engineer. This must be attended to at once as the tower is actually in danger ($6,000).

Cape Race.—Improved tower. (A hyperradial light to be substituted for the first order triple flashing light passed by board and approved by minister October last. No estimate is required for this change as commissioner of lights is of opinion that it can be arranged out of the amount already provided ($5,000).

Bird Rocks.—New fog alarm ($20,000).

St. Paul's Island.—New fog alarm, improving aids to navigation, new lighting apparatus (provided results of future investigations favourable which are to be conducted under chief engineer) ($40,000).

Seven Islands.—New fog alarm ($9,000).

Rimouski.—New tower ($2,000).

Fame Point, Heath Point, Cape Ray.—First order lights to be installed at these places instead of second order lights as passed by the Board on 15th October last and approved by minister. No additional amount required as commissioner of lights considers present estimate will cover this.

Entry Island.—Bell buoy ($3,000. Asked for by Hon. Mr. Lemieux and recommended by Commander Wakeham.

New Brunswick ($24,800).

Escuminac.—New fog-horn ($10,000).

St. Andrews.—Cribwork protection to beacon light. The experience of last winter has shown that this work must be done this season ($5,000).

Goose Lake.—Protection work (the sea has encroached on the lighthouse property to such an extent that this work must be commenced at once) ($2,000).

Partridge Island.—Water supply—(This is to extend the water supply from the quarantine station to the fog alarm. Fog is very prevalent here and water has frequently to be delivered to keep the alarm in operation. This is very expensive and with the extension the necessity will not exist). ($4,000.)

Partridge Island.—New dwelling for assistant keeper (old dwelling past repair) ($2,000).

Quaco.—New dwelling for engineer ($1,800).

Prince Edward Island ($7,000).

Souris, East.—New light on outer end of breakwater (recommended by agent and also by chief engineer) ($1,000).

Indian Point.—Repairs. (These are very necessary, so the chief engineer says—) ($6,000).

Manitoba ($5,000).

Cox Reef, Lake Winnipeg.—New tower and dwelling (the channel island tower destroyed by fire last season will be rebuilt to suit new channel. Position exposed. Contract for this has been let) ($5,000).

Ontario ($39,000).

Lake Cerebe.—New tower on piles (This tower is to be erected on a shoal in the middle of Lake Cerebe and contract for same has been let) ($2,000).

Tobermorey.—New dwelling for keeper (old dwelling practically unfit for use ($1,200).

Burlington.—New tower. Contract let ($2,000).

Rondeau.—New tower (to replace a wooden building struck by lightning) ($2,000).

Welcome Island.—New light (asked for by Canadian Association of Masters and Mates) ($5,000).

Parry Sound.—Permanent piers and lights ($20,000).

Sister Island.—Moving light ($1,000).

Colchester Reef.—Protection work (now in hand) ($5,000).

Nova Scotia ($21,500).

Brier Island.—New dwelling for keeper ($3,000).

Grand Passage.—New dwelling ($3,000).

Cape Forchu.—Yarmouth harbour, new tower and lighthouse apparatus: tower, $5,000; apparatus, $10,000 ($15,000).

Sand Point.—Bergman's Point, River Philip harbour: Spar buoys to be placed.

Noel.—Light on breakwater ($500).

British Columbia ($92,000).

Trial Island.—New station. (This includes erection of tower, fog alarm house, dwelling for staff and usual outbuildings, also purchase and installation of fog alarm machinery. This is strongly urged by all shipmasters, as the island is a menace to all vessels approaching Victoria from eastward. This estimate also includes the lighting apparatus ($30,000).

Point Atkinson.—New fog alarm (Recommended by agent, also by Mr. Noble, assistant commissioner of lights). ($20,000).

Race Rocks.—New fog alarm (Recommended by Mr. Noble) ($20,000).

Pine Island.—New tower (Recommended by Victoria Board of Trade and all local navigators ; also by agent ($7,000).

For improvement and new aids to navigation in British Columbia. (This includes new towers for Entrance island, Sehl's island, Union bar, Maud island; also moving light at Berens island. ($15,000).

I. Total, $341,000.—June 21, 1905.

Recommendations of Commissioner of Lights amounting to upwards of $368,500.

July 24, 1905.—This meeting was called especially to consider a recommendation prepared by the Commissioner of Lights in regard to the desirability of carrying out certain improvements in the coast signal buoy service. The improvements suggested consist of two kinds:

1st. Increasing materially the size of the present signal buoys, thereby adding to their power.

2nd. Lighting the same; adopting the new principle of automatic acetylene lights. In this system it is pointed out that each buoy contains its own gas supply and is entirely independent in respect to lighting of any shore plant or steamer. It was represented to the board that this automatic principle has been tested in service and found entirely satisfactory, the standard lighted whistling buoy at the inner automatic Halifax harbour, which has the same area of whistling tubes as the Courtenay whistling buoy, having proved much superior as a whistling buoy. A description of three sizes and types of lighted signal buoys was submitted by the Commissioner of Lights, ranging in price from $3,750 to $8,500 each, the latter being the type recommended for favourable consideration, which is a 'special lighted whistling buoy 11 feet diameter, twin whistling tubes 36 inches diameter, 18-inch whistle, focal plane of light 30 feet above water. Area of whistling tubes, 14 square feet; weight, charged, 16 tons,' to be substituted for existing buoys at the following places:—

Nova Scotia: Sambro, Egg Island, Ship Harbour, Sheet Harbour, Beaver Island, Liscomb, Isaac's Harbour, White Head, Cape Canso, Louisbourg, Lunenburg, La Havre, Lockport, Brazil Rock, Yarmouth Fairway, Cape Fourchu, Northwest Ledge, Southwest Ledge, Little Hope Island, Sydney Harbour (20).

New Brunswick: South Wolf, Split Rock, Black Point, Zephyr Rock, Lepreau, Musquash, Quaco Ledge (7).

Prince Edward Island: Indian Rocks, Tryon Shoal, Fitproy Rock (West Point), making a total of 31 'special lighted' whistling buoys as given above, at $8,500 $263,500).

II. The purchase of two 'lightship whistling buoys,' elliptical in plan, arcs 11 feet and 14 feet, twin whistling tubes 48 inches diameter, 18-inch whistle, focal plane of light 30 feet above water, area of whistling tubes, 25 square feet; weight charged, 19 tons; cost, $15,000 each, for the following places: Halifax Harbour and Blonde Rock, N.S. ($30,000).

III. Twenty-five standard No. 7 gas buoys at $3,000, for the following places: (a) to complete number required for Quebec agency, including 3 spare buoys; (b) to provide for Parry Sound district, including 3 spare buoys; (c) to provide buoy for Niagara Lake, Ontario ($75,000).

31 buoys, No. 11	$363,500
2 No. 14	30,000
25 No. 7	75,000
II	$368,500

Commissioner of Lights recommendation endorsed by L. H. Board and approved by Minister on condition that proposed experiment with the Special Lighted Whistling Buoy on Lurcher Shoal be deemed a success.

IV. This totals a sum of $368,500, and the board, after full discussion, came to the conclusion that in so far as the test of the Halifax inner automatic was concerned it was not sufficient to justify the submission of a recommendation for your approval for so sweeping a change in the buoy service on the Atlantic coast without further evidence of the reliability of the light and whistle under exposed ocean conditions, and to this end the Commissioner of Lights was instructed to place a special lighted whistling buoy on the Lurcher shoal in the Bay of Fundy for one month during which time it can be observed continuously from the Lurcher lightship, and a complete record kept of the test, which record is to be forwarded to the department by the captain of this lightship. If the Lighthouse Board is then satisfied with the completeness and success of the test above referred to, it was decided to recommend for your approval, which is now respectfully done, the adoption of the special lighted whistling buoy for the 31 places enumerated elsewhere in these minutes, the purchase of lightship whistling buoys for Halifax harbour and Blonde Rock, N.S., and the 25 standard No. 7 gas buoys. The board met at 11.30 o'clock a.m., and adjourned at 11.58 a.m. All of which is respectfully submitted for the approval of the Honorable the Minister of Marine and Fisheries, F. G. (Approved by Minister 29th July, 1905). (No further action until report of test is received). Copy given to the chief engineer, also Commissioner of Lights, 29/7/'05.

August 5, 1905.—At this meeting, 'careful consideration' was given to all applications brought forward, and attached will be found the recommendations, which are now respectfully submitted for your approval. Board met at 11 a.m. and adjourned at 12.05 p.m.

Recommendations.

Nova Scotia—Bar reef, Main-à-Dieu passage: whistling buoy to be placed 3 cables E.S.E. from Helen rock, eastern extremity of Bar reef, in about 40 fathoms of water, asked for by petition from Main-à-Dieu and recommended by Mr. Johnson, M.P.; also by agent at Halifax. Spare buoys on hand. No cost.

North Sydney bar: Department to build independent foundation for light as Public Works will probably not build any extension to ballast wharf. Chief engineer to look into this personally when in North Sydney. Mr. D. D. McKenzie, M.P., is concerned about this light.

Big Patch shoal: Bell buoy to be substituted for spar buoy. Asked for by petition from Port Felix through Mr. Sinclair, M.P., and recommended by Supt. of Lights. No cost. Spare buoys on hand.

Cape North, N.S.: New fog alarm. (This item was passed at meeting of board held on 15th June, 1905, but omitted in minutes). ($20,000).

New Brunswick—Cocagne harbour: Range lights to be established on mainland in Cocagne harbour, to lead to the inner harbour anchorage. Pole light ($500). This includes cost of lantern.

Ontario—McKay island, entrance Bruce Mines, Lake Huron: Small lighthouse to be erected here. (Boat captains plying in these waters petitioned for some aid, suggesting a gas buoy on Prout reef.) Chief engineer visited the place and reported that failing a gas buoy on Prout reef, what is wanted is a light on McKay island. ($800).

Jackstraw shoal: To be changed to a red light; no expense.

Gananoque narrows: Gas buoy to replace barrel buoy; no expense.

Fiddler's Elbow: Gas buoy to replace barrel buoy ; no expense.

III. Total—$21,300.

The above three changes are asked for by masters plying in these waters.

Aids to Navigation applied for, but allowed to stand over or declined.

Locality and details of aids to navigation applied for: No date.

26623. Dimock's point: at mouth of St. Croix river, near Windsor, N.S.; asked for by petition through Mr. Black, M.P., who recommends same; also recommended by Supt. of Lights.

25523. Avon river, Minas basin: Lightship wanted where fairway buoy now is; asked for by petition forwarded through Mr. Black, M.P., who recommends same. Inspector Hutchins recommended a gas buoy instead. To stand.

Harbour island, Darby point: Light asked for by petition through Mr. Sinclair, M.P.; known also as Holly point. To stand.

Western head, Liverpool harbour: Fog alarm asked for by petition through Hon. Mr. Fielding. Recommended by Supt. Hutchins. To stand for want of money; and Mr. F. so informed 8th August, 1905.

Middle Ledge, Isaac's harbour: Asked for by petition from Isaac's harbour; does not say what. To stand.

Larry's river: Light on breakwater asked for by petition. Breakwater not completed and consideration of establishment of light deferred. To stand.

Gannet rock and Brier island: Establishment of whistling buoy in fairway recommended by Supt. Hutchins. Not entertained.

Sydney, C.B.: Automatic buoy off harbour mouth. Asked for by Capt. Hackett; reported against by chief engineer. Refused.

St. Peter's island: Lighthouse asked for by petition through Mr. Finlayson, M.P. Recommended by Supt. Lights. To stand.

Bass river: Light on wharf; asked for by Hugh McKenzie, Truro, and recommended by Hon. Mr. Fielding. Suggested that Point is better place. Referred to chief engineer, 8th August, 1905.

Purdy's turn, Jemseg: Light asked for by petition through Hon. Mr. Emmerson, who recommends same. To stand for present. No action.

March 31, 1906.—Meeting March 31, 1906. The following gentlemen appeared before the board to plead the merits of the various applications for aids to naviga-

tion in which they are particularly interested: Wm. Sloan, M.P., Comox, Atlin, B.C.; C. J. Smith, gen. mgr. Richelieu and Ontario Navigation Company, Montreal. Careful consideration was given all matters brought up and attached will be found the recommendations agreed upon. Board met at 11.30 and adjourned at 3.40.

$74,380.

British Columbia—Lookout island: 30-day light. (B.C. Board of Trade asked for this, also Mr. Sloan, M.P., and recommended by chief engineer, and agent, B.C. ($750).

Yellow island Baynes' Sound: Fog alarm asked for by Mr. Sloan, M.P., also Vancouver Shipmasters' Association. Building, $4,000; 1½ inch diaphone, $3,500 ($7,500).

Pultney point: Fog horn (hand); asked for by Vancouver Shipmasters' Association; also Mr. Sloan, M.P. ($50).

Scarlet point, Christie pass: Fog horn (hand), asked for by V.S.A., and Mr. Sloan, M.P. ($50).

Egg island: To complete fog alarm and install machinery ($5,000).

West coast, Vancouver island: A new station to be erected on a site to be selected; recommended by assistant chief engineer (B. H. F.) not present at meeting. ($30,000).

Pine island: Fog alarm, new tower and dwelling asked for by V. B. of Trade and recommended by agent and assistant chief engineer ($16,500).

Lucy island: New tower and dwelling, asked for by Mr. Macpherson, M.P., in 1904; reported favourably by chief engineer, September, 1905. ($5,000).

To erect small lights as may be found most desirable; asked for by assistant chief engineer and included in estimates ($2,000).

General account: This is asked for by assistant chief engineer, and is to cover travelling expenses of agency officials, general repairs, superintendence, inspection of works, salaries of engineers, &c. ($8,000).

Ivory island, Milbank sound: Fog signal wanted; asked for by Mr. Sloan, and also by Van. S. A. The chief engineer intimated that Mr. B. H. F., assistant chief engineer, is now working on a self-contained fog alarm which might be tried at this place. No estimate of cost.

$9,000.

Prince Edward Island—Indian point: To rebuild foundation of tower. Work very necessary and cannot be delayed, so the assistant chief engineer reports. ($4,000).

Souris: To erect and complete the steel lighthouse provided for this station. Recommended by assistant chief engineer. ($1,000).

General account: Asked for by assistant chief engineer, and to cover general repairs, superintendence, inspection of works, salaries engineers, &c., locally employed, and travelling expenses of agency officials. ($4,000).

$17,000.

Now Brunswick—Cape Tormentine: Range lights; asked for by petition sent through Mr. Emmerson and recommended by agent at Charlottetown. No estimate. Only additional cost is salary of keeper for summer, as range lights are in position and operated in winter, when *Stanley* is on route.

Fog alarms: Improvements to existing fog alarms; asked for by assistant chief engineer. ($8,000).

Small lights: Asked for by assistant chief engineer. ($1,000).

General account: Asked for by assistant chief engineer, and is intended to cover general repairs, superintendence and inspection of work, salaries of local engineers, &c., and travelling expenses of agency officials. ($8,000).

$112,900.

Nova Scotia.—Cape North, fog alarm. Assistant chief engineer says this was to have been done last year, but was not overtaken. Material has been purchased and machinery can be obtained from a station where a low-pressure pattern diaphone has been installed ($7,500).

Light to be changed to a quick flashing light—recommended by Shipping Federation and asked for by commissioner of lights. More information seems to be wanted for this large vote ($17,250).

North Sydney: Pier and light. Assistant chief engineer says this is to replace the mast light carried away by storm, and must be built in a more substantial manner than the former one ($5,000).

Sydney harbour (entrance) Low Point light. Illuminating power to be increased and light made distinctive; asked for by Shipping Federation ($17,250).

Cape George: Tower and dwelling to be rebuilt. The agency officials report that this tower cannot last another season. Assistant chief engineer says it has been left till last minute ($4,000).

Port Maitland, Yarmouth county: Fog bell for end of pier (asked for by petition sent through Mr. Law, M.P., who strongly recommends same; also agent) ($600).

Eastern Point reef, Lunenburg county: A combination gas and bell buoy; asked for by petition, and recommended by Mr. Maclean, M.P. Commissioner of lights recommends a lighted bell buoy. Inspector of lights, Nova Scotia, reports favourably. (Have one in stock, no expense).

Goillon reef, Lennox passage: Conical steel buoy to replace present spar buoy. (Asked for by Mr. Finlayson, M.P., and reported on favourably by superintendent of lights, Nova Scotia) ($300).

Goulet beach, Cape la Ronde, Lennox passage: Iron can buoy (asked for by Mr. Finlayson, M.P., superintendent of lights, Nova Scotia, reports favourably and says there are spare buoys in stock)—no cost.

Liscomb or Wedge island. These two lights are very similar, and Capt. Johnson, of the *Lady Laurier,* recommends that one of them should be changed. (No cost).

Cumberland basin: Two black spar buoys be placed to mark the channel opposite Fort Cumberland. Also two spar buoys (one black and one red) to mark the turning point; easterly to lead into the channel asked for by Mr. Logan, M.P. and recommended by superintendent of lights, Nova Scotia) (in stock, no cost).

Yarmouth harbour, Hen and Chickens: Gas and bell buoy, to replace conical buoy (in stock).

John's cove: A black can buoy to be replaced (asked for by Mr. Law, M.P., and recommended by Superintendent Hutchins) (in stock, no cost).

Cerberus, Chedabucto bay: Asked that a whistling buoy be placed. Petition sent through Mr. Finlayson, M.P., who recommends same. Superintendent Hutchins reports favourably for an automatic whistling buoy be placed ½ S.W. from the Cerberus in about 26 fathoms water (one in stock).

Grand Digue, Lennox passage: Superintendent of lights, Nova Scotia, reports that mariners complain of the pole lights here, and recommends that a tower 33 feet from base to vane, like one on Freestone island, be erected—chief engineer concurs ($2,000).

Fog alarms. Improvements to existing fog alarms ($25,000). The inspector of fog alarms has made a partial inspection of Nova Scotia fog alarms and finds that a

large number require new boilers and other improvements. The assistant engineer asks for this amount, which is in the estimates.

Small lights: Not enumerated, but asked for by assistant chief engineer ($2,000).

General account: To cover general repairs, inspection of work, salaries of local engineers, &c., and travelling expenses agency officials, and unforeseen expenses (asked for by assistant chief engineer) ($20,000).

Cranberry island, Brier island, Cape Sable, Scattarie: To complete the installation of fog alarms at above places (asked for by assistant chief engineer) ($10,000).

To pay for contracts already awarded, but which will not be completed before July 1 (asked for by assistant chief engineer) ($2,000).

Ontario ($74,900).

Presqu'Isle, Lake Ontario: Fog alarm wanted (asked for by Lake Ontario and Bay of Quinté Steamboat Company, one of whose steamers went ashore there in a fog; also by Dominion Marine Association, Kingston, and Mr. Smith, manager Richelieu and Ontario Navigation, who appeared personally before Lighthouse Board) ($10,000).

False Ducks: Duplicating machinery and rebuilding lighthouse and dwelling ($5,000). The tower of this place was struck by lightning last fall and the dwelling destroyed by fire (asked for by assistant chief engineer).

Port Colborne: To enlarge the fog alarm building and duplicate the machinery and move existing lights to suit improvement. (The assistant chief engineer says this work must be of the strongest description. Port Colborne is a most important point and the engineer should have better accommodation and duplicate machinery, as in case of a breakdown he would be helpless) ($12,000).

Mississagi strait: To rebuild the fog alarm at this place, which is used up (asked for by assistant chief engineer) ($10,000).

Thames river: Gas buoy to be placed at mouth of channel leading into Thames river (asked for by Mr. Clements, M.P. Have one in stock, but freight, moorings, &c., will cost $200).

Surprise shoal, Georgian bay: Gas buoy with bell (asked for by Canadian Association of Masters and Mates); also by C.P.R. SS. Co. Recommended by Chief Hydrographer, W. J. Stewart.

Port Dalhousie: Front light on end of pier should be a red light (asked for by petition of Canadian Association of Masters and Mates) (small cost, no estimate given).

Small lights, not enumerated, but asked for by assistant chief engineer ($2,000).

Fog alarms: Improving existing fog alarms ($15,000). It is reported by the assistant chief engineer that the fog alarms on the lakes have not been properly inspected heretofore. A new system is being organized, and it is expected a good deal of work will be found urgently necessary in connection with the plants.

General account: The assistant chief engineer says there is large repair work to be done in this agency, such as lighthouse at Almonte, Sulphur Island, Little Current, shelter shed at Stokes bay and repairs at Bois Blanc, Chantry island, Black Bear island, Saugeen, Penetanguishene, Gull harbour, Red river and completion of works at Georges island and Collingwood ($20,000).

Quebec ($144,925).

Belle Isle high light: Illuminating power to be increased and character of light changed from fixed to occulting, 5 seconds light and 5 seconds dark (asked for by Shipping Federation) ($1,250).

Belle Isle low light: Illuminating power to be increased with a new 2nd order lens showing over an arc of 240° and light changed from fixed to occulting (recommended by Shipping Federation) ($1,250).

Flower island: Most powerful illuminant to be installed, and present light changed to one giving two flashes every 10 seconds (asked for by Shipping Federation) ($17,250).

Point Rich, Nfld.: A triple flashing light to be provided, giving three flashes every 20 seconds (asked for by Shipping Federation) ($17,250).

Belle Isle straits: That a beacon be erected on the Nfld coast about 18 miles west of Cape Norman (asked for by Shipping Federation) ($150).

Cape Pine, Newfoundland: Character of light to be changed to flashing 3rd order. Illuminating power to be increased (asked for by Shipping Federation) ($17,250).

Port Basque, Newfoundland: Illuminating power of light to be increased and light changed to a quick flashing white light (asked for by Shipping Federation) ($17,250).

Cape Chatte: Illuminating power of light to be increased and light changed to a quick flashing white light (asked for by Shipping Federation) ($17,250).

Father Point: Most powerful illuminant to be provided and characteristic changed to quick flashing; also that light be screened to clear Cock point shoal to the eastward (asked for by Shipping Federation). ($17,250).

Cape Dogs: Lighthouse and fog signal. At present there is no light on the north shore from Prince shoal to Cape Salmon, a distance of 15 miles (asked for by Shipping Federation; also by general manager Richelieu and Ontario Navigation Company) ($10,000).

Quebec harbour: Illuminating power to be increased. At present these lights are absorbed by the city's lights (asked for by Shipping Federation) ($75).

Lark reef, mouth of Saguenay: Gas buoy to replace red conical buoy on S.E. part of the reef (asked for by Richelieu and Ontario Navigation Company). Capt. Koenig says it would be very useful, and Mr. Gregory concurs. Capt. Koenig also reports that the only buoy that will stand upright in this current is type called No. 1B form, of which there are none in stock ($100). Commissioner of lights says if it will be necessary to get one of this class of buoy the cost will be more, as one will have to be purchased.

Point Amour: To complete work unfinished at close of navigation (asked for by assistant chief engineer). No estimate given. It is included in a bulk sum for unfinished work.

Cape Rosier: To complete work unfinished at close of navigation (asked for by assistant chief engineer). No estimate given. It is included in a bulk sum for unfinished work.

Saguenay river, Grosse Roche, Rivière du Moulin: To complete contracts and rebuilding range lights (asked for by assistant chief engineer) ($3,600).

Cape Norman: New dwelling for keeper. Resident engineer at Quebec reports this absolutely necessary. Asked for by assistant chief engineer ($2,000).

Small Lights: Small harbour and fishing lights, as may be considered most important by Lighthouse Board. Asked for by assistant engineer. ($3,000).

General account: Superintendence of works, salaries of local engineers, travelling expenses, agency officials and general repairs, as may be found necessary; asked for by assistant chief engineer ($20,000).

IV. Total, $433,575. .

Aids to Navigation wanted in British Columbia—Supported by Mr. Sloan, M.P.—April 26, 1906.

Submitted for approval of Minister of Marine and Fisheries, April 9, 1906.

Estevan Point, Vancouver Island.—First-class light wanted. Asked for by Mr. Sloan, M.P., who came before board. To be noted for discussion with minister. Referred to chief engineer.

Middle Bank, Strait of Fuca.—Lightship equipped with the most powerful light, fog alarm, and wireless telegraphy. Asked for by Mr. Sloan, M.P., who appeared before board. To be anchored about 15 miles out. Referred to chief engineer.

Cape Beale.—Fog alarm. Agent in British Columbia to experiment with booms, as suggested in report of chief engineer. Chief engineer to make personal examination of sites between Cape Beale and Carmanah and report on best one, where a first-order dioptric light and fog alarm is to be installed. Referred to chief engineer.

Pine Island.—Mr. Sloan, M.P., brought up the matter of a new tower at this place, and was informed by the chief engineer that the matter is being attended to.

Ballenas.—Light asked for at this place by Mr. Sloan, M.P.; also recommended by Vancouver S.M. Association. What is wanted is an improved light, so as to be visible all round, and a fog signal installed. Agent, British Columbia, to be asked for report.

Lund.—Light wanted. Asked for by Mr. Sloan, M.P., who intimated that it is very important.

Pitchen Sound.—Mr. Sloan, M.P., asked for a beacon here at the request of Capt. Hughes, who navigates in the vicinity. Agent, British Columbia, asked for report.

Zero or Paddle Rock.—Whistling buoy wanted. Asked for by Captain Hughes, who navigates in the vicinity, through Mr. Sloan, M.P.

Carslake Point.—Whistling buoy wanted. Asked for by Captain Hughes, who navigates in the vicinity, and recommended by Mr. Sloan, M.P. Agent, British Columbia, asked for report.

Alfred Reef.—Bell buoy wanted. Asked for by Captain Hughes, through Mr. Sloan, M.P.

St. Mary's Island, Quebec—New Fog Alarm and Light Station.

St. Mary's Island, Quebec.—Assistant chief engineer asked for $20,000 for a new fog alarm and light station; also a dwelling. Mr. Allan intimated that Captain Vipond reported unfavourably on this. Stand; no action.

Bryon Island.—Assistant chief engineer asked for $15,000 for a new fog alarm at this place Stand; no action.

Port Daniel.—Lighthouse applied for by petition, through Mr. Marcil, M.P., who strongly recommended same. To stand.

Shipping Federation ask that a Lightship with Fog Whistle be placed on Morin Shoal.

Morin Shoal (near Murray Bay)—The Shipping Federation asked that a lightship with fog whistle be placed here. Inquiries to be made about a suitable vessel or buoy. Referred to the Commissioner of Lights for necessary action, 26-4-'06.

Other Extensive Demands by Shipping Federation.

Montreal Harbour.—The Shipping Federation asked that the ledges, reefs and shallow water within the harbour be buoyed; that entrance lights be established on the guard and Victoria piers, and a screened light put on Isle Ronde, which will show

when a vessel comes abreast of the Heney carriage factory. To be brought to the attention of the Montreal Harbour Commissioners, who look after the lights in the harbour. Done, 26-4-'06.

Montreal Harbour.—The Shipping Federation asked that the range lights at Hochelaga be raised a sufficient height to be visible as soon as a vessel goes within the line of range, and the lanterns and illuminating power be increased. Mr. Boucher communicated with, 26/4/06.

Cap Rouge.—The Shipping Federation asked that a light be placed on the north pier of the Quebec bridge. Bridge Company to be asked to do this. Done, 26/4/06.

Nicolet to Champlain.—The Shipping Federation asked that the necessary changes in range lights be made to mark the improvements just completed in the channel between these points. This is being done.

Isle aux Raisin.—The Shipping Federation asked that 3 buoys be placed to mark anchorage at this place. Mr. Boucher communicated with, 26/4/06.

Red Island and Princess Shoal.—The Shipping Federation ask that an additional high gas buoy be placed on the north end of Red island bank to enable mariners to use this channel, which is 2½ miles wide and saves two crossings. Mr. Gregory asked for report. Done, 1/5/06.

Murray Bay to Quebec—Aids to Navigation suggested by Shipping Federation.

Murray Bay to Quebec.—The Shipping Federation ask that the range lights Goose cape, Cape St. Joseph and Cap à l'Aigle be made distinctive. At the present time they are very much alike, and it is difficult at times to be sure of the one visible.

(*a*) Cap Salmon to head of North Traverse.—That this part of channel be marked by a distinct range of lights—2 traverse lights, as at present.

(*b*) Head of Traverse to Pillars past Channel Patch.—The Shipping Federation asked that this part of channel be marked by range lights at L'Islet, the front light to be placed on the wharf.

(*c*) The Pillars to Crane Island. The Shipping Federation recommend that this part of channel be marked by range lights; front light on pier now nearly completed; high light on Crane island wharf.

(*d*) Beaujeu Bank.—Shipping Federation recommend that this part of the channel be marked, after dredging, by range lights near St. Thomas bank and St. Thomas point.

(*e*) Crane Island to St. Laurent Wharf d'Orleans.—The Shipping Federation recommend that the channel here be marked by a range of lights at each end of the tangents.

Referred to chief engineer for report, 22-5-06.

Ontario.

False Ducks, Lake Ontario.—Gas buoy asked for for deep-water boats. Petition from Canadian Association Masters and Mates, February, 1905. Stand; no action.

Kennedy Shoal, Georgian Bay.—Gas buoy asked for by petition from Canadian Association Masters and Mates, February, 1905. Stand; no action.

Eastern Gap, Toronto.—That lights here be improved. Asked for by petition from Canadian Association Masters and Mates, February, 1905. Chief engineer announced that there is no necessity for this, since the new lighthouse is being built there.

Port Dover.—Buoy asked for reef on southeast side of breakwater. No action; stand until application renewed.

Port Lewis.—Gas buoy. This has been placed.

Rainy Lake.—Range lights asked for at Sand bay, above Pithers rapids. Light at Pithers point and a light and range on mainland below Pithers rapids. Asked for by captains of tow boats operating on lake. To stand. Mr. Nash, agent of department at Rat Portage, so advised, 17-4-'06. (?)

Minnicog, Georgian Bay.—Beacons leading into this place to be kept lighted at night. Asked for by Mr. Jas. Playfair, Midland, in February, 1905. Stand until application renewed, March 31, 1906.

Bronte Harbour, Lake Ontario.—Light on pier. Stand; no action.

Goderich Harbour.—Gas buoy wanted outside breakwater. Asked for by contractors of breakwater and mayor of Goderich. Stand.

Nine Miles Point.—New light wanted. Done; no action.

Cobourg, Ont.—Light keeper applied for a Chance lens lantern (red) for west pier. Stand; no action.

Port Dalhousie.—Fog horn for pier asked for by petition from Canadian Association Masters and Mates in February, 1905. Stand; no action.

Graham Shoal, off Duck Island, Lake Huron.—Gas buoy asked for by petition from Canadian Association Masters and Mates, February, 1905. Stand—no action.

Red Rock, Georgian Bay.—Fog alarm asked for by petition by masters of vessels trading on the bay, 1898. Reported against by chief engineer in 1902. Application renewed, 1905, by petition, and recommended by lightkeeper; also by Mr. Watson, M.P. Stand—no action, unless application renewed.

Kitchener Island, False de Tour, Lake Huron.—Light asked for by petition from captains navigating in vicinity. Recommended by chief hydrographer. Mr. Dyment, M.P., presses for it also. Stand.

Niagara-on-the-Lake.—Lighthouse and fog alarm asked for by Dominion Marine Association. Stand.

Niagara Shoal.—Gas buoy asked for. Stand.

Cape Hurd Channel.—Channel to be marked by buoys. Asked for by petition from mariners in 1902. Application renewed in 1904 by Mr. J. E. Campbell, Hepworth, Ont. Stand—no action, unless application renewed.

Agate Island.—Lighthouse asked for by Mr. W. C. Fremlin and Mr. J. J. Kehoe, Marksville. Chief engineer: that lighthouse on North Sister rock had been removed to West Sister rock, and there is no need of the Agate Island light. No action.

Meldrum Bay, Lake Huron.—Lighthouse asked for by petition sent through Mr Dyment, M.P., who recommends same, March, 1905. Stand.

Pelee Island.—North end light. Discontinue light. No action necessary.

Spruce Island, Parry Sound.—Permanent pier proposed by assistant chief engineer The building of this to stand over.

New Brunswick.

Negro Head, Pisarinco harbour: Spar buoy to be replaced by bell buoy. Asked for by petition in 1904.—Stand—no action.

Machias, Seal island: Fog alarm, improvements suggested by Mr. Thomson Schmidt and Mr. D. J. Stevens. Referred to chief engineer, 21-5-06.

Wilmots' Bluff.—Extensive repairs required, reported by agent St. John. Referred to chief engineer, 21-5-06.

Montgomery island and Dalhousie wharf.—Improving range lights. Inspector of lights suggests changes. Referred to chief engineer, 21/5/06.

Kouchibouguac.—Range lights asked for by petition sent through Mr. LeBlanc, M.P.—Stand.—No action unless revived again.

Purdy's Turn, Jemseg river.—Lighthouse asked for by petition.—Stand—No funds —interested parties so advised, 2-5-06.

Burton, Sunbury county.—Light asked for by W. Johnson. Reported on unfavourably by agent St. John.—Stand.—No action.

Cherry island: St. John agent suggests improvements in fog signal. Chief engineer not in favour of any change.—Stand.

Nova Scotia.

Guyon island: Fog alarm asked for by shipmasters and also brought to attention of department by Mr. A. Johnson, M.P.—Stand.

Grand Passage.—Dwelling for keeper.—Being done.

Green Island, Holly Point, Bickerton: Capt. Johnson says these lights ought to be changed as they are misleading in misty weather.—Stand.

Kidston Island: Asked through Mr. McKenzie, M.P., that lighthouse be elevated. Superintendent of lights in Nova Scotia says light is high enough, but it might be improved.—Stand.

Neil's Harbour: Pole light wanted on end of breakwater.—Stand.

Margaretsville Annapolis county.—Fog alarm asked for by Mr. Pickup, M.P. Superintendent lights reports that interests of general navigation do not call for one, and in this the agent, Halifax, concurs.—Stand.—Mr. Pickup advised, 2/5/06.

North Ingonish, Victoria county.—Light asked for by D. D. McKenzie, M.P. Superintendent of lights reports favourably and chief engineer supports same. Owing to many more pressing wants this must stand over.—No action.

Point West Bay, Richmond county: Petition for light sent through Finlayson, M.P., who recommends same. Superintendent of lights reports that necessity for light not pressing.—Stand. Mr. Finlayson so advised. 2/5/06.

Herring Cove, Halifax county: Roche, M.P. and Carney, M.P., ask for a light on the breakwater. Superintendent of lights favourable to one, but chief engineer says light already there answers all requirements.—Stand until more pressing needs are satisfied. Roche and Carney so advised. 2/5/06.

Cumberland Basin: Two small range lights northwardly from Amherst Basin pier asked for by Logan, M.P. Reported on favourably by superintendent of lights. Must stand for more pressing aids to be attended to first.

Minudie.—Light recommended for Barrowfield head.—Stand.—No action.

Louisbourg harbour: Submarine bell for.—Stand—no action.

Yarmouth harbour: Cat Rock bell buoy to be replaced by a gas and bell buoy.

Ships' stern.—Bell buoy of American type to be substituted for present Canadian buoy. B. of T. Yarmouth ask for these changes.—Stand.

Windsor: Dr. Black, M.P., recommends that Dominion Atlantic R. R. bridge be lighted. D.A.R. asked to carry this out as promised. 2/5/06.

Upper Kemp Head, Big Bank shoal, Frasers' point: Three places are identical. Lighthouse asked for by petition through E. D. McKenzie, M.P.—Stand—no action until revived.

Sydney Harbour: Shipping Federation ask for a whistling buoy at Petries Ledge. Gas buoy for Livingstone shoal. Ditto near South Bar.—Stand.

Egg Island: Fog signal asked for by Shipping Federation. To be taken up when money is available.—Must stand for present.

Buoys: Shipping Federation recommend that all buoys be repainted and relettered at least once every year. Chief engineer explained that cause for complaint would be removed now that the department is getting another steamer for this agency.—No action.

Cape Fourchu (fog alarm): Oil plant recommended to replace steam plant by assistant inspector government steamers. Referred to chief engineer. 21/5/06.

Island Harbour, Guysborough county: Light asked for by petition sent through Sinclair, M.P., who recommends same. Superintendent of lights suggests Darby Point. Stand—Sinclair, M.P., informed verbally of decision of board, 28 April, 1906.

Louisbourg: New diaphone for fog alarm. Referred to chief engineer. 21/5/06.

Rankin's Island, Argyle harbour: Light asked for by petition through Law, M.P. Superintendent of lights reports favourably, but chief engineer not impressed with necessity for one.—Stand—Mr. Law, M.P. so advised. 2/5/06.

Red Bank, Avon river: Light asked for by petition sent through Dr. Black, M.P., who recommends same strongly. Report of agent Halifax not received at date of this meeting. Hold until report received.—No present action.

Prince Edward Island.

Charlottetown harbour: Range lights petitioned for by masters trading there and reported on favourably by the agent.—Stand.—No funds at present. Agent and petitioners so advised. 3/5/06.

June 1, 1906.—Meeting. Present: Chairman, Spain, J. F. Fraser, B. H. Fraser.

Nova Scotia ($1,450).

Jordan breakwater, Shelburne tower light, 7th order dioptric asked for by wharfinger through Cox, M.P.P., who forwards same through Hon. Mr. Fielding. Recommended by superintendent of lights, Halifax, ($700).

Island Harbour, Northwest point: Tower light 7th order dioptric asked for by petition sent through Sinclair, M.P., who recommends same, ($700).

Dimock's point, Hants county: Light asked for by petition sent through Dr. Black who recommends same.—Recommended by superintendent of lights, N. S. What is required is to attach tower of Windsor electric light on a pole ($50).

Hantsport: Buoy (gas and bell) to be placed at tail of bar; asked for by petition through Dr. Black who recommends same, also recommended by superintendent of lights.—No cost, have one in stock.

Quebec ($2,075).

Port Daniel, west: Lighthouse applied for by petition through Marcil, M.P., who strongly recommends same. Agent Quebec says: A light would be very useful in the general interests of navigation. Resident engineer, Quebec, says: No engineering difficulties in the way. Tower, $700; lantern, $575; freight and erection, $100; lens occulting light, $700 ($2,075).

V. Total $3,525.

October 10 and 11, 1906.—President, chief engineer, acting chairman; Spain, J. F. Fraser, H. A. Allan. Captain J. W. Troup. The chief hydrographer appeared before the board and outlined a scheme for lighting the approaches to Prince Rupert which will be made the subject of a separate report. The board met 10th inst. 10.50, adjourned 4.30 p.m. 11th at 10.15 a.m., adjourned 3.50 p.m.

Prince Edward Island ($6,580)

Charlottetown harbour: Range lights asked for by petition to be placed on Warren's farm, recommended by Lloyds' agent Prince Edward Island, also by agent department, ($830).

Souris: (main sea light).—Mr. Hughes, M.P., asks that it be changed to a flash light. Agent department recommends this. Light to be made occulting and power of lamp increased ($1,000).

Lennox Island: Range lights to guide the Indians in from their fishing grounds on dark nights. Asked for in petition sent through Indian Department, recommended by agent, ($250).

Miscouche shoal, off Summerside: Captain Cameron, of *Empress,* which plies here asks for lighted buoy.—Recommended by agent ($4,500).

Gaspereaux shoal, off Graham shoal: To remove present steel can buoy at Miscouche to this place when lighted buoy goes to Miscouche.—No cost.

Nova Scotia.

Digby Gut: Gas buoy to be placed off lantern point (Digby Gut). Have one in stock. Col. Anderson dissenting, saying that entrance is perfectly clear of danger, and is already marked by a good light and fog alarm on land.

New Brunswick ($7,600).

Point Lepreaux: 3rd order flashing light. Agent says this is one of the most important and dangerous places for steamers running up Bay of Fundy, ($7,000).

Wilmots Bluff: Small tower light to replace mast light. Recommended by agent and chief engineer, ($600).

Ontario ($6,300)

Port Burwell: Red light on end of pier, ($200).

Northport Shoal, Bay of Quinté. Gas buoy asked for by Richelieu and Ontario Navigation Company ($3,500).

Welcome Island, Thunder Bay, Lake Superior: 2nd class fog alarm (can use machinery that came out of Thunder Cape). Asked for by Port Arthur Board of Trade and also by Mr. Conmee, M.P., for building, ($2,000).

Way shoal, below mouth of Blanche river: 4 range light, ($500).

Lanterns for same (this is in the Ottawa river, and the chief engineer already has the minister's authority for erecting these lights), ($100).

British Columbia ($166,820).

Paschena Point (Beeghados Point): 1st order lighthouse, 1st order fog alarm ($40,000); 1st order lighting apparatus ($25,000).

Boat Point, Sarah island: Unwatched light. Vancouver Shipmasters Association asked for this, ($2,000).

Point Atkinson: 3rd order quick flashing light (small model). Recommended by commissioner of lights after inspection, ($4,350).

Middle Bank, Strait of Fuca. Lighted whistling buoy with bell, ($8,500).

Zero Rock, Rivers inlet : Unwatched light (Captain Troup remarked that this should be done right away), ($2,000).

Dodds' Narrows. Red light (Vancouver Shipmasters Association asked for this), ($1,000).

Whiffin Spit, Sooke harbour: Department to pay for upkeep of this light. At present fishermen maintain it. Fraser River canners ask department to take care of it, ($120).

Plover Point, Mosquito harbour, Clayoquot sound : Unwatched light to be furnished ; single wick lamp will do. Capt. Townshend will keep light going ($500).

Klunugget, Grenville channel : Day beacon painted white ($200).

Ballenas: Light to be shifted to end of island (moving tower), $400; installing fifth order flashing apparatus, $2,500; fog alarm previously in use by the department or Daball trumpet in use by United States, $2,000 (cost of building). Machinery, $1,000 = $5,900.

Yellow Island: Foghorn previously used by department or Daball trumpet used by United States. Cost of building, $2,000; machinery, $1,000 ($3,000). A fog alarm is already authorized at this place. This is to get authority to install a cheaper type.

Sisters: Fog alarm previously used by department or Daball trumpet. Cost of building, $2,000; machinery, $1,000.

Cape Beale: Fog alarm, 3-inch diaphone. Machinery, $9,000; building, $4,000. installation, $2,000 ($15,000).

Comox Bar: Gas and bell buoy. Vancouver Shipmasters' Association asked for something here ($4,000).

Spanish Bank: Remove present bell buoy from Comox Bar to this place. Fraser River canners ask for bell or whistling buoy here.

West Rock or Clark Rock, Gulf of Georgia: Unwatched light, or placed on beacon, to be built on Clark Rock ($2,000).

Carmanah: Third order of light to be installed. Fog alarm to be improved if possible ($14,000).

Esquimalt: Fog alarm 10,000 blow bell. Nanaimo pilots complain that at present there is no guide to lead them in ($500).

Cape Mudge: Larger reflector to be put here to show down gulf. Captain Troup says that at present light cannot be seen further than six miles out in gulf ($50).

Chatham Point: Bell buoy on Beaver Rock with tide bell attachment ($5,000).

Christie pass: Light to be made white with red sector only over Noble island ($50).

Fog rocks, Fitzhugh sound: Unwatched light. Col. Anderson in favour of lighthouse with watched light ($2,000).

Swan rock, Rivers inlet: Spar buoy ($25).

Gibson island, entrance to Skeena: Spar buoy ($25).

Tree Bluff, Chatham sound: Iron buoy off end of spit ($300).

Skidigate: Iron buoy ($300).

Lucy island: Hand foghorn ($25).

North Skeena passage: Buoy on rock between Inverness cannery and North Pacific cannery: chief hydrographer to place this next year—No charge.

Village island: Beacon on rock outside Village island, Port Essington ($800).

North Skeena passage: Small iron buoy on rock between Inverness cannery and North Tree point ; chief hydrographer to look after it ($300).

Gibson reef, off Gibson island: Unwatched light, Watson rock ($2,000).

Walbeau rock, Pointer island: Steel buoy ($300).

Morning reef, Klawnugget: Unwatched light ($2,000).

Ledger's reef: Gas buoy on reef off McNeill's point, Mr. Haddington island ($3,500).

Ripple shoal: Can buoy ($300).

Race point, Porlier pass: Increasing arc of front light in Porlier pass to make it visible all round ($150).

Siwash rock: Spar buoy ($25).

Victoria: Beacon lights in harbour to be attached for electricity with cable recently purchased from the War Department; laying cable ($100).

Prospect bluff: Installing fog alarm at lighthouse ($5,000).

Sands head, Fraser river: Lighthouse to be moved out to point ($3,000).

Sands head, Fraser river: lighted buoy to be placed at point temporarily until lighthouse moved ($10,500).

VI.—Total, $187,300.

February 6, 1907.—Meeting. Present: Chairman, Chief Engineer, Spain, H. A. Allan and W. H. Noble, in absence of Commissioner of Lights. The following gentlemen appeared before the board to plead the merits of the various applications: Dr. J. B. Black, M.P., Hants county, N.S.; D. Finlayson, M.P., Richmond county, N.S.; Michael Carney, M.P., Halifax; Mayor McIlwreith, Halifax; Mr. Bell, president Halifax board of trade. Mr. A. N. Maclean, M.P., Lunenburg, was notified when the meeting would take place, but he found it impossible to be present. The following departmental officials were present: Mr. Lord, Charlottetown; Harding, St. John; Hutchins, Superintendent of Lights, N.S., Kelly, Superintendent, N.B.; O'Farrell, Inspector Lights, Quebec, and Captain Koenig, master C. G. S. *Druid*. Board met 10.30 a.m.; adjourned 5.30 p.m.

Nova Scotia ($33,300).

Mitchener's point, Avon river: Small light asked for by Dr. Black, M.P. Tower and building, $600; lantern and apparatus, $200; land and right of way, $100 ($900). Tower, 4 feet; lantern, 7th order lens.

Madam or Big island: Instead of a lighthouse as asked for on the south end of Janvrin island, the board decided to put a combined gas and whistling buoy on the Cerberus instead of whistling buoy authorized by the board March 31 last. Cost of combined gas and whistling buoy, $6,000. The board also decided to place an American bell buoy on Peninsular shoal, instead of the combined gas and bell buoy recommended by Superintendent of Lights; in stock, no cost.

Fourchu harbour, Richmond county: Light asked for by Finlayson, M.P. Wooden tower, $1,000, and 5 ft. wooden lantern; 7th order apparatus. Also decided to shift the bell buoy here to mark Pot rock as soon as lighthouse is established.—Apparatus in stock, no cost.

Petit de Grat, Richmond county: Back range light, recommended by Finlayson, M.P. ($1,000).

Cole harbour, Guysborough county: Establishment of small inner harbour light in Mr. Munro's house there. No cost for instalment; maintenance, $50 per annum.

Cape George, Antigonish county: New lighthouse, 10 ft. lantern, 3rd order quick flashing light ($10,500).

Halifax harbour: The question of replacing the buoys in the harbour by a lightship was allowed to stand until new large buoy is tried.—No cost, one in stock.

Dartmouth: New lighthouse. Decided that steps should be taken to secure the

land recommended by Mr. Hutchins for site this year, and that an estimate be submitted to the board of the cost of a steel skeleton tower, for future consideration. Land required for new tower to be built later ($200).

Shelburne harbour: Bell buoy to replace can buoy on 'Jig rocks' ($700).

Glace bay: Range lights and spar buoys. Asked for by A. Johnston, M.P. ($2,000).

Mabou harbour: The recommendation of the superintendent of lights, *i.e.*, that two new range lights be built here was approved by the board, and matter will be referred to chief engineer for working out of details.

Cape Sable ledges: A combined gas and whistling buoy on S.W. ledge. Asked for by Mr. Fielding ($10,000).

Port Greville, Cumberland county: Range lights. Asked for by Mr. Logan, M.P. ($1,000).

Prince Edward Island ($17,000).

Panmure island, at entrance Georgetown harbour: A second-class diaphone building and apparatus. Asked for by Hughes, M.P. ($10,000).

Entrance to Murray river: Whistling buoy to be moved from Indian rocks to Murray river entrance.

Indian rocks: Small sized gas buoy to replace present bell buoy ($3,500).

Point Prim: Small sized gas buoy to replace present bell buoy ($3,500). These three asked for by Hughes, M.P.

New Brunswick ($74,250).

S.E. end Partridge island: Combined gas and bell buoy. (Agent N.B. asks for this.) Exact location to be arranged by the agent, captain and pilots—In stock, no cost.

Long Point, Belle Isle bay: Small pole light, land mast and lamp ($300).

Mispec harbour: An electric light on one of the ends of the breakwater. Asked for by agent. (Carried on basis of cost.)

1. East Head, Musquash: Fourth order apparatus (modern quick flashing light). Present lantern on a new tower and repairs. Asked for by agent N. B. ($5,000.)

2. Cape Spencer: Fog alarm, $10,000; lighthouse tower, $3,000; telegraph apparatus, $2,000. (Mr. Stockton, M.P.), ($15,000).

Heron islands, L. station (Restigouche river): Removal of tower and placing it on new foundation ($400). New lantern and fourth order lens with petroleum vapour lamp, to be provided out of stock. Asked for by Inspector of Lights, N. B.

Relief L. S. to replace *Lurcher*. Decided by the board that the L. S. *Anticosti* should replace *Lurcher* when that vessel is repaired next winter. The details of this arrangement to be settled in department. (*Lurcher* file is No. 20198 M.)

Gannet Rock: First-class diaphone. Machinery, $10,000. building, $10,000 ($20,000). The board decided that in the intervening time bombs be fired off every five minutes during a fog. Asked for by St. John board of trade.

North-western ledge off Brier island: Automatic gas and whistling buoy. (St. John board of trade.) ($9,000.)

Southwest ledge, Brier island: Automatic gas and whistling buoy. (St John board of trade.) ($9,000.)

Round reef, St. John harbour: Spar buoy on south side of round reef ($50).

Swallow Tail light, Grand Manan: Light to be changed from fixed to revolving ($500).

Beacon light, St. John harbour : To be improved to an occulting white light. (Asked for by St. John agent.) ($500.)

Wilmot's bluff light: New site of lighthouse and 7th order apparatus. (Asked for by St. John agent.) ($1,000.)

3. Cape Jourimain light, Northumberland strait: To be improved to 4th order quick flashing light ($2,000). Stronger light asked for by N. B. agent.

4. Miscou light, Bay des Chaleur: New lantern and central panels of 3rd order, double flashing apparatus. Improved light asked for by agent, N. B. ($5,000).

5. Escuminac light: To be improved to 3rd order flashing light, to be used in present French lantern. Details to be arranged by Commissioner of Lights. Cost apparatus. (Asked for by N. B. agent.) ($6,000.)

Portage island light, Miramachi river: To be improved to a revolving white and red light or a 4th order occulting apparatus. (Asked for by agent.) ($500.)

6. Flower island: Central rings, 3rd order apparatus to be placed in present lantern and tower. Already provided for, but only authorized by the board now. (Asked for by Commissioner of Lights.) ($2,000.)

Quebec ($23,700).

English point, English bay: Lighthouse asked for by W. M. Dobell, Quebec; also Shipping Federation.

Point Echourie light: Moving present tower and making a more distinctive light ($1,000). Recommended by Inspector of Lights and by agent, Quebec.

Bicquette fog alarm station: Machinery for duplicating fog alarm, $8,000; chge. building, $2,000 ($10,000). Modern quick flashing apparatus and new lantern. (Old fog alarm in very bad condition and new lighting apparatus is necessary.) ($10,000.)

Morin shoal, near Murray bay: One of the old L. Ss. on Lake St. Peter is to be utilized to mark the shoal. No cost.

Red island L. S., River St. Lawrence: To be kept where she is and a large can buoy is to be located at her former station. Can buoy in stock.

Ile Vache Marine, Esquimaux point: Two small pole lights. (Asked for by Girard, M.P.) ($400.)

Moisie river and bay of Seven islands: A buoy at entrance to bay of Seven islands. In stock, no cost.

Magpie, north shore (Gulf St. L.): Two pole lights. (Asked for by Girard, M.P.) ($300.)

Part II. appears as an addendum to these recommendations. It includes items or applications, numbering 35, which were either refused or held over. Some other unimportant matters were put under way.

VII.—Total $148,250.

March 6, 1907.—Meeting—Present: Chairman, Chief Engineer, Spain, J. F. F., Allan, B. B. Kelligher, chief engineer G. T. Pacific, and C. J. Smith, G. M. R. and O. Nav. Co. were present; also W. J. Stewart, Chief Hydrographer; U. P. Boucher, agent, Montreal. Board met 10.45 a.m.; adjourned 3.30 p.m.

British Columbia ($20,000).

Vicinity Prince Rupert, Marion rocks or Ellinor rock : Gas buoy to be established in the better locality after survey is completed this year, and a concrete masonry day beacon; the danger left unbuoyed. Gas buoy, $3,000; day beacon, $1,000 ($4,000).

For a lighthouse outside in best locality. Location to be decided after survey completed in the vicinity of Holland rock or White Top rock. Small lighthouse with dwelling; 5th order lens ($5,000).

Casey point: Range lights ($5,000).

Further aids ($6,000).

Quebec ($22,000).

Cap à l'Est: A single wick Wigham lamp; the R. and O. Nav. Co. undertaking to maintain it without charge, as agents of department. One in stock, no cost.

Six gas buoys, $3,000 each, to mark the curves and tangents in Lake St. Peter ($18,000).

Buoy Q45 to be replaced, to mark shoal opposite Cap Santé. In stock, no cost.

Entry island, Magdalen islands: Light to be strengthened to 4th order lens and occulting light, $2,000; and a whistling buoy to be placed off eastern end of Entry island. In stock—no cost.

Goose cape light: To be changed to a 4th order occulting light, $2,000.

Manitoba ($6,000).

Lake Winnipeg: Wigham light on piles at mouth of Red river. In stock—no cost. Public Works to be asked to provide the group of piles to carry the lamp.

Warrens Landing (at the approach to): 2 pairs of range lights, $3,000

Balck river (approach to): Gas buoy recommended, if found possible, $3,000.

Newfoundland ($13,000).

Cape Pine: Fog alarm recommended by Shipping Federation. Machinery, $8,500; building, $3,500; installation, $1,000, $13,000.

Nova Scotia ($2,500).

Cumberland basin (head waters), Bay of Fundy: 2 small range lights northwardly from Amherst basin pier. Asked for by H. J. Logan, M.P., $1,200.

Cape Sharp light: Light to be strengthened to 4th order lens and 25mm. petroleum vapour light, $1,000.

Eastern passage—entrance: Automatic buoy between Cape Negro island and Black point, just outside of Budget shoal. Asked for by Mr. Fielding. In stock—no cost.

Island harbour light: To be changed from a fixed to an occulting light. Recommended by Mr. Sinclair, M.P., $300.

New Brunswick ($22,000).

South point light, Brier island: Light to be made similar to that on Gannet rock. Asked for by St. John (N.B.) Board of Trade. Change to be made as soon as possible, $20,000.

Ward's point, Westmoreland county: Small diaphone plant, $850; building, $1,150. Recommended by Mr. Emmerson, $2,000.

Ontario ($11,800).

Halfway between Windmill point, on Ile Perrot, and L.S. No. 3, Lake St. Louis: Gas buoy, $3,000.

Brockville narrows—abreast of head of 1st island above Brockville: Gas buoy, $3,000.

Ottawa river: Small light for north side Jones' island, 7 miles below Carillon, $800.

Port Dalhousie: Fog alarm. Recommended by Dominion Marine Association, $2,000.

Southampton: Gas buoy off north end of the 'Spit' from Chantry island, $3,000.

VIII.—Total, $97,300.

Part II.—Consisting of 64 applications left over or put in way of being dealt with.

Meeting, April 17, 1907. Present: Chairman, chief engineer, Spain, J.F.F., H. A. Allan; also Joseph Girard, M.P.; Geo. Parent, M.P.; J. H. Sinclair, M.P.; Francis King, secretary Dominion Marine Association; James H. Hall, vice-president Ottawa Forwarding Company; Captain Clark, Ottawa Forwarding Company; Captain Noonan, manager Rideau Lakes Navigation Company. In the afternoon, the commissioner of lights moved, seconded by Commander Spain, that certain recommendations which had previously passed the board be reviewed. A difference of opinion having arisen between the chief engineer and commissioner of lights relative to certain technical points, the chief engineer thought he would submit his side of the argument to the minister. The chief engineer's memorandum has been prepared and is now in my hands. I propose to refer the chief engineer's objections back to the board, in order that the commissioner of lights may have an opportunity of replying to the same, when the whole question will be reconsidered.

Nova Scotia ($8,048).

Bass river, Colchester county: Small light on wharf. Recommended by Mr. Fielding, $800.

Cape Sharp: Fog alarm—increasing power of present alarm. Asked for by assistant chief engineer, $4,000.

New harbour: Courtney whistling buoy to replace bell buoy. Recommended by Sinclair, M.P. In stock.

Little Liscomb: Light contingent on favourable report from agent. Recommended by Sinclair, M.P., $2,000.

Iron can buoy, painted black, to be located about 1½ cables south of Horse rock. Recommended by superintendent of lights. No change to the buoy known as 'Spry Bay bell,' $300.

Gunning point, near entrance to Tanners pass, Black rocks: Small bell buoy. Recommended by A. K. Maclean, M.P., $474.

Grand river, Richmond county: Harbour bell buoy granted, provided department can maintain it (chief engineer dissenting). Recommended by D. Finlayson, M.P., $474.

Cape Argos shoal, eastern entrance Strait of Canso: Whistling buoy. Carried, contingent upon favourable report from inspector of lights. Recommended by Mr. Sinclair, M.P. In stock—no cost.

Quebec ($4,515).

Sault au Mouton: Two pole lights. Recommended by Girard, M.P., $500.

Ste. Anne de Beaupré and Cap Brulé Channel between: 2 ranges lights. Recommended by Parent, M.P., $4,000.

Gascons, Bonaventure county: Fog horn (hand). Recommended by Marcil, M.P., $15.

Ontario ($29,050).

Easterly end Pigeon island, Ottawa river: Wigham 30-day light. Tower lamp in stock. Contingent on favourable report from chief engineer, after inspection. Recommended by Dominion Marine Association, $200.

Sney channel, above Dickenson's Landing: To be buoyed, as in past years. Recommended by Dominion Marine Association. No cost.

Brighton harbour: Illuminating apparatus of outer pair of range lights to be strengthened. To be taken from Prescott stock. Reccommended by Dominion Marine Association.

Eastern Gap, Toronto harbour : Light to be changed from a 6th to a 4th order. Recommended by Dominion Marine Association, $1,000.

Campbell rock, Georgian Bay, about 9 miles south of Killarney : Spar buoy. Recommended by Dominion Marine Association, $50.

Hope island, Georgian Bay: 3″ diaphone, $8,500; building, $4,500. Recommended by Dominion Marine Association, $13,000.

Jackfish, Lake Superior: Small light. Recommended by Dominion Marine Association and C.P.R., $800.

Point Porphyry, Lake Superior: Fog alarm; 3″ diaphone, $8,500; building, $4,500. Recommended by the Dominion Marine Association, $13,000.

Flower-pot island, Georgiaan Bay: 1″ diaphone, to run by an oil engine. Recommended by chief engineer, $1,000.

IX.—Total, $41,613.

Part II.—30 other applications were left unfinished.

June 5.—Meeting—Present : Chairman, chief engineer, Spain, J. F. F., H. A. Allan, Captain J. W. Troup. The Lighthouse Board recommend the Minister of Marine and Fisheries that wireless telegraph stations be established, as explained before the board, at or in the neighbourhood of Estevan point, Pachena point, Cape Lazo, Point Grey and Victoria. 2nd. That it is desirable, in the interest of efficiency and economy, that the operators of wireless stations, when located at light-stations in British Columbia, should also be employed as fog alarm engineers and lightkeepers at those stations, their salaries being increased to cover the extra work involved. At my request, the chief engineer took the chair after the intermission for lunch.

British Columbia ($49,350).

Kelp reef, Hero straits: Unwatched light (recommended by agent), $2,000.

Helen point, Active pass : Automatic gas and bell beacon, $2,500, and freight and installation, $500.

Beaver rock, Chatham point : Chief engineer moved, seconded by Captain Troup, that an automatic gas and bell beacon replace the tidal motor bell at Beaver rock, Chatham point.

Prospect point light: To be changed to a powerful occulting red light—petroleum vapour light and screen. Recommended by agent, $1,000.

Gillard island, Eucletan rapids: Wigham light on N.E. point of island. Recommended by agent and Captain Troup. In stock—no cost.

Skidegate harbour, Lawn Hill, Queen Charlotte island: Gas buoy to indicate entrance to this harbour, instead of iron buoy granted October 10 last. Suggested by agent and recommended by Captain Troup, $3,750.

Tree bluff: Gas buoy, instead of iron buoy granted October 10 last. Recommended by Captain Troup. In stock—no cost.

Entrance island light, Quatsino sound: Small permanent light to replace present 31-day light. Building, $2,000; apparatus, 5th order, $400. Recommended by agent, $2,400.

Clayoquot harbour entrance: Range lights, $4,000; Beacon on Half-tide rock, $2,000; two platform buoys, $200—to be provided for next year. Recommended by Sloan, M.P., and H. C. Brewster, M.P.P., $6,200.

Ledge reef: The gas buoy placed on L.R. off Macneill point is to be moved to the south end of the dangers off Haddington island, so as to permit of the passage north of Haddington island being used. Recommended verbally by Captain Troup.

Leading island, Kyaquot sound : Wigham light or lights, if found necessary and possible to range them, to be provided by department and maintained by Captain

Balcom, of the Pacific Whaling Company. Recommended verbally by Captain Troup. No cost.

Lewis rock beacon, Baynes channel: Wigham light. Recommended verbally by Captain Troup, $1,000.

Solander island, Triangle island, or other point: Recommended that the department be authorized to order one first-class lighting apparatus for the west coast of British Columbia. Location to be decided later, $30,000.

Ontario ($100).

Eastern entrance to Toronto harbour: Existing bell at end of harbour to be improved. Canadian Association of Masters and Mates, Toronto, ask that the fog horn at eastern entrance Toronto harbour be placed at outer end of pier.

Meaford harbour, Georgian Bay: Gas buoy on end of Meaford breakwater to be removed and replaced by an electric light and an electric range light near elevator. Asked for by Meaford Board of Trade, $100.

X.—Total, $49,450.

PART II.—24 applications were left unfinished.

Recapitulation of Amounts voted by Board.

No. 1—June 21, 1905	$ 341,000
2—July 24, 1905	368,500
3—August 5, 1905	21,300
4—March 31, 1906	433,575
5—June 1, 1906	3,525
6—October 10 and 11, 1906	187,300
7—February 6, 1907	148,250
8—March 6, 1907	97,300
9—April 17, 1907	41,613
10—June 5, 1907	49,450
Total for three years	$1,691,813
Average per year	$ 563,937

ANTICOSTI LIGHTSHIP.

MARINE AND FISHERIES DEPARTMENT.

In examining into the working of this department we have found great difficulty in obtaining what may be called whole views of anything. The letters to and from the different agencies are not consecutively numbered and filed in chronological order, as we think should be done. They are not numbered at all, but are arranged in files according to their subjects ; and on the same files are placed copies of the replies made to them, with perhaps copies or originals of any relative documents. This system seems to have been adopted partly to meet occasional demands from the members of the House of Commons for complete files of letters connected with some matter which the House was inquiring into. When such a demand is now made the requisite file of letters can be produced at once. The system is also a convenience to the officer conducting the correspondence, since it enables him with the least possible trouble to see the whole previous history of the matter being dealt with. But if it has these advantages they are much more than counterbalanced by the obvious fact that almost anything in the shape of efficient inspection of the department becomes all but impossible. To overhaul the management of even one agency of the department might mean the necessity of referring, at enormous labour, to over 20,000 files of letters. Hence the great difficulty of obtaining whole views of anything.

The department is practically swamped with correspondence—100 to 120 letters a day being about the average. Each letter has to be put on the file to which it has relation, and that means a day's work of the 'records' staff of the department (consisting of three officers). Next morning the files are distributed among the different officials to be answered. A stamp being put on each letter: 'Referred to accountant' ; 'referred to chief engineer' ; 'referred to commissioner of lights' ; 'referred to Mr. Stumbles' or 'referred to——' the special name being filled in.

The custom has been to assume that everything has to be formally settled by the head of the department—the deputy. Each letter has to be answered by some one in the department who is supposed to be 'au fait' with the subject, or at any rate to give his attention to it. A letter is prepared by him, but the deputy signs it, knowing often little or nothing about it, and having no time to inquire. Hit or miss the letter goes, and in many cases it is found later on that it was written in ignorance of or conflicting with previous correspondence or instructions, and therefore calculated to bring reproach and discredit on all concerned. But nobody is the wiser for all this. It is regarded as unfortunate perhaps, but more or less inevitable in the nature of things. Certainly nobody is punished for it. The rush of unorganized work and the consequent jumble goes on as before.

While the deputy is nominally responsible for whatever is done in his department, the administration of the department shows that he is in point of fact held responsible for nothing. He, as head of the department, assumes to regulate everything, but he regulates very little. His signature is necessary to all documents because the law requires it, but in his absence some other signature is perfunctorily supplied, and it is held to do just as well.

When things are decided upon, such as important contracts, requiring the most careful and strenuous attention the papers are all duly signed and things are then allowed to take their course. Somebody or other is supposed to look after the business and in a kind of a way three or four or half a dozen people put their oars in at different times and places, each one being supposed to have some authority, because his title would indicate that ; but they are as likely as not to clash with each other, or at any rate to produce anything but the result originally intended.

There are officers enough in the department, both inside and outside, to do all the work efficiently, if they were properly organized, but there is no efficient organization. The only attempt at it is the appointment of men whose titles would seem to indicate what their duties are ; but those duties have never been specifically defined. There is no record of anything of the kind, and there are no written or printed rules and regulations known in the service. It is practically impossible to fix responsibility upon anybody. A plausible explanation is always forthcoming for everything that goes wrong, and as apparently there is always more than one so-called responsible officer concerned, and usually three or four, there is no difficulty in explaining everything away.

Anticosti.

To illustrate the kind of administration that goes on in the department, we have at considerable labour gone over carefully two or three files of correspondence in connection with the *Anticosti* lightship.

1904.—In July, 1904, this lightship was being fitted out for her station, and the Quebec agent, under whose supervision she is supposed to be, writes to the deputy (July 25) requesting him to please furnish the lightship *Anticosti* with a complete set of charts for the River and Gulf of St. Lawrence, a nautical almanac, azimuth table, pointers, deck and engineer's log books, extracts ship's log, chronometer and stationery complete for the ship as soon as possible. (This letter is marked 'Commander Spain, 29-7-'04.')

On August 3, nine days afterwards, the deputy writes back to the Quebec agent, instructing him to procure and send to *Anticosti* lightship first opportunity, one nautical almanac, also be good enough to send here a list of the stationery that is required for the lightship. The other supplies mentioned will be ordered from Ottawa. A memorandum is made out for Mr. Walsh to this effect: 'The following articles are required for the *Anticosti* lightship ; 1 mate's log, 1 chief engineer's log, 50 extracts of ship's log.

On August 4, Quebec agent replies: 'Your letter August 3, I beg to report that Capt. Couillard was furnished with a few articles of stationery here, but he asks that the department make up what they think he will require. As I had no pay-lists on hand I could not furnish him with any. Will you please furnish these also. I have obtained a nautical almanac which I will send the *Anticosti* first opportunity. Will you please furnish the other supplies asked for.' (Across the lower left corner of this letter was written in a very shaky hand: 'Will the deputy minister please cause a list of stationery to be made out.'—M. F. W.

On August 8, the deputy again writes Quebec agent: 'I have given instructions that pay-lists be sent to your address. You will be good enough to send me a list of stationery supplies that this lightship will require, as it is impossible for the department to know what is wanted.' This letter is initialled by O. G. V. S.

November 2.—Quebec agent writes deputy: 'Please inform me by return mail if possible when the *Anticosti* is to leave her station for Quebec. I understood it was to be after November 15. The steamer *Aberdeen* will proceed below, Monday morning, 7th inst., and could give the information *en passant.*'

November 4.—Deputy replies: 'The vessel is to remain on her station as long as possible, having due regard to her safety, and taking into consideration that she is to winter in Louise basin. You will instruct the captain of the *Aberdeen,* leaving 7th inst., to give this information to the *Anticosti.*'

November 7.—Quebec agent telegraphs that the *Anticosti* has left her station for unknown reasons. Deputy replies: '*Anticosti* must keep her station until close of navigation. Do everything possible to send her back promptly, and report reason for leaving without orders.'

November 8.—Deputy instructs Gregory to get from captain of *Anticosti* a written statement why he left station without orders.

On the same day, the following letter went from the department to the Quebec agent: 'Referring to my letter August 8, requesting you to send me a list of stationery supplies that this lightship will require, as the department does not know what is wanted. I have to remind you that no reply has yet been received to this communication. You will please forward the list with as little delay as possible.'

Gregory advises arrival of 'Anticosti' and gives captain's reasons for leaving station. Agent had no official information of captain's orders.

November 11.—Quebec agent telegraphs and writes deputy: '*Anticosti* arrived. Captain reports, obliged to leave on account of shortness of chain and defective shackles. Believed it impossible to remain on station during present heavy weather, after riding out some late storms. All his officers same opinion. Shall I prepare to pay off crew and put ship in winter quarters? Engines require considerable repairs. Mailing report. Capt. Couillard states that he would not have left the station before the date fixed by Commander Spain, and given to him (15th inst.) but was obliged to do so for the reasons stated in my telegram. I had no official information of such orders.' Gregory, the Quebec agent of the department, 40 years continuously in the service, apparently cannot fit out a lightship without writing to the department at Ottawa for every little thing required—things which he should know more about than any other man in the department or out of it. The people he asks for help (in the department) know less about it than he does, and they refer back to him. He falls back on the captain; and the captain in his vague ignorance can do nothing but ask that the department make up what they think he will require. Instructions about a matter of stationery for the vessel are bandied back and forth until the vessel had left her station for the season and was on her way back to Quebec. The last demand for the list of stationery being made on the Quebec agent by the department on the same day that the department was telegraphing all round that the vessel had left her station. The captain apparently had orders from Commander Spain which neither the Quebec agent nor the deputy at Ottawa was aware of. Query ; Under whose orders was this captain acting?

Gergory complains of the Department ignoring him in giving orders to his Subordinates.

After it is all over the agent respectfully suggests, in the interest 'of the public service, and for the maintenance of discipline and order in this agency, that all instructions given to any officers in its employ, information of the same be given to me, so that I may take note of the same in my order book, as I do not trust such important matters to my memory, and it would also prevent confusion.' This, after 40 years' service.

Gregory on Ship's Condition.

November 11.—On same day Quebec agent writes (letter apparently not on file): 'It is quite evident that there is considerable to be yet learned and done before that vessel (*Anticosti*) can be made perfectly reliable. She leaks considerably, above water line.'

Will require considerable overhauling of her engines and connections.

On her way up she bent one of her excentric rods, opposite Cape Chatte, about five miles off the land, and lost five hours trying to repair it. Had this occurred on her station during a gale she would have parted with her chain. Captain Couillard says the chances are she would have gone ashore. She will require considerable overhauling of her engines and connections.

Suggests new method of mooring vessel, which he thinks would be the most reliable.

I would respectfully suggest some improved means of mooring that vessel, as I have no great faith in mushroom anchors of the size she carries. I understand they only weigh about 3,000 lbs. We moor some of our gas buoys with a 5,000-lb. sinker on what I believe is a better bottom than they have at Heath point, Anticosti. From my conversation with Commander Spain, I am under the impression that a very heavy dead weight in the shape of stone, with moorings that can be floated some way, so that the *Anticosti* can pick it up, would be the most reliable means of anchoring that vessel. (Commander Spain, 1-2-,'05; answered, 9-2-,'05.)

'Anticosti' goes into Winter Quarters.

November 11.—Deputy to Gregory: 'Place *Anticosti* in winter quarters. Pay off crew, except those required to look after ship.

Anticosti's cables to be entered free of duty.

November 16.—Gregory telegraphs Deputy: 'To save demurrage please send to me permit to pass entry for cables for *Anticosti* lightship.'

Deputy replies: 'Commissioner of Customs has telegraphed Collector to pass your entry cables for *Anticosti* free. Printed forms will be sent you by to-day's mail.'

Captain suggests change in hawse pipe.'

November 18, 1904.—Captain Couillard writes to Deputy, through Quebec agent: 'I humbly suggest that some change should be made in the actual arrangement for the mooring of the *Anticosti* lightship. The present hawse pipe is laid at an angle of about 90 degrees, which makes it a very hard job to take in and out, and very dangerous and difficult to secure when the anchor is hanging at the hawse pipe. My suggestion would be that another hawse pipe be made with an angle of 45 or 50 degrees—then the chain would be lighter for the windlass to heave; and, having almost a fair lead the anchor would work in and out the hawse pipe without any aid. The windlass would be able to work an anchor much heavier than the one now in use, which is needed for the permanent anchoring of the lightship on her station.'

Heavier anchor wanted; should be at least 8,000 lbs.—Vessel should be docked, painted and seam and butt overhauled—Main deck, electrical apparatus, fog diaphone and many other things require attention.

The anchor should be at least 8,000 lbs. I suggest also that the lightship be docked and her bottom painted, and seam and butt overhauled as she leaks considerably about her top work. I understand all new ships leak more or less after heavy labour at sea, for a time. Such being the case with the *Anticosti*, I strongly recommend a good overhauling. The main deck also requires to be re-caulked. The electric apparatus also needs to be overlooked, as well as the fog diaphone, which has proved to be defective in regularity of sounding. I recommend all shackles to be clinched instead of iron pin in cross pieces of shackels. A watch or pilot house would be a good combination for the comfort as well as for the good maintenance of the watch in bad weather. The cabin also needs some alterations, and more room is required for the use of officers living in the cabin. Enclosed you will find a sketch of the bow of the lightship with her actual hawse pipe and the one suggested.

Gregory encloses above report and agrees in the main with it, but sees no reason for docking vessel—Wants to know what action to take.

November 23.—Gregory encloses above report and confirms it in such a way as to indicate that he may possibly have inspired it. About docking the lightship, however,

his letter dissents from the report and says: 'I can see no reason for putting this vessel into dock if she does not leak under the water line. I am perfectly well aware that all new vessels leak more or less from heavy labouring at sea, and such no doubt is the case with the *Anticosti*. She will therefore require overhauling and re-caulking. The electric apparatus also requires to be overhauled and put in good working order. The fog diaphone has been found to be very defective also. Please inform me at the earliest possible what action to take in this matter. (Referred to Commander Spain, 30-11-'04).

December 1.—Deputy to Gregory: Your letter of 29th November (copy not given). Make arrangements to put the *Anticosti* lightship into dock for a short period, so as to enable her to be re-caulked for her next season's work.

December 1, 1904.—Gregory incloses log of *Anticosti* from November 11 to 30.

Coal consumed by Lightship.

December 21, 1904.—Deputy wants to know what amount of coal was used by the *Anticosti* from the time she left Quebec till she returned to winter quarters—the elapsed time and the average consumption of coal per day?

January 3, 1905.—Gregory's acct. replies: 287 tons, 103 days, 2¾ tons per day.

The captain's weak excuses for abandoning his station were apparently accepted without question or investigation ; and the ship was put into winter quarters, with a programme for alterations and repairs drawn up by her captain and the agent of the department, which might not have been thought excessive for a vessel that had sailed round the world, but for a comparatively new lightship that had been on duty only 103 days, and lying at anchor the whole time, seems very extraordinary.

Gregory instructed to have vessel's engines and connections thoroughly overhauled—Diagram showing how 'Lurcher' lightship is moored.

February 9, 1905.—Deputy to Gregory. Instructs him to have the engines and connections of this vessel thoroughly overhauled as soon as possible, so as to enable her to proceed to her station off Heath Point immediately at the opening of navigation. In regard to the moorings of this lightship I inclose for your information a diagram from Commander Spain of the way the *Lurcher* lightship is moored. These moorings have enabled this vessel to hold through the very severe gales of wind that have prevailed on the Nova Scotia coast for the last two months ; and it appears to the department as the best means of mooring the *Anticosti*. You will have a copy made of this diagram and return it to Commander Spain as soon as possible.

Gregory writes about anchors but cannot get what is wanted.

March 3, 1905.—Gregory to Depy.—Your letter 18th ulto (not given) authorizing me to buy 4 3-ton anchors for mooring the *Anticosti* lightship. I have the honour to state that I cannot find any 3-ton anchors, but I can get two Rodger patent anchors comparatively new, weighing about 4,850 lbs. each. There are also some common (but good) anchors here, weighing from 3,700 to 3,800 lbs. Will you please inform me whether you consider these anchors heavy enough for the purpose so that I may secure them at once, as at this season of the year there may be a demand for them elsewhere. —(Commander Spain, 7-3-05. Answered, 10-3-05.)

Instructed to buy three of the best common anchors, but if larger could be got it would be better.

March 10.—Deputy to Gregory.—Your letter 3rd: 'I have to instruct you to purchase three of the best common anchors you can for this vessel; 3,800 lbs. does not seem to be quite heavy enough, and if it is possible to get larger anchors the department considers it would be better.

SESSIONAL PAPER No. 29a

Captain Couillard writes agent about mooring of Lightship—Objects to Department's plan and offers his own instead.

April 6, 1905.—Captain Couillard to Gregory.—I kindly beg permission to express an opinion in regard to the mooring of the *Anticosti*. 'I understood that it is the good will of the department to moor the lightship with a bridle with 105 fathoms on each end of the anchors, a submarine buoy at the coupling of the chains, forming the centre, and a swivel and a single chain from centre to the ship. Considering the nature of the bottom, which is hard and rocky, and consequently not good holding ground, making it possible that the vessel drag one anchor towards the other and this would make it an ugly job. Furthermore, suppose they would hold, which is doubtful, it will be a very hard job to lift it in the fall on account of the heavy weather prevailing at that time of the season. My humble suggestion would be to have two anchors on same cable, 30 fathoms apart from one, and allow second anchor to be shackled 30 fathoms from first anchor. With this arrangement the ship would always ride on two anchors, no matter how the wind would blow. Should the ship drag she would not get her mooring fouled. With the experience I have gathered during my stay on the station two mushroom anchors and 200 fathoms of chain is sufficient to hold the lightship on her station in any kind of weather. The trouble arose last year from shackling of chains which were not properly secured. This year all the shackles will be clinched and made more solid. I will, nevertheless, faithfully carry out any instructions given to me, whatever they may be.

Gregory agrees and pretends that the plan is just what Commander Spain and he suggested originally.

April 6, 1905.—Gregory incloses above to Deputy and says: 'This seems to me to be exactly the arrangement he started out with by the orders of Commander O. G. V. Spain last season, and personally I had faith in it, so had Capt. Couillard. He attributes the parting of his chain to bad shackling, especially in the matter of shackle pin bolt * * * * We have four mushroom anchors on hand and one 4,800 lbs. Rodger anchor. Therefore, are well prepared for any emergency. The ship will have four anchors—two in use, and two spare on board. Please inform me whether this is approved of. If my opinion is of any value I must say that I second this manner of mooring the *Anticosti* lightship for the reason stated. I would not volunteer my personal opinion in this matter had not Commander Spain, through the telephone, spoken to me on this subject. Many years experience in providing moorages for steamers, lightships, heavy buoys, &c., is also an excuse for my offering an opinion upon a question in which I take as deep an interest as I would for anything else connected with the efficiency of the service of this agency; and Captain Koenig as well as all our other captains are of the same opinion. The handling of stockless anchors is very much easier than tying up two common anchors bridled together on poor holding ground, especially as the vessel does not winter on her station. Respectfully submitted and awaiting further orders. (Commander Spain, 11-4-05. Answered 13-4-05.) As this recommendation was in flat opposition to the judgment of the department as expressed in their letter of 9th February last, it had evidently to be urged with great diplomacy, but it was done successfully—the department climbing down as gracefully as possible.

Department agrees with the recommendation, and instructs accordingly.

April 13.—Deputy to Gregory: 'In regard to the mooring of the *Anticosti* lightship this coming season, I have to instruct you that in the opinion of the department the best manner of mooring this lightship would be to have two anchors on the same cable, about 30 fathoms apart. With about 200 fathoms of chain out there would be little danger of fouling, and she ought to be able to ride out any weather. I note that you have four mushroom anchors on hand and one 4,800 lb. Roger anchor, and are,

therefore, well prepared for any emergency. The ship will have four anchors (two in use and two spare) on board.' (Initialled on margin 'W.C.G.')

May 20.—Gregory advises that *Anticosti* left this morning for her station.

Was vessel put in proper order ?

Apparently little or nothing had been done in the direction of the captain's suggestions for the improvement of the ship's equipment, except to purchase new anchors. There is no record of her engines and connections having been overhauled as the agent intimated would be necessary. (See his letter of November 11 last).

October 9.—Quebec agent wants to know when the *Anticosti* will leave her station

October 13.—The reply was given by Commander Spain—November 20—apparently it was still the department's habit to ignore the Quebec agent in such matters.

No further correspondence appears on this file until February, 1906, but in the meantime a new file had been started called '*Anticosti* repairs file.' The *Anticosti* was apparently used, during the season of 1906, to replace the *White Island* lightship until June; and did not get to her own station until the 28th of that month. On November 8 she again broke away from her moorings, lost her anchor, with 210 fathoms of chain and had to take refuge in Gaspé basin.

Vessel again compelled to leave her station—Investigation suggested.

November 10, 1906.—Gregory writes the department, after confirming the above news: 'The last message I received from Capt. Couillard is dated 9th inst., as follows, viz.: 'Unable to return to station, having only 60 fathoms chain left, please wire me instructions what to do. Meantime taking coal.' As this is the second time that the *Anticosti* has lost her valuable mooring chain under the same master at about the same season of the year, I would respectfully suggest that this matter be thoroughly inquired into, in order to ascertain whether there are means of preventing a recurrence of the same. (Referred to Commander Spain, 14-11-'06.)

Department orders investigation.

November 14.—Deputy to Gregory, *re* letter 10th. 'This is the second time that the *Anticosti* lightship has lost her anchors and chains at about the same season of the year. It appears to the department that there must be some carelessness on the part of the master, as our other lightship, the *Lurcher,* which is in a much more exposed position, and with nothing like as good holding ground, manages to stay on her station. On the return of Capt. Couillard to Quebec you will hold a thorough investigation into the matter, making your report after you have heard all the evidence, as to the advisability of retaining Capt. Couillard in charge of this ship (initialled in margin O.G.V.S.).

Report of Investigation.

November, 1906.—I. The windlass was too weak to lift the large amount of chain; it became absolutely necessary, owing to the weakening of the windlass and for the safety of the ship and the lives on board, to slip the chain and seek shelter in Gaspé basin.

II. The hawse pipe is very unfavourably looked upon ever since the ship is in service, and I would respectfully suggest that its suitability be inquired into.

III. The boilers and condensing tubes are in need of overhauling and repairs.

The first engineer's evidence was that windlass proved unfit to wind in the chain she was dragging. It is too weak for the work it has to perform. The chain might have been saved if the windlass had been stronger. (This engineer has only a 3rd class certificate and cannot sign his name.)

The second engineer has only a 4th class certificate, and cannot sign his name either. His evidence differs somewhat from that of the first engineer, but says it is on account of the latter's error. He agrees with him, however, as tc the weakness of the windlass and the unfitness of the hawse-pipe.

No blame attaching to Captain Couillard, or his officers and crew.

November 21.—In inclosing the results of his investigation (21 Nov.) the agent writes that he obtained the sworn evidence of Captain Couillard, Calixte Bernier, mate; Albert Boulanger, 2nd mate; F. Laverdiere, chief engineer; Zotique Larose, 2nd engineer, and Placide Boudreau, boatswain. I pressed all the questions to the witnesses as closely as possible and called upon them to declare upon oath whether they believed everything was done to retain the lightship on her station; and from their sworn evidence and statements I can see no reason to blame Captain Couillard for leaving his station and seeking shelter in Gaspé, and that no fault can be found with Captain Couillard or his officers and crew.

Department considers explanations satisfactory and instructs agent to have proper windlass supplied and hawse pipe attended to for next voyage.—Anchors and Chains.

November 27.—On the 27th November the deputy acknowledges receipt of this report, and says 'the department considers that the explanations as given are satisfactory, and before the vessel goes into commission next season you will see that she is fitted with a proper windlass, which will be strong enough to lift her anchors and cable when a large amount of cable is out. You will also have the hawse pipe attended to and put in satisfactory condition. The department are in communication with Captain Schmidt in reference to the boiler and condenser tubes. You will be good enough to at once advise the department what length of chain is required and what weight and class of anchors are necessary for this ship so that they may be ordered immediately.' Initialled O. G. V. S.

It seems amazing that such a report should have been received by any one in the department as a satisfactory explanation. Figure Commander Spain being satisfied that the weak windlass was the cause of the inability to hoist the chain—to say nothing of the deputy or other officers of the department. Where was Captain Schmidt when the investigation was being held? Why was not he or some similar officer present to examine into the condition of the boilers and engines and the work of the engineers? where even an outsider could have seen the chief trouble must have lain. Later on the chief engineer of the vessel was found to be an incompetent fraud and was dismissed without ceremony; and all the evidence to prove this must have been available to any one with eyes to see at the time of the so-called investigation.

Mr. H. A. Allan of Montreal, who was communicated with by the minister with regard to the lightship leaving her station, said he 'could not understand why a lightship in the position in which the *Anticosti* lightship is supposed to be located should find it necessary to leave her station by reason of heavy weather. I am inclined to think from what I have heard since I last had the pleasure of seeing you, that the people on the *Anticosti* lightship slipped their chain and went off to winter quarters.'

Chief Engineer drops on the file (perhaps by accident) and protests against the proceedings.—No action should be taken on evidence of men under investigation.

On the 17th December (three weeks after the department had expressed its satisfaction with Gregory's investigation) the chief engineer of the department writes: 'File No. 21040M., respecting *Anticosti* lightship, has just reached me and I would respectfully protest against going to the expense of putting a new windlass on the vessel, and against giving the agent such a free hand to make repairs without any

report from a competent inspector. I would point out, before any expenditure on changes in the vessel are made, that the windlass on the vessel is an improved Scotch windlass of the same quality as that on the *Lurcher* lightship which has never been complained of, and the *Lurcher* is in a much more exposed position than the *Anticosti*. Moreover, I am surprised that action should be taken on the evidence of men whose conduct was under investigation, without hearing a word from the other side of the question.

If new crew were put on vessel, complaints would probably cease.

I think that if a new crew were put on the vessel the complaints would probably cease. I am making this memo. as large repairs of this kind are charged against construction vote, and I am certainly not satisfied that any expenditure in this is required except for new anchors and chains. In this case the expenditure was not referred to the accountant to be noted, nor to ascertain whether funds were available, and the amount required will be at least $5,000 if carried out, and possibly $10,000, as the whole bow must be rebuilt to put in new hawse pipes. (Initialled W.P.A., A.W.O.) Stop this at once, F.G., 20-12-'06.

Deputy cancels his former instructions to Agent.—Chain and Anchors.

Dec. 24, 1906.—This memo. seems to have been somewhat of a shock to the deputy, as well it might. He immediately wrote to Gregory as follows, Dec. 24: 'Referring to my letter 27th November authorizing a new windlass and hawse pipe for lightship *Anticosti,* I have to advise you to take no steps to purchase a windlass or change the hawse pipe without further consulting the department and reporting on the cost. We are awaiting from you a report of what you can do in the matter of buying cable.'

C. T. Schmidl reports.

Dec. 26, 1906.—C. T. Schmidt, inspector of government steamers, was evidently instructed at the same time to report on the windlass and hawse pipe, for he writes to the deputy on Dec. 26, as follows: 'On the 21st inst. I made an inspection of the windlass, hawse pipe and forecastle head deck of the lightship *Anticosti* now lying in the Lévis dry dock at Quebec. I then took all measurements, &c. for the proposed change in the hawse pipe and moving of the windlass rendered necessary by such change.'

Sees no fault in the windlass.

In my opinion the windlass is suitable, and in such condition as to render it able to cope with any amount of chain in 20 fathoms of water. I may say that this windlass is a duplicate of that on the lightship *Lurcher* ; and for all the trouble that has been experienced in the mooring of this vessel I can find no single word which would lead the department to believe that the windlass had not given every satisfaction.

Deputy writes Captain Koenig on the subject.

December 28, 1906.—The deputy apparently still looking for some support to the department's view of the *Anticosti's* windlass, wrote on December 28 to Captain Koenig, steamer *Druid* : 'I have to inform you that a statement has been made by the Captain of the lightship *Anticosti* respecting the windlass of the lightship; and the question of supplying a new windlass of a different type is now being considered, and I have to request you to inform me if you have any intimate knowledge of the windlass at present on board the lightship, and if you have seen it work. I understood that you were on board the lightship for some time when she was first taken to Quebec and had an opportunity of forming an opinion as to the efficiency of the windlass. Please inform me what your opinion is with regard to supplying a new windlass and hawse pipe, after you have considered the matter carefully.'

Koeing replies that there is no need for change of windlass.

January 10, 1907.—Koenig replies to this January 10 : 'I beg to state that I was acting master of the *Lurcher* lightship on her voyage from Quebec to Halifax. The *Lurcher* and *Anticosti* lightships are sister ships. They are both alike as to the machinery and auxiliary power. The windlass of the *Anticosti* is comparatively new, and a powerful one. I do not see the necessity to condemn the windlass for a new one.

This ends the windlass dispute, but with no credit to the department.

. *Anchors and Chains.*

January 14, 1907.—A memorandum signed by B. H. F. and initialled W. P. A. recommends that Mr. Schmidt be instructed to prepare specifications for the work of repair on the *Anticosti* which he has already outlined, and that tenders be invited. This was done ; meantime Gregory on January 17 writes the department about anchors and chains. He is offered a suitable 5,500 lbs. anchor at 5 cents per lb. and suitable chain of the best quality, with Llodys test can be imported for $3.40 to $3.60 per 100 lbs. The price asked for the anchor appears to be rather high, unless patented. Please advise me what action the department intends to take in this matter.

Schmidt reports tubes in bad order—Windlass perfectly efficient—Pity to change gear which other men could work with perfect safety—The chain could have been saved—Reflects on Engineers.

January 22, 1907.—Schmidt sends in his report and says : 'I very much regret the trouble with the tubes of this vessel, but nothing can change my opinion as expressed in the report. I again wish to state that I consider the windlass of the *Anticosti* capable of landing any length of chain of dimensions in use in depths where she is anchored on her station. It would be a pity to change the gear to suit the captain which other men could work with every measure of safety. The gale which drove the said lightship from her station, was undoubtedly of great violence, but I feel sure the chain could have been saved. The engineers of this vessel are well paid, and I see no reason why, during the winter season, they should not do all the opening up, regrinding of valves, and themselves obtaining any parts they may require in usual way. It appears to me that in the past an engineer considered that all he had to do was to point out work. Now I assert that men of the class employed should be able to do all the overhauling, as would be the case in any ordinary privately owned vessel.' This shows clearly enough where he thought the source of the *Anticosti's* troubles lay, namely, in the engineer's department, which evidently had had no supervision from the captain, nor from any one else. The estimated cost of repairs was $6,000, outside of electric plant.

Gregory on Anchors and Chain.—Urges starting repairs on 'Anticosti.'

January 29.—Gregory again writes the department about the urgent matter of securing suitable anchors and chains for the *Anticosti* in time for the opening of navigation; and, a few days afterwards (4th Feb.) writes strongly recommending that the repairs and alterations to the *Anticosti* be started immediately—marked 'recommended immediate authorization. W. P. A., 6-2-'07.

Chain and Anchors.—Alterations to hawse pipe.

February 12.—He again writes: 'Please inform me whether measures have been taken to provide the *Anticosti* with suitable anchors and mooring chain, the anchors to fit the new hawse pipe. I would strongly recommend that means be taken to change the hawse pipe at once or later on it will be impossible to work to advantage around the lightship. I understand from Captain Koenig that nothing was yet done in the

matter, when he was in Ottawa recently. I was recently directed not to take any action, or I would have done so, in accordance with your first communication.

Gregory to give careful description of what is required in chain and anchors.

February 19.—Deputy writes Gregory: 'Referring to moorings for *Anticosti* lightship, I have to request you to carefully describe the moorings required, giving the length and description of the chain and a description of the shackels ,swivels and anchors. The original chain supplied for the *Anticosti* was 1⅝-inch Lloyds' test, stud link cable. The experience since the lightship was moored in position should enable the officers to select the most suitable moorings.

Gregory replies, says Captain favours Martin Stockless anchors—5,000 lbs. weight.

February 21.—Gregory replied: 'The chain required is similar to the one that came with the lightship from the builders, and similar to another chain supplied by Coghlin & Co., Montreal. I was offered the same style 1⅝-inch chain delivered at Quebec for $3.25 per 100 lbs. The anchor, Captain Couillard thinks most suitable, and possessed of the best holding powers, are of the Martin style, self-canting, stockless to fit in the new hawse pipe, and should weigh about 5,000 lbs. each. The anchors lost were of the mushroom style and weighed 4,800 lbs. each, so Captain Couillard stated. I presume that Commander Spain will know the name of the makers of the style I mention. Please inform me what action the department will take in this matter. This should be done as soon as possible.

Captain Couillard thinks a 6,000 lbs. anchor and a 2-inch chain should be used. .This contradicts agent's letter of February 21.

February 28.—In this connection Captain Couillard writes the Deputy: 'It was proved that the vessel drifted for three miles with an anchor of 4,800 lbs. and 175 fathoms chain. 12 hours before the chain broke 15 more fathoms were added—190 in all. This did not keep the vessel from drifting; and when the anchor got caught at the bottom the chain broke. I think a 6,000 lb. stockless anchor and a chain 2 inches in diameter should be used.

Gregory annoyed at the Department's Criticism of his so-called Indefiniteness.

March 1.—Gregory to Deputy: 'You letter 27th ulto. (copy not on file). I beg to request that you will please point out to me what items in any communication referring to anchors and chains for the *Anticosti* you find very indefinite or which in any way interfere with the department's understanding that suitable mooring chains and anchors are required by the lightship in question. As the department ordered the first chain and the second chain without reference to me at all—the latter from Messrs. Coghlin & Co., Montreal, I certainly had reason to believe that as this lightship was constructed and outfitted under special inspection, without any reference at all to this agency the officers of the department were thoroughly posted in what was necessary to replace anything belonging to that vessel; but I would thank you to show me where I am failing, as my attention is called by your communication of the 27th ulto., dictated by W. W. S., so that I may govern myself according to instructions you may choose to give me on such matters.

Gregory advises department prompted by Captain Koenig, that steps should be taken at once to outfit the lightships of the agency.—Captain Koenig and myself feel bound to warn the department against this delay.

March 1.—Another long letter on same day by Gregory to Deputy: 'I have the honour to report that it has been suggested to me by Captain Koenig that means should be taken at once to proceed with work absolutely necessary to outfit the lightships of

this agency. Mr. Schmidt is away in Halifax and Mr. Beauchemin is absent on other work. The work to these lightships should be finished at once in order that they may be ready for the opening of navigation and there is only about a month to complete this work. Please bear in mind that they have been sent to their stations on the 1st day of April, and there is nothing to prevent their being sent to their respective stations as early this season. Captain Koenig and myself feel it our bounden duty to warn the department against this delay. I do not wish to be over officious, but have never yet been behind hand; and I should like to avoid being censured later on for delays caused by others. (Initialled B. H. F.) (This letter refers not alone to the *Anticosti*. J. F. F. 7/3/07.

Repairs to 'Anticosti'—No necessity to advertise for Tenders.

March 2.—Memorandum *re* repairs to *Anticosti* (no signature).—As the time is short for doing this work instructions should be issued at once as to where tenders are to be invited. I would recommend that only a few firms having special facilities should tender on this work. The amount being less than $5,000 there is no necessity for advertising publicly.

Work on lightships—And tenders for work on 'Anticosti.'

March 7, 1907.—Memorandum: Instructions have been given regarding all the work to be done to these lightships with the exception of the *Anticosti,* as far as construction repairs are concerned. There is the electric plant to be overhauled and possibly outfitting to be done by the maintenance branch in addition. With reference to the *Anticosti* plans and specifications are ready as soon as instructions are given where tenders are to be called. This should be attended to at once. (Initialled B. H. F. L. P. B.—'Gregory to get tenders locally—B. O. M.')

Gregory authorized to incur the ordinary expenditure outfitting lightships—but anything further is to receive sanction of the Department.

March 7.—Deputy writes Gregory: 'Your letter 1st instant with reference to the outfitting of the lightships of your agency—with reference to any alterations that may be required, this is receiving the attention of the department, and you will be immediately communicated with. Regarding the outfitting of the lightships you are authorized to incur the ordinary expenditure for this purpose. Any expenditure over and above what is generally required is to receive the sanction of the department.'

Deputy explains to Gregory what he omitted to do re *new chain.—Refers to Captain Couillard's suggestions, which should have been put before the Department sooner.*

March 8, 1907.—Deputy to Gregory in reply to his letter of 1st instant: 'No statement of the size of the chain used on board the lightship was given by you, nor any report respecting the suitability of the chain that had been used for mooring the lightship. The department consequently invited tenders for a chain similar to that furnished in 1904 by Messrs. Polson & Co. It appears from a report by Captain Couillard that he recommends a 6,000 lb. stockless anchor for a chain 2 inches in diameter.' This is the information that the department should have had at the outset to enable it to get the size which the captain thinks should be purchased.

The time is now nearly up for receiving the tenders, and if the chain is not large enough the department will either have to invite new tenders or take 1⅝-inch chain.'

The initials on the letter referred to are none of your business.

With regard to your reference to initials that appeared on my letter, as you supposed indicating that the letter was dictated, I have to inform you that when my signature is placed on a letter I am responsible for that letter, and the letter is therefore from the Deputy Minister of Marine and Fisheries. The initials are placed on the letter for official purposes, which have nothing to do with the subject matter.

Gregory knows nothing of any recommendation by Captain Couillard—A 2-inch chain and 6,000-lb. anchor quite unnecessary—The new anchors only 200 lbs. heavier than the old ones.

February 28.—Captain Couillard thinks 6,000-lb. anchor and 2-inch chain should be used.

March 12.—Gregory to Deputy: 'Your letter of 8th instant, I beg to state that I cannot find any recommendation for a 6,000 lb. stockless anchor passed through my hands. If it did I have no copy of same; nor is it at all considered necessary for a vessel of the size of the *Anticosti*. A 5,000 lb. anchor seems quite sufficient. As to a 2-inch chain, if that is allowed it will necessitate a new clutcher barrel for the windlass, which would be very expensive. We do not consider it at all necessary. I do not remember of a 6,000 lb. anchor having been spoken of before me. 5,000 lb. is all that I understood the Captain wanted. The *Anticosti* did not leave her station the first time on account of her chain being too small, nor her anchors too light. The captain attributed his being forced to leave the station to the fact, as he said, of one of the shackles spreading out. We have nothing to prove this, as it was mere supposition. The second time he said he dragged a mushroom anchor. That seems to have been proven. Consequently we have asked for a 5,000-lb. anchor of a different description, and a heavier weight than the mushroom anchor, as the mushroom anchor does not appear to be suitable for the anchorage ground at Heath point, Anticosti island. Therefore I can see no reason for changing the tenders you are calling for. Hence my inferring that as the department has all the measurements for the chain, a 5,000 lb. anchor and 1⅝-inch chain as being what we consider suitable for that lightship. The holding power of the anchor seems to be the objective point.

Davie's tender accepted.

March 13.—G. F. Davie & Sons tender for repairs and alterations to *Anticosti*, $3,849 (recommended by W.P.A., O.G.V.S., F.G., and L.P.B., 15-3-'07).

Contract was never signed, as correspondence shows.

Deputy again writes about anchors and chains—Asks Gregory to consult some of the officers about the two anchors.

March 15.—Deputy to Gregory: 'Your letter of 12th. The department is inclined to agree with you as regards size of chain. Two kinds of anchors have been offered—one a Martin stockless anchor and the other a Taylor anchor. The Martin anchor, it appears, has a cast iron head, whilst the Taylor anchor is altogether of wrought iron. The latter anchor would cost about half the price of the imported Martin anchor. It is claimed for the Taylor anchor that it is not liable to be broken if it falls on a rock when being dropped, whilst there is some liability of an anchor made of cast iron being fractured or broken if it is dropped on a rock bottom. Please consult some of the officers on this subject and let me know at once their opinions respecting these two anchors. The master of the lightship wrote me on February 28 from Montmagny about a larger size chain being used. (Initialled W.W.S.)

Deputy's answer to Captain Couillard.

March 15.—Deputy to Captain Couillard: Your letter of 28th ultimo. A letter was written Mr. Gregory on the subject and he does not consider that a 2-inch chain is necessary, and also thinks that a Martin anchor 5,000-lb. weight is heavy enough for the vessel. He also states that it would be necessary to alter the windlass at considerable expense if a 2-inch chain was purchased instead of 1⅝-inch—the size for which the windlass was made. The department will therefore order a chain of 1⅝-inch stud link cable, and a Martin or Taylor anchor, which of course would be better than a mushroom anchor.

Captains Belanger and Koenig favour the Taylor Stockless Anchor.—Objects to Captain Couillard addressing the Deputy direct, instead of through the Quebec Agency.

March 16.—Gregory to Deputy: 'Your letter of 15th inst., I have talked over the matter of the stockless anchor with Captains Belanger and Koenig: both favour the Taylor stockless anchor. Captain Belanger says he has two Taylor stockless anchors on the *Montcalm,* and they are giving excellent satisfaction. Therefore, I may say that our people prefer the Taylor stockless anchor; and as it happens to be cheaper than the Martin anchor and possesses the quality of not breaking when falling on a rock, I would respectfully recommend that the department obtain 2 Taylor stockless anchors for the *Anticosti,* of 5,000 pounds each. I notice in your communication that you say that the master of the said lightship wrote you February 28 last from Montmagny about a larger size chain being used. I would suggest that this man be directed, when he requires any such supplies, to make his application to the agent of the department at Quebec, who should never fail, and does not fail, to consult able men about the most suitable chains and anchors required for such a service. The application from him to the department would then be on record in the agent's office.'

Is McConkey to be Inspector?

March 18.—Gregory writes department, inquiring whether McConkey, inspector of hulls, will superintend the repairs to the said lightship. If not, who is to do so?

Please telegraph McConkey to come up at once.

March 19.—Gregory telegraphs: 'Please telegraph McConkey come up at once about *Anticosti* L. S. contract—this being work to ———. This matter wants to be attended to at once.

G. F. Davie & Sons' tender.

March 13.—A tender was received from Geo. F. Davie & Sons, Quebec, $3,489, for repairs to the *Anticosti* at Quebec—date of contract, March 16—to be completed April 29. No deposit. Inspector, McConkey.

Contract was never signed, as correspondence shows.

No specifications apparently given. (Specification was afterwards found; was written by C. Thomson Schmidt.)

Who is to be Inspector of Repairs?

March 18.—Gregory writes to the department, inquiring whether McConkey, inspector of hulls, will superintend the repairs to the said lightship. If not, who is to do so?

Send McConkey.

March 19.—Gregory telegraphs: 'Please telegraph McConkey come up at once about *Anticosti* lightship contract—this being work to haul (?). This matter wants to be attended to at once.'

March 19.—Deputy ordered McConkey from Halifax.

Articles of Agreement to be signed.—They never were signed.

March 22.—Letter to Gregory, inclosing articles of agreement with G. F. Davie & Sons for the necessary repairs and alterations to the *Anticosti,* to be signed by the contractors.

March 23.—Gregory telegraphs: 'Please obtain and wire immediately internal diameter of hawse pipe necessary to take 5,000 pound stockless anchor ordered for *Anticosti.* Inspector McConkey reports size of hawse pipe given in specification of repairs not large enough. Unable to proceed with work until size of pipe is determined. (Endorsed in red ink to Commander Spain.—F.G.)

This is luminous.

March 26.—Deputy replies: Reference hawse pipe for *Anticosti.* Specification for new anchor states that it must fit hawse pipe. Hawse pipe should, therefore, be a very little bigger than the last one.

March 27.—Samson & Filion's tender for chain and anchors accepted.

Captain takes a hand in.

March 27.—Alfred Couillard, master, *Anticosti,* writes Gregory that the lightship needs very much to be put in dock for overhauling and general cleaning of her bottom, which is very dirty. Last time she was in dock was in April, 1905.

Gregory endorses him, as does Inspector McConkey.—Gregory wants Instructions.

March 27.—Gregory incloses Couillard's letter and says: I have consulted Mr. McConkey on this subject, who is decidedly of the opinion that the vessel should be docked before proceeding to her station; that her rudder be properly examined into, and that she be scraped and painted. All such vessels, it is well known, should be docked at least once a year. It is not necessary that she be put in graving dock, but she could be hauled up on the marine slip of Davie & Sons, and launched at any condition of high tide. Of course, this would be after the completion of contract with Davie & Sons for alterations to the stem and hawse pipe, &c., &c. Will you please inform me what action to take in this matter?

McConkey reports progress and discloses fresh needs of the lightship—A new anchor has been ordered—not taken account of in Specifications for repairs and alterations.

March 26.—McConkey writes Deputy, reporting progress on the work of alterations to the *Anticosti—re* shifting position of windlass and compressors to upper deck, fitting new hawse pipes, and renewing upper portion of stem. After describing what work is being done, he says: 'Patterns are being made for the stern piece and main hawse pipe. A wrought iron forging for new stern piece will be procured from the Nova Scotia Steel Works, New Glasgow, in two weeks after receipt of pattern. The whole of the work is progressing satisfactorily at present. Specification calls for a new main hawse pipe of 12 inches internal diameter, but it having been decided to supply a stockless anchor, 5,000 pounds weight, I find that the size of pipe given in specification would not be large enough to admit the anchor shank. This has caused

delay in preparing the pattern for the stem piece until the proper size of the pipe is determined.'

McConkey has altered specifications—Consequently, Davie & Sons cannot sign contract as drawn.

March 30.—Letter from G. F. Davie & Sons, acknowledging receipt of copy of agreement *re* repairs to *Anticosti,* but since we accepted the contract for this work, your hull inspector, Mr. McConkey, has altered the specification concerning the stem of the vessel, which will cause extra work and necessitate longer time than at first mentioned. We have informed your agent at Quebec to this effect, and he has referred us to Ottawa.

(This letter was stamped: 'Refer to Commander Spain, 3 Apl., '07'—then 'Refer to J. F. Fraser.' It should have gone to Stumbles, and probably got to him eventually.)

Docking of 'Anticosti'—Instructions wanted.

April 5.—Telegram—Gregory to Deputy: 'Refer my letter 27th ulto. about docking *Anticosti* lightship. Must have answer by Tuesday latest. *Druid* expected to come out that day.

Instructions given, as Gregory suggested.

April 6.—Deputy telegraphs Gregory: 'Haul *Anticosti* up on marine slip to get rudder examined and have her painted and scraped.'

Then found impracticable.

April 6.—Gregory replies: 'Davie says *Anticosti* too heavy to be hauled up on marine slip. Can take her in graving dock about middle next week. Do you authorize?'

Must now go into Graving Dock.

April 8.—Deputy replies: 'Make arrangements for *Anticosti* to go into graving dock as soon as possible.'

McConkey again reports progress—Discloses new requirements.

April 23, 1907.—McConkey writes to Gregory and has the honour to report that the work on the *Anticosti* is progressing satisfactorily. It has been delayed somewhat by waiting for the stem piece from New Glasgow. It arrived Sunday and was tried in place yesterday and found to be a good fit and a first-class job. I beg to point out that no provision has been made in the specification for placing the large fog bell. This had to be removed from its position on the upper deck to make room for the windlass, and probably in preparing the specification it was expected that the bell could be placed between the windlass and companion hatch. There is no available place forward where this bell could be fixed as at present fitted, the angle iron frame or standard that supports the bell being entirely too large and out of proportion to the requirements. A new standard will require to be made if it is intended to use the bell as before.

More trouble.—More requirements.

I regret to inform you that I find the shell plating becoming badly pitted in way of the light water line, and the rivets in this part are in a bad state. It is absolutely necessary to renew about 250 rivets on the port side, 100 on starboard side; also about 40 keel rivets. Only those which are loose and leaking are included in this number. Provision should be made to haul the vessel out of water when she comes off her sta-

tion in the fall, and the riveting from stem to stern along the water line and for about 5 feet below thoroughly overhauled and renewed, as found necessary—this part being in way of the lower deck and includes the fresh water tank, should be kept in good condition. A new cast-iron fair lead warping chock is required at the bow. The captain makes application for three bunker scuttles to be fitted on the upper deck for passing the coal to 'tween decks. It has been intended to fit these scuttles, as I found there are two complete fittings on board which, the captain informs me, were supplied with the vessel. I beg to recommend that these scuttles be fitted for coaling purposes, as under present arrangements to coal the bunkers from the upper deck necessitates passing it (the coal) in bags over the vessel's sides and through the cargo ports. I would also recommend that 50 lbs. of rivet cement be supplied for the purpose of filling on the pitted plates. The work can be done by the crew.

Gregory reports that as McConkey's requirements are absolutely necessary he is providing for them.

April 23, 1907.—Gregory writes deputy inclosing above letter and says :—'As work recommended by McConkey is of a character absolutely necessary to be attended to, he is carrying it out while the vessel is in dock. If the vessel is hauled up when she comes up in the fall, the overhauling in the riveting below water line can be attended to then. The bunker scuttles to be fitted on the upper deck for passing the coal 'tween decks, are no doubt very much needed, and would greatly facilitate the taking of coal on board while the vessel is on her station, and will pay for themselves at once.'

(This letter stamped : 'Referred to Commander Spain,' and then stamped : 'Dealt with.—O. G. V. S.'

Authority for the same then given.

April 26.—Deputy writes Gregory (initialled O. G. V. S.) authorizing what McConkey suggests.

May 7.—Memorandum for chief accountant by C. Thomson Schmidt, Inspector of Government steamers.

First appearance of F. X. Drolet's part in the job—Schmidt again on deck—Machinery shamefully neglected—Engineer discharged in consequence—Boilers being impaired by oxidation.

The attached bill, amounting to $1,175.46, rendered by the firm of F. X. Drolet against the lightship *Anticosti*. When the machinery was opened up it was found that owing to the shameful neglect on the part of the engineer, who has since been discharged, all parts were in a shockingly bad condition. Two independent pumps have been installed for the purpose of keeping the water in the boilers in constant circulation, and it is hoped thereby to overcome the rapid oxidation which is taking place in same. These pumps, you will find, were strongly recommended in my report, and I understand that upon the strength of that recommendation, after due consultation between Messrs. Gregory, Parent and Beauchemin, it was decided to install the same. There is no doubt that these pumps will be of great benefit to the boilers.

No tools on board. Many other requirements.

The diaphone plant has been overhauled and compressor valves, springs, &c., adjusted. I would here remark that no tools could be found on board for the purpose of making these repairs; also, that no name could be found by which the maker of the compressor could be identified. Four complete valves for spare gear have been supplied, also one set of steam piston rings. The independent air pump, when

opened up, was found in a bad way, owing to neglect, and it was necessary to send the same to the shops to have its somewhat complexed valve gear overhauled.

The main condenser when tested, was found to be leaking badly, and it was necessary to repack same and renew ten tubes.

The parts opened up were found in such a condition that Mr. Beauchemin (Schmidt's assistant) decided it would be necessary to open up everything for the purpose of satisfying himself that when Mr. Belanger, the chief engineer, recently appointed, leaves for his station, everything will be in first-class order, and Belanger held responsible for same. I understand there is still a further charge to be made against this vessel, as the work was not completed on the 30th March. (Was this the date up to which he reported?).

This is the first appearance on the file of any word regarding work done or to be done by F. X. Drolet.

I have inspected the work done, particularly in connection with the fitting of these circulating pumps, and find all to have been carried out in a thoroughly workmanlike and satisfactory manner.

All work was duly authorized. (By whom?). Prices are fair and just. I would therefore recommend that the bill be paid.

Still further trouble disclosed by Schmidt.

May 8.—C. Thomson Schmidt writes as follows to Deputy: 'I have the honour to inform you that Messrs. Amiot, Lecours & Lariviere, with whom Mr. Beauchemin placed the order for 200 tubes, required for the port boiler of the *Anticosti,* now advise Mr. Gregory that it will be impossible to supply them before the middle of August, and in their letter dated 4th instant, ask Mr. Gregory to inform them as to what action shall be taken in the way of claiming damages from the mill with which it appears that the fault rests.

Proposes what he admits will not be a satisfactory job.

I have wired in every direction but cannot get any tubes of the size required before the middle of June, and as these have to come from Scotland, a further delay, due to mistake in shipment, may occur, and therefore places the question of waiting for these tubes impossible. I propose that 3-inch tubes shall be fitted, having the ends of each swelled to the diameter of 3¼ inches. This will necessitate considerable amount of labour being put upon the tubes, and when finished, we will neither have a satisfactory job or the same heating surface we would have with the tubes as ordered. It is, however, the best that can be done under the circumstances. When I have formed some idea of the additional cost entailed in fitting these tubes, I will then be in a position to report to Mr. Gregory as to the amount of claim that should be made, if the department so desires. The rest of the work in the engine room department of the *Anticosti* is now completed, and the department may have no anxiety as to the vessel not being ready when required, as far as detention caused by non-delivery of the tubes is concerned. (Note: The phraseology and style of this letter, and of many others from Quebec, signed by special officers of the department other than Gregory, would seem to indicate that they are all dictated by Gregory.)

Gregory has now his innings—Discovers that the electric plant of the 'Anticosti' requires overhauling.

May 11.—Gregory to Deputy: 'I have the honour to inform you that the electric plant on board the *Anticosti* requires to be overhauled, and needs, as usual, an electrician to attend to the same.

I presume Mr. Coté, inspector of these electric plants, will come down to attend to

the same, as customary. I recommend that he would be here about the 20th of the month, and advise me of the same.

Coté instructed at Sorel to go and attend to it.

May 27.—Deputy writes to Coté at Sorel: 'I am advised by the agent of this department at Quebec that the electric light plant on the *Anticosti* requires to be overhauled at once. I have to instruct you to proceed to Quebec and have the same carried out, sending to me at the same time an estimate of the cost of this work.

Deputy discovers that the agreement with G. T. Davie & Sons re *'Anticosti' repairs has never been signed by them.*

August 26, 1907.—Deputy writes Gregory: 'Referring to my letter of March 23 last, enclosing articles of agreement with Geo. T. Davie & Sons of Levis, for the necessary repairs and alterations to the *Anticosti,* I have to inform you that the papers do not appear to have been returned to the department. I have to request you to look into this matter and have the papers signed and returned to the department, for the completion of the file. (Signed J. B. Halkett, for Deputy Minister.)

(Note: The writer of this letter had only to turn back a short distance on his file of letters on this subject, and he would have found the letter of G. T. Davie & Sons, of March 30, '07, explaining why they could not sign the agreement in question.)

September 12.—G. T. Davie & Sons write to Gregory in answer to his letter of 10th instant *re* agreement for repairs, &c., to *Anticosti,* giving the same reasons already given to the Deputy at Ottawa in their letter of March 30.

September 16.—Gregory then writes to the Deputy, giving the same information.

Department indignant at this gross irregularity.

September 21.—Deputy writes to Gregory (signed by Stanton, probably dictated by Stumbles): In reply, I have to inform you that I should have been notified of the alterations in an official way, in order to make the contract agree with the cost of the work. I do not see how the accounts can be certified in accordance with the contract, when no attention was paid to the contract, or any notification given for the necessity of changing the contract.

McConkey overhauled.

September 21.—A long letter was then written to McConkey (signed Stanton, dictated Stumbles), calling his attention to this matter. I have to inform you, where a contract is taken, as in this case, no alterations in the contract should be made without advising the department, so that a new specification and contract could be prepared. As the matter now stands, the accounts cannot be certified in accordance with the contract made in April last (It was dated March 16). The necessary repairs and alterations were to cost $3,849. The department does not see how matters of contract can be carried out, if officers of the department make changes without any authority, or the officer who approves of the changes notifying me, so that the contract will cover the cost of the work.

McConkey replies. Says Gregory knew of everything and that Schmidt knew nothing of new anchor.

September 27.—Long letter from McConkey (from Pictou) refers to whole history. Says Gregory was informed of everything, as well as the department. Had full approval of Mr. Gregory to proceed with the work, in order to have the vessel ready to go on her station at the time required. Inspector Schmidt assured me that when the plans and specifications were prepared, he had no knowledge of a 5,000 pound anchor to be supplied the vessel.

Fresh Instructions to Gregory, which are quite harmless.

September 30.—Deputy writes to Gregory on same subject. Refers to McConkey's explanation. Requests him in future to be good enough to return the contract or see that it is returned, when any alterations are made in it, so that when the account comes to the department, it can be seen that it corresponds with the contract.

Department at last waked up over the enormous cost of repairs to this vessel.—Calls on the Accountant for a comparative statement with the similar figures for the ss. 'Lurcher,' from the beginning.—Statement furnished, and matter forgotten.

Memorandum, without date or initials: The department has accounts unpaid at the present time from F. X. Drolet, amounting to $3,013.27, and from J. B. Morin, amounting to $807.76, both for repairs to the *Anticosti* lightship. The undersigned desires to call the deputy minister's attention to the extremely heavy repairs which have been incurred in connection with this lightship, and would deem it advisable that a statement be prepared showing the amount of repairs annually since the *Anticosti* went into commission. In this connection, a comparative statement should be prepared showing the cost of repairs to the *Lurcher* lightship. There appears to be something radically wrong in the excessive cost in maintaining the *Anticosti* lightship in the proper condition.

(Stamped: 'File and return J.F.F.' 'Referred to Commissioner of Lights 5 Oct.' 'Approved C.S. 3/10/07.' 'Mr Owen, please let me have this statement. J.F.F. 7/10/07.') Statement now given and annexed hereto.

Gregory refers Deputy to his own Instructions.

October 1.—Gregory writes to deputy, replying to his letter of September 21. Begs respectfully to state that I forwarded to you, on April 23 last, McConkey's report on the progress of the work and the alterations necessary, which were not covered by the contract, and I received your authority, dated April 26, to carry out the improvements found absolutely necessary. It is utterly impossible for any contract to be made for the repairs of a vessel or a house which will cover anything.

Gregory gets fresh Elementary Instructions in dealing with Contracts, so that the Department may keep clear of the Auditor General.

October 4.—Deputy (signed Stanton, dictated Stumbles) writes Gregory: I have to inform you that when contracts are sent out by this department to be signed by contractors, it is expected that the contractors will sign the contract and return it to the department, unless there is something in the contract to which the contractor objects. He is then supposed to give his seasons for not signing the contract, and if the department considers it a reasonable one, the contract may be changed. If there are any extras for work not foreseen, then a supplementary agreement or understanding is generally arrived at, and accounts are certified in accordance with the contract, or with the agreement to pay an additional sum. By this means the department is kept from any difficulty with the Auditor General. In the case of this particular contract, it was inclosed to you on March 22 last, with the request to have it signed, and it was not returned to the department until it was written for, on August 26, (What was the department thinking about all that time?) and then explanations were given why the contract was not signed, which should have been given in April last (and which were given on the 30th of March last).

MAINTENANCE AND REPAIRS OF 'LURCHER' AND 'ANTICOSTI' LIGHTSHIPS.

Lurcher.

	Maintenance.	Repairs.	Total.
1903-04	$ 9,785 94	$2,441 83	$12,227 77

Anticosti.

	Maintenance.	Repairs.	Total.
1904-05	$12,890 41	$ 1,780 65	$14,671 06
1905-06	20,101 47	10,349 94	30,451 41
1906-07	10,630 30	1,203 11	11,833 41

In comparing the cost of maintenance and repairs of the *Lurcher* and *Anticosti* lightships, it will be seen that the *Anticosti* lightship was not in commission in 1903, and was not placed on her station until late in the season of 1904. This will explain the difference for these years.

Accounts, amounting to $9,650, for repairs to the *Anticosti* lightship incurred during the year 1906-07, are in the hands of the commissioner of lights, payment of which has been withheld for the present, and to add this amount to the expenditure of the *Anticosti* lightship would make the amount for repairs $10,853.11, instead of $1,203.11 as shown in the statement.

To make a comparison, the expenses for maintenance and repairs of the *Lurcher* for four years amounts to $81,917.90 and for the *Anticosti* for three years, including the amounts withheld, would make the expenditure $66,605.88.

It should also be noted that the *Lurcher* is in commission and at her station the whole year round, while the *Anticosti* is only in commission for seven months or during the time of the season of navigation in the gulf and river St. Lawrence.

Gregory clears himself of any responsibility for the failure to get the Davie agreement executed.

October 3, 1907.—Gregory writes deputy: 'In reply to letter 30th ultimo, upon further inquiry into this matter I find that Geo. T. Davie & Sons wrote to the department on March 30 last on this very subject, as I had requested them to do so, as the correspondence had taken place direct between the department and Davie & Sons; and in that communication they distinctly state the facts connected with the contract. I inclose copy of G. T. Davie & Sons' letter.'

October 10.—*Anticosti* again drags her anchor (See *Anticosti*, 21040 M—page 12).

Department acknowledges its oversight, but is not yet satisfied. Explains its methods to prevent misunderstandings.

October 10.—Deputy replies (dictated by Stumbles): 'In reply to your letter of 3rd inst., I have to inform you that the letter of G. T. Davie & Sons of March 30 last is on file. When your letter was received I caused a search to be made for the letter and found it. This explains everything satisfactorily so far as the changes and alterations are concerned. It does not, however, cover the question of returning the contract signed and making out a supplementary one for the extras or alterations that were made. For your information I may state that contracts are made out in the contract branch and sent either through the agents or directly to the contractors, to be signed. If the contracts are not returned, the contract branch may not know the reason and consequently correspondence takes place on the subject. The letter of March 30 last was not seen by the officer who is in charge of the contracts, but it

should not have been shown him, in order that a new contract could be made out, or a supplementary one. This explanation is given in order that there may be no misunderstanding.'

Anticosti accounts rendered up to date (not yet all in):—

F. X. Drolet	$3,013 27
J. B. Morin	807 76
G. T. Davie & Sons	3,849
" " extras	1,500 00
" " still to come in	.....
	$9,170 03

October 29, 1907.—Deputy telegraphs Gregory as follows:—'Referring to contract with Messrs. Davie & Sons for *Anticosti* lightship, specification was not sent with contract. Required for C. S. Commissioners.'

Gregory replies: 'See my letter September 16 last giving Davie's reasons for not being able to carry out contract according to specifications. Season was late, lightship urgently wanted, and cost, due to alterations in specification, very little over contract price. This appeared unavoidable under circumstances and for efficiency of service. Will get original specification from Davie and send it to you to-morrow.'

Gregory's final vindication of himself and all concerned in Anticosti matter.

October 30, 1907.—Gregory writes deputy confirming telegrams as above, and inclosing original specification for repairs *Anticosti*. I beg to add that I do not believe there is a builder of ships in Canada, nor of houses, who can undertake the repairs upon a specification which will cover everything that will be required to put such a ship or such a house in perfect condition. Every care was taken by the department and its officers to do nothing more than was absolutely necessary to cover the conditions of the contract for $3,849. Mr. McConkey's reports fully show what cropped up as the work progressed, and was not known when the specification was made out. The season was advancing rapidly and the lightship was needed as early as possible for the safety of navigation, and was under heavy expense in the graving dock. It must be taken into account also that there was much work done of the ordinary character necessary to keep any vessel in working condition, as takes place every spring. I cannot see what else could have been done by the department in this matter than was done for the efficiency as well as the economy of the service, and further I do not believe there is a ship builder in America who will think otherwise.

See file 21040 M, *Anticosti,* page 12.

November 16, 1907.—*Anticosti* again left her station.

The circumstances connected with this vessel, as shown in the foregoing extracts, would seem to indicate a great lack of efficiency on the part of her captain and crew. Yet there seems to have been practically no fault found with them at any time. No investigation of any kind apparently was held to inquire into the causes of the first disaster; and it would even seem as if the vessel did not get the overhauling then thought necessary both by the Quebec agent and the captain, before she again went to sea. (See letters Noember 11 and 18, 1904.)

If the investigation which was held in consequence of the second collapse had been thorough it would probably have been found, as already stated, that the chief trouble was in the engineer's department and that it was of old date.

The vessel arrived at Quebec, after the second disaster, on 11th November, 1906, but it was not until over four months later that any repairs were begun on her. What possible justification can there be for such a waste of time?

No sooner had the repairs begun, however, according to specifications drawn up by one of the department's experts, than the inspector began to find that many other repairs or alterations were necessary, or were said to be necessary.

The first trouble was the hawse pipe which had been specified to be 12-inch internal diameter ; and that was not large enough it seems for the new anchor. Schmidt, who drew the specifications, was evidently not aware that a new and larger anchor was to be ordered and it was apparently nobody's business to tell him.

Then the inspector discovers that no provision has been made in the specifications for placing the large fog bell.

The shell plating is becoming badly pitted, and many rivets loose.

The captain wants three bunker scuttles to be fitted on the upper deck for passing the coal to 'tween decks (as if she were a coal barge, instead of a lightship). These, the agent says, are very much wanted, and would greatly facilitate the taking of coal on board while the vessel is on her station, and will pay for themselves at once. (He does not say how.)

Shortly afterwards a bill for $1,175.46 presented by F. X. Drolet turns up for payment, this being the first heard of it. It appears to have been challenged by the accountant, so a memorandum appears on the file in connection with it, drawn up by Mr. C. Thomson Schmidt, inspector government steamers, and the same officer who drew up the specifications for the repair work tendered for by G. T. Davie & Sons. His explanation of the matter is given in the memorandum in question, at great length. (See May 7, page 23.)

The day after this memo. was written Mr. Schmidt writes to the deputy disclosing a new trouble, which is very interesting reading. An order for 200 tubes had been given by Mr. Beauchemin (who authorized him?) to Messrs. Amiot, Lecours & Larivière, who in turn placed it with some manufacturer, who failed to fill the order. Messrs, Amiot, Lecours & Larivière apparently recognized no liability on their part, and suggested that the department sue the manufacturer for damages. The damage was quite serious, as Schmidt explained, it forced him to adopt the expedient of making 3-inch tubes do for 3¼-inch tubes by having them swelled at the ends. He says, naively, 'This will necessitate a considerable amount of labour being put upon the tubes, and, when finished, we will neither have a satisfactory job, nor the same heating surface we would have had with the tubes as ordered.'

Then the electric light had to be overhauled by special officer from Sorel, which was not ordered until the 27th of May, and the vessel did not start for her station till the 27th of June, nearly three months behind time, although she had been lying in Quebec since the 11th of November.

After all this enormous amount of trouble, worry and blundering expense the *Anticosti* started for her station on the 27th of June, and left it again without orders on the 16th of November.

It seems to be a pretty conspicuous case of 'how not to do it.'

LIGHTS.

THE LIGHT BRANCH OF THE DEPARTMENT.

We have endeavoured to get some insight into the management of this branch of the department by the only means open to us, namely, by perusing several files of correspondence bearing on the business pertaining to it.

We have already commented on the difficulty of obtaining through its correspondence a full knowledge of any business transacted by the department on account of all letters being distributed among an enormous number of files, each file supposed to contain all the letters and documents or data in connection with one subject. If the letters had been filed in chronological and numerical order, as is customary in ordinary business, we should have found our task much more simple and easy.

The light branch of the department has within the last three years come to be almost entirely bound up with a private concern in Ottawa called the International Marine Signal Company, of which Mr. T. L. Willson is president and chief proprietor, he having established the business as a private concern, which was incorporated about December 7, 1906.

It is based on a patent for automatic low pressure acetylene gas buoys, taken out by Mr. Willson, which is supposed to be a great improvement on all other buoys formerly in use by the department, and still used by other countries. A sample of the new buoy was offered to the department for test in August, 1904. We have not seen any account of the test, which was made by the present Commissioner of Lights, but it was deemed entirely satisfactory; and the Deputy wrote Willson October 7 and October 11, 1904, saying that the Commissioner of Lights, who had tested the buoys, advised that they possess a number of advantages over the types previously in use; and that these automatic gas buoys would now be used exclusively by the department, concluding his letter by ordering 40 buoys at Willson's own prices, amounting to $148,000. Any imported materials required for the manufacture of them to be admitted free of duty.

This was a good beginning for Mr. Willson, and, with the splendid facilities extended him by the department, he has not been slow to better it.

It may seem that in taking up with a new idea so largely and so suddenly, the department were hardly acting with the prudence required by the circumstances. New ideas are not apt to reach a perfect development all at once, and the most ordinary considerations would seem to have called for more caution.

The buoys first purchased consisted of three types, designated No. 5, No. 7, and No. 9, respectively, costing $2,000, $3,000, and $5,000 respectively.

Buoys first purchased—$148,000.

By March 31, 195, Willson had shipped to the order of the department 16 buoys, a No. 5 and a No. 7, to Prescott, three number sevens and a No. 9 to Halifax; eight number sevens to Quebec, and one No. 5 stored to the order of the department.

As early as March 6, 1905, the Commissioner of Lights appeared to be animated by very progressive ideas, with regard to these buoys.

He is on record with the following memorandum dated July 6, 1905:

Memorandum by Commissioner of Lights.

July 6, 1905.—On May 6, 1905, the undersigned prepared a memo. giving facts and figures with reference to the Signal Buoy Service of the Dominion.

The salient points were the recommendation to provide 40 Standard automatic lighting whistling buoys at $3,750 each. The matter was not acted upon at the time,

but the supplementary estimates for 1905-06 contain an amount of $360,000 to provide for these changes. Since the introduction and testing of the Standard lighted whistling buoys, two new and much larger types have been evolved.

The Standard whistling buoy heretofore adopted is 9 feet in diameter, carries twin whistling tubes 20 inches in diameter, has a 10-inch whistle, and carries its light 10 feet above the sea level, and costs $5,000.

A much larger and more powerful type is now available: 11 feet in diameter, with twin whistling tubes 36 inches in diameter, carries an 18-inch whistle, has four times the whistling capacity of the standard type, and carries its light 30 feet above sea level, and is a practical substitute for a lightship; the cost of this is $8,500.

A still larger buoy is available for special positions, elliptical in plan, the axis of ellipse being 11 and 14 feet. It carries twin whistling tubes 4 feet in diameter, has an 18-inch whistle, with six times the whistling capacity of the Standard buoy, and carries a powerful light 30 feet above sea level.

In view of the larger and more powerful types available, the undersigned is now prepared to recommend that these be substituted for the smaller Standard lighted whistling buoy.

Owing to the inability of the undersigned to visit Nova Scotia at the time, Mr. Hutchins, superintendent of lighthouses, came to Ottawa, and the question of the improvement of the coast signal buoy service was thoroughly discussed with him, and the undersigned now recommends that the department place orders for the following apparatus:—

1st. Viz.: 2 elliptical lightship gas buoys, 11 x 14 feet, at $15,000 each, for Halifax and Blonde rock	$ 30,000
2nd—30 Cylindrical lightship gas buoys, 11 feet in diameter, $8,500 each	255,000
3rd—25 Standard No. 7 gas buoys at $3,000 each	75,000
Total	$360,000

(Note at the beginning of this memo.: He states that the Standard whistling buoy heretofore adopted is 9 feet in diameter, carries twin whistling tubes 20 inches in diameter, has a 10-inch whistle, and carries its light 10 feet above the sea level, and costs $5,000.)

These latter (the 25 Standard No. 7) to complete buoyage required for Quebec agency, and partially replace the 39 Scout Kingston type of gas buoys withdrawn from the service.

In order to obtain the material within the fiscal year for which the appropriation is available, the undersigned recommends that it be ordered immediately. (Initialled: J.F.F., K.P.)

Commissioner of Lights recommends the purchase of $360,000 *more, the type having been much improved.*

It will be observed that he was alive to the great improvements already claimed to have taken place in the manufacture of the buoys; so much so that he wanted the whole year's appropriation, amounting to $360,000, invested at once in new buoys, without apparently having considered beforehand where they should all be placed or if they were really required. Of the original types only the No. 7 reappears in his new recommendation, but he is strongly in favour of the larger and more powerful types available, and recommends that these be substituted for the smaller standard lighted whistling buoy.

Change in standard gas buoy.

A few days after the filing of this memorandum, which appears to have been endorsed by the Minister, on the 19th of July, Willson writes to the Deputy to inform

him that in future the standard automatic gas buoys will be different in form, being semi-spheroidal in shape, and 8½ feet in diameter, this being the stronger form, and a very great improvement over the existing form.

Buoys sent Quebec have to be returned to Ottawa for alteration.

In August, 1905, the Quebec agent acknowledges instructions from the Deputy to remove the lantern supports from all the automatic gas buoys which have been sent to his agency, and ship the same in one car load, if possible, to P. J. Powers, Ottawa. Under these instructions he shipped 17 lantern supports.

Other Changes.

Other changes were made with the view of reducing the weight of the lantern supports at the instance of Willson's engineer, and with the consent of the commissioner of lights, who instructs Willson to furnish the new supports for the following sizes of buoys, viz.: Nos. 5, 6½, 7, 8½ and 9.

Willson instructing Halifax agent of the department direct.

To give some idea of the changes and alterations that were deemed necessary in the Willson buoys already delivered, along with the returning of all the lantern supports from Quebec, take the following letter by Willson addressed direct to the agent of the Marine and Fisheries Department at Halifax in a style pretty much as if the latter were an employee of his own.

October 10, 1905.—T. L. Willson to J. Parsons: We have shipped you a new lantern support fitted with a purifier for buoy No. 506 (type 7). This is one of the Standard gas buoys you have in service, either at Middle Ground or Neverfail. This support has attached to it a box containing the necessary connecting pipe, valve and bolts to attach it to the buoy. The lantern support and lantern now on this buoy should be removed at the earliest opportunity and replaced by the new support and a clean lantern. This work could be done without taking the buoy out of service, if properly handled, on a day when the weather is not too rough. Please return the old lantern support to us here, that we may fit a purifier to it and send it to you for the (other Standard gas buoy you have) we previously shipped you, along with the last automatic gas and whistling buoy. We sent you a new lantern support with purifier for the buoy you have on the inner automatic station. It is intended to use the whistle and rubber ball valves now on the buoy. As there is some fitting to be done in attaching this new support to its buoy, it will be necessary to take this buoy in, which can of course be done in this case, as you have in stock spare buoys of the same type, with purifiers already attached. Please return us the old lantern support from this buoy also. When the above work is done, all the automatic gas buoys in your division will be equipped with purifiers.

About the same time September 25, 1905, the assistant commissioner of lights at Prescott writes T. L. Willson that he has shipped to his address the superstructure belonging to No. 7 valveless buoy. He does not mention for what purpose. The buoy itself remains at Prescott till November 2, 1906, when the assistant commissioner of lights ships it also to Willson, as, he says, it has not been, nor is likely to be of any service until alterations are made. Willson, or the I. M. S. Co., took till September 12, 1907, to make the alterations, and then writes to the commissioner of lights as follows: 'We have finally shipped to you all the gas buoys which you had sent us for alterations, including the No. 7 valveless, to which we had to fit a new lantern support, owing to the original not being returned to us with the buoy, ignoring the fact that the whole superstructure of the buoy had been sent him in November, 1906.

Up to October 10, 1905, Willson had shipped to the order of the department 47 buoys, as follows, viz.: to Prescott 10 No. 5 and 2 No. 7; to Halifax, 3 No. 7 and 9 No. 9; to Quebec, 12 No. 7; to Lévis, 5 No. 5; to Port Arthur, 3 No. 5; to St. John, 1 No. 9; to Point du Chene, 1 No. 9, and 1 gas and bell buoy now in shop—embracing 18 No. 5, 18 No. 7 and 11 No. 9.

Lighted Whistling Buoys for Maritime Provinces and standard buoys for other localities required.

On October 17, 1905, another memorandum appears on the file drawn up by the commissioner of lights. He says he drew the attention of the minister to the necessity of making arrangements for certain lighted whistling buoys for the maritime provinces and standard buoys for other localities, for which provision was made in the estimates for 1905-6. This matter was referred to the Lighthouse Board and provisional recommendation was given pending a 30 day test of the buoys referred to. The test has since been carried out with a No. 9 gas and whistling buoy at the position indicated, viz.: adjacent to the *Lurcher* lightship, and test was entirely satisfactory, as can be seen by the report of the captain of the lightship, attached herewith. The undersigned (J.F.F.) therefore recommends that the formal order be given to Mr. Willson as the minister has already approved of memorandum authorizing these buoys (July 6, 1905), and has advised Mr. Willson to proceed with work. (On the margin of this memo. is written: 'I concur for minister's signature' F. G.—'Minister directs that this order be given as he has visited the works and is satisfied with the work on hand, which he orders to be carefully inspected from time to time. 19/10/05. F. G.')

The order for $360,000 worth of buoys now given, without apparently knowing where they were required.—October 19, 1905. And without the authority of an order in council.—This order in council was repeatedly applied for, and refused, and was not granted until July 24, 1906.

The order for $360,000 worth of the buoys was accordingly given Willson in letter of 19th October, 1905.—namely for 30 No. 11 combined gas and whistling buoys 11 feet diameter $8,500 each, $255,000; 35 No. 8½ Standard gas buoys, $3,000 each, $105,000.

The price quoted above to be f.o.b. Ottawa. The necessary shipping directions will be given you from time to time, as the buoys referred to are ready for delivery.

It will be noticed that the whole of this large amount was invested in two types of buoys. Neither of which had hitherto been supplied to the department by Willson, although the No. 8½ buoy was supposed to be an improvement on the old No. 7, and cost the same price.

On January 17, 1906, T. L. Willson writes the commissioner of lights that the standard gas lighted and combination whistling buoys for 1906 will be:—

A. Standard buoys suited to carry 300 wx/m, occulting lanterns 9 feet above water, capable of giving 30 times the light of the usual compressed oil gas or Pintsch buoy now in service.

B. Eleven feet diameter cylindrical whistling buoys, suited to carry 375 mm. occulting lanterns 30 feet above water, giving a light equal to about 3rd order lighthouse and each carrying two whistling tubes 3 feet in diameter, draught about 27 feet.

C. Eleven by fourteen and a half feet, oval whistling buoy, suited to carry 500 mm. occulting lanterns 30 feet above water, giving a light about equal to a second order lighthouse and each carrying 2 whistling tubes 4 feet in diameter, draught about 27 feet. Both of the latter have eighteen inch diameter whistles.

(File, no action, January 17, 1906, J. F. F.).

This communication would seem to be meant to convey the impression that only

the larger and newly developed buoys should now be ordered by the department, or at any rate that that was Mr. Willson's opinion.

Meantime we may consider how the buoys already in service were standing the stress of experience.

Change in lantern supports suggested by Capt. Johnson, of C. G. S. 'Lady Laurier.'

On January 18, 1906, Willson writes the commissioner of lights as follows: 'On a recent trip to Halifax our Mr. Creelman had his attention called by Captain Johnson of the *Lady Laurier*, to the advisability of omitting the platform plates from the lantern supports of our standard gas buoys, as they are likely to gather ice, and, in his opinion, they are not needed for attending to lanterns. We would like to know if the department desires us to omit these plates, we to put the holes in the supporting angles and supply the plates, ready to rivet on, if at any time the department should desire to have them.

On January 22, 1906, the Commissioner of Lights replies: 'It may possibly be that the omission of those plates would prevent the accumulation of ice on the upper part of the lantern support; and as this is a matter that can only be determined after a trial, I have to request you to omit the plates from the Standard gas buoys to be supplied. But you are to put the holes in the supporting angles, and in the platform plates which otherwise would go on the gas buoys, and ship to the Dominion lighthouse depot at Prescott, with a covering letter explaining the object of the shipment.

Improvement adopted, but no attempt made to save anything by it.

This seems to be rather an original kind of economic progress or improvement, where the unnecessary material cut out is carefully shipped to the government's depot at Prescott and labelled as old junk, although richly paid for as part of a most expensive patented machine.

The chief engineer does not appear to have been consulted about this, nor any one else but Mr. Willson.

Mooring of buoys.

On December 30, 1905, a year and a quarter after the introduction of these buoys into the service, A. Legere, the resident engineer of the department at Halifax, wrote the Commissioner of Lights asking for plan showing how the combined gas and whistling buoys are moored; also the gas buoys and combined bell buoys, as it is outside of his jurisdiction, and that the agent at St. John, N.B., Mr Harding, having asked him for it, he thought he would write for it.

Although the answering of this letter involved only writing a line in reply and inclosing blue print plans, it was not answered till January 30, 1906, a delay of a whole month.

It does not appear that any general instructions to the department's agents with regard to the mooring of these buoys were issued by the Commissioner of Lights until September 27, 1907, when the following circular letter was written: 'I inclose herewith a blue print showing the proper way to moor the No. 8½C automatic gas buoys. Hereafter all moorings put out are to conform in all respects to the dimensions shown on the print.' This was about three years after the introduction of these buoys into the service. Even after that, Victoria agent wrote on October 3, 1907: 'Your letter 27th ulto. as to correct way of mooring No. 8½C gas buoys. Up to the present we have not used any wire rope in mooring these buoys, and request information as to whether the wire rope is to be in addition to the 2 or 2½ lengths of chain, as the case may be.'

Further change in the buoys.

February 9, 1906.—Deputy writes Willson: 'I have to instruct you to place the necessary receptacle for attaching the submarine bell to the buoys in place of the

cast steel bracket which the specifications provide, on the understanding that this change entails no additional cost to the department.'

Experimenting with whistles.

March 12, 1906.—Deputy (J.F.F.) writes the agent at Halifax: 'I am advised by the manufacturer that some No. 11 lighted whistling buoys are ready for shipment. Instructions have been given to ship these to Halifax. You will arrange to have the first two buoys held at Halifax until the department is able to determine whether the 12-inch or the 18-inch whistle is the more suitable for this type of buoy. When this information is obtained the No. 11 buoys are to be placed in the exposed positions off the coast of Nova Scotia, replacing the present Courtenay whistling buoys and the No. 9 gas and whistling buoys.

Willson announces further improvements which he offers to add to the No. 9 buoy free of charge; and suggests his taking back the No. 9 buoys at cost and substituting No. 11 for them.

March 31, 1906.—T L. Willson writes deputy: that improvements have been accomplished in the No. 11 combined automatic gas and whistling buoys, viz.:—

I. The attachment of the receptacle for the submarine bell.

II. The increased height of the air chamber above the water in the whistling tubes.

II. The combined purifier head of the generator instead of being separate as in the No. 9.

I will make changes in the No. 9 buoys which I have furnished, to correspond with the above, free of charge to your department, and further ,in the event of your department substituting the No. 11 buoys for the No. 9, I will take back and allow full value for the No. 9 buoys when delivered F.O.B. cars at Ottawa

Willson's offer of substitution of No. 11 buoys for No. 9 buoys declined for the present.

April 6, 1906.—This letter acknowledges Willson's offer, and says that it is not probable that the department will require a substitution of buoys, inasmuch as the No. 9 gas buoy meets with the requirements of the department for many localities where lighted signal buoys are necessary. If, however, a change is desired later on the department will be pleased to take advantage of the offer which you make.

Two No. 11 buoys sent to Halifax—Whistle experiments to be made with them.

Meantime two of the new No. 11 buoys had reached Halifax where they had to lie for some time at the railway wharf, as there were no preparations for them and no machinery with which to handle them. On 5th April the superintendent of lights at Dartmouth advises the agent of the department at Halifax that the two buoys have been safely landed on the wharf at Dartmouth As they have no ship available, and the cars were required, we were obliged to employ Beazley Bros. to rig a special purchase on their dredge, to remove the buoys from cars. The transportation (across the harbour) from deep water terminus to Dartmouth cost $100 for the buoys, which was the best bargain we could make. In regard to testing (whistles) I beg to make the following suggestions : On 14th March last the *Lady Laurier* placed a combined light and whistling buoy, with an improved submarine bell attached, at the outer automatic station. Captain Johnson reports that the submarine bell sounded once after being submerged and then ceased sounding. We have since had no opportunity of testing this buoy with the *Lady Laurier's* receiving apparatus, and I can't say whether or not the bell is still inoperative. As this outer automatic station is the most appropriate for this large 11 feet buoy, just received, I suggest that the buoy now there

be brought in, the submarine bell removed, regulated again, and attached to the 11 feet buoy, and this new 11 feet buoy placed on that station, where satisfactory tests with the 12-inch and 18-inch whistles, &c., can most conveniently be made. If this plan is approved I can arrange to have the buoy brought in at a time most convenient for carrying out the change, and involving as little lost time as possible.

April 10, 1906.—The deputy replies to this letter, as follows : 'The intention of the department in shipping to you the first two buoys of this type is to have them anchored side by side in some convenient point in Halifax harbour in order to determine whether the 12-inch or 18-inch whistle is the most suitable for this size buoy. * * * * * It is important that this whistle test be carried out as soon as possible so that whistles may be ordered for the remainder of the No. 11 lighted buoys now under construction.

On receipt of this letter please advise me when this whistle test can be carried out, so that Mr. Creelman (Willson's engineer) can go from Ottawa to Halifax and be present at the test.

Whistle experiments completed successfully.

April 27, 1906.—Finally, after much trouble and delay, Hutchins reports to the Halifax agent that he, along with F. Creelman and Captain Johnson, have made two tests of the buoys whistles—12-inch and 18-inch and report favourably ; and recommend the 12-inch whistle be adopted for use on those 11 feet gas buoys. The sound produced was loud, deep, and well sustained. It appears, however, that it was not until the 16th of July that the deputy authorized Willson to supply 12-inch whistles for the No. 11 gas buoys.

Further shipments to Halifax of No. 11 gas buoys.

In the meantime, and before this whistle test was completed further shipments of the new No. 11 buoys had been made to Halifax, eight in all, up to 21st of April, 1906, and two more in May. Not one of these had apparently been called for by the Halifax agent, or the superintendent of lights there.

Captain Johnson objects to them.

May 28, 1906.—On 28th May, Captain Johnson of the *Lady Laurier* writes thus: 'Before any more large gas buoys are sent here I think it my duty to inform you that they are not practicable, as they are too large. The smaller size, with a few alterations, would be first-class and quite safe.'

Department pretends to think that Johnson's objection is solely on account of his not having powerful enough gear to handle them.

The deputy simply acknowledged receipt of his letter without comment. The commissioner of lights wrote a memorandum about it, dated 1st June, and affected to believe that the sole reason of Captain Johnson's objection to the No. 11 buoys was that his gear on the *Lady Laurier* was not powerful enough to handle them. He says he 'is not surprised at Captain Johnson taking this ground, seeing that the hoisting gear of the *Lady Laurier* has not strength enough to lift the buoys. The department has plans provided for a new derrick and hoisting gear which will be capable of lifting a weight of 25 tons, which should obviate to a large extent Captain Johnson's objection.'.

In accordance with this memorandum the deputy wrote to the Halifax agent of the department on 13th June, as follows : 'Captain Johnson of the *Lady Laurier* informs the department that in his opinion the No. 11 gas buoys are too large, and he has to tow them into position. I have to request you to inform Captain Johnson that the department has plans provided for a new derrick and hoisting gear for the *Lady Laurier* which will be capable of lifting and controlling a weight of 25 tons and thus obviate the objection raised by Captain Johnson.'

All the buoys supplied to the department after February, 1906, seem to have been of the larger types, No. 9½ and No. 11, with the No. 8½, which is the improved No. 7.

Willson again offers to alter the old types of buoys at his own expense, excepting the cost of freight and handling.

On November 7, 1906, Willson writes to the Deputy: 'Referring to my letter of March 31, 1906, and yours of April 6, 1906, I will make the improvements in the No. 9 gas buoys, as offered, and further that I will make improvements in the 5, 6 and 7 sizes, which are now equipped with detachable purifier boxes now in service, to bring them up to the present standard by substituting the fixed purifier head upon the gas buoys, instead of the present arrangement; all of the above to be done free of charge to your department, on condition that you deliver the said buoys F.O.B. Campbell's siding, Ottawa. After these changes are made, we will deliver the buoys F.O.B. cars at Ottawa, to your order.'

This was informally accepted.

Although there appears no formal letter of acceptance of this offer on file, the buoys referred to seem to have been all sent to Ottawa at different times for alteration, as suggested—of course, at great inconvenience, and expense for freight and handling.

A further development about this time was the automatic gas beacon, principally for points in British Columbia, at a cost of $1,500 each.

Total Number and Values of Buoys and Beacons supplied by Willson up to March 31, 1907.

Up to November 2, 1906, Willson had supplied to the department 124 buoys and 1 beacon of the aggregate value of $537,825. Up to March 31, 1907, he had supplied 50 more buoys and beacons, making a total of $692,325 in two years and a half. Up to the end of 1906, all the buoys supplied by Willson had been for use in Ontario, Quebec and the Maritime Provinces, but with the opening of 1907 British Columbia began to get its full share of attention; the types of buoys sent there being No. 8½ and No. 11.

St. John Agent wants three No. 11 Gas Buoys.

January 14, 1907.—On January 14, 1907, the St. John agent of the department wrote the Deputy, saying that 'three No. 11 gas and whistling buoys are required by this agency. You will please ship them at your earliest convenience.'

Deputy wants to know what for.

On January 21, the Deputy replied: 'I have to instruct you to inform me as to name of locality for which these buoys are intended, in order that application may be submitted to Lighthouse Board for their consideration.'

Agent gives names of places.

January 29.—St. John agent, in reply, recommends that a No. 11 gas buoy be anchored off Southern Wolf Island, in place of the Courtenay automatic now anchored there, another to replace the Courtenay whistling buoy now anchored off Split rock; and the third is for a spare buoy.

Again reminds Deputy of his request.

April 2.—No attention is paid to the letter, so St. John agent writes again on April 2: 'Reverting to my letter of January 14 last, asking to be provided with

3 No. 11 gas buoys for Split rock, off South Wolf island; and the other for a spare buoy; and your reply of February 1, informing me that the matter would be laid before the Lighthouse Board, I have not received any further information on the subject up to this date.'

Is asked for a Return of what he has.

May 8.—This letter is not answered till May 8, when the Deputy writes: Your letter, April 2, referring to your former letter, January 14, asking for 3 No. 11 gas buoys. I have to request you to be good enough to forward to me a list of the gas buoys which have been sent to you for the Bay of Fundy, and the positions in which these buoys have been placed, together with any recommendations which you may have for additional automatic buoys for your agency.

Which he gives, and the matter ends there.

May 23.—On May 23, St. John agent sends a complete list of gas buoys received at his agency, and stating where they are placed. They consist of five No. 11, one No. 11½, one No. 9½, one No. 8½, eleven No. 8, and two No. 7.

Apparently, nothing further was done about this, as the matter disappears from the file.

Buoys for British Columbia.

About the beginning of 1907, special attention appears to have been given to British Columbia in the matter of buoys.

December 11, 1906.—An order in council was asked for by the minister to authorize the following recommendations of the Lighthouse Board, viz.:—

For Ontario:	Northport shoal, Bay of Quinté: gas buoy 8½C at.	$3,000
	Prince Edward Island: Miscouche shoal: gas buoy 8½C at.	3,000
	British Columbia: Middle bank, strait of Fuca: gas buoy, 1 No. 11, with bell.	9,550
	" Sand Head, Fr. river, gas buoy, 1 No. 11, with bell.	9,550
	" Comox bar, gas buoy, 1 No. 8½, with bell.	3,750
	" Ledger's reef, off McNeill's point, gas buoy, 1 No. 8½	3,000
	" One spare gas buoy, 11, with bell.	9,550
	" " 8½, with bell.	3,750
And six gas beacons, as follows:—Boat point, Sarah island; West rock, Gulf of Georgia; Gibson's reef ,off Gibson; Zero rock, Rivers inlet; Fog rock, Fitzhugh sound; Morning reef, Klewnugget, at $1,500 each.		9,000

Victoria agent advises what the I. M. S. Co. are going to send him.

February 13.—Victoria agent writes to Deputy, as follows: 'I have to inform you that the engineer of the International Marine Signal Company of Ottawa advises that, according to instructions received from the department, six automatic gas beacons had been shipped to the Pacific coast via G.T.R. and C.P.R. I notice that these beacons are intended for certain points enumerated in Mr. Creelman's letter, and, amongst them Gibson's reef, for which I presume Watson's rock is meant. Instructions were received some time ago to establish a Wigham's 31-day lamp at this point. I beg to be advised whether it is the intention of the department to adhere to the instructions which I have already received or to establish a gas beacon on Watson's rock.

It conflicts somewhat with what the department has already instructed him—What are they going to do about it.

Here we have instructions given by the department to the International Marine Signal Company affecting the administration of their British Columbia agent, with

whom, however, the department does not take the trouble to communicate, even although the matter involves the cancelling of instructions previously given him. It would almost look as if the International Marine Signal Company were regarded by the chief officers of the department as a branch of the Department of Marine and Fisheries, and a favoured one at that.

Shipments of buoys and beacons to British Columbia.

January 19.—The International Marine Signal Company advises Deputy: That, as instructed by his letter of January 10, they have shipped to British Columbia 2 gas buoys, No. 11, serial Nos. 626-7; January 30, shipped to British Columbia, 2 gas buoys, No. 8½, serial Nos. 628-630; February 5, the I.M.S. Co., shipped six gas beacons to Victoria, B.C.; February 27, I.M.S. Co., shipped 1 gas and whistling buoy, No. 11 and No. 629, with bell, intended for spare.

February 16.—Victoria, B.C., agent writes to Commissioner of Lights: 'I beg to requisition for the following:—6 gaskets for carbide door cover for No. 8½ auto. gas buoys; 6 rubber gaskets for carbide door, No. 7½ beacons. (Recommended, J.F.F., 25-2-'07.)

Fresh instructions from the Deputy.

March 5.—Deputy to Victoria agent: Your letter 13th ult. I beg to state that the Lighthouse Board has passed an unwatched light for Gibson's reef off Gibson island. With reference to Watson's rock and the 31-day light, I have to inform you that the department has no Wigham lights available, and as I indicated in a previous letter, you are authorized to use your own judgment as to the disposition of the gas beacons forwarded to you. You have been requested to forward a complete report as to the number of unwatched lights requested granted, and the means available at your agency for carrying out instructions given.

Six gas beacons and four gas buoys lying on wharf at Vancouver.

March 6.—Victoria agent to Deputy: Reports that he has lying on the C.P.R. wharf at Vancouver, 6 gas beacons and 4 gas buoys, waiting transportation to destination, and the *Quadra* is the only available steamer; and it will keep her engaged for upwards of two months.

No more buoys should be shipped for the present.

Would recommend that no more buoys be shipped to the coast until we are in a position to place them as soon as they arrive.

The department has already been advised on several occasions that present accommodation will not permit the storage of a large shipment of aids to navigation and supplies.

Another Number 11 advised for Spare.

I am advised by engineer of the I.M.S. Co. of the shipment of one No. 11 automatic gas and whistling buoy with 500 lb. bell apparatus, No. 629, marked 'intended for spare.'

Nine more automatic gas beacons advised.—Ship four Wigham lamps to Prescott.

March 13.—To agent, Victoria: 'Instructions have been given to the I.M.S. Co. to ship to you nine automatic gas beacons complete. The necessary lanterns will be forwarded from the Dominion Lighthouse Depot, Prescott. As you were advised in another letter, you are to ship the 4 Wigham lamps at your agency to the lighthouse depot at Prescott, and automatic gas beacons are to be used where required in British Columbian waters. (Initialled J.F.F.)

Only on 5th instant, after having instructed Victoria agent to use a Wigham lamp for a certain place, the deputy said that the department had no Wigham lamps available, and now instructed him to ship four in use to lighthouse depot at Prescott.

Gibson's reef confounded with Watson's rock or reef.

March 14.—Victoria agent to Deputy: 'You letter 5th advising that Lighthouse Board had passed an unwatched light for Gibson's reef off Gibson island; in reply I beg to explain that the reef off Gibson's island is named Watson's reef on the chart, and that a gas beacon is being shipped on board the *Quadra* to be installed on this rock.

This is the second time within a month that the agent has set the Deputy right about Watson's rock or reef, and his confusing it with Gibson's reef, off Gibson island.

Another No. 8½ gas and bell buoy for spare.

March 18.—I.M.S. Company have shipped to British Columbia one No. 8½ automatic gas and bell buoy for spare. We have notified Captain Gaudin of this shipment. (The department is evidently determined to make the B.C. agency a dumping ground for all the buoys Willson can wheedle them into buying, whether they are wanted or not.)

Power Derrick Scow for British Columbia.

March 20, 1907.—Deputy to Victoria agent: Your letter 6th. with reference to lack of facilities for handling aids to navigation at your agency, I have to advise you that plans are being prepared, and tenders will be called for the construction of a power derrick scow for British Columbia waters. While it may take some time for the construction of this scow you are directed to forward to me a report indicating what boats are available and may be chartered for the purpose of placing gas buoys and other aids to navigation that may be forwarded to you. The department recognizes that the *Quadra* is unable to overtake the work as it stands now in British Columbia and pending the furnishing of permanent appliances, it is necessary that other steps be taken. Your early attention to this is equested (J.F.F.).

No. 14 Lightship Gas Buoy for Blonde Rock.

March 5, 1907.—Deputy to Halifax agent: 'Instructions have been given to the I. M. S. Co., to forward to you one No. 14 lightship gas buoy similar to that recently placed in the position of the outer automatic buoy. The buoy referred to above is to be placed at Blonde Rock. It may be some time before delivery can be made of the buoy referred to.

(The No. 9 buoy at Blonde Rock went adrift about October 10, 1906—No. 546—and has not been recovered.)

Scout Buoys sent to Halifax—Obviously Junk.

March 21, 1907.—Deputy to Halifax: Instructions have been given to the Lighthouse Depot at Prescott to ship to you 15 Scout type gas buoys. These have been condemned by the department, and have been replaced in service by No. 8½ automatic gas buoys. They may be used at your agency in place of conical or can buoys with a suitable top, and the department is making arrangements to provide a sealed ball-bell attachment so that the buoys can be utilized as bell-buoys. Please advise me the disposition that you suggest making of these. (J. F. F.)

Though Nominally to be used.

March 25, 1907.—Deputy to Halifax agent: 'I have to advise you that additional instructions have been given to the Lighthouse Depot at Prescott to ship you 13 more Scout type gas buoys. These are condemned as gas buoys, and are to be used as either conical can or bell buoys; and for the latter a special attachment will be provided. (J. F. F.).'

Halifax will endeavour to use them.

March 27, 1907.—Halifax agent to Deputy: In partial reply to yours 21st, I beg to say when the buoys are received and cared for we will endeavour to utilize them for some of the many opportunities that our rivers, bays and coast shoals present. Awaiting these buoys and the sealed ball-bell attachments.

Halifax sent 2 No. 6 buoys to Ottawa 8th March.—Have no others.—Halifax agent replies to instructions from Deputy to return all No. 5 and No. 6 buoys to Ottawa for alteration.

April 1, 1907.—C. A. Hutchins (approved Parsons agent, Halifax): Your letter 25th ulto., I beg to report that on 8th ulto. we sent to Ottawa 2 No. 6 gas buoys in accordance with previous instructions; we have no more on hand. We have on hand at this agency 2 No. 8 gas buoys in the dockyard Nos. 506 and 8 and 1 No. 8 at present in St. John, No. 519 to be replaced off the Avon river as soon as the ice disappears. Those three buoys have the purifiers in the lantern supports. The 2 No. 6 already returned were brought in from the Middle Ground and Neverfail, Halifax harbour, having been replaced by No. 8½ buoys. We should have at least 1 No. 8½ buoy on hand, as spare, to relieve Middle Ground and Neverfail. I beg to ask if we shall send these No. 8 buoys 506, 508, 519 to have purifiers fitted in heads of buoys. A combined gas and bell buoy should be sent to St. John to replace No. 519 for Avon river. This buoy is attended to by the *Lansdowne* from St. John.

The above letter was in answer to Deputy's of 25th March, which was also written to St. John, and on 30th March to Prescott, and was as follows: All No. 5 and No. 6 gas buoys at the agency are to be returned to Ottawa, in order that new heads containing purifier may be placed by the manufacturer, as he has offered to do this free of cost to the department, if the buoys are delivered to him f.o.b. Ottawa. On receipt of this you will reply by wire the number of No. 8½ gas buoys which will be required to replace the No. 5 and No. 6 buoys at your agency.

Bell attachment wanted for Scout Buoys, and price asked for from I. M. S. Co. Price $474.

These buoys were evidently called in to Ottawa in accordance with Willson's offer of 7th November last to alter them free of expense to the department except freight and handling. He made no mention, however, of No. 8 buoys, a few of which were evidently in the same category as the 5s, 6s and 7s.

May, 1907.—On May 6 a price was asked from the I. M. S. Co., at which they would supply a bell attachment for the 'Scout' buoys which were to be converted into bell buoys for the maritime provinces. The price quoted was $474.

Bell attachment to be tested at Prescott appears to have been neglected.

On May 10 the commissioner of lights advised assistant commissioner of lights, Prescott, that a bell attachment for Scout buoys had been ordered from the I. M. S. Co., to be shipped to Prescott. I have to request you to have this tested and send a report to the department.

This was duly acknowledged May 13, and was promised attention. It did not appear to get it, however, as on June 18 the commissioner of lights telegraphed to his assistant at Prescott: 'Advise me when you will complete test of Scout type bell buoy.' No answer appears on the file.

Remaining Pintsch buoys abandoned.

On the 26th of June the three remaining Pintsch buoys in the service were abandoned and three No. 8½ buoys put in their place at Barrett Ledge, Channel Patch and Beaujeu Bank respectively.

Latest improvement up to date.

June 10, 1907.—On 10th June the Assistant C. of L., at Prescott, acknowledges to deputy receipt of his letter of 7th inst., in which you inform me that you are sending under separate cover blue print sheet No. 1001 giving the governing dimensions of the latest type No. 9½ automatic gas and whistling buoys, which is provided by this department, and which carries an adjustment for submarine bell (J. F. F.)

A similar letter from Victoria agent is dated 14th June. This seems to refer to the latest improvement or alteration carried out on these buoys.

Book of instructions for the handling of Buoys issued by the I. M. S. Co.

June 18, 1907.—On the 18th June, after the buoys have been nearly three years in service the commissioner of lights sends to all the agencies of the department, a book of instructions issued by the International Marine Signal Co. for assembling and charging automatic low pressure gas buoys. Presumably up to this date they had had no instructions, and were left to their own devices, as they had been up to a comparatively late date, with regard to the mooring of the buoys.

Great accommodation by the department to the I. M. S. Co.

June 28, 1907.—At this date a singular transaction with the department was proposed by the I. M. S. Co., and after some delay carried out. The company were in need of a No. 11 lighted whistling and bell buoy to sell to the government of Brazil, and of course had no such expensive luxuries in stock. But being fully as well posted as the department itself as to its buoy service, they knew that they had supplied it with just such a buoy in August, 1906, at a cost of $9,550, which was provided, or at any rate considered as a spare, and was still lying at Prescott. They asked the department to give them back this buoy and take in exchange for it two of their improved No. 9's, now called No. 9½, at a cost of $5,000 each, the department to pay them the difference of $450, but to get no advantage whatever from the deal—neither discount nor bonus.

History of the transaction.

The eagerness of some of the officials of the department to serve the company in this matter, without consideration for the government, was quite remarkable. There were no difficulties at all. It was explained that the No. 9½ tpye, lighted whistling, was not available at the time that the No. 11 buoy was purchased by the department, and that the 9½ type will meet all the requirements of the department. So, after submission to the Privy Council it was carried through.

The No. 11 buoy was shipped from Prescott on the 19th July. On the 13th August the deputy wrote the I. M. S. Co., as follows :—

'I have to acknowledge receipt of your letter of 28th June *re* exchanging one No. 11 gas buoy for your giving two No. 9½ buoys, difference of $450 to be paid by the government. In reply I beg to inform you that authority is given to return to you the No. 11 lighted whistling and bell buoy; and I have to instruct you to ship to the

L. H. depot, at Prescott, for transmission to the Parry Sound depot two No. 9½ lighted whistling buoys, and credit against the account the price paid by the department to you for the No. 11 lighted whistling and bell buoy.'

The No. 11 buoy, as above stated, was shipped from Prescott 19th July.

The two No. 9½ buoys were shipped from Ottawa on 17th August.

On the 19th August the deputy writes to the C. of L. who was then at Prescott, as follows: 'With reference to the order in council of 1st inst. approving of the purchase of two buoys for Parry Sound depot, I am to request you to inform me when you expect that these buoys will reach destination'?

On 21st inst. the C. of L. replies: 'Your letter 19th inst., I beg to state that it was the intention to send these buoys to Parry Sound on the gas and derrick scow now under construction at Prescott. I returned from Montreal yesterday, after having seen the contractor for the machinery and derrick, and I find that so little progress has been made that it will be late in the fall before the scow can reach the Georgian Bay. If the delivery of the buoys is required before this I would recommend that the cars be not unloaded at Prescott, but rerouted to Depot Harbour.'

On 28th August deputy replies: 'Your letter 21st. I have to inform you that it is considered desirable that these buoys be sent by freight. I understand that Mr. Noble has telephoned you to this effect.

So the two buoys were shipped by rail to Parry Sound, the government of course paying the freight, which is not small.

The first buoy was said to have been purchased to go to Parry Sound by the scow which was building. The buoy was bought 4th August, 1906, and paid for, $9,550, and lay at Prescott waiting for the scow until 19th July, 1907, when Willson kindly took possession of it again and substituted two others for it. These could not wait any longer for the scow, and of course had to pay their way. It is presumed that one spare buoy was all that was wanted at Parry Sound, if even one was wanted. Then why send two? Probably for the luxury of paying the freight.

We are informed that the scow left Prescott 21st October and arrived in Parry Sound on 1st November.

When did the two buoys arrive there, and what was done with them?

Commissioner of Lights calls for more buoys for British Columbia.

June 28.—On June 28, the Commissioner of Lights again puts himself on record in a memorandum showing that in his opinion British Columbia was not even yet sufficiently supplied with buoys. He says: 'In view of the increase of shipping and the necessity of additional aids to navigation in British Columbian waters, the undersigned has the honour to recommend that 10 No. 9½ lighted and whistling buoys be procured from the I. M. S. Company at a cost of $5,000 each, and shipped by the department to the agent at Victoria, B.C. (Signed J.F.F.; initialled W.T.).

This recommendation passed Council July 10, and the whole ten buoys were despatched on July 24 and 26.

Ten more buoys No. 9½, for Victoria, B.C.—Agent advised of them.

In advising the agent the Deputy said: 'Instructions have been given the I.M.S. Company to ship to you 10 No. 9½ lighted whistling buoys for British Columbian waters. I have to instruct you to forward to me, after consultation with Captain Troup, a list of the points where these buoys are most urgently required. The I.M.S. Company has been instructed to forward a blue print, giving the governing dimensions of the buoys referred to. Lanterns for these buoys will be forwarded to you in due course. (Initialled J. F. F.)

Agent acknowledges instructions and is waiting for Captain Troup.

July 26.—Victoria agent to Deputy: 'Your letter 19th advising 10 No. 9½ buoys, also to forward me a blue print giving plans and dimensions of these buoys. I am in communication with Captain Troup with reference to the placing of these buoys where they are most urgently required.

Department shows urgency to get buoys disposed of.

And again, on July 30, he writes the Deputy: 'I have to inform you that Captain Troup has been away on a trip to Alaska on board the C.P.R. steamer *Princess Royal,* returning yesterday. He leaves for Montreal to-morrow, and requests that the question of placing these buoys be left in abeyance until his return in about ten days, in order that he may obtain a report from the captains engaged in the coasting trade. I beg to acknowledge your telegram of this date: "No additional buoys beyond the 10 lighted whistling buoys shipped you will be forwarded to British Columbia until further arrangements made for additional facilities. Wire best arrangements you can make to charter suitable tug to place number lighted whistling buoys, and to tow scow. If more assistance than tug required, can you charter any suitable steam barge for the outside work." The I.M.S. Company has forwarded me three drawings governing the dimensions of the No. 9½ lighted and whistling buoys.'

(Note the long telegram. What necessity was there for it? Note also the anxiety to have the buoys placed or disposed of in some way.)

August 8.—Deputy to Victoria agent: 'Your letter 30th ulto., in which you advise me that you wish to await Captain Troup's return before sending to me a list of the points where the 10 lighted whistling buoys should be placed.

I beg to call your attention to the necessity of your keeping a sufficient number of these for spare buoys. Please be good enough to let me have the list referred to at the earliest possible moment.

Expense no consideration—Almost an invitation to extravagance.

'Please note also that I will require a report from you as to the general facilities which you may need for placing and maintaining the new aids to navigation supplied to your agency. The report should be clear, and any recommendations made should be specific.'

Spare buoys in British Columbia.

1 No. 11; 4 No. 9½; 1 gas buoy; 1 gas and bell buoy.

August 17.—Victoria agent to Deputy: 'Your letter 8th inst., calling my attention to the necessity of keeping a sufficient number of buoys for spare ones, and in reply beg to inform you that after the Swiftsure bank and the Sand heads buoys have been installed, we shall have one spare No. 11 buoy in readiness for relief. We are only placing 6 of the No. 9½ and will have 4 to spare. We have also one each to spare of the gas, and the combined gas and bell buoys (7 spares in all).

I. M. S. Co. advise that all the No. 5, No. 6 and No. 7 buoys now changed except five No. 5 and one No. 6.

September 12.—The I.M.S. Company write Commissioner of Lights: 'As instructed by yours of August 1, we have finally shipped to you all the gas buoys which you had sent us for alterations, including the No. 7 valveless, to which we had to fit a new lantern support, owing to the original not being returned to us with the buoy. We note that you have not yet returned to us for alterations five of the No. 5 buoys, serial numbers 505, 530-1-2-4, and also 1 No. 6 buoy, serial number 550. As these latter buoys were originally shipped to Prescott, we presume that these are the buoys which are still at Parry Sound.'

Buoys left out during the winter in Parry Sound channel.

September 25.—Commissioner of lights replies: Your letter 12th. In reply, I have to advise you that these buoys were left out during the winter at the Parry Sound ship channel, and I think that they have been recovered, with the exception of one. Owing to the department's lack of facilities at this point, it has not been possible to

lift out these buoys and ship them to you, but this will be attended to at the earliest possible moment.

Great difficulty in collecting complete information about the buoys supplied by T. L. W. and the I. M. S. Co.

The Auditor General having called on the department for a complete list of all the buoys purchased from T. L. Willson and the I. M. S. Co., together with a certificate from each agent of the department to whom they had been sent, that they had been received, and were either in service, or in store, or had been shipped to some other agency, the department seemed to have the greatest difficulty in giving a clear account of what had been done with each buoy. No books or proper records have been kept in the office of the commissioner of lights. Each agency had to be applied to for all the evidence it could give, which in some cases had to be revised, resulting as usual in an abundant correspondence, tedious and confused. The I. M. S. Co. also had to give their assistance, as the following shows:—

I. M. S. Co. asked to supply a complete list.

September 25.—Deputy to I. M. S. Co., September 25. 'I desire to call your attention to the request made some time ago to furnish this department with a complete list of all buoys and beacons supplied to it, together with the points to which they were sent to. Kindly give this matter your immediate attention.' (Initialled J.F.F.)

And on the same day a letter was written to W. Kearns, of the Auditor General's office, as follows:—'I have your note, 24th inst. The list promised you is nearly completed. We are almost without any facilities at Victoria for handling new aids to navigation, but they are being attended to with the least possible delay, and boats have been chartered for this purpose. Plans have been prepared for the new buoy steamers, and I expect the coming session will see sufficient provision made for this and other services. I have so far received excellent reports relative to both the gas buoys and beacons.

Nothing but appreciation of the new buoys discoverable in the correspondence of the department.

There is nothing to be found in any of the foregoing extracts taken from the department files which gives the faintest indication of anything unsatisfactory in the work of T. L. Willson or the International Marine Signal Co. It never appears to have been criticized by any officer of the department; and, as there appears at the same time to have been no question of price, the impression is conveyed that no exception whatever could be taken to it. This is confirmed by the direct evidence of the deputy in his letter of January 31, 1906, to the Naval Secretary of the United States at Washington, where he says: 'This department has had in the past considerable difficulty in carrying out its policy of providing an efficient buoy lighting system and has taken great pains to test and investigate the Willson buoy, with the result that it has been fully adopted; and the department purchases no other types. It is regarded as a distinct improvement on all others which the department has used. I can therefore recommend it to your board.'

In a subsequent letter, dated June 13, 1907, to the Secretary of the Trinity House, London, he is much more guarded, as he had good reason to be; but even in this letter no one could gather from it anything but unqualified approval of the buoys, based on the department's experience of them. He gives a complete statement of all the buoys and beacons acquired by the department from Willson and the I. M. S. Co., and the cost of the aggregate number of each type. He says: 'The experience of this department shows that the lighted whistling buoys which have been supplied by the I. M. S. Co. are superior to the Courtenay whistling buoys heretofore in service, inasmuch as the area of the whistling tubes is greater. This department has had in its

service compression gas buoys using both Pintsch and acetylene gas. The Pintsch gas buoys have been discarded by the department, and the acetylene high pressure buoys are being replaced as rapidly as possible by automatic gas buoys of the type manufactured by the International Marine Signal Co. I have pleasure in sending you, under separate cover, copies of the annual reports of this department for the years 1904-5, which contain certain information with reference to the gas buoy service of Canada.'

It seems to us that a much more extended experience of the Willson gas buoy than the department had had was necessary to justify the writing of such letters as the above to the representatives of the United States and Great Britain.

It seems hardly possible that every report coming to the department from its agents and inspectors could have expressed nothing but unmixed satisfaction with everything turned out by Willson and the I. M. S. Co. If there were no other evidence except the fact that all the earlier buoys made had rapidly become obsolete, and had required to be changed and improved so as to satisfy the makers themselves, if not the department, that should have been sufficient to deter the deputy from openly giving such unqualified endorsements.

We know, however, that when he wrote the letter to the secretary of the Trinity House, he was in possession of the annexed report from the Superintendent of Lights at Halifax, dated May 14, 1907.

This report (which appears to be the only one on the files of the department, although the buoys have been in use for three years), affecting as it does the latest type of buoy, and taken in connection with the loss of the buoys from Blonde rock and Brazil rock, which were of the No. 9 type, is calculated to throw the utmost suspicion on the workmanship and design of these buoys; and to deepen the impression already gained from a perusal of the correspondence, that the department has been most imprudent in committing itself so unreservedly to Willson and the International Marine Signal Co., at enormus expense to the country.

This report placed on file 26688—'Improvement of coast buoy service, Maritime Provinces.' J.F.F.

The Agent,
M. and F., Halifax, N.S.

Halifax, N.S., May 14, 1907.

Sir,—I have to report some unsatisfactory results from our fall and winter tests of the No. 11 gas buoys, which I beg to make in detail, as follows:—

Cape Canso: Buoy No. 562. Placed buoy July 20, 1906. On January 21, 1907, Captain Johnson found buoy hove down on its side, the lantern support being covered with ice. On February 8, 1907, the *Lady Laurier* brought in buoy and moorings. Buoy in good order. Lantern full of ice and water.

Comment: The fact that the buoy was hove down by the weight of accumulated ice on the lantern support suggests that the height of superstructure is too great for service on this coast.

Sambro: Buoy No. 574. Buoy placed December 31, 1906. Reported out, Januaray 7, 1907. Relighted, January 7, 1907. Reported out, April 8, 1907. On April 17, 1907, Captain Johnson found the lantern support and fixtures had entirely disappeared. Brought in buoy and moorings. Lantern support not yet recovered from the bottom.

Egg island: Buoy No. 583. Placed buoy, January 18, 1907. On April 11, 1907, Captain Johnson reported lantern support entirely gone. On May 8, 1907, *Lady Laurier* picked up buoy and moorings, and Captain Johnson grappled for and recovered the lantern support from the bottom. One corner angle-iron and four braces bent, and one brace broken, whistle-pipe pulled out of flange. Part of ventilator gone. Remainder of ventilator bent. Whistle diaphone plate loose. Rubber valve balls collapsed, possibly by being softened by the crude petroleum, 22 gallons of

which we put in each tube, or else by the natural pressure in 36 fathoms water, when lying on the bottom.

Inner automatic: On April 23, 1907, this buoy was examined. All the nuts on bolts holding the lantern support to buoy, that is, the four corner angle-irons, had entirely worked off and disappeared. Four of the bolts and nuts holding the whistle-pipe flanges to buoy had entirely disappeared, and the other four were loose. The latter could not be tightened, but new bolts, fitted with split keys under the nuts were fitted to the four angle-iron lantern supports. It will thus be seen that the lantern support was only held in position by two whistle-pipes, and one of these was four bolts short. Had this not been looked after promptly after discovering the loss at Egg island and Sambro, we would have lost the lantern support of this buoy the first gale which occurred. Loose bolts were placed in holes of whistle support to prevent escape of air.

Remarks and Suggestions: The primary trouble is caused by the nuts on bolts securing the four angle-iron corners of support to the buoy, working loose, no provision of any kind for locking, or preventing nuts from working loose having been provided.

Secondly, the castings on foot of said angle-iron supports, and also the cast bracket on buoy, on which those four legs are bolted, are uneven on the surface, and in consequence do not make a solid or rigid joint. This, I think, could be remedied by having the connecting parts of castings planed true, or by making a shaft coupling joint, or male and female joint, commonly so called.

Thirdly, the four iron corners of lantern support should be secured to the cast brackets on top of buoy by jam nuts and split keys, or some device to prevent the nuts from working loose.

The lantern should also be secured by some similar means.

Height of lantern supports: It is my opinion, and also that of our captains, with whom I have discussed the question, that the height of the lantern supports on our No. 11 buoys is entirely too great for service on this rough coast. We had expressed this opinion before the severe test alluded to in this report was made. We think it quite unnecessary to show a gas buoy light at an elevation of 30 feet above the water. In weather when lights should be visible, we have our coast lights as a general guide. In no case is it necessary to see a gas buoy light at a greater distance than four or five miles, and in thick weather the sound signal is the only guide to their discovery. Therefore, we advocate, for this reason, and also as a matter of convenience and economy, that the height of the superstructure be reduced to that of the No. 9 buoys, showing the light from the lantern at an elevation of about 15 feet above the water.

Length of tubes: We also think that the length of the tubes might be decreased by about five or six feet, without affecting the force or volume of air forced through the air pipes. The reduction of the length of lantern support and tube under buoys would give the buoy greater buoyancy, and increase the freeboard, thus increasing also the air space and reserve of air between the water in the tubes and the diaphragm in buoy, which should increase the power, and prolong the sound of the whistle.

On the first favourable opportunity the *Lady Laurier* will grapple and bring in the lantern support lost from the Sambro buoy, which lies on the bottom in about 26 fathoms water. The condition when recovered will be reported.

Your obedient servant,

C. A. HUTCHINS,

Superintendent of Lights.

This is an exact copy of report taken from file 26688. J.F.F. 20/2/08.

May 30, 1907.

The Agent,
Marine and Fisheries,
Halifax, N.S.

SIR,—I have to acknowledge receipt of the letter of the superintendent of lights, dated the 14th instant, transmitted by you, covering a report on fall and winter tests of No. 11 gas buoys.

I have carefully considered the report referred to and it is the intention of the department that the high towers provided shall be retained for the present and be tested again during the coming winter. In this connection, I note the loss of the lantern supports and lanterns, and I have to instruct you to see that longer bolts are provided for holding the lantern supports to the buoys and that a lock nut or a cotter pin is used.

Referring in detail to your report, I may state that the Cape Canso buoy No. 562, should not have a counterweight attached to the submarine signal receptacle, although these counterweights are now in Halifax and weigh about 2,800 lbs. each.

With reference to the Sambro buoy No. 574, I do not observe any inspector's report relative to the buoy being relighted. Please be good enough to forward this report to me.

There is no doubt that provision should have been made for bolting more securely the lantern supports to the buoys, but as no difficulty had ever been experienced in the past, it was not expected that this would prove serious. The instructions above relative to lock nuts or cotter pins will obviate this difficulty in the future.

It is not considered, even now, necessary, that the cast steel pieces to which the lantern supports are bolted, should be planed. There is considerable 'give' in the lantern support, and the casting at the base of the same should be drawn down to the casting riveted to the buoy.

With reference to lantern bolts for No. 11 buoys, I have to advise you that instructions will be given to see that these are provided with a cotter pin. Relative to the height of lantern supports the department is not prepared to make any change in the height at the present moment as I have indicated above, and it will not be practicable to shorten the whistling tubes without considerable expense in view of the fact that the submarine bell receptacle is attached.

I have to request you to forward from time to time any observations which you may wish to make relative to these or other gas buoys in the service.

Your obedient servant,

F. GOURDEAU,
Deputy Minister of Marine and Fisheries.

CONTRACTS.

January 18, 1907.—With Chas. Koenig, captain of C. G. S. *Druid*, to pay the board of the master, officers and crew of his steamer at the rate of 60 cents each per day, according to bills of fare attached, one for each day of the week. Should there be any officer of the government service on board or other passenger, the amount to be paid to Koenig for each would be $1 per day. If any labourers are on board they would have to be paid for at rate of 75c. per day.

February 21, 1907.—With Midland Towing and Wrecking Co., Limited, to remove the wrecked tug *Castle*, now lying sunk in the Detroit river, by May 1, 1907. Consideration, $1,750.

January 2, 1907.—Drummond, McColl & Co., steel plates and shapes required for the construction of the hull 'A' frame, spuds, beam, dipper arm, bucket, &c., of dipper dredge No. 19, to be built at the government shipyard at Sorel.

Steel plates, 725,000 lbs., at $1.80 per 100 lbs., delivered free on board cars at Sorel.

Steel checkered plates, 65,000 lbs., $2.80 per 100 lbs., delivered as above.

Steel angles, 250,000 lbs., $1.80 per C.

Steel bulb angles, 4,000 lbs., $2.10 per C.

Steel Z bars, 18,000 lbs., $1.80.

Steel channels, 320,000 lbs., $1.80.

Steel I beams, 18,000 lbs., $1.80.

They shall deliver any less or greater quantity. Open hearth, ship steel, quality specified in Lloyds rules, on or before June 1, 1907.

In competition with seven others. Ck. $1,500 with Finance Department.

March 19, 1907.—Robb Engineering Co., Amherst, 9 conical buoys, 7 ft. diameter, $245 each; no deposit.

March 19, 1907.—J. Matheson & Co., New Glasgow, 7 conical buoys, 3 can buoys, $1,270; no deposit.

March 19, 1907.—Burrill Johnson Iron Co., 63 buoys, $12,936; no deposit.

April 5, 1907.—Alex. Bremner, Montreal, International Portland cement in lots of 1,000 barrels, at $2.40 a barrel. In competition with two others; deposit, $240.

April 8, 1907.—Letter to C. Thomson Schmidt, Inspector of Government Stmrs., Halifax: I herewith inclose a list of the accepted tenders for the construction of steel buoys required for the maritime provinces. Contracts have been entered into with the different firms for the construction and delivery of the buoys, and I have to request you to make arrangements to have the necessary inspection made.

October 7, 1907.—D. J. Stevens, Asst. Inspector of Govt. Stmrs., writes to C. Thomson Schmidt, Inspector of Govt. Stmrs. at Quebec, as follows:—

'I beg to report that on the 2nd and 3rd inst. I examined and tested twenty-four 5-ft. can buoys under construction at the new Burrill Johnson Iron Co.'s works, Yarmouth; also examined 15 4-ft. can buoys and six 5-ft. conical buoys. Each of the 5-ft. can buoys was subjected to a hydrostatic test pressure of 15 lbs. in my presence, and upon the final tests they all proved good and tight under the pressure. The buoys are in accordance with the plan and specification; the material is good and the workmanship good, with the exception of the riveting and mooring eye forgings, which are somewhat rough in appearance. When these buoys are cleaned, heated, oiled and painted and weighed they will be fit to be taken delivery of. I examined fifteen 4-ft. can buoys and found them so far in accordance with the plan and specification. The mooring eyes and doors have yet to be fitted before they can be tested. I examined

the work done on six 5-ft. conical buoys. The cone and bilge plates are formed, but not yet put together. The material and workmanship so far is good.

QUERY.—Why should the Assistant Inspector report to the Inspector? He seems to do so in every case.

October 25, 1905.—The deputy addresses a letter to Chas. Koenig, Inspector of Buoys and Lighthouses, Quebec, acknowledging receipt of photograph of best type of buoy for strong currents.

March 20, 1907.—Sam'l Gammon, Bathurst, N.B. Wooden lighthouse to replace mast light on Little Belledune Point, county of Restigouche, $1,100, in competition with four others, up to $1,820; no deposit. Bond for 'Two thousand five dollars' given, with other two names as sureties. (Query.—What inquiries are made about the financial standing of the sureties?)

April 11, 1907.—Charter Party, John E. Moore, St. John, for ss. *Lord Kitchener* up to June 7 or from day to day after that, to be employed in the lighthouse and buoy service in the N.B. agency of the Department of Marine and Fisheries, or any other lawful service, $125 per day.

Agrees that the crews shall take on board and discharge all cargo at the places of loading and unloading and that the department shall not be liable for the employment of extra labour in loading and discharging cargo unless the said minister so agrees.

In the event of loss of time from breakdown of machinery, boiler or hull due to their defectiveness, for more than 24 hours, the payment of the hire shall cease until she shall again be in an efficient state to resume the service.

REINFORCED CONCRETE.

July 18, 1906.—Tenders were asked for for the construction of 3 lighthouse towers of reinforced concrete—specifications prepared by the chief engineer. Tenders to be in by August 20.

Contract No. 57,1906—To be completed October 20, 1906.

August 18, 1906.—E. A. Wallberg (personally) writes Col. Anderson, chief engineer, as follows:—'We have to-day mailed our tender for the 3 lighthouse towers which you are calling for on Monday. I trust that you will be able to recommend our tender as I fear that there may be some people who do not understand this class of work who may quote less than it is worth, and I think that it would be a great mistake to let a construction so important and where heavy loads have to be carried, to any one who are not thoroughly familiar with both theory and practice of reinforced concrete, and who have not the proper experience and organization to carry it out. We will be glad to call on you at any time if you consider it advisable.

On same day (August 18) Wallberg (in his own name) writes to Deputy: In connection with our formal tender herewith for 3 lighthouse towers reinforced concrete, we beg to advise that these will be built in all particulars like to tower which we are now building for you at Cape Race, and we will embody all the small changes in details and stairs which were suggested by your engineers, and we will make all details entirely to their approval. We submit herewith a general plan of one of these towers. The structure will be anchored by having every alternate rod embedded 2 feet in the rock foundation and the tower will be built entirely in monolithic concrete in proportion of one of 'star' cement to two of sand to four small broken stone or equivalent proportion of hard clean gravel. The apparatus will rest on 2 steel beams. The upper floor with balcony, lower floor, stairs and tower itself will all be reinforced with steel bars as per plans.

Can complete them all in one month.

We are in a position to begin this work immediately on receipt of order and to complete the first tower in (from) 2 to 3 weeks and if you so require we can complete

them all in 1 month. We could submit a cheaper form of tower which we would also guarantee, but we do not feel justified in doing so and we trust that you will take into consideration the heavy design and heavy reinforcement which we are using and also our experience in doing this class of work. We sincerely trust to receive your esteemed order. We enclose our certified cheque herewith ($542.50).

Tenders.—Cape Magdalen tower, $3,300; Matane Tower, $3,600; Little Metis Tower, $3,900.

On a memorandum showing this tender dated August 23, 1906, and initialled by Mr. Stumbles, was written the following: 'The prices are reasonable and the towers can be erected this autumn which is a great advantage. Recommend acceptance, August 27, 1906, initialled B. H. F.—Crossed in red ink 'For Minister's approval, F. G., August 28, 1906.—Then initialled L. P. B.—(Notified August 29, 1906, W.W.S.)

Tender accepted and Tenderer to prepare his own Specifications.

August 29, 1906.—Deputy writes Steel Concrete Co., Limited: Your tenders for the Cape Magdalen tower at $3,300, the Matane tower at $3,600 and the L. M. tower at $3,900, have been accepted and a contract will be prepared and sent you for signature. In the meantime I have to request you to have plans and specifications of the towers prepared which will be embodied in the contract. You may prepare for the construction of the towers at once.

August 30, 1906.—Acknowledged. We will proceed with the work and forward plans and specifications to you in a few days.

August 31, 1906.—S. W. Black for Expanded Metal and Fireproofing Co., Ltd., Toronto. Writes chief engineer: We shall take it as a favour if you will advise us of the names of successful tenderers for concrete lighthouses on the St. Lawrence. Thanking you in advance for your courtesy. Chief engineer replies September 1: I have to advise you that the contract for at least one of concrete lighthouses has been awarded to the Steel Concrete Co., Ltd., of Montreal.

Shipment of Material Doubtful.

September 14, 1906.—E. A. Wallberg telegraphs B. H. Fraser: Mr. Parent, Que., advises may not be able to transport our materials Metis and other places this fall. I propose see him Monday. What can you arrange? Wire.

Engage ss. 'Aranmore' for that purpose.

September 15, 1906.—Deputy telegraphs P. E. Parent, Resident Engineer, Que.: Inquire from Holliday if *Aranmore* ready to convey materials Metis. Cape Magdalen and Matane. Wire reply. See Wallberg who will be in Quebec Monday. Ascertain if absolutely necessary to ship material at once. Crew of *Aranmore* must load and unload.

September 15, 1906.—Deputy telegraphs Wallberg Co.: 'Making inquiries and arranging about steamer to convey material for concrete towers. Copy of this endorsed.

Charter Party signed September 17, 1907.

Charter Party made and handed deputy for signature. W. W. S. 17/9/06.

Designs forwarded and Men engaged to start at once.

September 19, 1906.—E. C. Warren (for Concrete Co.) writes B. H. F. as follows: 'We are mailing you herewith prints No. 40, 41, 42 showing proposed designs for lighthouses at Matane, Little Metis and Cape Magdalen. The details of these 3 lighthouses are indicated on drawing No. 40. We have men engaged to start on this work at once and are arranging for shipment of materials and would therefore appreciate

it very much if you could give this matter your immediate attention and advise us at an early date.

Diameter of Towers.

September 26, 1906.—E. A. Wallberg (in his own name) writes B. H. F. Kindly wire me to-morrow about the exact diameter of the towers for Little Metis and also for Little Hope. (?) You have my plans and I do not know whether you want them built 10′ 1½″ or 10′ 6″ diameter. I have sent my foreman to Quebec to arrange for sailing to Little Metis as soon as possible. We have also shipped the iron and other parts for Little Hope (?) and are waiting your definite instructions regarding that.

September 27, 1906.—B. H. F. telegraphs Wallberg: Concrete towers to be 10 feet 2 inches outside diameter, radius of bolt circle 5 feet one quarter inch. Mailing details to-day.

Plans satisfactory except that stronger reinforcing required for towers.

September 27, 1906.—B. H. F. assistant chief engineer writes Wallberg (in his W's own name) confirming above telegram and continues: 'I inclose herewith detail for the lantern and beg to say that the plans submitted by you are satisfactory with the exception of the 60-foot tower for which we would require stronger reinforcing as follows: The vertical bars in the lower 20 feet of the tower to be ⅞-inch, in the central 20 feet to be ¾-inch, in the upper 20 feet to be ⅝-inch. Regarding the exact dimensions of this tower my telegram says 10 feet 2 inches. It would be quite satisfactory to make them 10 feet 1½ inches in outside diameter. Trusting you will be able to commence work on these towers at an early date and push them rapidly to completion.'

October 2, 1906.—Deputy telegraphs to Wallberg: 'Send 2 more copies blue prints lighthouses Matane, Metis, Cape Magdalen for contract.

October 1, 1906.—Wallberg writes B.H.F. replying your favour 27th ult.: 'We note that your bolt circle will be 5 feet ¼ inch radius and the outside diameter of the tower 10 feet 2 inches. This will leave the center of bolts ¾ inch inside of the outer diameter line, but as we are making the balcony concrete 12 inches thick where it joins the main wall this will give a good body for anchor bolts. These anchor bolts should not bed more than 8 inches to 9 inches into the concrete as it would not do to let them run down through being so close to the outside, and the 8 inch depth will give a great deal more strength than ever required. We call your attention to this detail so that if the bolts come very long they should be cut off so as not to break through the outside of the concrete. Kindly let us hear from you on this point. This letter is stamped (refer to chief engineer, October 4), and initialled B. H. F., W. P. A., 4/10/06. Also written across corner: 'Commissioner of Lights please have this noted by your erectors. 10/10/06, B. H. F., noted J. F. F.,' also stamped 'referred to Commissioner of Lights, October 13, 1906.'

Note.—There are four typewritten copies of the above letter on the file, on one of which across the corner is written 'File Gen. Steel Concrete file, J. F. F.'

October 3, 1906.—E. C. Warren (for Steel Concrete Co.) writes Deputy acknowledging his letter of 2nd inst. (which was a telegram to Wallberg and confirmation) mailing under separate cover 2 prints each of revised drawings (showing design for Little Hope lighthouse) for lighthouses at Matane, Little Metis and Cape Magdalen (and also 3 revised drawings). The reinforcing steel as shown on these drawings is in some cases larger than is necessary, but to facilitate delivery of material, we were obliged to use the sizes as indicated. Stamped refer to chief engineer and initialled B. H. F., W. P. A., 5/10/06. (These initials both look as if made by one hand) also stamped 'blue prints filed in my office under the No. 16606—14, 5/10/06, W. P. A., Chief Engineer.'

October 22, 1906.—B. H. F. telegraphs Wallberg Steel Co., weights of lanterns and apparatus, three towers Quebec district to be as in specification.

Chief Engineer instructs Parent to have the building of these towers closely inspected to make sure that good materials are used—Minute details given involving continual presence of Inspector.

October 27, 1906.—Chief engineer writes P. E. Parent, resident engineer, Quebec: 'As you are aware the Steel Construction Company has the contract for erecting new towers of reinforced concrete at Matane, Little Metis and Cape Magdalen, and materials for this work were sent down by the *Aranmore,*' with the exception of crushed stone which Mr. Wallberg did not have ready when the steamer left. You will understand that the strength of buildings of this class depends principally upon the integrity of the concrete, and good concrete can only be made with crushed granite. I have therefore to instruct you to have the buildings of these three towers most closely inspected to make sure that a good rich concrete is used and that only clean granite stone properly broken is put in the granite. The temptation to use soft local stone to save trouble in breaking will be so great that it must be specially guarded against. The inspecting officer in each case if he sees the least tendency to use inferior materials or to neglect the junction of one course with the next course or to neglect any steps that would insure perfectly solid walls must immediately stop the work and report by telegraph.

Sixty-two days after awarding of contract Resident engineer had not received copies of plans.

October 30, 1906.—P. E. Parent replies—I was informed only verbally of certain clauses of the contract entered into with Mr. Wallberg by the department, one of them being that the department had to deliver the construction materials on the ground for the contractors. As I have not yet received a copy of the contract referred to, or of the plans and specifications up to this date, I was not quite sure if this work was to be done directly under my supervision. I must also state that I do not know who has been appointed inspector for these different works.

Charter party for use of 'Aranmore,' dated 17th September, she has therefore been under charter for six weeks.

As to the kind of stone that has been used up to this date in the concrete work at Little Metis, I must inform you that this broken stone comes from Beauport, and is not broken granite but broken limestone. Should granite be absolutely required and the limestone discarded by Mr. Wallberg should be notified in consequence. Mr. Wallberg's foreman has already refused to use the local stone, which he has found too soft. As to the modes of conveyance at our disposal to deliver Mr. Wallberg's materials on the spots where required, I have to inform you that the steamer *Aranmore* left last week on her last trip to the straits of Belle Isle, and that at present we have no ship at our disposition to go to Metis or Matane. You will therefore kindly instruct if we are to rent a schooner or another ship for this purpose. Kindly send me this information as soon as possible by return mail so that I can act accordingly, and go to Little Metis to inspect the works if you find it necessary. Please note that this season is well advanced, and I am afraid that Mr. Wallberg will experience some difficulty in preventing his concrete from freezing ; moreover, if he undertakes the construction of the Matane and Cape Magdalen towers after the one at Little Metis will have been completed, it seems to me that it would be greatly advisable to request Mr. Wallberg to postpone the construction of the towers at Matane and Cape Magdalen until next spring.

Resident engineer to blame as he was aware of the necessities of the case from the first—See his communication with Wallberg, 14th September last.

October 31, 1906.—B. H. F., acting chief engineer replies—I regret that you were not sooner put in possession of the facts regarding this contract. However, there is

no doubt that you were aware that material would have to be supplied at these places, and the department will be under a heavy expense if this is not done, and Mr. Wallberg is building towers under guarantee, and if he takes the risk of building them this season—that is his affair. At the same time it is necessary for you or one of your assistants to arrange for a thorough supervision of the work and no time should be lost in attending to this. As regards the delivery of material you were supplied with the fastest boat to be absolutely at your control to carry out such work for the balance of the season. It was understood at the time that the work would have to be rushed to the close of navigation, and you were specifically instructed to keep this boat for your own purposes and to see that no delay might happen. A letter was written to the agent the other day informing him that the *Aranmore* was chartered solely for construction purposes, and that the cost of the rental of the boat is paid out of the construction vote, and consequently this boat was to be used in the first instance for construction work, and that if any space was available it might be used to convey lighthouse supplies to the different stations if the *Aranmore* is not delayed in any way.

B. H. F. to Parent about Aranmore being used for other purposes than transporting materials for Wallberg.

That I take it would mean that supplies could only be sent to such stations where the boat was to call and this only in such quantities as could be unloaded while the boat was waiting at the station. If you have permitted the boat to be taken for other purposes, or have sent her down to the gulf under the direction of an officer in another service I shall consider that you are to blame for any delay or difficulty that may be met with in carrying on the construction work in consequence. I shall be glad to hear from you immediately that you have made some suitable arrangement for delivering Mr. Wallberg's materials to him at the various stations mentioned above without causing any delay in the erection of the towers.

Wallberg has to send prints of lighthouses to Parent.

November 7, 1906.—E. A. Wallberg writes W. P. A., chief engineer : 'Replying to your wire of to-day we will be pleased to mail Mr. Parent at Quebec a set of prints of the lighthouse towers to-morrow.

November 9, 1906.—Unsigned letter to P. E. Parent, Quebec : 'In compliance with a request received from Mr. B. H. F. I send you herewith a copy of the standard plan of steel tower.

Vessel waiting for stone.

November 9, 1906.—W. P. Anderson telegraphs E. A. W. Steel Construction Co.: 'Resident engineer, Quebec, reports, *Champlain* waiting for your broken stone. Must insist on materials being furnished without further delay. We hold you responsible for delay in completion of contract.

Department telegraphed to for plans and specifications.

November 7, 1906.—B. H. F. telegraphs J. M. O'Hanley, M. and F. Dept.: 'Plans of reinforced concrete towers and specifications must be sent Parent by first mail.

Specifications sent by Chief Engineer.

W. P. A. writes P. E. Parent: 'Mr. Fraser telegraphed O'Hanly to-day to send plans and specifications reinforced concrete towers to you by first mail. As we have no copies on hand, the only plans received from Wallberg having been used for contracts I have telegraphed him to furnish you with the plans. I inclose herewith the specification. I inclose copies of the original plans but these have been replaced by amended plans showing brackets on the two higher towers.

Wallberg applied to for plans.

November 7.—W. P. A. telegraphs Wallberg: Please send complete set plans reinforced concrete towers to P. E. Parent, M. Dept., Quebec, by first mail.

Parent's defence to acting Chief Engineer's indictment.

November 1, 1906.—P. E. Parent writes in reply to letter 31st ult.: 'I beg to state that after having consulted with Mr. J. U. Gregory, agent, Department Marine and Fisheries, Quebec, it appears that amendments were made to the charter party by Mr. Stumbles at Quebec by which the *Aranmore* was to do both construction and maintenance work, and an increased number of deck hands was to be provided for that purpose at the expense of both Messrs. Holliday Bros., and the department as it was found absolutely impossible to perform our work with less than 16 deck hands, while the *Aranmore* had only six when she was chartered. These amendments were made owing to the fact that the *Montcalm* was undergoing heavy repairs at Sorel, and that the agency here had no ships whatever to supply the lighthouses on the north shore of the St. Lawrence and the straits of Belle Isle this fall, and the supplying of these lighthouses being a vital question for the department something had to be done. Col. Gourdeau, Deputy Minister of Marine and Fisheries told Mr. Gregory over the telephone not to employ any schooners to supply the *Anticosti* lightship with coals, but to send the *Aranmore,* which he did. As the *Aranmore* has a very large carrying capacity I could not see any reason why she could not be used for both services, especially as she had to go to the very stations with ordinary supplies for the lighthouses, where we have a large number of men working at construction work, for instance, northeast Belle Isle, Cape Bauld, Cape Norman, Greenly island, Anguille, Cape Magdalen, Seven islands.

As to the delivery of the material for the construction of the towers at Matane, Metis and Cape Magdalen by the *Aranmore* for Mr. Wallberg, contractor, I may say that the *Aranmore* has already made a trip for this gentleman after having been idle waiting a few days for a certain amount of broken stone. When the steamer *Aranmore* was ready to start on her trip to the gulf on the 27th October, the contractors were by no means ready to ship any more materials down below. The *Aranmore* would then have had to wait here in Quebec a great number of days to transport a comparatively small quantity of materials and this at the rate of $300 per day. During this time work could not have been done easier in the straits, and as the season is well advanced the later the ship would have gone the more trouble and danger she would have encountered.

Stone not ready sixty-nine days after contract was accepted.

November 7, 1906.—Please note that the *Aranmore* is bringing back to Quebec on her return all the men that have been employed during this past summer season at the various stations where works are going on.

You are surely aware that after November 1 the season in the straits is very rough, and that it is not advisable to leave gangs of men there to work, say a day per week, and that it is better to bring them back to Quebec as early as possible after this date.

After many attempts, we succeeded in securing one schooner, whose captain was willing to go down to Cape Magdalen, but his charges were exorbitant, that is, $10 per ton weight, or $800 for the entire cargo.

Mr. Gregory and I thought it advisable to ask the department to let us use the *Champlain* for this trip, which request was granted. Yesterday, the *Champlain* took on board a good portion of Mr. Wallberg's materials, but we learned that the stone was not ready, and the steamer is at the wharf waiting for the delivery of same. As soon as everything will be on board, she will proceed down to Matane and Métis, cancelling her trip to Cape Magdalen, as I am aware that it is most probable that Mr. Wallberg will abandon this station this fall and carry on the works there only

next spring. (This letter evidently written by Gregory,—Parent not equal to any such performance.)

Steamer still delayed.

November 9.—Wallberg writes W. P. A., acknowledging telegram steamer waiting for his stone. Says: We are doing eevrything we can to hasten sailing.

Memo. for Mr. Parent.

November 8.—If Mr. Wallberg explains or shows that the towers are well under way and have reached a considerable height, he is to use his judgment about sending down material to finish the towers. It must be distinctly understood that the department assumes no liability after to-day. If the boat reaches the places and has difficulty, or finds it impossible to land the stuff immediately, she is not to remain. Signed B. H. F.; dated at Quebec, November 8. Written across corner: 'File. No action. W. P. A.'

Just finishing at Little Métis.

December 4.—Wallberg Steel Co. writes W. P. A.: Advises he is just finishing at Little Métis. Will leave our staging up and leave our tools and other materials till spring, so that in case any minor points of finish are required, then they can be done to advantage. We have also our forms made and have made a beginning on the work at Matane, but we have closed it down for the season. Have also delivered all the iron work for both Matane and Cape Magdalen. Would be glad to have you arrange to make us payment for the Métis tower, and in such case we will not ask for any estimates on account of the other two this fall.

Wallberg wants payment on account.

December 11.—B. H. F. telegraphs P. E. Parent, Que.: Advise me what amount can safely be advanced on account construction concrete towers.

December 6.—Wallberg writes department: Inclosing herewith duplicate contracts duly executed for the three lighthouses, at Little Métis, Matane, Cape Magdalen, and also the contract for Little Hope lighthouse towers.

Wallberg wants contracts on Pacific Coast.

December 6.—Wallberg writes B. H. F.: We understand that you will build a lighthouse at Prince Rupert, on the Pacific coast, and no doubt you will have a number of others as well. We would like to figure on these, as we are quite prepared to build on the Pacific coast, as well as anywhere else. Our foreman at L. M. reports that he is finished and is leaving there to-morrow, which will close our work for this season in that vicinity. Our men will no doubt remain at Little Hope to finish there, which I hope they will do in the next two weeks. I have a letter from Mr. Legere, who visited there some time ago, stating that all is going well. We should be able to do a large number of these promptly and in very good style next year, and we trust that you will give us an opportunity.

December 13.—Deputy writes Steel Concrete Co.: I herewith inclose copy of the articles of agreement with you for the construction of 3 reinforced concrete lighthouses. This copy has been completed and may be retained for your use.

Parent to say how much to be paid to Wallberg.

December 12.—P. E. Parent telegraphs from Quebec B. H. F.: Will advise you in a day or so what amount can safely be advanced on account construction concrete towers.

December 14.—P. E. Parent telegraphs from Quebec, B. H. F.: I advise ¾ cost of Métis concrete tower only to be paid Wallberg. Will report and see you next week.

Inspection at Little Métis by Parent.—Apparently none before this date, and now too late.

December 15.—Parent writes chief engineer: That on 12th inst. he had visited the works that have been done by Mr. Wallberg at Little Métis. I have found the concrete tower practically completed, and that portion which was visible, that is, the first 40 feet from the ground, appears to be good substantial work.

As to the top part, it being completely covered by the wooden moulds, I could not examine it to ascertain the quality of the work.

The exterior of the tower, as well as the counterforts, present a very good appearance, except in a few places, where the surface is not smooth, stones being seen in the concrete; but this can easily be patched up with pure cement next spring. As to the interior, everything seems to be in good condition, except the stairs, which will require a finishing touch, and this again is proposed to be done next spring. I was told by the lighthouse keeper, who has worked with Mr. Wallberg's foreman, that the only weak spot might be the top of the lantern floor, as this was done when the weather was frightfully cold, and the different coats of cement then laid might not be found to adhere very well next spring.

In a general way, it is almost impossible to exactly ascertain the quality of the concrete tower, as everything is frozen hard. As soon as the sun begins to heat the tower, it will then be easy to detect the faults, as, if there is any ice, snow or extra water in the concrete, when these thaw and drain out, the faults, if any, will then appear As a result of my inspection, I beg to recommend the department to pay Mr. Wallberg three-quarters of the sum agreed for the construction of that tower, as I am perfectly satisfied that the one-quarter remaining will be amply sufficient to guarantee the completion of the tower next spring in a satisfactory manner.

Stamped: 'Refer to cf engr.,' who endorses: 'Acct. pay ¾ of contract price. W. P. A., 21/12/06.' W. W. S. writes in red ink: 'Contract price, $3,900. W. W. S., 22/12/06.' Acct. writes on it: '$2,925 paid on acct., Dec. 27, '06. O.'

Wallberg disputes with workmen.

December 26.—Letter from Frs. Parent to the minister about an account for $115.20 for broken stone supplied to the Steel Concrete Co., Montreal, against whom he had drawn a draft at sight for that amount through the Banque Nationale, and it had been returned with answer, 'We cannot get anything out of this company.' He asks the minister to retain the amount out of what the government still owes on the contract.

January 5, 1907.—Letter received from E. F. Hebden, general manager M. B. of C., saying they had received letter containing cheque for $2,925 in favour of E. A. Wallberg, president Steel Concrete Company, Montreal, and asking what disposition they were to make of it.

Dept. blunder.

January 9.—Deputy replies that it was a mistake. The cheque should have been addressed to the Steel Concrete Company, Merchants Bank Building. Initialled A. W. O.

Disputes with workmen.

January 18.—C. Stanton, for deputy, writes Wallberg, inclosing copy of translation of letter from Joseph Jacquet and L. Florence in regard to non-payment of wages on work at Cape Race and Little Hope. (See copy of letter annexed.)

Moncton, January 7, 1907.

Hon. L. B. Brodeur,
Minister of Marine and Fisheries,
Ottawa.

Sir,—We have recently learned of your offer to assist in obtaining the salary due us by your contractor, Mr. E. A. Wallberg (Steel Concrete Co.).

Until that information reached us, we were under the impression that you took no interest in the fate of the workingmen, as we understood our troubles had been brought to your notice by Mr. Goffette, who received no reply from you, but simply your offer through the honourable the Minister of Labour. It seems strange that Mr. Légère did not give you better information in this matter, and that he seconded Mr. Wallberg so well in his bad action.

We were engaged by Mr. Wallberg and our engagement was confirmed by Mr. Goffette, the Superintendent, at the rate of $4 per day and all our expenses. On our return from Cape Race my companion was paid at the rate of $3 and myself at $2.80. We protested and Mr. Goffette then told me I would get $3, like my companion, and that we would be employed during the whole winter. I was asking $3.30, and he told me he would support my request, but that I would certainly receive $3. He insisted upon our accepting these conditions, and, on this understanding, we proceeded to Little Hope. We are now left on the street without work, and we cannot even get the $3 which were promised us for the whole winter.

I think it is needless, sir, to describe any further our tribulations. The bad faith of your contractor has been clearly established by facts as well as by his own correspondence. We respectfully beg to submit our case for your consideration and hope you will take such action as will promptly procure payment of what is due us.

We beg to remain sir, etc.,

JOS. JACQUET,
L. FLORENCE.

January 21.—E. A. Wallberg (personally) writes B. H. F., as follows:—'In connection with the letter of your deputy, dated 18th inst., regarding claims of Messrs. Jacquet and Florence, we beg to advise that we arranged to meet them with their friends, Messrs. Dorais & Dorais here, and writer met Mr. Florence, while Jacquet is in Moncton with Goffette. We settled with Florence, as per copy of receipt herewith, and Dorais & Dorais advised that they would recommend the acceptance of Jacquet's account, which we paid to them, as per copy of receipt inclosed, so that we feel that these matters are fully disposed of. Florence was well disposed, but considered that he had been promised various things by Goffette, whom we feel is at the bottom of any misunderstanding with these other two men.

February 14.—Telegram, B. H. F. to E. A. Walberg, Steel Con. Co.: Do you expect to be in Ottawa shortly? Wish to see you. ? ? ?

No reply on file.

Wallberg asked to make arrangements for transporting materials for lighthouse towers.

March 26.—B. H. F. to Steel Con. Co.: Will you be good enough to make immediate arrangements with the agent of this department at Quebec regarding the transport of men and materials that you will require for the completion of your contracts for concrete lighthouses in the Gulf of St. Lawrence, so that there will be no delay when the boats are leaving Quebec.

Gregory's scathing criticism of management with regard to transport of Wallberg's materials.—Query: Who is responsible for it?

April 29.—Gregory writes deputy: I have the honour to report that the agent of Mr. Wallberg, who is the contractor for the new concrete buildings at Métis, Matane

and Cape Magdalen, is here. He wants a special trip of the supply steamer to take down 60 yds. of broken stone and 500 bags of cement to Métis. It will take the supply steamer the best part of a full day, weather permitting, to reach Métis, and no one knows how many days it may take before a landing can be effected at Métis. If the weather is favourable, the landing can take place in a few hours: but if not favourable, the steamer may have to cross over to the other side and wait for suitable weather to land there. It will also take a whole day to get back. Therefore, the closest estimate that I can make of this one service is from 3 days upwards, at a cost of $250 per day for the steamer. Will be simply an expenditure of from $750 upwards to land the small quantity of supplies I mention. This will require to be repeated at Matane and Cape Magdalen. The whole of this service I do not believe can be managed at a less cost to the department, under most favourable conditions, than $3,000. I think I can get the whole of this work done by schooners for less than $500. The reason the agent of Mr. Wallberg gives for wanting special trips of the steamer is that he will require to remove the scaffolding of one building, when finished, to where he is going to begin the next one. I do not believe that the scaffolding cost over $50, and it seems ridiculous to make special trips costing over $700 each simply to save the cost of $50 worth of scaffolding. Schooners are far handier to do this work at Matane and Cape Magdalen, as they can enter into the river and land the supplies in almost any weather; besides, we have no boat available. When I state that the service may cost $3,000, this is the very closest calculation I can make, allowing no loss whatever for weather; but if the weather is not favourable, that amount would probably be more than doubled by the detention which would take place. The coal that we will burn on one trip will cost more than the three trips of a schooner. I consider it my duty to lay these facts before the department prior to incurring such heavy expenses, as schooners can do the work better than we can with our steamers, and very much cheaper. I am not aware what steamer the department will have available for this work under any circumstances.

Work finished at Little Metis—But was said to be virtually finished last December when it was inspected.

May 1, 1907.—P. E. Parent telegraphs B. H. F.: 'Wallberg through with work at Little Metis—now ready for Matane. Will I send his materials by schooner or await *Aranmore*. Any delay would be injurious to Wallberg. Also advise if illuminating apparatus can be put up immediately. Kelso here. Has nothing to do and might be sent down. (Stamped, 'Refer to Mr. Stumbles.) Query.—What can Stumbles have to do with it?

Wallberg Materials again.

May 1, 1907.—B. H. F. telegraphs Parent: 'Cannot make special trips for Wallberg. If he cannot wait for regular trips must transport his own material.

If he cannot wait for Regular trips of Department Steamers must transport his own material.

May 1, 1907.—Deputy writes Gregory.—Reply to yours April 29, with reference to the transport of material for the reinforced concrete towers being constructed by Mr. Wallberg, Mr. Parent has been advised to-day that the department will make no special arrangements to handle this material. It was distinctly understood that this would go on regular trips of the department's steamers and no provision has been made for handling the material in any other manner. Owing to the enormous amount of construction work recommended by the lighthouse Board this season the utmost economy must be exercised in handling the vote, and if necessary you will inform Mr. Wallberg's agent that if he cannot afford to wait for the first trip of one of the boats to the gulf he will have to arrange for his own transportation. (Initialled W. P. A.)

MEMORANDUM.

What special motive produced this unusual bit of foresight?

Ottawa, April 30.—Plans have been prepared for several reinforced concrete structures which are to be built during the coming season. This work to be satisfactory must be done by experienced men, and consequently, if let by tender, it must be distinctly understood that tenders will not be accepted unless sent in by parties who satisfy the department that they have the necessary facilities for doing first class work of this kind. On the other hand, if the department decides that the work is to be done by its own men, it will be necessary to effect an organization for this purpose. Several thoroughly experienced and competent foremen will have to be engaged. . I should prefer having the work done by contract if possible. B. H. F. I approve of this, W. P. A. Approved, F. G. B. H. F. to note approval, W. P. A., 3/5/'07.

Wallberg applies for patent and on strength of it wants more business from the Department.

May 17, 1907.—Wallberg, Prest. Steel Con. Co., writes Hon. W. Templeman, acting Minister: 'With reference to our conversation of yesterday in connection with the contracts of lighthouse towers in reinforced concrete, we beg to advise that we have applied for a patent on this construction which we expect to be issued in a few days, and request that you send us particulars of such new construction in this line as you may have in the near future. As we now have 5 of these towers under construction for your department, we are very anxious to secure others so as to keep our gangs busy, as we now have several of them thoroughly organized for this class of work. We are prepared to do work either on the Atlantic or Pacific coast and we can assure you that we will quote the lowest prices consistent with first class construction. We have talked the matter over with your acting chief engineer, Mr. B. H. Fraser, and we trust you will take the matter up with him and send us particulars of such new work as you may have. The Hon. Mr. Brodeur has given us contracts for 3 towers at various times recently without calling for other tenders as I have no doubt that he has found our prices quite reasonable. We trust you will be able to do likewise on other work.

May 22, 1907.—Deputy writes in answer to above: 'In the event of any further tower of this kind being required your application will be considered. Initialled W. P. A.

Chief Engineer objects to Wallberg's patent.

May 23, 1907.—C. Stanton for Deputy writes Commissioner of Patents: The chief engineer of this department is given to understand that an application is pending before you for the issue of a patent for reinforced concrete towers for lighthouses. I beg to advise you that this department has already built reinforced concrete lighthouse towers and would desire to be heard as to priority of invention before such patent is granted (initialled W. P. A.)

Letter Missing.

May 25, 1907.—B. H. F. telegraphs Wallberg, Moncton: 'Writing you Moncton *re* concrete towers.' Where is this letter?

More Omissions.

June 28, 1907.—W. P. A. telegraphs from Matane light, Quebec, to Deputy Minister Marine: 'Made satisfactory start. Remind Fraser no provision made for lantern anchor bolts, Matane tower and Madeline, concrete finished here next week. (Written on this, 'Immediate, Mr. Fraser, F. G.).'

June 29, 1907.—Assistant chief engineer writes Steel Con. Co.: I inclose herewith blue prints showing details of anchorage for lanterns for concrete towers. Please instruct your erectors to leave the necessary holes to receive the anchor bolts in question.

Wallberg's Patent and Proposition to Department thereanent.

July 9, 1907.—Wallberg writes Deputy: 'As you are aware the Steel Con. Co., Ltd., of which I am president has built several reinforced concrete lighthouse towers for your department. These towers are based on a design of my own and for which I am desirous of securing a patent. Application has been made, and I understand that it would be granted at an early date, but for the fact that your department has requested of the patent office that no such application be granted until you have been consulted. In order to protect the Department of Marine and Fisheries and on account of construction which it has given to my company in the past, I will undertake to carry out all work which is covered by this patent for the department for a fair contract price as may be fixed by consultation with the officers of the department and without charging anything extra for royalty. Should, however, the department decide to do such work themselves, I would, of course, expect the privileges of the Patent Act to be extended to me by allowing me such royalty as would properly be due to my interests in this matter. I will be pleased to consult with the officers of your department as to the amount of this royalty for each individual tower. I trust the above will meet with your approval and that consequently you will have no further objection to my patent application and that you will write the Commissioner of Patents accordingly. I am prepared to enter into an agreement covering the above arrangement to bind me and my heirs and assigns.

MEMORANDUM.

Wallberg's proposals find favour with the Department.

Ottawa, July 12, 1907.—I have carefully read over Mr. Wallberg's letter in connection with his application for a patent for reinforced concrete towers. Mr. W. has shown me his application and I believe that he is entitled to any protection that will be granted him by the patent office in connection with his application. There is no doubt that the department should be protected in connection with this matter as well as Mr. W. and I am of opinion that his proposition does this fully, and I would be in favour of the department withdrawing any objection to his patent being granted on the understanding that he makes the agreement he refers to, binding himself, his heirs and assigns. I also consider that there should be a clause in the agreement that if the holder of the patent at any time refuses to carry out the work of construction the department will then have the right to do the work without the payment of any royalty. B. H. F. Approved F. G.

Wallberg so informed.—What does Chief Engineer say to this?

July 13, 1907.—Deputy F. G. writes E. A. Wallberg as follows: 'In reply to yours of 9th inst relative to your application for a patent for concrete towers, I would say that the department is inclined to accept your proposition on receipt of agreement covering the points you mention, viz.: that you will carry out any work covered by your patent for the department at a fair price to be fixed by consultation with the officers of the department and that should yourself or the holder of the patent at any time refuse to carry out such work, the department will have the privilege of doing so, as seems advisable without any royalty being charged, the department will withdraw any objection to this particular application being put through. It would probably be well for you to consult with the officers of this department as to the price of the towers and the allowance for royalty before the agreement is prepared. (Initialled B. H. F.)

July 22, 1907.—Wallberg acknowledges receipt of cheque for $4,000 on account of our contracts.

Wallberg's men idle, wants more work from the department.

July 23, 1907.—Wallberg writes to Deputy: We beg to advise you that we have a full gang of men experienced in construction of reinforced concrete lighthouse

towers, and this gang has now finished the tower at Little Hope Island. We trust you have some other work which you want done this season on which we can place these men, otherwise we will have to disband the gang and if we do so we cannot secure a competent gang for this year. There is now just enough time to build one more tower in the east this year before cold weather, provided we can secure an order at once. We await your further orders.

Memorandum, July 24, B. H. F

This Indenture, made the Twenty-third day of July, One thousand nine hundred and Seven:

Between Emil Andrew Wallberg, of the City and District of Montreal, in the Province of Quebec, Contractor, hereinafter called the Contractor,

Of the First Part ;

And His Majesty King Edward the Seventh, represented herein by the Minister of Marine and Fisheries of Canada,

Of the Second Part.

Whereas, the contractor is the inventor of a certain new and useful improvement in monolithic towers, and has made application to the Patent Office of the Dominion of Canada for a patent of the said invention.

And whereas, it is desired to use the said invention in work to be done by the Department of Marine and Fisheries:

Witnesseth, that in consideration of the premises and of the sum of one dollar (receipt whereof is hereby him acknowledged) the contractor covenants and agreed with His Majesty as follows:—

1. The contractor agrees to do and carry out for His Majesty all work which may have to be done in any part of the Dominion of Canada requiring the use of the said invention or in which the said invention can be advantageously employed for a fair contract price to be fixed by consultation between the contractor and the officers of the Department of Marine and Fisheries and without making any charge whatsoever except such as shall be agreed upon as aforesaid by way of royalty or in any other way for the use of the said invention.

2. The contractor further agrees that if at any time he is unable or unwilling to carry out work offered to him on terms as aforesaid the Department of Marine and Fisheries of Canada may itself execute and carry out the said work and may use the said patented invention without making any payment by way of royalty for the said use of the said patented invention.

In witness whereof, the contractor has hereunto set his hand and seal, and these presents have been signed and sealed by the said minister and countersigned by the secretary of the Department of Marine and Fisheries of Canada on behalf of His Majesty.

E. A. WALLBERG.

Signed, Sealed and Delivered
by the contractor in the
presence of

CHAS. MURPHY.

Signed, Sealed and Delivered
by the Minister and Secretary
of the Department of Marine and
Fisheries, in the presence of

July 24, 1907.—Memorandum by B. H. F., evidently called out by Wallberg's letter asking for more work. (See copy attached.)

Telegram, 14th February to Wallberg—Memo. re patent, 12th July, 1907.

MEMORANDUM.

With reference to Mr. Wallberg's letter hereunder, I would say that in my opinion the only way in which we can be certain of having this work completed this season, is to put the work in Mr. Wallberg's hands. The designs have been prepared and tenders could be asked for at once. Authority has already been given to accept tenders for this class of work only from contractors who have had previous experience in it and can satisfy the department that they understand fully the method of doing first-class reinforced concrete work. Each contractor has, to a certain extent, a method of his own, and no doubt would suggest modifications in the design to suit their particular plans or methods, all of which will involve consultation and tend to delay. When tenders were called for this class of work previously, there was very little response from the contractors. Mr. Wallberg was the only tenderer, and I believe that it would be to the advantage of the department to place the work in Mr. Wallberg's hands provided a satisfactory price can be arranged. The department has to send a lot of machinery to this station at an early date, and the material for the lighthouse could be taken at the same time. The lantern for this tower has been ordered and will be ready to erect by the time the tower is completed. The erection of the tower is included in the work proposed to be done during the present season and money has been provided to pay for the same.

B. H. F.

OTTAWA, July 24, 1907.

Completion of Wallberg's Contracts.

August 2, 1907.—Telegram, W. P. Anderson to P. E. Parent: Wallberg reports his contracts completed. Can you inspect buildings on return trip for payment certificates?

Wallberg's patent.

July 23, 1907.—Proposed agreement with the government offered by Wallberg providing for the use of his so-called invention in reinforced concrete work for the government. (See copy attached).

B. H. F. endorses Wallberg's proposition.

July 24, 1907.—Memorandum (in consequence) by B. H. F. again: I consider that the accompanying agreement protects the department, and as soon as it has been properly executed we can notify the patent department that under the circumstances we will offer no objection to Mr. Wallberg's application; at the same time, they should understand that we still desire to be consulted in connection with any further applications regarding the construction of lighthouses or other works usually undertaken by this department. (B. H. F.)

Chief Engineer objects.

Written across upper left hand corner: 'Col. Anderson to see this. (F. G.') Written at foot: 'Why should the minister sign this? If Mr. Wallberg has invented anything he is entitled to his patent and his royalty without this; if not so entitled, why should we be bound to deal with him. I advise the minister to refuse to sign.—W. P. A., 2/8/'07.'

Minister objects also.

Written across lower right hand corner: ' I am of opinion that if Mr. Wallberg has anything that he has a right to patent that he should procure a patent therefor,

and whenever the government want to use the arrangement patented that it pay like any private individual for use of same. No good purpose can be served by making this contract.—W. T.'

August 8.—Wallberg notified in accordance with this last note.

Patent Office wants further information re reinforced concrete towers.

August 17, 1907.—Letter from W. J. Lynch, Patent Office, to deputy: 'Referring to your letter, May 23 last, to the Commissioner of Patents, I am directed by him to say to you that the examiner would like to be furnished with as full information as possible regarding the nature of reinforced concrete towers heretofore constructed by the Department of Marine and Fisheries. It is, of course, impossible to allow a broad claim for a reinforced tower, but in order to deal satisfactorily with specific claims it is desirable to know as fully as possible what has already been done.

Department shows that Wallberg is not entitled to patent.

August 24.—J. F. H., for deputy, writes chief clerk patent office: 'In reply to inquiries contained in your letter, 17th inst., I beg to forward herewith plans of four buildings which this department is erecting in reinforced concrete to show that this method of construction is not new with us. Moreover, I should like to explain, with reference to some reinforced concrete lighthouses built by Mr. W. for this department, that Mr. W. offered to supply his own plans because he claimed that it suited him better than working to plans which we were prepared to furnish, as we had announced to Mr. W. before he built any reinforced concrete towers for us that it was our intention to use that method of construction. You will please note that there is nothing new in buildings erected in reinforced concrete. I am not sure that lighthouses have been previously built in this style, but it has been used for mill chimneys and other high towers, and of course the principle involved is the same. In my opinion, if Mr. W.'s contention that a reinforced lighthouse is patentable, he would be equally entitled to take a patent for any other building similarly constructed. (Initialled on the side, W. P. A.)

Payments made on Wallberg Contracts.

August 30.—E. C. Warren, for Steel Con. Co., writes: 'Would like to arrange a settlement with you to cover our contracts for the construction of lighthouses at Little Metis, Matane and Cape Magdalen. We understand from Mr. B. H. F. that these have been inspected and found to be satisfactory.'

September 3.—Deputy writes Steel Con. Co., in reply to above, to send in immediately your account for this work. Payment will be promptly made on receipt of the accounts.

October 19.—Wallberg, for Steel Con. Co., writes inclosing accounts for Little Hope, Little Metis, Matane and Cape Magdalen. Little Hope paid in full, balance $3,875. We also request estimate of about $4,000 on Heath Point tower, contract for which amounts to over $6,500. All materials for this work delievered and considerable portion of work performed.

Little Hope Lighthouse Tower and Dwelling.

May 17, 1906.—Memorandum by B. H. F. *re* Little Hope new tower: Arrangements have been made for the resident engineer at Halifax to supply information at the earliest possible moment to prepare plans for rebuilding this station. It will cost from $10,000 to $15,000 to build a new tower and dwelling and rebuild the breakwater. . . . . The rebuilding of the the light is, of course, urgent, but no doubt the details will be approved by the Lighthouse Board before work is commenced. (This

light was destroyed by fire on April 19. 22/5/'06.) (Await information from Halifax —W. P. A., 14/6/'06.)

Light for same.

May 19.—Memo. for the minister: Light at Little Hope Island, N.S., has been burned, and it is necessary to erect a new tower and provide lighthouse apparatus for this station. The undersigned recommends a 3rd order small model quick flashing light (characteristic to be determined later) with a 7-ft. circular lantern, for which the sum of $7,000 should be provided. The apparatus itself will cost, delivered in Montreal, about $6,200, and the remainder of the amount is required for freight and erecting expenses. No signature, but initialled G. W.

July 2.—Long letter from Resident Engineer J. A. Légère to W. P. A., proposing plans for new lighthouse, dwelling, breakwater, repairs, &c., at Little Hope.

Chief Engineer recommends certain work at Little Hope Island.

August 1.—Memo. by W. P. A.: I recommend that repairs to the Hope Island breakwater be sanctioned at once, and be done by days' labour under Mr. Légère's supervision, at an estimated cost of $3,000. I think possibly a good deal of this work might be done in concrete, so as to be permanent, just about as cheaply as cribwork. I think also that a little extra expenditure in groines and a little saving in facework might be an improvement. It will be seen from Mr. Légère's report that one or more of the groines already built have filled in. With regard to a tower I recommend the erection of a reinforced concrete tower 50 feet high, and ask for permission to get tenders for such a building. I recommend the erection of a comfortable small dwelling which can be built by contract or days' labour, as Mr. Légère thinks best. Endorsements: 'This tower should be sufficiently high to utilize to advantage a 2nd order 9-ft. light.—J. F. F.' 'Money available.—B. H. F., A. W. O.' 'Authorized—F. G.'

Instructions as to same.

August 27.—Telegram, B. H. F. to J. A. Légère, Halifax: Proceed with repairs Little Hope breakwater. Plans being prepared for fireproof tower and dwelling. If necessary, small temporary shed for lightkeeper may be erected. Hope to call for tenders shortly.

August 23.—Letter from Légère to Chief Engineer, calling attention to the urgency of the work at Little Hope breakwater.

August 24.—Chief Engineer writes Parsons inclosing plans for a new dwelling for lightkeeper.

Wallberg's tender for Little Hope Lighthouse tower.

August 30.—E. A. Wallberg, for Steel Con. Co., writes B. H. F., quoting for a lighthouse tower for Little Hope island in reinforced concrete, $4.950, 10 ft. 6 in. diameter and 75 ft. high, and will be built exactly similar to the other towers which we are constructing for you. We can begin the construction of this tower at once and complete it very promptly, and in order to do so we trust to have your acceptance at very earliest moment.

September 4.—E. A. Wallberg telegraphs B. H. F.: Expect go Halifax to arrange for gravel and materials for Little Hope to begin quickly. Can you confirm order. Wire Moncton.

Cape Race tower.

September 4.—B. H. F. replies: Will not recommend acceptance your offer till I have seen Cape Race tower. Can arrange purchase material which we will turn over to you as part of contract price should you get the work. If this is satisfactory, let me know.

Resident Engineer, Halifax, suggests arrangements for Little Hope work.

September 1.—J. H. Légère writes B. H. F.: I received your telegram stating that the work at Little Hope island might be done by Wallberg when through their work at Cape Race, and I have answered you that Wallberg's foreman at Cape Race had wired me that he would be through September 15. I would be very glad, of course, if you could arrange to go to Cape Race when the vessel goes there. I want the ship to take a load of materials to Little Hope Island about September 10, and then go to Cape Race on or about September 17. I am not certain whether I can arrange this, but I will let you know as soon as possible.

September 5.—E. A. Wallberg telegraphs, from Moncton, B. H. F.: Arrangements your wire yesterday quite satisfactory. Saw Légère yesterday. Am certain about Cape Race. Writing.

Wallberg explains his plans.

September 22.—E. A. W., Steel Con. Co., writes: We inclose herewith blue print of Little Hope lighthouse tower as we propose to construct it as soon as you fully decide. We are sending on materials according to this plan. We understand that the foundation is gravel, so we have made an extended base with buttresses and this figures now ample for stability without any further anchorage. We would suggest, however, that the earth be banked up around base, about as we have shown, which will give a good appearance and shed the water away from the tower, at the same time bedding it into the gravel and give additional stability. We have figured on 50 lbs. wind pressure in every case, which is more than we will ever obtain. Gives other details, then closes. Please advise us as soon as possible about this and about the other three for which you have plans. Also please send us the sketch of the house at Port Colborne which you wished us to consider.

Work not to be done this fall.

September 28.—B. H. Fraser telegraphs Legere: 'Shall not build Little Hope tower this fall. Sending instructions *re* temporary lights.'

Assistant Chief Engineer talks of Temporary Arrangements, but is apparently willing to let Wallberg decide.

October 1.—Assistant Chief Engineer to Legere: 'Since writing you *re* temporary light at Little Hope island, I have been in consultation with Mr. Wallberg regarding the proposed design for the tower for that station. I was under the impression that owing to its height and small diameter that there would probably be a considerable vibration, in fact enough to interfere with the rotation of the illuminating apparatus and probably break the incandescent mantles. Mr. Wallberg, however, purposes entering into a contract with us under a guarantee that this will not occur and consequently if he desires, he may proceed with the erection of the tower this fall. Under the circumstances it will be well to let the matter of a temporary light rest, and if the tower is erected the light may be installed thereon in a temporary manner, using the 7 ft. lantern lately taken from Mauger Beach station and 6th order temporary light which will be furnished from Prospect. In case the construction of the tower is not proceeded with the lantern can be erected on a rough wooden trestle which may be boarded in if desirable and weighted down with ballast. The height should not be less than 20 feet. During the winter months it would be difficult to maintain a pole light so as to give a satisfactory service. I believe Mr. Wallberg's intention is to proceed immediately with the construction of the tower and I will advise you later as to this matter sending a copy of the accepted plan.

October 3.—Chief Engineer informs Legere that it will probably not be possible to have the new dwelling erected at Little Hope this season.

October 3.—B. H. F. telegraphs Wallberg: 'Send Legere 2 copies latest plan Little Hope, send 3 copies here for approval and attaching to contract. Send 2 copies each other 3 towers for same purpose.

Wallberg gives Guarantee.

October 1.—E. A. Wallberg writes B. H. F.: In reply to your wire regarding Little Hope tower, we hereby guarantee that there will be no breaking of mantles of your lights due to vibration of the tower and agree to make good any loss or defects due to such cause. We are pushing the work ahead as fast as possible.

Wallberg Decides Matter.

October 3.—Telegram from Legere to B. H. F.: Your telegram September 28 saying not to build Little Hope light is followed by one from Wallberg, October 2, saying building authorized by you. Kindly advise me whether this is so—have plans forwarded.

October 3.—B. H. F. replies: 'Writing you fully *re* Little Hope. Wallberg will send plans.

Wallberg's Tender Accepted.

September 17.—Minister writes Governor General in Council about Little Hope matter and recommends that Steel Concrete Co.'s offer to rebuild for $4,950 be accepted. The company have just completed the erection of a similar tower at Cape Race, Newfoundland, and are preparing to erect 3 others in Quebec for which tenders were publicly invited and theirs was the only tender. The acceptance of their offer would seem to be the only way the work can be done without loss of time.

Contract dated September 27.

October 4.—Approved by committee of P. C.

Temporary Light for Little Hope suggested by Noble.

October 5.—W. H. Noble, Assistant Commissioner of Lights, writes from Prescott, J. F. F., Com. Lights, Ottawa: Have a memo. from B. H. F. Can you arrange a temporary light for Little Hope island. I can put up the lantern taken down at Mauger's Beach on a temporary staging until a permanent tower is erected. If this is approved I beg to recommend that a 4th order lens of 36° with 25 m/m Diamond or Chance light and stand by lamp be supplied. Stamped, File and return October 9, 1906. J. F. F. Stamped, Referred to Commissioner of Lights, October 11; same stamp. October 20, and same stamp November 7.

Wharfage Charge objected to by Wallberg.

October 29.—E. A. Wallberg writes B. H. F. about a bill for $5.20 from Robin Collas & Co., for wharfage for lumber in connection with Little Hope. As you are doing the transportation, material should have been delivered at your wharf and if you could not arrange to receive it there you should bear this charge.

October 30.—B. H. F. replies, and hardly thinks the charge is a legitimate one against the department.

Work to be put in hand immediately.

November 2.—Chief Engineer writes Legere inclosing 2 copies foundation plans for new dwelling at Little Hope island. You may put this work in hand immediately. (Omitted, and sent with note on 7th. W. P. A.)

Plans wanted for Department.

November 27, 1906.—Memorandum for Mr. B. H. Fraser by W. W. S.

Please supply us with 2 copies of the specifications and plans of the reinforced concrete tower to be erected at Little Hope island and also state when the tower is to be completed, as we require the information for the contract.—Endorsed, plans 16606 and 7 given Mr. Stumbles. 27/11/06 B. H. F. Completed before close of 1906.

Trouble with Wallberg's Workmen.

November 24.—Deputy writes Steel Con. Co.: This department is in receipt of a complaint from J. L. Goffette to the effect that he has not been paid wages due him by your company and further that you have men employed since October 2, last, on Little Hope island who have not been paid. If you are not prepared to settle with these men the department will have to refer the matter to the Department of Labour for settlement under the terms of your contracts.

Agreement with Wallberg.

November 27, 1906.—Deputy writes Steel Con. Co., inclosing articles agreement (in duplicate) for the construction of a reinforced concrete lighthouse tower at Little Hope island, and requests that he have the names of two good sureties placed in the bond and have it signed by them after you have signed and dated it.

Inspector of Work.

November 26.—J. A. Legere telegraphs Chief Engineer: 'Can I have our foreman John Morton remain at Little Hope island as inspector new concrete tower. Man is satisfactory to E. M. Farrell, M.P.P.

November 27.—W. P. A. replies: You may keep Morton if satisfied he is competent insure good concrete.

Wallberg stops work.

December 11.—B. H. F. telegraphs Legere: 'Wallberg wishes stop work Little Hope, assuming full responsibility. Make effort remove his men to Halifax earliest possible moment save expense. Instruct foreman advise Wallberg amount required at Halifax to settle wages.

Men removed from Little Hope Island.

December 14.—Legere replies: Took men from Little Hope yesterday and to Halifax this morning.

December 14.—Chief Engineer writes Legere: 'I have your telegram stating that the men were removed from Little Hope. Please advise me whether all work has been stopped there or if it was only Wallberg's men that were removed.

Workmen's Trouble.

December 15.—Letter from Minister of Labour to Mr. Brodeur inclosing copy of letter from J. L. Goffette about his and other workers' wages being unpaid by the Steel Concrete Co. Calls his attention to the fact that he corresponded with him on this matter on the 21st November. (Letter stamped 'referred to chief engineer.')

December 20.—B. H. F. telegraphs Legere: 'Can you recommend any payment on account of construction Little Hope lighthouse?

December 20.—Deputy writes Deputy Minister of Labour asking to be furnished with a list of the current wages paid in the vicinity of Little Hope island for masons, concrete workers and labourers.

Wallberg Explains regarding his Trouble with Workmen.

December 15.—Wallberg writes Deputy: We have your favour 24th ult. regarding complaint from Mr. Goffette that his wages have not been paid. He has been paid all that we legitimately owe him. He is a trouble breeder and is making unfounded claims because he was discharged for insubordination. Since that time he has tried to cause trouble among our other men, but without any success. Regarding the 2 men at Little Hope, they have been paid regularly and are perfectly contented, but he wanted us to send their money through him, which we refused to do. We pay all legitimate claims and wages without the slightest delay and we trust the above explanation is satisfactory. Any claim that Mr. Goffette may have he will have to take to the courts.

Goffette (Wallberg's workman) writes Minister.

December 18.—J. S. Goffette writes Mr. Brodeur and says: 'The men who have been working at Little Hope for nearly 3 months have quit work without being paid and were Saturday and Sunday last in the streets of Halifax. Confirms his 3 letters of last month which have remained unanswered. Regret the stand you take in this question. I would willingly have accepted your arbitration in my difference with Mr. Wallberg your contractor. I hope you will come to some decision in this matter.

P.S.—I have just received a telegram from the workmen stating that they have not yet been paid.

Wallberg invokes Assistance of Department (almost instructs it) to settle his Differences with his Workmen.

December 21.—Wallberg writes Department: 'I have a letter from Mr. Jacquette together with bills which I inclose herewith. They each claim 668 hours at 30 cents or $200.40. If this time figures up to the date when they landed in Halifax I will allow it and will also allow the 30 cents per hour, but I will not allow any time nor hotel expenses after they reached Halifax.

Jacquette was not paid 30 cents an hour at Cape Race if the letters of Mr. Goffette are correct, but I will allow it now. Regarding their expenses I will allow Florence $68.45 and Jacquette $26, but before paying them I wish you would look them over and see that they have receipts covering these expenses, as they look very high. They state car fare Halifax and return $24.60. I wish you would look into this particular as I cannot understand that item at all. Jacquette was paid $120 on account and I sent $80 for Florence to Belgium, which you will deduct. This will make a deduction of $200 and the total wages and expenses figure up $495.25. On the 18th inst. they were each paid $25 on account as per receipts which Mr. Legere sent me and Legere lent Jacquette $10, so this will leave a balance of $235.25. If you find their wages accounts and expenses accounts correct in such case you can pay this and take a receipt from each one, which receipts I attach hereto. In case you do not quite understand the matter you could pay them most of it and leave any items which are not clear until Mr. Legere returns, when he will understand perfectly. I want to get the matter settled. I do not consider their claims just as represented to me by Mr. Goffette, but I have decided to settle them. I have an account of Isaac Wagner, St. Catherines, for board, $49. Ask Jacquette if this has been paid or shall I pay it. Thank you for your trouble in this matter.

Minister explains matter to Mr. Lemieux.

December 22, 1906.—Mr. Brodeur writes Mr. Lemieux: 'I would say that it appears to me Mr. Goffette will have to take his case to the courts. He does not appear to be a workman. I doubt whether any of the workmen have a complaint against the company, as the work at Little Hope is apparently going on quite satisfactorily under the supervision of our resident engineer. I am quite sure we would have heard if the

workmen were having any trouble with the contractors. The work at Little Hope is being done by contract, and it is now about half completed, but no payments whatever have been made on account. I inclose herewith a copy of a letter from the Steel Concrete Company in connection with this matter.

Condition of work at Little Hope Island.

December 18, 1906.—Legere, Hal., writes B. H. F.: 'In reply yours 14th instant, asking whether all the work was closed at Little Hope Island, or only that part which is under contract, I beg to inform you that all the work has been closed for this season. It has been really unfit to do any work since the 1st December. The breakwater has been repaired and I think the work has been well done. I will have the work on the new dwelling begun early in the spring.'

December 27, 1906.—Legere telegraphs B. H. F.: 'Little Hope tower about one-third completed. Some men have claims against contractor. Writing fully to-night from St. John.'

Memorandum—Steel work for dwelling at Little Hope Island and other materials to be provided for.

December 29, 1906.—The Department is erecting a steel and concrete keeper's dwelling at Little Hope Island. The foundations are being put in by the resident engineer at Halifax. The steel frame of the building should be ordered now so as to be ready for the spring. It should cost in the vicinity of $800, and I would recommend that offers be got from several Nova Scotia firms for providing the steel work ready to be erected on the foundation. I would also recommend that a price be got from the Expanded Metal Company of Toronto, for covering in this building and erecting the partitions, as was done so satisfactorily in the case of Lake St. Peter lighthouses. (Initialled B. H. F. I concur, W. P. A.)

'The work as a whole has been approved and the money provided.'—B.H.F. I recommend C. S., 3-1-'07. L.P.B.

Resident Engineer explains the difficulties encountered in carrying out the work and its present condition.

December 27, 1906.—Legere from St. John, N.B., writes B.H.F.: 'Your telegram received some days ago asking how much I would recommend to be paid for work done to Little Hope lighthouse tower. I now beg to report:—When it was decided to proceed with the work at Little Hope, there were none of our steamers available to transport the men and materials for the contractor from Halifax to Little Hope, so, as agreed between Mr. Wallberg and ourselves, I chartered a schooner to transport the men, materials, &c., for a certain sum, and expected that everything would be landed in a week's time, but instead of that the very bad wind storms of the last fall delayed the landing for over 20 days. The schooner had to put in Liverpool for shelter. I was away from Halifax at the time, and had Mr. Murphy go down to try and have the men at least taken over on a steamer. Mr. Murphy advised me that they would not go without their materials, which of course it was impossible to land. Having landed at last they were delayed occasionally for lack of gravel which they had not ready for us, and which at times it was difficult to take over. They have now the tower built some 20 feet above the ground and the foundations 6 feet below the ground level to hard clay bottom. I consider that from one-third to two-fifths of the work has been performed, and seems to have been well done—some of it of course will need retouching. All the cement they have used was taken from our own stock, which I had taken to the Island, as well as the sand, on a previous trip of one of our steamers. Counts of the materials from our stock which they are using is being kept, and was to be deducted from the amount due the contractor. The two men representing the contractor have some misunderstanding with Mr. Wallberg regarding their wages,

expenses, &c., and I think it would be well for Mr. Wallberg to settle with these men before the department pays anything on account. I understand they are taking the matter into the courts—at least they informed me they were to do so. I will talk the matter over with the chief engineer when he comes down, which I understand will be shortly.

Memorandum—Dictated by B. H. Fraser—Regarding payment on account of work—Difficulty with workmen to be first settled.

January 14, 1907.—'Mr. Wallberg called at the office some time ago to see if he could not receive payment on account of the work done at Little Hope. I would recommend that he be written to and informed that the resident engineer recommends that no payments be made until he has settled with his representatives, whom it appears have a grievance. Mr. Wallberg has not been altogether open with the department in connection with this matter, and possibly it might be as well to notify the Department of Labour that Mr. Goffette's charges have been to a certain degree substantiated. (Initialled, W. P. A.—Approved, F. G. Mr. Stumbles, 15-1-'07. See correspondence on steel concrete file. We are now awaiting an explanation from Mr. Wallberg.—B. H. F.)

Memorandum for Mr. Noble. Change in Little Hope light.—Query; who discovered the reason for this and who was responsible for the original costly blunder?

February 2, 1907.—I understand there is to be some change in the lantern and apparatus for Little Hope lighthouse. I should be glad to have full particulars as to weight and dimensions so that the top of the tower can be finished off to suit. There will be no trouble in doing this if we are advised at once. The height of the present tower is designed for a 2nd order light. If a lower order is to be installed the tower need not be so high, and this will be an advantage.—B.H.F. (W.P.A., 20-3-'07; also W.H.N., 2-2-'07).

February 23, 1907.—B.H.F. telegraphs from Halifax to W. H. Noble, Ottawa: 'Try delay any action Little Hope tower till my return next week.' (No action.—W.H.N., 22-2-'07). G., 1-3-,07; W.N.

March 2, 1907.—Chief Engineer writes Steel Concrete Co. with reference to change of light at Little Hope tower. Wants an offer from the company for (cost) change.

March 21, 1907.—Wallberg writes Chief Engineer: 'We beg to quote you for alterations in the reinforced concrete lighthouse tower at Little Hope Island, for which we have contract, the sum of $2,300. These alterations will be shown on our blue print No. 80, herewith.—W.P.A., 22-3-'07.

Memorandum (B.H.F.).—Department agrees to alterations and to Wallberg's tender for them.

I have gone carefully into the offer of the Steel Concrete Co. for making the necessary changes in the Little Hope tower, to enable it to carry a 2nd order lantern and apparatus, and if the change is to be made, I consider that their offer should be accepted, as it is reasonable for the work that has to be done. It will be necessary to take down a portion of the tower and make first-class connection at the head of the present buttresses. This should be done under the most careful supervision. The tower will be practically doubled in strength towards the top, and very much stiffened. (Initialled, B. H. F.; I concur; W. P. A., 2-4-'07; for Minister's approval, F. G., L. P. B.)

Resident Engineer at Halifax suggests names of tenderers for steel work for Little Hope Island dwelling.

March 27, 1907.—J. A. Legere, Halifax, to B.H.F., assistant chief engineer: 'With reference to the new steel dwelling to be erected at Little Hope Island, I beg

to submit the following names of firms of Nova Scotia from which I think tenders might be asked: Robb Eng. Co., Amherst; J. Matheson & Co., N.G.; N. S. Steel Works, N. G.; Fraser Bros., N. G.; The New Burrill Johnson Co., Yarmouth, N.S.; Iron Fdry Co., Dartmouth; Ferguson & Co., Halifax. If I have omitted any you might please advise me of same, or also whether some of the names submitted should not be asked to tender. If it is the wish of the department that some of the firms in New Brunswick should be asked, kindly advise me as to whom they are.' Stamped; referred to chief engineer.

March 20, 1907.—Expanded Metal and F. P. Co., Toronto, write B. H. F., K. E. Hotel, Tor.: 'Quoting prices on material required in erection of dwelling at Little Hope Island, according to blue print submitted to us; total, $406. Will provide foreman at $5 a day and expenses. (Initialled, B.H.F., W.P.A., 5-4-'07.)

April 8, 1907.—Chief Engineer to Steel Concrete Co.: Advises acceptance of their offer and asks for date of completion of tower.

April 10, 1907.—Chief Engineer to Expanded Metal F. P. Co.: 'I find that your price is much higher than that quoted by your local agent in Ottawa. I should be glad to hear from you immediately as to whether there is not some mistake in your quotation.

Memorandum (B.H.F.).—One thousand dollars payment to Wallberg recommended.

April 10.—The Steel Con. Co., Montreal, is erecting a concrete tower at Little Hope light station for the contract price of $4,950. The resident engineer reports that from one-third to two-fifths of the tower is completed, and I would recommend that an advance of $1,000 be paid on account of this work, out of the vote 1906-7. Money available, B. H. F.—A. W. O. Pay, W. P. A., 11-4-'07. Paid April 11, '107. Q.

April 12, 1907.—E.M. and F.P.Co. to W.P.A., chief engineer: Your favour 10th instant to hand. We have looked up our estimate on materials for Little Hope Island. Offer to make no reduction in prices quoted, but explain that the articles are of the best, and they have to allow for sundry risks.

Acknowledges letter 27th ulto. Gives resident engineer instructions about Little Hope Island dwelling.

April 17, 1907.—From Chief Engineer to Legere: 'I have to instruct you to procure this (tenders for steel work) as soon as possible, locally, using your own judgment as to where to invite tenders. Time of delivery should be taken into account. I am making arrangements for shipment of metal lathing for walls and partitions for this dwelling and shall be glad to know if you will require an expert for placing of the same. The walls of this building are to be lathed and plastered. I inclose herewith extract from a letter received from the Expanded Metal & F.P. Co., in connection with this matter. After referring to the usual method of doing the lathing &c., and giving other instructions, he says: 'I should think that with the assistance of the expert concrete man at work on the tower, you should be able to finish this building without the services of an expert from Toronto.

Resident Engineer telegraphs to Department for plans 27 days after these had been accepted by them.

April 16, 1907.—B.H.F. sends order to Expanded Metal & F. P. Co.: 'Stuff to be shipped to J. Parsons, agent, Halifax.' (Cost, $276.82.)

April 22, 1907.—Chief Engineer writes Steel Con. Co. asking why no letter has been received in answer to our letter 8th April.

April 24, 1907.—Steel Con. Co. replies; apologises for oversight; expect to complete construction promptly; are sending our foreman off to-day. Thanking you for previous favours and trust that our tender for Heath Point lighthouse may be decided on favourably.'

Plans sent.

April 29, 1907.—J. A. Legere telegraphs to B. H. F.: 'Send altered plans of Little Hope at once; also man to inspect work. Ship will leave Wednesday.'

B.H.F. replies: 'Enclose herewith plans of changes Little Hope tower: also detail of the connection between old and new work as explained to you while in Ottawa and accordance with my telegram to-day. Man here cannot get away inspect Little Hope; use best local man available. Am mailing plans to-night. Shall send extra copies later.'

With explanations.

I also inclose sketch showing rearrangement of the floor beams and opening necessary for rope which drives clockwork. There should also be an opening in light room floor to allow this rope to pass through. The opening should be at or near centre of tower so as to give a free fall of the weights inside the stairway. I communicated to-day with the Steel Concrete Co. in connection with the detail of the joint, and expect them to notify their man to-morrow to carry out arrangement shown on the inclosed sketch. It will be necessary of course for holes to be drilled through the stairs for the steel reinforcement to pass through, but it is not intended to carry the inside concrete work through the stairs. It should stop against them top and bottom.

Company acknowledges receipt of these.

April 30, 1907.—E. C. Warren, Steel Concrete Co. writes B. H. F.: 'Are in receipt of your details showing arrangement of I-beams, &c., supporting platform slab of Little Hope lighthouse; also B. P. giving your method of bonding new work to old. We are advising our foreman, Mr. Jacquet, as to these details; also Mr. Wallberg who is at present in Moncton.

(Query: Is this the same Jacquet who last fall had a row with Wallberg about his wages?)

Department now sends Inspector.

May 6, 1907.—B. H. F. to Legere, Halifax: 'Could send man now inspect connection old and new work Little Hope; advise me fully how he could reach station and return with least loss of time, giving date to leave here.

May 6, 1907.—Legere replies: Leaving here Thursday. Man for Little Hope should come at once and to Halifax; advise me.

May, 7, 1907.—B. H. F. to Legere, Halifax: 'DeMiffanis leaves this afternoon by C.P.R. Better meet him on arrival, Halifax.

Plans found to vary from Wallberg's.

May 9, 1907.—Understand from DeMiffanis plans sent me, Little Hope tower not the ones to be used. Advise at once. Work begun as per your plans.

May 10, 1907.—B. H. F. replies: 'Prefer to use my plan, Wallberg prefers his. If he insists, the work to be done to satisfaction of DeMiffanis.

Memorandum for Commissioner of Lights.—New Light.

April 10, 1907.—Can you furnish me with details of the openings required in the lantern floor of the Little Hope lighthouse tower?—B. H. F.

April 11, 1907.—Cable: Chanfeare-Smithwick, England: 'Send details of base, second order lantern and apparatus Little Hope tower concrete.'

Expanded Metal Company's goods received at Halifax.

May 8, 1907.—Tremaine for Halifax agent writes deputy advising receipt of goods from Expanded M. and F. P. Co., Toronto, has to pay $19.53 freight on them. Wants

to know whether this should be paid by them or by the contractor. Stamped 'referred to chief engineer.' Letter to Expanded M. and F. P. Co., 14-5-07.—B. H. F.

Freight disputed.

May 13, 1907.—B. H. F. writes to Expanded M. and F. P. Co.: Referring to my letter 16th April, please advise me whether you have carried out shipping instructions given therein ; that is in the matter of prepayment of freight and forwarding of invoices to Mr. Parsons with freight vouchers attached.

Letter 17th April only received 10th May.

May 10, 1907.—Legere writes P. H. F. acknowledging letter 17th April : 'Has just been received,' and I may say that I have already asked for tenders for steel work Little Hope this Saturday morning. The alterations of the tower are carried out hope to be able to place order soon. The materials from Toronto received and foreman to prepare foundation and cellar ready for superstructure.

Resident Engineer details his arrangements.

I have gone over the matter of the tower with DeMiffanis and he left this morning for Little Hope island. Plans from Mr. Wallberg to his foreman passed through here after foreman left and I had them forwarded to him. I did not open same as I thought they were simply a notice of ratification of plans sent me by you. However, if they are instructions to carry on work as Wallberg seems to wish, I have instructed DeMiffanis to make very sure that the work was performed satisfactorly. With reference to the necessity of having an expert sent from Toronto to complete the interior of dwelling, I think it will be possible for us to manage without this. I will advise you again as to this latter, and also as to the method of procedure of the tower.

May 15, 1907.—Expanded M. and F. P. Co. to B. H. F.—Your letter 13th. We have prepaid freight charges and forwarded invoices to Mr. Parsons.

Inspector reports not very satisfactorily.

May 11, 1907.—H. DeMiffanis writes: (No addressee given.) 'I have landed to Little Hopse this Saturday morning. The alterations of the tower are carried out according to my plan, and ready for concrete. I believe that the boss misunderstood a telegram sent to him by Mr. Wallberg on May 3rd and telling him to proceed according to former instructions ; but as the work is nearly completed and absolutely satisfying in the present way I have advised this man to continue the tower in accordance with my plan, and I think they will start at the new part in a few days. The old one is good ; only some light defects in the concrete are to be fixed before completion. I have indicated them to the boss and will watch to their suppression.'

Chief Engineer objects to unnecessary cost transporting broken stone—From Inspector's report.

May 21, 1907.—Chief Engineer to Steel Concrete Co. : 'Am advised by Mr. DeMiffanis of this office that your men engaged in work at Little Hope are bringing broken stone from the mainland by private steamer, and with the intention of billing this department with the cost. We have no objection to landing the stone in one trip with our own boat, as we did at Cape Race, but we must absolutely refuse to pay any such charges as I understand are being incurred by these men at Little Hope. Mr. DeMiffanis states that it will cost at least $1,000 to transport the stone to the station in the way it is being done now.'

And reports same to Resident Engineer at Halifax.

May 21, 1907.—Chief Engineer to Resident Engineer, Halifax : 'I inclose herewith copy of a letter sent to-day to the Steel Concrete Co. in connection with the

supply of broken stone at Little Hope light station. I find that some accounts have already been paid for carrying sand and gravel to this station, but they were marked, "Ordered by Mr. Murphy," and certified by yourself, so it was presumed that they were in connection with the work on the breakwater and not that being done by the Steel Concrete Co.'

Supplementary agreement now signed.

May 23, 1907.—Deputy to Steel Concrete Co.: 'I herewith inclose supplementary agreement in duplicate, providing for the changes in the reinforced concrete lighthouse tower at Little Hope island, and have to request you to sign both copies in presence of a witness.—(Initialled W. W. S.)

May 25, 1907.—Deputy sends copy to agent M. and F., Halifax; also inclose copy of blue print referred to.

Plans of dwelling sent foreman.

May 27, 1907.—Acting Chief Engineer to John Silver, foreman construction, Little Hope. At the request of Mr. DeMiffanis I inclose herewith copy of plan of dwelling to be erected, Little Hope, for your guidance in carrying on the work. You will notice that the location of the cistern trap has been changed, and this should be built with a curbing 2 or 3 inches high to keep dirt and water from getting into the tank. I have further to advise you that the bolt circle for the anchor bolts of the lantern is 10 feet 6⅜ inches in diameter. The bolts are———in diameter and are spaced at 16½-inch centres.

Copy of same to resident Engineer, Halifax.

May 27, 1907.—Acting Chief Engineer to Legere inclosing copy of above letter, also an extra copy of the dwelling plan for Little Hope. A similar copy has been sent the foreman there at the request of Mr. DeMiffanis so as to avoid delay; also copy of letter sent to-day to Steel Concrete Co.

Rough work objected to.

May 27, 1907.—Acting Chief Engineer to Steel Concrete Co.: 'I have a report from Mr. DeMiffanis of this office with reference to the construction of the lighthouse tower at Little Hope. He states that the concrete is strong but exceedingly rough, and considers that the outside should receive a coat of cement wash when the work is complete. I would be glad to know if you would instruct this work to be done without extra cost.'

Explanations re cost transporting broken stone.

May 23, 1907.—E. C. Warren for Steel Concrete Co. to W. P. A., Chief Engineer: 'We are in receipt of your communication 21st inst., in which you mention that our men at Little Hope are not handling broken stone economically. We have sent your letter to Mr. Wallberg, who is at present in Moncton, and he will probably advise you from there.—No action—W. P. A., 30-5-07.'

May 27, 1907.—E. A. Wallberg, for Steel Concrete Co., from Moncton to W. P. A., Chief Engineer: Replying to your favour of 21st inst. *re* steamer used for gravel at Little Hope, I saw Mr. Legere on Friday last, and he advised that he had arranged for this steamer at favourable terms. I may advise that most of this gravel is now transported.—No action—W. P. A., 30-5-07.

Inclosure missing from letter—Resident Engineer, Halifax, explains his arrangements re stone, sand and gravel transportation.

May 27, 1907.—J. A. Legere to Chief Engineer: 'Have your letter 21st saying you are inclosing copy letter to Steel Concrete Co. with reference to broken stone

and sand for work at Little Hope. Such copy was not inclosed, but I may say that I saw original, Mr. Wallberg having shown it me at Moncton. As you are aware we agreed to transport the materials, including sand and gravel to the station. This material is being supplied from Port Mouton and taken to the site by a steamer which was bargained for by us, as I found I could not get our own steamer to land these materials. The *Lady Laurier* is at present overworked by buoy work, and the *Aberdeen* has just came off from repairs and left for Cape Race, and in the meantime sand and gravel must be supplied. I made the best arrangement I could with the steamer transporting this sand and gravel, and pay them $25 per trip from Port Mouton to Little Hope island, a distance of about 10 miles each way. I might possibly be able to charter schooner to take a load or so of sand and gravel, and this might be done more cheaply than with the steamer. We have to carry besides the contractor's sand and gravel that for our own work at the new dwelling house being erected there.—Noted.—No action—W.P.A., 30-5-07.'

Wallberg explains and minimizes roughness of work.

June 7, 1907.—Extract from letter from E. A. Wallberg: 'In reply to your favour of 27th May I will put on the cement wash if you wish, and without charge, but a few hundred feet away the tower would look exactly the same. Your man is no doubt accustomed to plaster finished concrete work as done in Europe, but there is none of this done in America, as it is not considered good practice. The finish does not bind permanently with the body concrete. Please advise your wishes and I will arrange accordingly: 'Mr. DeMiffanis to consult with Mr. Fraser and advise me of decision, W. P. A., 13-6-07.'

Steel for dwelling at Little Hope Island.

June 25, 1907.—Legere to Chief Engineer: 'With reference to your letter 17th April instructing me to procure for the Little Hope dwelling the steel work required, I may say that I invited tenders from seven different parties but none were willing to tender except J. Matheson & Co., N.G. Their tender is $800 for materials as per plan and specification, delivered f.o.b. on car with freight prepaid to Halifax. The amount of steel in this structure is about 15,500 lbs, which makes the cost per lb. a little over 5 cents. This is quite reasonable, and I have advised Messrs. Matheson that their tender is accepted. They cannot make delivery before 12 weeks, which will be some time in September. P.S.—We have to erect at the grounds, J. A. L.

Tower finished.—Resident Engineer to report on it and on claim for extra Excavation.

July 5.—Acting Chief Engineer to Resident Engineer, Halifax: I understand that the lighthouse tower at Little Hope has been completed. Will you be good enough to report on this at the earliest possible moment, stating if the work is satisfactory, so that the contractors may be paid. I understand also that, owing to the nature of the site, a considerable amount of excavation was required over and above that shown in the plan submitted and on which the tender was based. You will also report as to whether you consider any extra amount should be allowed for this work, and if so, what the amount should be.

Steel for dwelling should be delivered earlier than twelve weeks.

July 5.—Acting Chief Engineer to Resident Engineer, Halifax: Acknowledge receipt yours 25th *re* steel frame for Little Hope dwelling. I would suggest that you endeavour to get an earlier delivery of this material, if possible, as I hardly think the building will be fit to live in this winter, unless it can be erected and plastered during comparatively warm weather.

Repetition of letter of 5th.—See above.

July 11.—Acting Chief Engineer to Resident Engineer, Halifax: I understand that the lighthouse tower at Little Hope has now been completed, and should be glad to have your report on this matter, so that the contractor may be settled with, if the work has been satisfactorily done.

See letter of July 5—above.

Foreman on dwelling foundation work reports on tower.

July 9.—Frank Silver, foreman on dwelling foundation, and Inspector: 'I have to report that the steel concrete tower at Little Hope island was completed Thursday, July 4, and I must say that the work was done according to plans. The full complement of steel bars has been put in, as per plan, and also the connection with the old part of the tower built last season was well and strongly made, as shown on plans. As regards the cement and concrete, it has been well handled, and concrete was richly made. Sand and gravel was good and clean. I must say that the tower is perfectly plumb; the work I consider strongly built, but somewhat rough, especially underside of stairway. (Note.—Should like to see the original of this letter.)

Resident Engineer also reports on tower.—Incloses copy foreman's report.—Some details to be finished.—Nothing extra should be allowed for extra excavation work.

July 13.—J. A. L. to Chief Engineer: Beg to inform you that the steel concrete tower at Little Hope island was completed July 4, and that I had the men taken back to Halifax on Saturday, July 6. I made a personal inspection of this tower, and I found that the work seems well done and the concrete work strong-looking. The joint between the part built last year and the part made this year was well made and according to altered plans sent. The tower is very plumb, the string fastened to the centre point at the top hanging directly over the centre at the base in the inside of the tower. The shell is slightly lumpy in places, *i.e.*, is not in a direct line but is done about as well, I think, as could possibly be done. The underside of the stairway is quite rough, however, and I think we should level it off with concrete. This would have been done by the contractors, only that they ran out of cement, and the delay which would have been occasioned by sending for more would have been considerable, and I did not think it wise to have them remain there. One man could fix this up in a few days—say 1 week—and about 3 barrels of cement ought to be sufficient to do the work. About $30 ought to cover the whole cost of this work. The railing was very well placed, and it is satisfactory to me. I am inclosing copy of report received from my foreman and inspector at Little Hope island, in which he reports that the steel bars were all placed as shown and that the work was well and strongly built. The tower is now ready to receive the lantern, and I think that no danger will result if it is put on at once. Instructions should be given the erector to see me before he proceeds to the island, as I may be able to give him valuable information. In the case of the Cape Race tower, I was away when a man from England arrived, and I was not advised that he was there, so that he went to Cape Race without seeing me, and this occasioned great inconvenience, both to him and to myself. I am inclosing three views of this Little Hope tower, which I took at the time of my inspection. You will notice in one of them that the men are standing on the foundation which I have had built for a new dwelling which is to be erected there. This work is very well done indeed. I may say that the cement used by the contractors was supplied by the department. They used 67 barrels last year, which cost us $2.02½ each, or $135.67; and 123 barrels this year, which cost us $2.15 per barrel, or $264.45; making in all, for the cement, $400.12. This, together with the $30 which I estimate it will cost to fix the underside of the stairway, would make a total of $430.12 to be deducted from the amount of contract due to the contractors.

P.S.—I do not think the contractor should be allowed any extra for depth of

foundation, as I explained to him fully the nature of the soil before he took the contract, last year.

July 17.—Chief Engineer reports to above effect to Steel Con. Co.—End of file 20269.

File 21084.

Matane: Wallberg says foundation sand.—Chief Engineer objects to such contention. Memo. for Mr. B. H. Fraser.

October 19, 1906.—Wallberg called me up on the phone to say that he had a report from Matane that the foundation was sand. I told him that we were aware that there was no rock there, but that the foundation was a good stiff soil, and that he would have to make his tower foundation sufficiently heavy to prevent either displacement or excessive vibration. W. P. A.

'Records--Get sufficient memos. on this file to show how work of building was initiated. W. P. A. 24/10/06.' Endorsed: 'Specification distinctly covers this. 22/10/06. B. H. F.'

Parent explains why work at Matane was not inspected by him.

Dec. 15.—P. E. Parent, R.E., Quebec: With reference to the new lighthouse under construction at Matane. I have the honour to inform you that nothing has been done there this fall, except the excavation for the foundation and the delivery of a certain quantity of construction materials. Therefore, I did not think it advisable to drive the 30 miles between Little Métis and Matane, owing to the very bad and stormy weather prevailing the day I was there. I may also state that if I have not visited Métis and Matane before the 12th inst., it is entirely due to the fact that the roads were reported absolutely impassable, either with winter or summer rigs. Besides this, it was necessary for me to be in Quebec to look after the men that returned from the straits, the last gang returning on the 9th inst.

Wallberg wires department about sending tower materials to Matane.

May 7, 1907.—E. A. Wallberg telegraphs from Moncton to department: 'Please arrange schooner transport our tower materials, Quebec to Matane. Whole month delay for steamer serious. Wire Moncton.' (Refd. to Cf. Eng. F. G.)

Deputy replies.

May 7.—Deputy to Wallberg: I beg to confirm my telegram of to-day: 'Our engineer went fully into matter transport material with Warren. He promised to make proposal. Will give same full consideration when received.'

File 28075.

International Marine Signal Company purchase file.

December 22, 1906.—Memo. to Clerk, P.C., January 14, 1907; approved by the Governor in Council, December 22, 1906.

On a report dated December 11, 1906, from the Minister of Marine and Fisheries, stating that he has had under consideration the recommendations of the Lighthouse Board of Canada, passed at a meeting held on October 17, 1906. The minister recommends, in order to carry out that portion of the improvements recommended relating to the establishment of gas buoys and gas beacons, that authority be give to him to purchase from the International Marine Signal Company, Limited, the following gas buoys and gas beacons for the localities mentioned below, viz.:—

14 gas buoys and beacons (8 buoys, 6 beacons), amounting to $54,150.

3 x $9,550, 2 x $3,750, 3 x $3,000, 6 x $1,500 = $54,150.

December 26, 1906.—Extract from report of Committee, P.C., December 26, 1906:

On a memo., dated December 17, 1906, from the Minister of Marine and Fisheries, recommending that authority be granted to purchase from the International Marine Signal Company, Limited, the following gas and bell buoys, to be placed at points indicated below:—

Yarmouth Harbour, combined gas and bell buoy, $3,750.
Hantsport: Combined gas and bell buoy, $3,750.
Eastern Point reef, Lunenburg: Combined gas and bell buoy, $3,750.
$11,250.

January 10, 1907.—Deputy writes T. L. Willson, president International Marine Signal Company, Limited: 'I have to instruct you to ship to Captain Jas. Gaudin, agent of department at Victoria, B.C., marked for Middle Bank, Strait of Fuca:

'One gas buoy, No. 11, with bell.
" for Sand Head, Fraser river.
" (spare one), for Sand Head, Fraser river.
" No. 8½, with bell, for Comox bar.
" No. 8½, with bell, for Ledger's reef, off McNeill point.
" No. 8½, with bell (spare one), for Ledger's reef, off McNeill pt.
' No. 7½, for Boat point, Sarah island.
' No. 7½, for Zero rock, Rivers inlet
' No. 7½, for West rock or Clark rock, Gulf of Georgia.
' No. 7½, for Fog rock, Fitzhugh sound.
" No. 7½, for Gibson reef, off Gibson.
" No. 7½, for Morning reef, Klewnugget.

'In all: 3 No. 11 gas buoys, with bells; 3 No. 8½ gas buoys (one with bell); 6 gas beacons, No. 7½.'

BUOY SERVICE—T. L. WILLSON, INTERNATIONAL MARINE SIGNAL CO.

Willson tender's for buoys.

Otober 5, 1904.—Willson tenders for aut. gas buoys, with understanding that materials necessary to import shall be free of duty: No. 5, 5 ft. 9 in., $2,000; No. 7, 7 ft. 3 in., $3,000; No. 9, 8 ft 10 in., $5,000.

August 6, 1904.—Willson writes deputy that he has under construction three gas buoys, and offering them for test and report.

J. F. F. has instructions to test buoys.

August 12, 1904.—Deputy acknowledges receipt of above letter 6th, and informs him that J. F. F. has instructions to take over these buoys, test same and report.

C. of L. apparently doing Willson's work.

September 27, 1904.—Commissioner of Lights writes to Powers & Co., boilermakers, Ottawa (in absence of Willson) about bitumastic solution to apply to both interior and exterior of the gas buoys now being built for this department.

Letter from English buoy manufacturer. He is turned down.

September 30, 1904.—Letter received from James Thomson, president Engineering Works, Wolverhampton, Eng.; desirous of being put into communication with the Chief Engineer of Lighthouse Board, to bring before him specialties in the way of welded gas buoys.

October 2, 1904.—Memo. J. F. F. *re* above letter: 'As the Willson gas buoys have been tested he cannot see that the department will require any welded gas buoys, as those which Mr. Thomson desires to bring to the notice of this department.' This memo. is suggested by J. F. F. as a suitable reply to Mr. Thomson.

October 7, 1904.—Thomson was written to in these terms, and so squelched.

Lengthy memorandum by J. F. F. and B. H. F. in favour of Willson's buoys.

October 7, 1904.—J. F. F. writes a memorandum, B. H. F. apparently joining (four foolscap pages) on the merits of the Willson gas buoys, winding up with a recommendation to order from Willson 12 No. 5 buoys ($24,000), 20 No. 7 buoys ($60,000), and 10 combined gas and whistling buoys, No. 9 ($50,000); total, $134,000, exclusive of four buoys already on hand.

Willson notified that test of his buoys was successful.

October 7, 1904.—Deputy answers Willson that acetylene gas buoys have been successfully tested, and that acetylene has been adopted by the department as the illuminant for its gas buoys (marked 'Concurred in, F. G., 8/10/04, and initialled R.P.)

And that they would be used exclusively by the department. Orders $148,000 worth.

October 11, 1904.—Deputy writes Willson that J. F. F., who has tested the buoys, advises that they possess a number of advantages over the type previously in use, and that the automatic gas buoys be used exclusively by the department; and concludes by ordering 12 No. 5, 23 No. 7, and 11 No. 9—in all 46—cost $148,000. Imported materials to be admitted free of duty.

Automatic buoy for Zephyr Rock, Straits of Northumberland.

October 12, 1904.—Memo. by J. F. F.: That an automatic gas buoy should be provided for Zephyr Rock, Strait of Northumberland.

C. of L. already improving new buoy by suggesting submarine bell attachment.

January 3, 1905.—C. of L. writes Willson asking blue prints giving the dimensions and showing the water lines of the No. 7 buoy, as it may be possible to make arrangements with the Submarine Signal Co. to attach to these standard buoys their submarine bell device.

A number of buoys already finished.

February 7, 1905.—Willson informs deputy that a number of automatic buoys are finished, and asking shipping directions.

Ship to Quebec and Prescott.

February 20, 1905.—Deputy to Wilson: Instructs him to ship his No. 7 gas buoys, now ready, to Quebec agency in car lots. The No. 5's you will ship in car-load lots to agency at Prescott.

Invoices for 504-514 11 buoys.

March 2, 1905.—T. L. Willson writes he is inclosing invoices in triplicates for Nos. 504-14 inclusive, eleven automatic gas buoys.

Minister wants all papers concerning Willson buoy business put before him. Will probably ask for tenders under new law.

May 12, 1905.—Memorandum for Deputy Minister (by Minister): Please place before me report to Council and all documents concerning the order for new apparatus to Willson. I will probably, after consulting with my colleagues, ask for tenders under the new law (initialled R.P.)

At foot of above: Report to Council prepared March 6, and original given to minister. Copy filed in office of commissioner of lights—Signed, J. F. F.

Prescott writes about charging cost of buoys which they have reshipped.

May 9, 1905.—W. H. N., Asst. C. of L., to C. of L., *re* account of T. L. Willson, asking if $9,000 charged for buoys shipped to Lévis are to be charged to Quebec buoy service from this depot (Prescott) and the amount credited the advance of $30,000 charged against this depot.

C. of L. gives him instructions.

May 18, 1905.—C. of L. to W. H. N.: 'Your letter, 9th inst., *re* gas buoys shipped to Lévis, I have to inform you that the buoys have been inspected and passed at Ottawa and the accounts certified here. The advance of $30,000 charged against the Prescott depot should be charged to general account, and only those buoys which were actually used between Moncton and Kingston charged to Prescott. I have made a memo. to this effect for Mr. Owen.

Automatic Acetylene Gas Buoys and Beacons.

1904.—In the fall of 1904 the acetylene gas buoy was taken up by the department, after a test by the commissioner of lights, deemed to be entirely satisfactory. Immediately after the test that officer drew up a memorandum on the subject ending with a recommendation to order from T. L. Willson, the manufacturer, twelve 5′ 9″ buoys at $2,000 each ($24,000) twenty 7′ 3″ buoys at $3,000 each ($60,000) and ten combined

gas and whistling buoys $5,000 each ($50,000) in all $134,000, exclusive of four buoys already on hand.

A few days afterwards an order was sent to Willson for a slightly larger amount, namely for $148,000 to consist of 12 No. 5 buoys at $2,000 each, $24,000; 23 No. 7 buoys at $3,000 each, $69,000; 11 No. 9 buoys at $5,000 each, $55,000=$148,000.

No. 7 Buoys shipped Quebec, No. 5 Buoys to Prescott, in carload lots.

1905.—In February Willson reported that a number of these buoys were completed and asking for shipping directions. On February 20 the deputy instructed him to ship the No. 7 buoys to J. U. Gregory, the Quebec agent, and the No. 5 buoys to the Dominion Lighthouse Depot, Prescott, all in carload lots, by C.P.R.

Prescott to prepare 18 Connecting Tubes for No. 7 buoys for Quebec.

February 22.—The commissioner of lights instructs his assistant at Prescott to prepare and hold in readiness for shipment 18 connecting tubes between buoy and lantern for No. 7 antomatic gas buoys, with necessary valves and fittings. They will probably be required for Quebec agency.

Instructions to Halifax about Painting Buoys.

March 9.—The Commissioner of Lights writes to the Agent of the Department at Halifax:: 'Referring to automatic buoys sent your agency, these have been covered with two coats bitumastic solution. If it is necessary to paint these buoys they should be covered first with a patent knotting varnish in order that the bitumastic solution may not discolour the red paint. A similar letter was written to the Quebec agent, and 13th March telegram sent to each agent on this subject.

Same to Quebec.

March 13.—The Quebec agent replies by telegram to the Commissioner of Lights as follows: 'Captain Koenig in Ottawa. Explain buoy painting matter there.'

Automatic Gas Buoys shipped by Willson to date.

March 14.—Willson writes to Deputy: 'In accordance with verbal request from your department, I give you below a memo. of the automatic gas buoys, shipped to date to the order of your department August 22, 1904, September 30, and October 13, Nos. 501, No. 5, 502, No. 7, 503, No. 7 (3) delivered to Prescott; December 31, 1904, February 15, 1905. Nos. 504, No. 9, 507 No. 7, delivered to Halifax, February 21, 1905. No. 505, No. 5, stored. February 22, 1905. Nos. 506 (No. 7), 508 (No. 7) delivered to Halifax, February 25, 28, March 2, Nos. 509, 514 (No. 7) delivered to Quebec.

March 31.—Nos. 515 and 516 No. 7 buoys were also shipped to Quebec.

April 5, 1905.—No. 7 buoys (3) Nos. 517-520, No. 7, inclusive were shipped to Quebec.

April 12, 1905.—No. 7 buoys (2) Nos. 521-523, No. 7, were shipped to Lévis as per instructions. Also one (without number) No. 7.

May 1, 1905.—No. 5 buoys (3)—No number—shipped to Port Arthur.

May 6, 1905.—No. 5 buoys (3) Nos. 530-2—shipped to Prescott.

May 9, 1905.—Prescott ships three gas buoys to Lévis.

May 13, 1905.—Three No. 5 buoys, Nos. 533-5-6 shipped to Prescott.

Canadian Bank of Commerce manager informed that Department owes Willson $99,000.

May 15.—Deputy writes manager Canadian Bank of Commerce, Ottawa, as follows: 'This is to certify that the department owes to Thos. L. Willson on a contract

for gas buoys the sum of $99,000 which sum will be paid as soon as appropriations are available. The balance of the contract—$10,000—will be payable when the final delivery of the buoys is made.

Wllson offers to furnish a Lightship Buoy 11 feet by 14 feet for $15,000, and a smaller one for $8,500.

May 17.—T. L. Willson writes Deputy: 'Referring to your letter file 26283 of May 10. I beg to state that I will furnish to your department a large lightship buoy 11 x 14 feet in plan, having whistling tubes 4 feet in diameter and arranged to carry your departmental lantern at an elevation 30 feet above the water for $15,000; and a smaller lightship buoy, circular, 11 feet in diameter, whistling tubes 3 feet, $8,500, detail plans of which are now being prepared.

Willson asked for plans, prices, &c., for Gas Beacons on same principle as Gas Buoys.

June 15.—Deputy asks Willson to furnish him with plans, specifications and prices for gas beasons operating on the same principle as automatic acetylene gas buoys. It is probable that an automatic beacon light would be of service to the department in British Columbia.

Willson names $1,325 for half ton carbide capacity.

June 22.—Willson replies—says price for beacon holding half ton of carbide would be $1,325. Detailed plans will be furnished in the near future, to the department.

Startling Recommendation by Commissioner of Lights.—Endorsed by Minister and acted upon.—Marked on Margin 'File no action' July 31, 1905. J. F. F.

July 6.—Memorandum by Commissioner of Lights.

On the 6th March, 1905, the undersigned prepared a memo. giving facts and figures with reference to the signal buoy service of the Dominion. The salient points were the recommendation to provide 40 standard automatic lighted whistling buoys at $3,750 each. This matter was not acted upon at the time, but the supplementary estimates for 1905-6 contain an amount of $360,000 to provide for these changes. Since the introduction and testing of the standard lighted whistling buoys two new and much larger types have been evolved. The standard whistling buoy heretofore adopted is 9 feet in diameter, carries twin whistling tubes 20″ in diameter, has a 10″ whistle and carries its light 10 feet above the sea-level, and costs $5,000. A much larger and more powerful type is now available, 11 feet in diameter with twin whistling tubes 36″ in diameter, carries an 18″ whistle, has four times the whistling capacity of the standard type, and carries its light 30 feet above sea level, and is a practical substitute for a lightship. The cost of this is $8,500.

A still larger buoy is available for special positions, elliptical in plan, the axis of the ellipse being 11 and 14 feet. It carries twin whistling tubes 4 feet in diameter, has an 18-inch whistle with six times the whistling capacity of the standard buoy, and carries a powerful light 30 feet above sea level.

In view of the larger and more powerful types available, the undersigned is now prepared to recommend that these be substituted for the smaller standard lighted whistling buoy.

Owing to the inability of the undersigned to visit Nova Scotia at the time, Mr. Hutchins, superintendent of lighthouses, came to Ottawa, and the question of the improvement of the coast signal buoy service was thoroughly discussed with him; and the undersigned now recommends that the department place orders for the following apparatus, viz.:—

1. Two elliptical lighship gas buoys, 11 x 14 feet, at $15,000 each, for Halifax and Blonde rock ($30,000).

2. Thirty cylindrical lightship gas buoys, 11 feet in diameter, $8,500 each ($255,000).

3. Twenty-five standard No. 7 gas buoys, at $3,000 each ($75,000).
Total, $360,000.

(Note: At the beginning of this memo. he states that the standard whistling buoy heretofore adopted is 9 feet in diameter carries twin whistling tubes 20 inches in diameter, has a 10-inch whistle and carries its light 10 feet above the sea level, and costs $5,000).

These latter (the 25 standard No. 7's) to complete buoyage required for Quebec agency, and partially replace the 39 Scout Kingston type of gas buoys withdrawn from the service.

In order to obtain this material within the fiscal year for which the appropriation is available, the undersigned recommends that it be ordered immediately. (Initialled J.F.F., R.P.).

Twelve No. 5 buoys ordered.—Destination to be given later.

July 12, 1905.—Deputy advises T. L. Willson that the department will require 12 No. 5 automatic gas buoys to be placed in hand, and advise when the department may expect delivery of the same. Shipping directions to be given later.

July 19, 1905.—T. L. Willson acknowledges receipt of the order for 12 automatic gas buoys, No. 5.

New standard No. 8½ instead of old No. 7.

July 19, 1905.—T. L. Willson informs the Deputy that in future the standard automatic gas buoys will be different in form, being hemi-spheroidal in shape, and 8½ feet in diameter, this being the strongest form and a very great improvement over the existing form.

Eight No. 9 buoys for Halifax.

July 21, 1905.—Willson ships 1 buoy, gas and whistling, No. 9, No. 543, to Halifax.

July 25, 1905.—Willson sends invoice for 7 No. 9 gas and whistling buoys Nos. 539, 541-2, 544-7, held to the order of the department (most of these shipped to Halifax shortly afterwards—Aug. and Sept.) See Parsons' letter 10th Aug., 1905, below.

Fifty thousand dollars paid Willson.

July 27, 1905.—Deputy sends Willson cheque for $50,000 in payment for 10 auto. buoys.

July 28, 1905.—Willson notifies that he has shipped 27th July to Halifax 1 No. 9 gas and whistling buoy, serial No. 542.

August 3, 1905.—Willson notifies that he has shipped 2nd August to Halifax 1 No. 9 gas and whistling buoy, serial No. 541.

Gregory instructed to remove lantern supports from all auto. gas buoys sent him and forward same to Ottawa.

August 3, 1905.—Gregory acknowledges Deputy's letter 21st ulto., instructing him to remove the lantern supports from all the automatic gas buoys which have been sent to his agency, and ship the same, in one car load if possible, to P. J. Powers, Ottawa. He says that he has shipped seventeen lantern supports to Powers. (What was the meaning of this?).

August 8, 1905.—Willson advises having shipped 5th Aug. to Halifax 1 auto. gas buoy, serial No. 539, No. 9.

Experiments for altering and reducing weight of lantern supports made by Willson's engineer, and change recommended.

September 6, 1905.—Frank Creelman, in the employ of T. L. Willson, writes to the latter on the subject of lantern supports; seemed desirable to determine whether

these lantern supports could be made strong enough without making the structure weigh too much. We had an experimental support 6½ feet high constructed exactly like the standard support, except the two lower panels are omitted, and the main leg angles are somewhat heavier than in standard, and he continues on giving details and explanations, and concludes by saying that he is of opinion that supports of 6½ feet and 5 feet high, will be amply strong, constructed like the experimental one; and he would recommend that all lantern supports of the sizes mentioned above be made with legs of 2½ x 2½ x ⅜-inch angles, and the two lower panels of bracing omitted. In addition to overcoming the objections with regard to icing up, the new type of support will render the generator more accessible for cleaning and recharging.

September 18, 1905.—Willson advises having shipped to Halifax 2nd Sept. 1 No. 9 auto. gas buoy No. 545, as per instructions.

Commissioner of Lights approves Creelman's suggestions.

September 11, 1905.—Willson sends to Commissioner of Lights copy of Creelman's report on the subject of lantern supports, and he replies approving of Creelman's suggestions.

Freight on buoys shipped to Halifax.

August 10, 1905.—J. Parsons, agent M. and F., Halifax, writes that he has had to pay the freight on three buoys at $72 each and $82 for a fourth buoy, the difference of $10 being for blocking the buoy. I have no knowledge of the terms on which the buoys were built, whether the shippers should pay the freight or not. Space for storing these large buoys at the present time is exceedingly limited. Please advise.

Deputy replies to Halifax agent about freight and storage facilities.

September 13, 1905.—The Deputy evidently took about 32 days to answer this letter. He acknowledges receipt of it on 13th Sept., and states that the buoys are received by the Department at Ottawa and the freight is paid by the department. I am aware that the facilities are limited, and the department has under consideration the question of providing proper facilities at that point.

September 19.—Willson advises having shipped to Halifax, on September 18, 1 No. 9 aut. gas buoy, Serial No. 547.

Commissioner of Lights instructs Willson to adopt new style of lantern support for No. 5, No. 6½, No. 7, No. 8½ and No. 9 types of buoys.

September 20.—The Commissioner of Lights writes T. L. Willson, acknowledging receipt of his letter of 11th inst., covering report of experiments made as to the strength of lantern supports proposed to be furnished by you for gas buoys. He is of the opinion that, from the results obtained, the type of lantern support proposed is sufficiently strong to meet our service conditions; and, furthermore, renders access to the valves easier, and lessens the chance of ice accumulating. You will therefore please furnish these supports for the following sizes of buoys, viz.:—Nos. 5, 6½, 7, 8½ and 9.

Superstructure No. 7 valveless buoy shipped to Willson.

September 25.—Assistant Commissioner of Lights, Prescott, writes T. L. Willson that he has shipped to his address one superstructure belonging to No. 7 valveless buoy.

September 28.—Willson advises that in accordance with instructions from department shipped to Halifax, September 23, 1 No. 9 buoy, Serial 546.

Willson asked for list of all gas buoys made by him for department.

October 5.—The Commissioner of Lights writes Willson, requesting him to furnish a list of all gas buoys made by him for the department, with the serial numbers and where shipped. (See next page.)

Willson instructs Halifax agent as to lantern supports and lanterns.

October 10.—Willson sends commissioner of lights copy of a letter written by him (Willson) to Parsons, agent Marine and Fisheries, Halifax, on the subject of lantern supports and lanterns, indicating to him what to do.

New lantern support, with purifier, for 506.—One now on buoy to be removed and replaced by the new one.—Old one send here to have purifier fitted to it.—Previously shipped you new lantern support and purifier for buoy at inner automatic station.—This buoy will have to be taken in, as some fitting is required in attaching new support, but this can easily be done.

October 10.—T. L. Willson to J. Parsons: 'We have shipped you a new lantern support, fitted with a purifier, for buoy No. 506 (type No. 7). This is one of the standard gas buoys you have in service, either at Middle Ground or Neverfail. This support has attached to it a box containing the necessary connecting pipe valve and bolts to attach it to the buoy. The lantern support and lantern now on this buoy should be removed at the earliest opportunity and replaced by the new support and a clean lantern. This work could be done without taking the buoy out of service, if properly handled, on a day when the weather is not too rough. Please return the old lantern support to us here, that we may fit a purifier to it and send it to you for the other standard gas buoy you have. (Should have three.) We previously shipped you, along with the last automatic gas and whistling buoy we sent you, a new lantern support with purifier for the buoy you have on the inner automatic station. It is intended to use the whistle and rubber ball valves now on the buoy. As there is some fitting to be done in attaching this new support to its buoy, it will be necessary to take this buoy in, which can, of course, be done in this case, as you have in stock spare buoys of the same type, with purifiers already attached. Please return us the old lantern support from this buoy also. When the above work is done, all the automatic gas buoys in your division will be equipped with purifiers.

Gas buoys received from Willson to date, 47.

October 10.—Willson sends Commissoner of Lights the following memo.:—Of all the gas buoys shipped him to the order of the department, viz., 501 to 547, inclusive = 47 buoys: to Prescott, 10 No. 5, 2 No. 7; to Halifax, 3 No. 7, 9 No. 9; to Quebec, 12 No. 7; to Lévis, 5 No. 5; to Port Arthur, 3 No. 5; to St. John, 1 No. 9; to Pt. du Chêne, 1 No. 9, and one gas and bell buoy now in shop. (For more minute particulars, see page 2, Miscellaneous Excerpts.)

October 12.—The Commissioner of Lights asks Willson for cuts of the buoys to be used in the illustration of the annual report. (Furnished file. J. F. F.)

See Minute of Lighthouse Board, 24 July, 1905, which passed the recommendation conditionally on one of the buoys being tested for 30 days successfully.

October 17.—Memorandum by Commissioner of Lights: Says he drew the attention of the minister to the necessity of making arrangements for certain lighted whistling buoys for the Maritime Provinces and standard buoys for other localities for which provision was made in the Estimates for 1905-6. This matter was referred to the Lighthouse Board, and provisional recommendation was given, pending a 30 day test of the buoys referred to. The test has since been carried out with a No. 9 gas and whistling buoy at the position indicated, viz., adjacent to the *Lurcher* lightship, and test was entirely satisfactory, as can be seen by the report of the captain of the lightship, attached herewith. The undersigned (J. F. F.) therefore recommends that the formal order be given to Mr. Willson, as the minister has already approved of memo. authorizing these buoys (July 6, 1905), and has advised Mr. Willson to proceed with work.

(On the margin of this memo. is written: 'I concur for minister's signature. F. G.' 'Minister directs that this order be given, as he has visited the works, and is satisfied with the work on hand, which he orders to be carefully inspected from time to time. 19/10/05. F. G.')

Order for buoys amounting to $360,000 given to Willson.

October 19.—Deputy Minister (countersigned J. F. F.) has to inform T. L. Willson that the department will purchase from you the following buoys, viz.:—

30 No. 11 combined gas and whistling buoys, No. 11, 11 ft. diameter, at $8,500 each—$255,000.

35 standard No. 8½ gas buoys, at $3,000 each—$105,000.

The price quoted above to be F.O.B., Ottawa. The necessary shipping directions will be given you from time to time, as the buoys referred to are ready for delivery.

October 26.—Willson writes Deputy: Acknowledging receipt of the order of October 19 for 30 No. 11 aut. gas buoys at $8,500 each, and 35 standard aut. gas buoys No. 8½ at $3,000 each; all of above to be suited for your departmental lanterns.

St. John agent asks for 3 gas and whistling buoys.

November 30.—F. J. Harding, agent, St. John, N.B., writes department, asking to be provided with three combined gas and whistling buoys, three combined gas and bell buoys and three gas buoys, for the use of the agency.

(This letter was not answered until January 18, 1906.)

Auditor General asks under what authority $40,000 was paid Willson.

December 22, 1905.—The Auditor General writes deputy and wants to know upon what certificate was made the payment of $40,000 to Thos. L. Willson.

(Crossed: 'Minister's authority. F. G.')

Resident Engineer, Halifax, wants to know how the combined gas and whistling buoys are moored, also the gas and combined bell buoys.

December 30.—J. A. Legere, resident engineer, Halifax, writes Commissioner of Lights, asking for plan showing how the combined gas and whistling buoys are moored; also the gas buoys and combined bell buoys, as it is outside of his jurisdiction; and that the agent at St. John, N.B.—Mr. Harding—having asked him (Legere), he thought he would write for it.

(Note: This letter was not answered until January 30, 1906.)

January 8, 1906.—Deputy writes to Auditor General inclosing certificate *re* payment of $40,000 cheque No. 24,420 to T. L. Willson, Ottawa.

Deputy to Auditor General in Explanation of Buoy Transactions.

January 8, 1906.—Deputy writes Auditor General: 'I have to acknowledge receipt of your letter of the 20th ulto. calling attention to the following payments made during last year from the vote for the construction of lights, viz.: T. L. Willson, Ottawa, $192,500. With reference to this amount I have to state that it was not practicable to call for tenders for gas buoys furnished by Willson inasmuch as they are patented and only supplied by him. I may add, however, that the prices charged for all gas buoys are proportionately to the gas contents of the same, and on this basis, the buoys supplied by Mr. Willson cost the department about one-half as much as the gas buoys furnished heretofore.

12 *No. 5 Buoys Ordered to be Shipped to Prescott.—No Evidence of these* 12 *Buoys having been Shipped.*

January 9, 1906.—The commissioner of lights instructs Willson to ship the twelve No. 5 automatic gas buoys which you have held for some time for this department, to the Dominion Light Depot, Prescott. Before doing so you will communicate with W. H. Noble to find out if the C.P.R. siding into the yard is open; and in any event you will please ship by the Grand Trunk, as the G.T.Ry. have agreed to absorb the switching charge from their tracks into the department. The automatic gas beacon has been, on instructions from me, forwarded to you from British Columbia. (Query: Why?)

(Note.—Memo. given by Willson, October 10, shows ten No. 5 buoys and two No. 7 buoys shipped to Prescott. It would seem from the instructions now given that these buoys had never left Willson's premises.)

SPARKS' CHAMBERS (Room 49),
OTTAWA, February 19, 1908.

Col. F. GOURDEAU,
Deputy Minister Marine and Fisheries Department,
Ottawa.

DEAR SIR,—We find that a letter was addressed by you to Mr. T. L. Willson on July 12, 1905, to the effect that the 'Department will require twelve No. 5 automatic gas buoys to be placed in hand, and advise when the department may expect delivery of the same. Shipping directions to be given later.'

On July 19, Mr. Willson acknowledges receipt of the order for twelve No. 5 automatic gas buoys.

On January 9, 1906, the Commissioner of Lights instructs Willson to 'ship the twelve automatic gas guoys, which you have held for some time for this department, to the Dominion Lighthouse Depot, Prescott.'

We can find no subsequent trace of these buoys, and shall be glad if you can explain what became of them.

Your obedient servants,

THOS. FYSHE,
P. J. BAZIN,
Civil Service Commissioners.

The Deputy Minister replied as follows: February 21, 1908.

I have just received your letter with reference to the disposition of twelve No. 5 gas buoys ordered by this department from Mr. T. L. Willson on January 9, 1906, and stating that you are unable to trace the disposition of these buoys. I must say that I was surprised that there should not be a proper record of this matter, and took occasion to look into it personally, and I send for your information files Nos. 27122 and 26860, together with the official 'record of automatic gas buoys, book No. 1, which belongs to the Commissioner of Lights Branch, and I have marked the portions of the files and of the record book referring to the disposition of these buoys. You will observe that instructions were given to the manufacturer to ship these buoys to Prescott, that later directions were given to the L. H. Depot at Prescott to ship certain of these buoys to New Brunswick, that to avoid expense the L. H. depot directed the manufacturers to make the shipment from Ottawa, and further, that the remaining buoys, covering the buoys not directed to be sent elsewhere, were sent to Prescott. I have no objections to give the Civil Service Commissioners any information which may be required with reference to the operation of this department, but at the same time I am advised that the facts upon which you want information are not within the scope of your inquiry.

SPARKS BUILDING,
OTTAWA, February 26, 1908.

Col. GOURDEAU,
Deputy Minister Marine and Fisheries Department.

DEAR SIR,—We have to acknowledge receipt of your letter of 21st instant in explanation of the inquiry made in our letter of 19th instant. Your explanation does not quite fit the facts—inasmuch as the nine buoys shipped to Campbellton and Chatham and three to Prescott at the time named, were all type No. 6 buoys. The twelve No. 5 buoys which we inquired about were ordered from Willson not on the 9th of January, 1906, as you say, but on July 12, 1905. The order was acknowledged by Willson on July 19, 1905, and on January 9, 1906, when the Commissioner of Lights instructed Willson to send the buoys to the Dominion L. H. depot, Prescott, he described them as the twelve No. 5 automatic gas buoys which you have held for some time for this department.

Some further explanation would seem to be necessary.

Your obedient servants,

THOS. FYSHE,
P. J. BAZIN,
Commissioners of the Civil Service.

Auditor General asks what Precautions Department have taken with Willson Buoys—there being no Competition.

January 11, 1906.—Auditor General to Deputy: Referring to payments, amounting to $192,500 to T. L. Willson and asking (as competition not possible, Willson being the only maker) if the deputy had taken the necessary care to ascertain the cost of these buoys and their superiority over the buoys heretofore used in the lighthouse and coast service of Canada. Would not the excellence of manufacture, the quantity of material used and the record of the proposed buoy in other countries be considerations to be taken into account, in addition to its capacity, before finally deciding to adopt the buoy offered by Mr. Willson, in preference to the one in use at the time? I shall be obliged therefore if you will let me know in what manner you satisfied yourself in regard to these features of the buoys in question before finally deciding to accept them in preference to the buoys in use at the time.

Are the Willson buoys manufactured in Canada, and are they used elsewhere than in connection with the lighthouse and coast service of Canada?

Payment to Willson, $40,000.—Further certificate wanted from J. F. Fraser.

January 11.—The Auditor General writes *re* payment of $40,000 in favour of Willson. Finds that J. F. F.'s certificate does not state the value of the buoys delivered to the department and accepted, as in all respects according to contract at the time he certified, for the minister's information, that it would be proper to make an advance of 80 per cent of the contract amount. Please obtain from Mr. J. F. Fraser a further certificate to this effect.

Washington asks for Information about Willson Automatic Acetylene Gas Buoys.

January 15.—Department Commerce and Labour, Lighthouse Board, Washington, writes to Deputy: 'The board has the honour to ask what class, if any, of acetylene buoys are in use in the Canadian lighthouse service; the cost of these buoys, how they act, and if they have proven to be satisfactory in Canadian waters. The board also beg to ask if the Department of Marine and Fisheries can recommend the use of these buoys to the United States lighthouse establishment?

Willson informs J. F. F. what the Standard Gas Lighted and Combination Whistling Buoys for 1906 will be, as if it depended wholly on himself, the Department having to take what he says.

January 17.—T. L. Willson writes J. F. F., Commissioner of Lights: that the standard gas lighted and combination whistling buoys for 1906 will be:—

A. Standard buoys suited to carry 300 m/m occulting lanterns, 9 feet above water, capable of giving 30 times the light of the usual compressed oil, gas or Pintsch buoy now in service.

B. Eleven feet diameter cylindrical whistling buoys suited to carry 375 m/m occulting lanterns 30 feet above water, giving a light equal to about 3rd order lighthouse, and each carrying two whistling tubes 3 feet in diameter—draught about 27 feet.

C. Eleven by fourteen and a half feet oval whistling buoy suited to carry 500 m/m occulting lanterns 30 feet above water, giving a light about equal to a second order lighthouse, and each carrying 2 whistling tubes 4 feet in diameter—draught about 27 feet. Both of the latter have eighteen inch diameter whistles. (File—no action, January 17, 1906. J. F. F.)

Deputy Replies to St. John Agent's Request of November 30, last.

January 18.—The deputy acknowledges receipt of St. John agent's letter of November 30, and stating that the department cannot at present accede to his request, but the buoys will be sent to you as soon as they are manufactured, possibly by the 1st May.

(A memorandum dated January 18, says: 'One of the gas buoys referred to for St. John harbour has already been shipped from Prescott.)

Improvement in lantern support on buoys suggested by Captain Johnson of 'Lady Laurier.'—Willson would like to know if Department Desires it.

January 18.—Willson writes Commissioner of Lights: On a recent trip to Halifax our Mr. Creelman had his attention called by Captain Johnson of the *Lady Laurier* to the advisability of omitting the platform plates from the lantern supports of our Standard gas buoys, as they are likely to gather ice, and in his opinion they are not needed for attending to lanterns. We would like to know if the department desires us to omit these plates, we to put the holes in the supporting angles and supply the platform plates ready to rivet on, if at any time the department should desire to have them.

The Commissioner of Lights approves of the suggestion.

January 22.—Commissioner of Lights replies: It may possibly be that the omission of those plates would prevent the accumulation of ice on the upper part of the lantern support; and as this is a matter that can only be determined after a trial, I have to request you to omit the plates from the standard gas buoys to be supplied. But you are to put the holes in the supporting angles and in the platform plates which otherwise would go on the gas buoys, and ship to the Dominion Lighthouse Depot at Prescott, with a covering letter explaining the object of the shipment.

(Note: The chief engineer does not appear to have been consulted about this, nor any one else.)

Deputy replies to Washington about the Willson buoys.

January 29.—Deputy writes U.S. Naval Secretary, Lighthouse Board, Washington: 'The low-pressure buoys are Willson type. The buoys which have been received and are in the service are Numbers 5, 7 and 9. Orders have been placed for Nos. 8½, 11 and 14. The prices paid, or contracted for, by the department are as follows:—No. 5, $2,000; No. 7 and 8½, $3,000; No. 9, $5,000; No. 11, $8,500, and No. 14, $15,000. The buoys in service have given satisfaction, and the number in use

is to be material increased; and the Willson acteylene low-pressure buoys can be recommended by the department.

January 30.—Commissioner of Lights to J. A. Legere, Resident Engineer, Halifax, inclosing blue prints covering the method of mooring automatic gas buoys.

January 31.—Deputy writes another letter to U.S. Naval Secretary: Going over exactly the same ground, then goes on as follows:—This department has had in the past considerable difficulty in carrying out its policy of providing an efficient buoy-lighting system, and has taken great pains to test and investigate the Willson buoy, with the result that it has been fully adopted; and the department purchases no other types. It is regarded as a distinct improvement on all others which the department has used. I can, therefore, recommend it to your board. Some detailed information appears in the report of this department for 1904 and in the report for 1905, which will be issued shortly. Should you desire, I will be pleased to forward you copies.

Willson instructed to place receptacle for attaching submarine bell on buoys, in place of bracket as at present.

February 9.—Deputy to Willson: 'I have to instruct you to place the necessary receptacle for attaching the submarine bell to the buoys in place of the cast steel bracket which the specifications provide, on the understanding that this change entails no additional cost to the department.

Willson wants shipping instructions for some No. 11 buoys now ready.

March 10.—Willson informs the department that he is ready to begin delivery of some of the No. 11 lighted whistling buoys, complete, and asking for shipping instructions.

They go to Halifax.

March 12.—Deputy (J.F.F.) instructs Willson to ship the No. 11 buoys to the agent of the department at Halifax.

J. F. F. so advises Halifax agent, and instructs him about a whistling test.—After whistling test made, No. 11 buoys to take places of Courtenay whistling buoys and No. 9 gas and whistling buoys.

March 12.—Deputy (J. F. F.) writes Parsons, department's agent at Halifax: 'I am advised by the manufacturer that some No. 11 lighted whistling buoys are ready for shipment. Instructions have been given to ship these to Halifax. You will arrange to have the first two buoys held at Halifax until the department is able to determine whether the 12-inch or the 18-inch whistle is the more suitable for this type of buoy. When this information has been obtained, the No. 11 buoys are to be placed in the exposed positions off the Nova Scotia coast, replacing the present Courtenay whistling buoys and the No. 9 gas and whistling buoys.

Secretary of Shipping Federation, Montreal, pays his respects to the Deputy and to Willson, and suggests experiments with a red flashing light.

March 13.—Thos. Robb, Manager and Secretary, Shipping Federation, writes Deputy, saying that a deputation of their federation had been inspecting the works of the Willson Gas Buoy Company. The members were much pleased at the department having given them the opportunity of seeing the manner in which the construction and details are being carried out. Suggests making experiments to show whether a red flashing light cannot be obtained to show as far as a white flashing light, so as to illustrate the advantage of such an improved system as we learn has been adopted in Great Britain and the United States, in connection with the different river channels.

Deputy sends Willson copy of above letter, and says what he has promised.

March 16.—Deputy writes Willson copy of above letter. I have replied that as soon as the large gas lanterns were received, that the test asked for would be carried out. Please advise me when you expect to receive the 375 mm. lanterns.

New lantern for automatic buoy No. 502, No. 7, Prescott.

March 16.—T. L. Willson advises having shipped a new lantern for automatic buoy No. 502 to breakwater contractor, Prescott. (No. 502 was second buoy constructed for the department.)

Two No. 11 buoys for Halifax, 560, 561.

March 16.—Willson advises having shipped two No. 11 combined gas and whistling buoys to Halifax. Serial Numbers 560 and 561.

Deputy asks Halifax agent to advise him when whistling buoys arrive. Department will send expert to supervise test.

March 24.—Deputy writes Parsons, Halifax agent, asking him to advise when the two lighted whistling buoys reach Halifax, &c. It is the intention of the department to send from Ottawa a competent person to supervise the tests.

Three cars buoys arrive at Halifax from Prescott.

March 26.—W. H. Olive, agent I.C.R., Montreal, wires J. F. F., Commissioner of Lights, that 3 cars of buoys have arrived at Halifax on 23rd from Prescott—864, 896 and 894. Please advise Willson. (Why from Prescott, and what buoys were they?)

Parsons advised.

March 26.—Same day, Deputy wires Parsons, Halifax: 'Three cars No. 11 buoys in Halifax. When can *Laurier* place these two to carry out whistle tests?'

Prescott receives 3 No. 6 from Willson, and wants invoice, 550, 553, 558.

March 27.—W. H. Noble, Prescott: 'On the 14th February we received by G.T.R. three No. 6 type buoys from T. L. Willson. Could you obtain an invoice for this material?'

Commissioner of Lights instructs Willson regarding these. His reference to 12 No. 6 buoys not intelligible.

March 29.—Commissioner of Lights, in connection with above, writes T. L. Willson: 'A request has been received from W. H. Noble for invoice of three No. 6 (5?) gas buoys shipped by you to Prescott. The invoices for the 12 gas buoys ordered were received by this department; and I have to request you to send duplicate copies of invoice for 3 gas buoys to W. H. Noble.' (Must look into this.)

Duplicate invoice for 3 No. 6 buoys sent to Prescott.

March 29.—Commissioner of Lights writes to Assistant Commissioner of Lights, Prescott, that Willson has been requested to send duplicate invoices for the three gas buoys referred to in your letter. I may state, the invoices for these buoys have been received by the department, and the accounts paid.

Two No. 11 buoys arrived Halifax, March 24. 'Lady Laurier' not ready to make whistling test.

March 30.—C. A. Hutchins, Superintendent of Lights, Dartmouth, N.S., writes to Agent Marine and Fisheries, Halifax: The two 11-ft. lighted buoys recently sent from Ottawa arrived at Halifax on the 24th inst. They are still on cars at deep water terminus, as the *Lady Laurier* was off for repairs when they arrived. As the *Laurier* repairs will not be finished before April 15, and as she is then required to

proceed to the *Lurcher* lightship to supply water and coal, I beg to suggest that the testing of those 2 buoys be deferred until the *Laurier* returns from the *Lurcher.* Due notice can be given to the department. in order that the person appointed to supervise the tests may be here in good time.

Wilson advises improvements in No. 11 buoy, and offers to change the No. 9 buoys already delivered to the department to correspond with the other, free of charge to Department, on receiving them F.O.B. cars, Ottawa.

March 31.—T. L. Willson to deputy: Writes that improvements have been accomplished in the No. 11 combined automatic gas and whistling buoys. viz.:—

1st. The attachment of the receptacle for the submarine bell.

2nd. The increased height of the air chamber above the water in the whistling tubes.

3rd. The combined purifier head of the generator instead of being separate as in the No. 9.

I will make changes in the No. 9 buoys which I have finished to correspond with the above, free of charge to your department; and, further, in the event of your department substituting the No. 11 buoys for the No. 9, I will take back and allow full value for the No. 9 buoys when delivered F.O.B. cars, Ottawa.

Two station purifiers and ten cans purifying material shipped Prescott and Sorel.

April 4.—T. L. Willson sends invoice for material and work on two station purifiers and ten cans of purifying material shipped to Prescott and Sorel, as per letter March 17, containing bills of lading. (No amount given.)

Two No. 11 buoys shipped——?

April 5.—Wilson sends invoice for two automatic gas buoys No. 11, Nos. 562-3, shipped March 31 and April 5.

Two No. 11 buoys safely landed at Dartmouth wharf.—They cost $100 to be taken across the harbour.—In doubt about the efficient working of bell attachment to buoy now at outer automatic station.—Propose to change that buoy for one of the new ones, attaching bell to the latter.

April 5.—C. A. Huchins, Superintendent of Lights, Dartmouth, advises the agent at Halifax that the two buoys have been safely landed on the wharf at Dartmouth. As they have no ship available and the cars were required, we were obliged to employ Beazley Bros. to rig a special purchase on their dredge to remove the buoys from cars; the transportation from deep water terminus to Dartmouth cost $100 for the buoys, which was the best bargain we could make. In regard to testing, I beg to make the following suggestions. On March 14 last the *Lady Laurier* placed a combined light and whistling buoy, with an improved submarine bell attached, at the outer automatic station. Capt. Johnson reports that the submarine bell sounded once after being submerged, and then ceased sounding. We have since had no opportunity of testing this buoy with the *Lady Laurier's* receiving apparatus, and I can't say whether or not the bell is still inoperative. At this outer automatic station is the most appropriate for this large 11 feet buoy just received. I suggest that the buoy now there be brought in, the submarine bell removed, regulated again and attached to the 11 foot buoy, and this new 11 feet buoy placed on that station, where satisfactory tests with the 12-inch and 18-inch whistles, &c., can most convenient be made. If this plan is approved I can arrange to have the buoy brought in at a time most convenient for carrying out the change, and involving as little lost time as possible.

Deputy acknowledges Willson's notification of improvements in the No. 11 and No. 9 gas buoys.—Department will not require a substitution of buoys, as No. 9 meets with requirements of the department for many localities.

April 6.—Deputy (J. F. F.) writes to Willson acknowledging receipt of his letter of 31st ulto. *re* improvements which have been made in the No. 11 gas buoys and No.

9 gas buoys. I am advised by the officer in charge that it is not probable that the department will require a substitution of buoys, inasmuch as the No. 9 gas buoy meets with the requirements of the department for many localities where lighted signal buoys are necessary. If, however, a change is desired later on the department will be pleased to take advantage of the offer which you make.

Willson writes Deputy about changing paints for the buoys.—Sherwin-Williams paints to be adopted.

April 6.—Willson writes deputy at great length on the subject of changing paints for the buoys, giving apparent reasons for doing so; also correspondence exchanged between the Sherwin-Williams Paint Co., of Montreal, and T. L. Willson, and concluding by the adoption of the Sherwin-Williams paint. Willson says he has submitted the information verbally and has given instructions to proceed with the painting as described. He also adds that the paints, as described, are the most expensive on the market. (This letter not answered until June 1. Then it was declared to be entirely satisfactory; and necessary authority was given.)

Deputy writes Hutchins, Halifax, about whistling test with No. 11 buoys and gives him instructions. Willson's man Creelman to be present.

April 10.—Deputy to Hutchins, Halifax: Your letter 5th inst., the intention of the department in shipping to you the first two buoys of this type is to have them anchored side by side in some convenient point in Halifax harbour in order to determine whether the 12-inch or 18-inch whistle is the most suitable for this size buoy. The department has the choice of either and will select the one that is most suitable for this buoy. . . . Important that this whistle test be carried out as soon as possible, so that whistles may be ordered for the remainder of the No. 11 lighted buoys now under construction. On receipt of this letter please advise me when this whistle test can be carried out so that Mr. Creelman (Willson's man) can go from Ottawa to Halifax and be present at the test.

Item for labour in P. J. Powers & Co.'s account re *station purifier—not detailed sufficiently, and certified to.*

April 10, 1906.—Commissioner of Lights to T. L. Willson: 'With reference to accounts rendered by you for station purifier for this department, my attention had been directed by the Audit office to the item for labour, $491.50. I have had the opportunity of looking over the accounts which have been rendered to you by P. J. Powers & Co., and I am perfectly satisfied as to the correctness of the charge, but it would be better to render to this department a copy of P. J. Powers' account and some further evidence from Mr. Powers that the amount of work charged for was actually performed on the work referred to.

Claim for free entry of gasway tubes.

April 12, 1906.—Geo. T. Merwin, Montreal, writes to U. P. Boucher, agent M. and F., Montreal, with reference to (his) mine of 29th instant, in which I (he) requested a free entry for gasway tubes for gas buoys (No. 61). Would say that this certificate had not come to hand as yet, and I would ask that you kindly hurry it forward.

April 14. 1906.—U. P. Boucher writes deputy inclosing copy of above letter, in which he states he has not yet received a free entry for gas way tubes as per my letter of the 30th ulto., in which I send you the said invoice, as we will need these for the opening of navigation.

One No. 11 buoy to Halifax via Ste. Rosalie Junction.

April 14.—Willson notifies the department having shipped one No. 11 automatic buoy to Halifax, care of J. Parsons, agent, via Ste. Rosalie Junction.

Hutchins proposes arrangements for whistle test.

April 16.—Hutchins, Superintendent of Lights, writes to deputy saying: As your letter expresses urgency in carrying out the test of whistles on those two 11 ft. buoys, I would suggest, on Friday morning the 20th inst., I proceed with the *Lady Laurier* to place those two buoys in the water ready to be towed out to the testing ground, somewhere in the vicinity of the inner automatic buoy; that Mr. Creelman leave Ottawa as soon as possible after receipt of this letter, to be present here to direct the work. Presuming on your approval, I shall proceed to carry out my part, as soon as the *Lady Laurier* is handed to me, &c., &c.

Whistle test.

April 17.—C. A. Hutchins wires Deputy: Referring to your letter 10th advise Creelman coming here at once. Letter—particulars mailed you yesterday.

April 18.—Hutchins wires J. F. F.: 'Wired deputy yesterday, send Creelman at once; *Lady Laurier* now waiting to test whistle on buoys. *Laurier* cannot place submarine bells until she returns from trip to Yarmouth about 30th April.

April 18.—Deputy wires Hutchins: 'Creelman be in Halifax Friday night. If everything ready and weather fit try and conclude test by Saturday night.

Automatic Gas Buoy—Accounts for Auditor General.

April 18.—J. F. F. writes to W. Kearns, Audit Office, inclosing accounts aggregating $25,325 for automatic buoys and beacons obtained by this department from T. L. Willson. You have the requisite accounts covering all these items, but the accounts which are certified and inclosed indicate the points to which the material is shipped, and consequently contain more information than those in your possession. Will you please be good enough to send me the accounts which were forwarded to you and replace them by the present ones.

April 19.—Deputy wires Hutchins: 'Letter 16th April *re* movements *Lady Laurier* approved. Creelman will be in Halifax Friday night.

Exhaustive memorandum on automatic Acetylene Gas Buoys, by Commissioner of Lights.—Memorandum by J. F. F., Commissioner of Lights.—See original Memo. by J. F. F., July 6, 1905, when he recommended ordering buoys to value of $360,000—Followed up by fresh Memo., 17th October, 1905, reiterating former recommendation—The order for $360,000 of buoys was then given.—No Order in Council for this large expenditure has as yet been obtained; and in the meantime the Minister had died, hence the urgency for an Order in Council for this large amount, and hence this new and elaborate memorandum.

April 18.—The undersigned desires to draw attention to the general question of gas buoys required for aids to navigation, to enable the department to carry out improvements promised to the shipping interests, and to meet the needs of navigation as they may arise from time to time. This department has had in its service in the past, and has at the present moment, examples of each type of gas buoy which has been developed, and from practical experience is in position to determine which best meets the requirements of the service. The types of gas buoys referred to above are as follows: 1st. Compression buoys burning oil gas; 2nd. Compression buoys burning acetylene; 3rd. Low pressure acetylene boys. Compression oil gas buoys were the first developed, and originally consisted of a riveted steel buoy into which a rich and specially purified oil gas, known as Pintsch gas was forced by a suitable compressor.

A support carried the gas lantern sufficiently above the level of the water to render the rays of light collected by a lens within the lantern effective at a distance. The riveted steel construction was later improved by the substitution of a welded buoy body in one piece. This change was necessary on account of the difficulty of holding gas under high pressure, in a riveted envelope subject to the stress which gas buoys may experience in service.

Acetylene compression buoys differ from compressed oil gas buoys only in the substitution of acetylene for oil gas as the illuminant. Low pressure acetylene gas buoys carry within the buoy body a charge of carbide of calcium from which gas is generated as required. In method of operation the following difference in each type is observed.

In oil gas buoys the illuminant is made in special gas works on shore and transferred in holders to buoys in position. With compression acetylene buoys the same system may be employed, or the acetylene may be generated as required on the tender utilized for supply purposes. Low pressure acetylene buoys are filled with carbide through an opening in the buoy as required. Compressed oil gas buoys have been in the service of the department for more than twenty years. Compressed acetylene buoys for three years and low pressure acetylene buoys for one year; and the advantage of the latter over the former types may be summarized as follows :—

1st. In the compression type the gas is raised to a pressure varying from 150 to 225 lbs. per square inch. In the automatic type the pressure does not exceed a few pounds per square inch.

2nd. Compression buoys require for their maintenance a generating and compressing plant.

3rd. One compression buoy in position requires the same gas plant as a number of buoys or the gas must be transported from a distance in steel holders, whereas automatic low pressure acetylene buoys do not require any special charging facilities.

The considerations mentioned above determined the department on the recommendation of the undersigned to adopt low pressure acetylene buoys after practical test under service conditions. The automatic lighting principle has been adapted to signal buoys of different sizes. The following table shows the capacities and price charged for gas buoys, compression and automatic :—

COMPRESSION.

Type.	Gas capacity cubic feet per atmosphere.	Total capacity compression at 10 atmospheres and automatic at 4 atmospheres per pound.	Price without Lanterns.	Price per cubic foot of Gas Contents.	Number of Whistle Tubes.	Diameter of Whistle Tubes.	Area of Whistle Tubes.	Designation.
1c	176	1,760	$1,200	$ ·68	.....	.....	.....	Shallow draft spar.
2	169	1,690	1,300	·77	.....	.....	.....	do do
3	138	1,380	1,200	·87	.....	.....	.....	Deep draft spar.
4	176	1,760	1,450	·82	.....	.....	.....	B 3.
5	353	3,530	2,200	·62	.....	.....	.....	B 1.
6	400	4,000	4,000	1·00	1	18″	1·76	Special.
7	1,980	19,800	11,500	·57	1	18″	1·76	Ocean.

13	3,000	12,000	15,000	1·25	2	48″	25·	" 14.

Comparison of Pintsch Gas Buoys with the Willson Automatic Acetylene low pressure Buoys.

A comparison of the two types of gas buoys, the details of which are given above, shows that the standard Pintsch gas buoy costs from ·68 to ·82 cents per cubic foot gas content, while the standard low pressure acetylene buoy costs 30 cents per cubic foot gas content (the above figures do not bear out this statement). A comparison of the special Pintsch whistling buoy with the No. 9 low pressure acetylene buoy shows that the Pintsch buoy costs $1 per cubic foot, gas content, while the No. 9 lighted whistling buoy costs 42 cents per cubic foot.

Furthermore, it has an area of whistling tube more than double the Pintsch buoy. Comparing the ocean type of Pintsch buoy a cost of 57 cents a foot is found. The No. 11 low pressure acetylene buoy costs 71 cents per foot, while the area of whistling is more than seven times as great as that of a Pintsch buoy, while the absolute cost of the buoy is $8,500 against $11,500.

Comparing the ocean type of Pintsch buoy with the No. 14 low pressure acetylene buoy, the cost of the latter is $3,500 greater. Its cost per cubic foot gas content is $1.25, against 57 cents for the Pintsch buoy, but the area of the whistling tubes is more than twelve times greater than the Pintsch buoy referred to above.

The gas generated by the decomposition of carbide produces acetylene which burned volume for volume gives a candle more than five times Pintsch gas.

This test was carried out on the request of this department by the officer of the Department of Inland Revenue responsible for this class of work.

The largest gas lantern which has hitherto been developed for Pintsch gas buoys carries a lens of 300 m.m. diameter. While in order to increase the power of the acetylene lighted buoys of the larger size, gas lanterns have been developed carrying lenses of 375 and 500 m.m. diameter, or of the fourth or fifth order, while 300 m.m. lenses used in the larger sized Pintsch gas lanterns are equivalent to the sixth order. The low pressure acetylene buoys referred to above are the invention of T. L. Willson and are protected by patents issued in Canada and throughout the world.

The question of improvement of the signal buoy service of the Dominion by the substitution of No. 11 gas buoys was referred to the L. H. Board, and a provisional recommendation was given, pending a 30-day test of one of these buoys in an exposed position near the Lurcher shoal, Bay of Fundy. A No. 11 L.S. buoy not being available, the test was carried out with a smaller No. 9 lighted whistling buoy, low pressure type, which having passed the test successfully, a decision was given by the late Minister to provide the necessary No. 11 L.S. gas buoys, and instructions were given Mr. Willson to furnish thirty buoys of this type to the department; and also thirty-five No. 8½ standard gas buoys. The undersigned recommends that the necessary steps be taken, by order in council, to cover the provision of thirty No. 11 L.S. gas buoys, thirty-five standard gas buoys, low pressure type, and that the necessary authority be obtained to order from time to time as the needs of the service may demand, automatic low pressure gas buoys of the Willson type. (Signed J.F.F., afterwards marked cancelled.)

Application to Council in accordance with foregoing Memorandum—'Cancelled.'

April 20.—The Minister to His Excellency Governor General in Council: 'The undersigned has the honour to submit to council the accompanying report from the Commissioner of Lights, Dept. M. & F., in regard to the general question of gas buoys required for aids to navigation to enable the department to carry out improvements promised to the shipping interests, and to meet the needs of navigation as they may arise from time to time. The undersigned reports that he has given the representations of the commissioner his most careful consideration, and approves of the suggestions contained in the report alluded to; and he therefore recommends that the necessary authority be given to cover the expenditure entailed in providing thirty No. 11 L.S. gas buoys at $8,500 each, $225,000; and thirty-five No. 8 standard gas buoys at $3,000 each, $105,000; making a total of $360,000 duly voted by parliament; and that

he be empowered to order from time to time as the needs of the service may demand, additional automatic low-pressure gas buoys of the Willson type. (Marked cancelled.)

Three No. 11 Buoys for Halifax, 564, 565, 566.

April 19, 1906.—Willson incloses invoices for 3 No. 11 buoys No. 564/6 with receptacle for submarine bell shipped to Halifax.

April 20.—Willson incloses invoices for two lantern supports and two boxes of wrenches for buoys 564 and 565.

April 21.—Willson incloses invoices for one No. 11 buoy No. 567 shipped to Halifax.

Mersey Docks and Harbour Board want information from Commissioner of Lights about Willson buoys, acetylene lights, whistles and submarine bells.

April 21.—Mersey Dock and Harbour board write C. of L. about Willson buoys fitted with acetylene lights, whistle and submarine bells. Wants information as to these buoys and also as to their efficiency. If you could let me have a drawing of one of them I would be glad, or perhaps you might put me in communication with the manufacturer.

Hutchins reports favourably on whistle test—Recommends 12-inch whistle.

April 27.—C. A. Hutchins reports to agent at Halifax of Department of Marine and Fisheries that he along with F. Creelman and Captain Johnson have made two tests of the buoy's whistles 12″ and 18″, and report favourably, and recommend the 12″ whistle be adopted for use on those 11-foot gas buoys. The sound produced was loud, deep and well sustained. (Noted, this must be tranasmitted through the agent at Halifax, C.S. 30-4-06.)

Willson borrowing whistles from Halifax agency.

April 30.—Hutchins writes J.F.F. thus: 'Mr. Creelman received a telegram from Willson asking him to borrow two ten-inch whistles for temporary use on two buoys he was shipping to Upper Provinces, until he received a stock of 10″ whistles I at once forwarded the whistles to Mr. Willson to be returned to the Dartmouth depot after he receives the 12-inch whistles. I also sent to Willson the two 18-inch whistles recently used here experimentally. Freight in both cases to be paid by Willson. (Noted, no action, J.F.F., 10-5-06.)

Two No. 11 buoys for Depot Harbour, 568, 569.

May 11.—Willson incloses invoices for two No. 11 automatic buoys, Nos. 568, 569; 568 shipped on 3rd inst., and 569 on 8th inst., to Depot Harbour, c/o J. F. Fraser, Commissioner of Lights.

P. J. Powers & Co.'s account re *two station purifiers.*

May 14.—Willson writes J. F. F. in answer to his letter April 10, file 25868, with reference to an account for two station purifiers, which account bears date April 14, 1906, for a total of $869.25. I herewith inclose you detail statement from P. J. Powers & Co., for item of labour $491.50 which was charged in a lump sum. All the material and labour charged to you on these purifiers has been put in at actual cost to me, and without any charge for drawing, designing or supervision.

May 23, 1906.—Willson sends invoice for one No. 11 auto. gas buoy, No. 570, shipped to Halifax.

May 25, 1906.—Willson sends statement dated 25th May, showing balance due him, $80.104.65.

Capt. Johnson objects to No. 11 buoys.—Not practicable.—Too large.

May 28, 1906.—Captain Johnson of the *Lady Laurier,* writes thus: 'Before any more large gas buoys are sent here, I think it my duty to inform you that they are not practicable, as they are too large. The smaller size with a few alterations would be first class and quite safe. Marked 'immediate—Mr. Fraser, F.G.' (June 1—Deputy simply acknowledges receipt of this letter.)

Capt. Johnson objects to any more No. 11 buoys being sent to Halifax.—J.F.F. not surprised.—His hoisting gear is not strong enough.

June 1, 1906.—Memorandum by J.F.F. for the deputy minister *re* No. 11 gas buoys, of which Captain Johnson of the *Lady Laurier,* complains as being not practicable and too large. Is not surprised at Captain Johnson taking this ground, seeing that the hoisting gear of the *Lady Laurier* has not strength enough to lift the buoys. The department has plans provided for a new derrick and hoisting gear, which will be capable of lifting a weight of 25 tons, which would obviate to a large extent Capt. Johnson's objection.

Application again made to Council in accordance with Commissioner of Lights' memorandum and recommendation to cover the $360,000 order for buoys given by the late Minister, and for future orders.—Again withdrawn.

June 4, 1906.—Minister to His Excellency in Council: 'The undersigned has the honour to submit to Council the accompanying report from the Commissioner of Lights, Department of Marine and Fisheries, which has been concurred in by the deputy minister, in regard to the general question of gas buoys required for aids to navigation to enable the department to carry out improvements promised to the shipping interests and to meet the needs of navigation as they may arise from time to time. The undersigned reports that the late minister having given the representations of the commissioner his most careful consideration, and having approved of the suggestions in the report alluded to, recommended that the necessary authority be given to cover the expenditure entailed in providing thirty No. 11 lightship gas buoys at $8,500 each ($255,000), and thirty-five No. 8½ standard gas buoys low pressure type at $3,000 each ($105,000) making a total of $360,000, duly voted by parliament. The No. 11 lightship gas buoys to be placed at the following points, viz.: Nova Scotia, Sambro, Egg Island, Ship Harbour, Sheet Harbour, Beaver Island, Liscomb, Isaac's Harbour, Whitehead, Cape Canso, Louisbourg, Brazil Rock, Lunenburg, Lahave, Lockport, Yarmouth Fairway, Cape Fourchu, Northwest Ledge, Southwest Ledge, Little Hope Island, Sydney Harbour (20). New Brunswick: Split Rock, Musquash (2). Prince Edward Island: Indian Rocks, Tryon Shoal, West Point (3). Ontario: Lone Rock, Sequin Bank, Surprise Shoal (3). Quebec: Morin Shoal (1). British Columbia: Juan de Fuca Strait (1).

The 35 No. 8½ standard gas buoys to be utilized to complete the change from high pressure to low pressure buoys in the Quebec district, and for the purpose of removing from service the 'Scout' type high pressure gas buoys. (L.P.B.)

(Marked. Privy Council. Referred back. John J. McGee, 17 July, '06. File, J.F.F. Cancelled).

June 4, 1906.—Memo. for minister by deputy: 'The undersigned transmits for the minister's information a memo. prepared by the Commissioner of Lights, in which he recommends that 30 No. 11 lightship and 35 No. 8½ gas buoys low pressure type be procured for the service of the department, and that low pressure buoys be adopted by the department, and that authority be given to procure the same as they may be required from time to time. The undersigned has given careful consideration to the memo. referred to and concurs in the recommendation contained therein.

Re inspectors Willson may send to department's agencies.

June 5, 1906.—Deputy to Willson: 'In future, if it is necessary for you to send any of your special inspectors to Parry Sound, or any other agency of this department, I have to request you to instruct them to report to Mr. Brais, agent (or the agent of the department in the district), who will provide facilities for carrying out any inspection desired.' (Initialled J.R.F.)

Canadian Bank of Commerce again anxious.

June 6, 1906.—The manager of the Canadian Bank of Commerce writes to the minister regarding the position of the contract between the department and Mr. T. L. Willson, as they (the bank) are seriously interested. (Accountant to prepare statement.—F.G.)

Deputy replies that the department owes Willson about $90,000, and further large deliveries will take place before end of fiscal year.

June 11, 1906.—Deputy replies to C. B. of C., that the department owes Mr. Willson the sum of about $90,000, and further large deliveries will take place before the closing of the accounts for the present fiscal year. The department has ample appropriations available to pay any account due Willson, and is only awaiting the passage of a formal order in council confirming the orders entered into by the department last October, with Mr. Willson. The order in council referred to is expected within a few days, when all amounts due Mr. Willson will be promptly paid.

One No. 11 buoy shipped to Halifax, 571.

June 11, 1906.—T. L. Willson incloses invoice for one No. 11 auto. gas buoy, No. 571, shipped to Halifax via St. Rosalie junction.

Captain Johnson of 'Lady Laurier' objects to No. 11 buoys as too large.—A new derrick and hoisting gear promised him.

June 13, 1906.—Deputy to Halifax agent (J.F.F.): 'Capt. Johnson of the *Lady Laurier* informs the department that in his opinion the No. 11 lightship gas buoys are too large, and he has to tow them into position. I have to request you to inform Captain Johnson that the department has plans provided for a new derrick and hoisting gear for the *Lady Laurier* which will be capable of lifting and controlling a weight of 25 tons, and thus obviate the objection raised by Captain Johnson.

June 13, 1906.—T. L. Willson sends account for 50 cans of gas purifier (4,000 lbs. at 5c.) and 50 cans 5c. each.

Three No. 11 buoys held to order of department, 572-3-5.

June 20, 1906.—T. L. Willson incloses invoice for 3 No. 11 auto. gas and whistling buoys, 572-3-5, held to order of Marine Department at Ottawa.

One No. 11 shipped to Halifax, 574.

June 21, 1906.—T. L. Willson incloses invoice for 1 No. 11 auto. gas and whistling buoy, 574, shipped to Halifax.

Two No. 11 held to order of department, 576-7.

June 22, 1906.—T. L. Willson incloses invoice for 2 auto. gas and whistling buoys, 576-7, held to order of department at Ottawa.

Canvas for chutes.

July 6, 1906.—Commissioner of Lights writes Willson asking him for quotations on canvas for chutes for loading gas buoys.

Chutes prices.

July 9, 1906.—Willson quotes as follows: 10 chutes for No. 5 buoys, $1.21 each; 23 chutes for No. 7, $2.04 each; 14 chutes for No. 11 buoys, $2.42 each.

One No. 11 buoy shipped Halifax, No. 577.

July 10, 1906.—Willson to deputy: 'As directed by you, we have shipped to J. Parsons, Halifax, one No. 11 buoy, serial No. 577.

Where to and what?

July 12, 1906.—Willson sends invoice for one auto. buoy, serial 578, shipped 3rd July (where to?).

12-inch whistles to be supplied for No. 11 buoys.

July 16, 1906.—Deputy authorizes Willson to supply 12-inch whistles for the No. 11 gas buoys.

Deputy's memo. for J. F. Fraser.—Authority for big purchase of buoys (Oct., 1905) to be got through Privy Council.

July 16, 1906.—Memorandum for J.F.F.: The following is translation of a memo. received on Saturday at 4 p.m from the minister: 'The old recommendation in connection with the purchase of buoys is not the copy of the one already before council. I also want copy of the report of Mr. Fraser, that accompanied the other recommendation to council.' I have to leave this afternoon for Quebec and as the minister is very anxious to have all the matters in which you are interested passed by council you had better remain here and meet the minister either to-morrow evening or Wednesday morning and give him all the information he requires in connection with these matters to be passed in council.'

L. P. B.—Minister's report to Privy Council on the subject of gas buoys, recommending the necessary authority to cover the expenditure entailed in providing 30 lightship buoys No. 11 at $8,500 each and 35 No. 8½ Standard gas buoys at $3,000 each, making a total of $360,000, duly voted by Parliament. (Privy Council refers back J. J. McGee, 17 July, 1906.—Marked, 'cancelled' in blue.)

Hints to J. F. F. in Drafting Application to Council.—Trial of a new Buoy a Great Success.—Lighthouse Board and Technical Officer in Charge Strongly recommended it.

July 20, 1906.—Memo. for Mr. J. F. Fraser: *Re* drafting the report to council, you will utilize the following points: High pressure buoys offer a constant danger—even loss of life and considerable destruction of property.

In 1904, Mr. T. L. Willson patented an automatic low pressure buoy that the Lighthouse Board looked into and recommended the trial of. The result was a great success; and the Minister (Mr. Préfontaine) on the recommendation of the Lighthouse Board consented to adopt this buoy. The minister also acted on the recommendation of the technical officer in charge of that service and gave instructions to purchase these buoys at the price indicated. The undersigned since then, has carefully and personally looked into this question. He has examined into the price paid, and has established the fact that Mr. Willson has sold to other countries buoys at the very same price, and therefore recommends the payment of the price arrived at between the late Minister and Mr. Willson.

Memo. of April 18, 1906 (given above) again filed.

Another application to Privy Council—Application again cancelled.

July 21.—Minister to His Excellency in Council: The undersigned has the honour to submit to council the accompanying report from the commissioner of lights, Depart-

ment of Marine and Fisheries, which has been concurred in by the deputy minister in regard to the general question of gas buoys required for aids to navigation to enable the department to carry out improvements promised to the shipping interests, and to meet the needs of navigation as they may arise from time to time. In 1904 Mr. T. L. Willson patented an automatic low pressure gas buoy and placed at the disposal of the department three buoys for the purpose of carrying out certain tests. These buoys were placed in service and adopted by the department. Mr. T. L. Willson also designed and built certain large lighted signal buoys and the question of the adoption of these lighted signal buoys has been referred to the Lighthouse Board of Canada, and it was recommended that a 30 day test be carried out in an exposed position. This test was completed in a satisfactory manner at the Lurcher shoal, Bay of Fundy; and the late minister gave directions to purchase 30 No. 11 lighthouse gas buoys at $8,500 each ($225,000) and 35 No. 8½ Standard gas buoys, low pressure type, at $3,000 each ($105,000), making a total of $360,000 duly voted by parliament. These lightship gas buoys have been assigned to the following points:—

(Same as contained in minister's letter to council dated June 4—see above.)

The undersigned has carefully considered the question of prices and has examined the basis on which these have been arrived at, and finds that the manufacturer has now under construction for the United States Government, subject to their approval and test, several gas buoys of various types; and the prices submitted to the United States Government are identical with the prices charged this department. The undersigned therefore recommends that authority be given to enter into a contract with Mr. T. L. Willson for the gas buoys referred to (marked 'Cancelled').

Final Application to Council which was Passed.

July 24, 1906.—To His Excellency in Council: 'The undersigned has the honour to submit that previous to August, 1904, the department had in its service gas buoys of various sizes of the compression type; that a certain number of the compression gas buoys burned oil gas and that the remainder burned acetylene; that on or about the date referred to above, an automatic low pressure acetylene gas buoy was invented by Thos. L. Willson, of Ottawa, who offered to the department several of the low pressure buoys to be tested under service conditions. Two of the four sample buoys submitted were tested under service conditions of the Lighthouse Depot at Prescott, Ont., and in October, 1904, the commissioner of lights submitted a detailed report to the department in which it was recommended that 12 No. 5 gas buoys at $2,000 each, 20 No. 7 at $3,000 each, and 10 lighted whistling buoys No. 9, at $5,000 each, be procured by the department at a total cost of $134,000, in addition to the acceptance of the 4 test buoys referred to above which cost $14,000. The report referred to above contemplated an expenditure of $148,000 which was approved by the late minister and the material ordered by departmental letter of 11th October, 1904. These buoys were delivered to the department in due course and are now in service.

On the 6th March, 1905, the commissioner of lights prepared a report on the signal buoy service of the department and recommended that the Courtenay whistling buoys in use be replaced by No. 9 lighted whistling buoys of the Willson type, as the supplementary estimates of 1905-6 contained an amount of $360,000 to provide for improvements in that service.

Increase in size from No. 9 to No. 11, July 6, 1905.

On 6th July, 1905, a larger and more powerful lighted signal buoy having been designed, it was recommended that the No. 11 automatic low pressure lighted whistling buoy be substituted for the smaller No. 9 lighted whistling buoy in the changes contemplated.

October 17, 1905, $360,000 *buoys ordered.*

On the 17th October, 1905, the attention of the then minister was directed to the necessity of taking action in the matter of providing gas buoys if it was the intention of the department to carry out the improvements recommended. The then minister having, previously to the date immediately referred to above caused this matter to be submitted to the Lighthouse Board, a 30 day test was imposed, which was successfully carried out in the vicinity of the *Lurcher* lightship, Bay of Fundy, and directions were given to order from Mr. T. L. Willson 30 combined gas and whistling buoys 11 feet in diameter, 35 Standard No. 8½ gas buoys at $3,000 each, the value of the above being $360,000. This was done by departmental letter of 19th October, 1905.

Previous to the introduction of the Willson low pressure automatic acetylene buoys the welded compression buoys required for the service were purchased without competition. The advantages of the Willson low pressure acetylene buoys over the older types of compression buoys may be summarized as follows : 1. In the compression type the oil and acetylene gas is raised to a pressure varying from 150 to 225 lbs. per square inch ; in the automatic type the pressure does not exceed 5 lbs. per square inch. 2. Compression buoys require for their maintenance a generating and compressing plant, while no special plant is required for charging low pressure buoys. 3. A compression gas buoy service of but one buoy requires for its maintenance the erection of a special gas plant to manufacture oil or acetylene gas, while the same plant could provide gas for a number of buoys of the same type ; and if the gas is transported in steel holders, practically the same number of holders is required for one compression buoy as would serve to charge a number. Carbide of calcium in tins is the only material necessary for recharging automatic low pressure buoys. In the matter of safety the low pressure buoys are superior to the compression type. With the former no accident, such as that which occurred at Kingston, in April, 1905, would have been possible. The considerations mentioned above determined the adoption of the low pressure acetylene buoys after a test under service conditions. It was further reported that the prices at which the acetylene low pressure buoys were ordered, were fair and just as appears from the following table which makes a comparison between high pressure gas buoys and automatic gas buoys. (See comparison given in Minister's letter to Privy Council, April 18, 1906. See page 219—MS. 14.)

The undersigned has carefully considered the question of prices, and has examined the basis on which these have been arrived at, and finds that the manufacturer has now under construction for the United States government several gas buoys of various types ; and the prices submitted to the United States government are identical with the prices charged this department. (This omits to state, what is done in preceding excerpt, that the order of the United States government is experimental and subject to test and approval. Besides, Willson would not have dared to ask less from the United States government in view of his relations with that of Canada. The price, however, is not the same, because in our case the duty on Willson's materials is exempt by the contract.)

The undersigned observes that the Willson low pressure gas buoys are manufactured in Canada, while, the welded compression buoys heretofore used were manufactured in foreign countries (G. B.?) The adoption of low pressure buoys has created a new Canadian industry and gives employment to a large number of workmen. The undersigned therefore recommends that authority be given to pay for 30 No. 11 lightship gas buoys, and 35 No. 8½ standard gas buoys ordered by departmental letter of 19th October, 1905. (Passed by Privy Council.)

Four No. 11 Buoys shipped, Halifax.

July 30.—Willson incloses invoice four No. 11 buoys shipped to Halifax, 581 and 582 via C.P.R. and Intercolonial Railway. 579 and 580 by G.T.R. and I.C.R., also shipping bills for 576, 578.

Claim for cost of alterations to buoys by Dept. Agent at Quebec on T. L. Willson.

July 4.—Quebec agent writes T. L. Willson: 'As instructed by your Mr. Smaill, some alterations have been made to the automatic acetylene gas buoys for which I inclose certified pay-list. Please forward the amount with as little delay as possible, as these men are wanting their wages very badly.'

Willson disclaims liability for it—C. of L. supports Willson's contention.

July 6.—Wilson to Deputy : Inclosed please find letter from J Gregory, agent, Department of Marine and Fisheries, Quebec, dated 4th inst., referring to file 19328 of that agency. This work was done on account of improvements made in this type and class of buoy since these buoys were delivered to and accepted by the department. The actual parts for these improvements were furnished by me free of charge to your department, and the work of attaching the same to the counterweight was performed by the firm of F. X. Drolet at a contract price of $15 for each buoy, which includes transportation of counterweight from your dock and return. This work I pay for myself. The question arises as to whether it is a proper thing for me to pay for labour of department employees on the premises of the department in connection with the actual service of the department? P.S.—The account which Mr. Smaill requested your Mr. Gregory to certify as correct was to be the bill of Drolet, upon completion of his work and delivery to the department in good order. (Written across upper left corner, 'I consider department should pay this account, J. F. F., 3-8-06.' 'The payment of this account involves a principle and is therefore referred to the minister for ruling.' C. S., 4-8-06. 'Bring up on our return F. G.' 'Bring up 15th September, J. D. D.')

Three No. 11 Buoys shipped to Halifax, and three held over.

August 4.—T. L. Willson incloses invoice for 6 type 11 gas buoys Nos. 583/8, the three first shipped to Halifax, and the other three are held subject to your order.

Three more for Halifax.

August 6.—T. L. Willson incloses shipping bills for three type 11 buoys 583/5 shipped to Halifax.

One No. 11 Buoy and thirty-five No. 8½.

August 9.—T. L. Willson incloses invoice for one type 11 buoy No. 589; also 35 type 8½ buoys Nos. 590/624 inclusive (marked certified and forwarded for payment, J. F. F., 9-10-06.)

Buoys not accounted for.

Memo., 20th June, 1906, three buoys 572/5 held to order—No trace of delivery.

Memo., 4th August, 1906, three buoys 586/8, held to order—No trace of delivery.

Chutes suddenly wanted.

August 8.—M. Brais, Agent, Parry Sound, telegram J. F. F.: 'Please advise me when will canvas chutes be shipped. Three Star shoal buoy reported out. Being unable to reach Richmond immediately sent Jones to investigate. Should buoy have to be recharged, have no chute for the purpose. Wire reply.'

August 8.—J. F. F. to Brais : 'Am sending you by express to-morrow 8 canvas chutes for 3 sizes buoys.'

To be sent to Parry Sound.

August 8.—J. F. F. to Willson: I have to instruct you to ship by express to M. Brais, agent, Parry Sound, 3 canvas chutes for No. 5 gas buoys, 2 ditto for No. 11 gas buoys, and 3 for No. 7 buoys.

Also to Prescott.

August 8.—J. F. F. to Willson: I have to instruct you to prepare for shipment 10 chutes for No. 5 gas buoys at $1.21, 23 chutes for No. 7 gas buoys at $2.04, and 14

chutes for No. 11 gas buoys at $2.42. Shipping instructions will be given you later. Shipped to Prescott.

Improper regulating of automatic buoys at Morrisburg to be inquired into.

September 19.—J. F. F. to Assistant Commissioner of Lights, Prescott: Mr. Frank Creelman, of T. L. Willson's staff, states that his assistant, Mr. Smaill, informs him that on August 13, while at Prescott, Mr. Leslie stated that the regulator for the automatic gas buoy at Morrisburg was adjusted for 2" pressure, and further, that this was the regular pressure at which these lanterns were set. Please inquire into this matter, as you are aware that the occulting boxes are set to 4" and the regulator to 3".

Instructions re shipment of buoys given to T. L. Willson.

September 19.—Memo. for file: Instructions have been given to T. L. Willson to make the following shipments of gas buoys:—

No. 11 whistling buoy, with 500 lbs. bell, for Morin shoal (file 21159).
12 No. 8½ to Quebec agency (file 19505).
5 " Parry Sound (26826).
7 " Montreal-Kingston division (26827).
3 " Port Arthur (19387).
4 " Mr. Boucher, ship channel (27041). Total, 32.

Willson's account against department to date.

November 2.—Willson's account for buoys and material up to date, since October, 1904, when the automatic gas buoy was adopted by the department, $541,694.68. (For details, see 3 folios forward. Page 231.)

Two No. 5 buoys and one No. 7 valveless shipped to Willson—Refer to page 237 (MS. 29).

November 2.—Assistant Commissioner of Lights, Prescott, to T. L. Willson: There has been shipped to your address, per C.P.R. freight, as per statement of supplies herewith inclosed, 2 automatic gas buoys No. 5 and 1 automatic gas buoy No. 7 (valveless). This latter I have taken the opportunity of shipping on the same car, as it has not been, nor is likely to be, of any service until alterations are made. Please acknowledge receipt of these buoys on the inclosed form.

Improvements on buoys offered by Willson. Willson offers to make improvements in No. 9, also in Nos. 5, 6 and 7 buoys, which are now equipped with detachable purifier boxes, instead of fixed ones.

November 7.—T. L. Willson to Deputy: Referring to my letter March 31, 1906, and yours April 6, 1906, I will make the improvements in the No. 9 gas buoys, as offered; and further, that I will make improvements in the 5, 6 and 7 sizes, which are now equipped with detachable purifier boxes, now in service, to bring them up to the present standard by substituting the fixed purifier head upon the gas buoys, instead of the present arrangement; all of the above to be done free of charge to your department, on condition that you deliver the said buoys F.O.B. Campbell's siding, Ottawa. After these changes are made, we will deliver the buoys f.o.b. cars at Ottawa, to your order.

Auditor General wants certificates from agents of buoys delivered.

November 12.—Auditor General to Deputy: Wants agents' certificates of delivery of buoys. Buoys to value of $128,500 held in workshops of Willson, although paid for. I have to ask for explanations for having made payment before final delivery.

SESSIONAL PAPER No. 29a

Forms for keeping records of gas buoys.—1,000 copies Gas Buoy Inspector's report.—40 loose-leaved ledgers, 100 pages each.

December 4.—Memorandum by J. F. F.: Attached herewith are ruled forms showing requirements necessary for the gas buoy service in connection with keeping records of the same. The undersigned recommends that 1,000 copies of gas buoy inspector's report (Appendix A, attached herewith) be provided, and also loose-leaved books, forty in number, each containing 100 pages, similar to that shown in form B attached; and in addition thereto, 1,000 sheets of the upper half of the last sheet mentioned above.

Certificates required by Auditor General.

November 12.—At this date the Auditor General asked for a certificate from each agent, Marine and Fisheries Department, as follows:—

I certify that automatic buoys of type No. 5, type No. 7, type No. 7½, type No. 8½, type No. 9, type No. 11 were received at this station, and that have been placed, and in store (this in addition to the statement already sent him).

It was the middle of December before all these statements were sent in.

J. F. F. wants to know positions of all Halifax buoys, except No. 6 buoys, to be returned to Ottawa.

December 13.—J. F. F. telegraphs Hutchins, Dartmouth: Please forward to me at once positions assigned by you to all gas buoys now in Halifax, with exception of No. 6 buoys, to be returned to Ottawa. Urgent.

Locations assigned to gas buoys sent to Halifax agency.

December 14.—Hutchins to Agent, Halifax: 'On service, No. 11 buoys: 561, Egg island; 562, Canso; 563, Louisburg; 577, outer automatic, Halifax harbour; 560, Blonde rock, now being placed. No. 9 buoys: 543, Lunenburg; 545, inner automatic, Halifax harbour; 542, Lockport; 540, Little Hope; 541, Brazil rock; 539, Sambro; 504, Yarmouth S.W. fairway; 546, Blonde rock (reported adrift October 10, 1906, and has not since been recovered). No. 7 buoys: 526, Thrum Cap, Halifax harbour; 519, Avon river; 508, Neverfail, Halifax harbour. No. 6 buoys: 558, Middle Ground, Halifax harbour.

At depot:

No. 11 buoys:	564-7, 570-1, 574, 576, 578-85, 588	17
No. 9 "	538, 547	2
No. 8½ "	590, 595 (ready to be placed)	2
No. 8 "	506-7	2
No. 6 "	503 (Cannot identify this with 503 from the records. Should it not be 553?)	1
	In all, in depot	24

No. 507 is gas and bell buoy brought in from Thrum Cap. The above No. 11 buoys will be assigned the following positions, replacing No. 9 and Courtenay buoys: Inner automatic, Halifax harbour (9), Sambro (9), Lunenburg (9), Little Hope (9), Lockport (9), Brazil rock (9), Yarmouth S. W. fairway (9), Yarmouth N. W. fairway, N. E. shoal, Liverpool, Shelburne, Pubnico, Sheet rock, Liscomb, Isaac's harbour, Whitehead = 16. This will leave us one No. 11 on hand as spare.

T. L. Willson incorporates his business as the International Marine Signal Co.

December 7.—Thos. L. Willson writes to deputy that he has transferred all his business as a manufacturer of gas buoys, beacons and other aids to navigation to the International Marine Signal Co., Limited, who will hereafter carry on the said business in his place, including all correspondence, contracts and any obligations whatsoever which he has had or may have with your department. He is the president of the said International Marine Signal Co., and will personally manage the company, and see that it fulfils all its contracts and obligations.

Above change advised to the department's agents.

December 11.—Deputy writes circular to all the agents of the Marine and Fisheries advising the above change in Willson's business. In view of its being necessary to communicate directly with the manufacturer relative to gas buoy work, all letters should be addressed to the company mentioned above.

C. of L. writes the I. M. S. Co. on a project for standardizing all the burners used in the gas buoy service.

December 10.—C. of L. writes to the International Marine Signal Co. thus: I find the time has arrived when it will be possible for the department to standardize all the burners used in the gas buoy service, and settle definitely the patterns to be made for each size gas buoy. I understand from Mr. Creelman that this matter is being considered by your company and I shall be glad to receive any blue prints or information which you may have relative to this before the department decides finally the size and type to be used.

Memo. by C. of L. on the subject of gas beacons for British Columbia.

December 14.—Memorandum by the Commissioner of Lights (to accompany report to Council *re* gas buoys and beacons for British Columbia). A gas beacon for Dock island, B.C., was supplied by Mr. T. L. Willson for the sum of $1,325, without illuminating apparatus. This beacon contained, when charged, 1,000 lbs. carbide, and with the burners supplied, had sufficient gas for four months. The designating number was 5. The latest type beacon is No. 7½, which is quoted at $1,500 (see letter October 20, 1906, file 21984 M), which carries 1,500 lbs. carbide and will last without re-charging six months. The price is $175 more, or 13·2 per cent greater, while the capacity is increased 50 per cent. Before the Lighthouse Board, Captain Troup stated that the Dock island gas beacon was the best light in British Columbia, with the exception of two or three coast lights. The automatic gas beacons are complete lighthouses, ready to be set up and put in operation in a few hours.

Gas and bell buoys wanted at Yarmouth Bar, Hantsport and Eastern Point Reef, Lunenburg—$11,250. All these required owing to previous errors on the part of the department (C. of L.).

December 17.—Memo. for the Minister: Referring to the attached report to Council *re* gas and bell buoys for Nova Scotia the undersigned notes that (1) the buoy asked for Yarmouth harbour (Hen and Chickens) was passed by the Lighthouse Board, March 31, 1906 (file No. 26230)), and that it was stated that a buoy was available for this location. The buoy referred to is at Thrum Cap (No. 7), Halifax harbour, and is in service. (2) The gas and bell buoy for Hantsport was passed by the Lighthouse Board, June 1, 1906. It is noted on the board minutes that a buoy was in stock. This referred to a gas buoy, not a gas and bell buoy, and the former was borrowed from the Quebec agency, consequently a lighted bell buoy must be provided (file No. 26623). (3) Eastern Point reef. Lunenburg buoy was passed by the Lighthouse Board March 31, 1906, and was stated to be available, which was an error not corrected at the time.

Order in Council for new buoys.

December 11.—Minister to His Excellency in Council: Undersigned recommendations of Lighthouse Board have been considered, and recommends they be authorized:—

For Ontario—Northport shoal, B. of Q., gas buoy, 8½C....	$3,000
For Prince Edward Island—Miscouche shoal, gas buoy, 8½C..	3,000
For British Columbia—	
Middle Bank, Strait of Fuca, gas buoy, No. 11, with bell..	9,550
Sand Head, Fraser River, gas buoy, No. 11, with bell.. ..	9,550
Comox Bar, gas buoy, No. 8½, with bell..	3,750
Ledger's reef, off McNeill's Point, gas buoy, No. 8½..	3,000
One spare gas buoy, with bell, No. 11..	9,550
One spare gas buoy, with bell, No. 8½..	3,750
Boat Pt., Sarah island, gas beacon, No. 7½..	1,500
West Rock, Gulf of Georgia, gas beacon, No. 7½..	1,500
Gibson reef, off Gibson, gas beacon, No. 7½..	1,500
Zero Rock, Rivers Inlet, gas beacon, No. 7½..	1,500
Fog Rock, Fitzhugh Sound, gas beacon, No. 7½..	1,500
Morning Reef, Klewnugget, gas beacon..	1,500
	$54,150

Gas buoy or beacon for Northport shoal, B. of Q.

January 11, 1907.—Deputy to T. L. Willson: Referring to gas buoy or gas beacon intended for Northport shoal, B. of Q., you will receive shipping instructions for this as soon as information can be obtained as to the best shipping route. (Initialled W. H. N.) (Feb. 27, 1907, I. M. S. Co. were instructed to ship this buoy to D.L.H.D., Prescott; initialled J. F. F.)

Buoy for Miscouche shoal, P.E.I.

January 11.—Deputy to T. L. Willson.—Referring to gas buoy No. 8½C for Miscouche shoal, P.E.I., you will receive shipping instructions for this as soon as possible.

No. 11 buoys wanted for St. John agency.

January 14.—St. John agent to Deputy: Three No. 11 gas and whistling buoys are required by this agency. You will please ship them at your earliest convenience.

Names of Localities must be given.

January 21.—Deputy to St. John agent: Your letter 14th, have to instruct you to inform me as to name of locality for which these buoys are intended, in order that application may be submitted to Lighthouse Board for their consideration.

Four No. 8½C gas buoys shipped from Prescott, to be replaced by others.

February 19.—Memo.: With reference to the four No. 8½C gas buoys, which were authorized by Order in Council of December 29, 1906, for British Columbia, and which were shipped from Prescott, the undersigned begs to recommend that the I. M. S. Co. be instructed to ship to Prescott four No. 8½C gas buoys to replace those sent to British Columbia.

Victoria Agent calls Deputy's attention to advices he has received from I. M. S. Co. of six automatic gas beacons for certain points enumerated. Wants specific instructions.

February 13.—Victoria agent to deputy: 'Have to inform you that the engineer of the I. M. S. Co. of Ottawa advises that according to instructions received from

the department six automatic gas beacons had been shipped to the Pacific coast via G. T. R. and C. P. R. I notice that these beacons are intended for certain points enumerated in Mr. Creelman's letter, and amongst them Gibson's reef, for which I presume Watson's rock is meant. Instructions were received some time ago to establish a Wigham's 31-day lamp at this point. I beg to be advised whether it is the intention of the department to adhere to the instructions which I have already received, or to establish a gas beacon on Watson's rock. (Answered, J. F. F., 5/3/'07.)

Halifax writes: Have no spare combined gas and bell buoys on hand—Should have at least four.

February 19.—C. A Hutchins, Halifax (approved J. Parsons, agent) calls attention of the department to the fact that we have no spare combined gas and bell buoys on hand here. The Thrum Cap buoy has now been in service eight months and should be changed very shortly, as the carbide will soon be exhausted. We should always have at least one spare buoy at the dockyard. We also require combined gas and bell buoys for the following stations, viz.: Avon river, Hen and Chickens shoal, Yarmouth, Lunenburg. The spare bell buoy we had here, which was formerly at use on Thrum Cap, Halifax harbour, was recently placed off Lahave. We therefore require, as soon as possible, at least four combined gas and bell buoys. (I recommend this; cost, $3,750—J. F. F., 27/2/'06.)

Correspondence relative to purchase of gas buoys from T. L. Willson.

February 20.—Memorandum for Minister: Attached herewith are copies of the correspondence relative to the purchase of gas buoys from T. L. Willson. The record is complete, and the undersigned does not see that any additional explanations relative to this matter can be given beyond what is contained in the correspondence.

Gaskets for carbide doors.

February 16.—Victoria, B.C., agent, to J. F. F., C. of L.: I beg to requisition for the following: Six gaskets for carbide door cover for No. 8½ automatic gas buoys, 6 rubber gaskets for carbide door No. 7½ beacons. (Recommended, J. F. F., 25/2-/'07; F. G., ordered, 28/2/'07—J. F. F.)

Buoys for British Columbia, two No. 8½, two No. 11.

January 19.—I. M. S. Co. advises deputy that, as instructed by his letter of January 10, they have shipped to British Columbia two gas buoys No. 11, serial Nos. 626-7.

January 30.—I. M. S. Co. advises deputy that, as instructed by his letter of January 10, they have shipped to British Columbia two gas buoys No. 8½, serial Nos. 628-630.

Three No. 11 buoys asked for by St. John.

January 29, 1907.—St. John agent recommends that a No. 11 x 14½ gas buoy be anchored off Southern Wolf Island in place of the Courtenay automatic now anchored there, and the other to replace the Courtenay whistling buoy now anchored off Split Rock; and the third is for a spare buoy.

I.M.S. Co.'s buoys endorsed by Amn. Association Masters, Mates and Pilots.

January 29, 1907.—The I.M.S. Co. send copy of a letter that they received from the Amn. Association of Masters, Mates and Pilots, endorsing the Willson automatic gas buoys.

Six beacons for Victoria.

February 5, 1907.—The I.M.S. Co. have shipped 6 gas beacons to Victoria, B.C., serial Nos. 4, 5, 6, 7, 8 and 9 (for Boat Pt.; Sarah Island, B.C.; Zero Rock; Rivers

Inlet; West Rock, Gulf of Georgia: Fog Rocks, Fitzhugh Sound; Gibson Reef, off Gibson, Morning Reeef, Klewnugget.

One No. 11 for Victoria, as spare.

February 27, 1907.—The I.M.S. Co. have shipped to Victoria 1 No. 11 type automatic buoy, No. 629, gas and whistling, with bell, intended for spare.

Four No. 8½ for Prescott.

February 27, 1907.—Deputy instructs I.M.S. Co. to ship to Prescott 4 No. 8½ gas buoys to replace the same number shipped to B. C.

Five sent Prescott.

March 4, 1907.—I.M.S. Co. send five No. 8½ gas buoys Nos. 631-5.

Lightship gas buoy for Blonde Rock.

March 5, 1907.—Deputy to Halifax agent: Instructions have been given to the I. M. S. Co. to forward to you 1 No. 14 L.S. gas buoy similar to that recently placed in the position of the outer automatic buoy. The buoy referred to above is to be placed at Blonde Rock. It may be some time before delivery can be made of the buoy referred to. (The No. 9 buoy at Blonde Rock went adrift 10th Oct., 1906, No. 546.)

Unwatched light for Gibson's Reef.—Dept. have no Wigham lights.—Agent to use his own judgment in placing beacons.

March 5, 1907.—Deputy to Victoria agent: Your letter 13th ulto. I beg to state that the L. H. Board has passed an unwatched light for Gibson's reef off Gibson island. With reference to Watson's rock and the 31-day light, I have to inform you that the department has no Wigham lights available, and as I indicated in a previous letter you are authorized to use your judgment as to the disposition of the gas beacons forwarded to you. You have been requested to forward a complete report as to the number of unwatched lights requested granted, and the means available at your agency for carrying out instructions given. (Initialled J. F. F.)

Victoria agent remonstrates against sending more buoys than they can take care of.

March 6, 1907.—Victoria agent to department: That he has lying on the C.P.R. wharf at Vancouver 6 gas beacons and 4 gas buoys, waiting transportation to destination, and the *Quadra* is the only available steamer, and it will keep her engaged for upwards of 2 months. Would recommend that no more buoys be shipped to the coast until we are in a position to place them as soon as they arrive. The department has already been advised on several occasions that present accommodation will not permit the storage of a large shipment of aids to navigation and supplies. (Extract wanted. J.F.F.). I am advised by engineer of I.M.S. Co. of the shipment of 1 No. 11 auto. gas and whistling buoy with 500 lb. bell apparatus, No. 629; marked 'intended for spare.'

Twelve No. 8½ gas buoys for Prescott.

March 13, 1907.—C. of L. to assistant C. of L.: Instructions have been given to the I. M. S. Co. to ship to you at Prescott 12 No. 8½ auto. gas buoys. These are to be used by you to replace the Scout type of buoy now in service.

Nine automatic gas beacons for Victoria (not located).—Six sent 5 Feb. were specially located.

March 13, 1907.—To agent, Victoria: Instructions have been given to the I.M.S. Co. to ship to you 9 automatic gas beacons complete. The necessary lanterns will be

forwarded from the Dom. L. H. Depot, Prescott. As you were advised in another letter you are to ship the 4 Wigham lamps at your agency to the L. H. Depot at Prescott, and automatic gas beacons are to be used where required in B. C. waters. (Initialled J.F.F.)

Gas beacon already provided for Gibson's (Watson) reef.

March 14, 1907.—Victoria agent to deputy: Your letter 5th advising that L.H. Board had passed an unwatched light for Gibson reef, off Gibson Island, in reply, I beg to explain that the reef off Gibson Island is named Watson reef on the chart, and that a gas beacon is being shipped on board the *Quadra* to be installed on this rock.

One No. 8½ gas and bell buoy for Victoria.

March 18, 1907.—I.M.S. Co. have shipped to B.C. one No. 8½ auto. gas and bell buoy, for spare. We have notified Capt. Gaudin of this shipment.

Seven No. 8½ gas buoys for Prescott.

March 20, 1907.—Assistant C. of L. Prescott, acknowledges receipt of 5 No. 8½ auto. gas buoys, serial Nos. 631-5; also on 19th March, 2 No. 8½, 637-8.

'Scout' buoys sent to Halifax to be used as bell buoys, after a sealed ball bell attachment has been provided.

March 21, 1907.—Deputy to Halifax agent: Instructions have been given to the L. H. Dept. at Prescott to ship to you 15 Scout type gas buoys. These have been condemned by the department and have been replaced in service by No. 8½ auto. gas buoys. They may be used at your agency in place of conical or can buoys with a suitable top; and the department is making arrangements to (have) provide a sealed ball bell attachment so that the buoys can be utilized as bell buoys. Please advise me the disposition that you suggest making of these. (Initialled J.F.F.)

Prescott instructed to ship them.

March 21, 1907.—C. of L. to Assistant C. of L., Prescott: I have to instruct you to ship to the agent of this department at Halifax the 15 Scout type gas buoys which have been condemned by the department as gas buoys and which are to be replaced by No. 8½ automatic type.

Three No. 8½ gas buoys for Prescott.

March 21, 1907.—C. of L. to Assistant C. of L.: Instructions have been given to I.M.S. Co. to ship to you at Prescott 3 No. 8½ auto. gas buoys. These buoys, together with the 12 referred to in my letter of 13th inst., cover the 15 buoys provided by order in council 11th March, 1907.

Nos. 5 and 6 buoys called in for alterations, and No. 8 buoys to take their place in great hurry.—Want to know how many by telegraph.

March 25, 1907.—Deputy (J.F.F.) advises St. John agent that all No. 5 and No. 6 gas buoys at the agency are to be returned to Ottawa, in order that new heads containing purifier may be placed by the manufacturer, as he has offered to do this free of cost to the department, if the buoys are delivered to him f.o.b. Ottawa. On receipt of this you will reply by wire the number of No. 8½ gas buoys which will be required to replace the Nos. 5 and 6 buoys at your agency. Same thing written to Halifax agent, and on 30th March, same thing to Prescott agent.

Thirteen more Scout buoys sent to Halifax—One to be retained for experimenting with bell attachment.

March 28.—C. of L. to asst. C. of L., Prescott: Referring to my letter 21st instant, instructing you to ship fifteen Scout buoys to Halifax agent, I have to instruct you to ship thirteen additional buoys of this type and retain for the present one buoy for the purpose of having fitted to the same the bell attachment which the department proposes for all buoys of this type. Arrangements have been made to supply the deficiency in the number of gas buoys caused by taking this buoy out of service.

St. John agent wired what No. 8½ buoys required to replace No. 5 in Restigouche, Miramichi and elsewhere.

March 27.—J. F. F. wires Harding, St. John, agent: 'Wire number and shipping directions for No. 8½ gas buoys to replace all No. 5 gas buoys, Rivers Restigouche and Miramichi and elsewhere, including spare buoys. Number fives to be returned to I.M.S. Company, Ottawa. (Apparently no answer to this.)

Thirteen more Scouts for Halifax.

March 28.—Deputy to Halifax agent: I have to advise you that additional instructions have been given to the L.H. depot at Prescott to ship you thirteen more Scout type gas buoys. These are condemned as gas buoys, and are to be used as either conical, can or bell buoys; and for the latter a special attachment will be provided. (J.F.F.)

Three No. 5 gas buoys to be sent I.M.S. Co., Ottawa, for alteration.

March 30.—C. of L. to asst. C. of L., Prescott: I have to instruct you to ship the three No. 5 gas buoys in the Montreal-Kingston division to the I.M.S. Co., Ottawa. The manufacturer has offered to lengthen the tubes and supply new heads containing purifier without cost to the department, provided the buoys are delivered on cars, f.o.b. Ottawa. (See next item.)

Above buoys (three No. 5) already disposed of.

April 2.—Asst. C. of L. to C. of L.: Your letter 30th ultimo. I beg to inform you that two of these buoys were shipped on November 2 last along with the No. 7 valveless buoy to T. L. Willson (per copy letter inclosed). The other No. 5 type buoy was shipped to Thames river and is still there (stamped file and return, J.F.F.)

Halifax will endeavour to utilize discarded Scout buoys.

March 27.—Halifax agent to Deputy: In partial reply to yours 21st, I beg to say when the buoys are received and cared for we will endeavour to utilize them for some of the many opportunities that our rivers, bays and coast shoals present. Awaiting these buoys and the sealed ball bell attachments.

St. John agent complains of inattention to his request.

April 2.—St. John agent to Deputy: Reverting to my letter January 14 last asking to be provided with three No. 11 gas buoys for Split Rock, off South Wolf Island, and the other for a spare buoy, and your reply of February 1 informing me that the matter would be laid before the L.H. Board, I have not received any further information on the subject up to this date (stamped, refer to C. of L.)

Have no No. 6 buoys, but have three No. 8 with purifiers in lantern supports.—Should have one No. 8½ as spare buoy.—A combined gas and bell buoy should be sent to St. John to replace No. 519.

April 1.—C. A. Hutchins (approved by Parsons, agent); Your letter 25th ultimo, I beg to report that on 8th ultimo we sent to Ottawa two No. 6 gas buoys in accordance

with previous instructions. We have no more on hand. We have on hand at this agency two No. 8 gas buoys in the dockyard—Nos. 506 and 8 and one No. 8 at present in St. John—No. 519 to be replaced off the Avon river, as soon as the ice disappears. Those three buoys have the purifiers in the lantern support. The two No. 6 already returned were brought in from the Middle Ground and Neverfail, Halifax harbour, having been replaced by No. 8½ buoys. We should have at least one No 8½ buoy on hand as spare to relieve Middle Ground and Neverfail. I beg to ask if we shall send these No. 8 buys, 506-8 and 519 to have purifiers fitted in heads of buoys. A combined gas and bell buoy should be sent to St. John to replace No. 519 for Avon river. This buoy is attended to by the *Lansdowne* from St. John.

New power derrick scow for B.C.—Want a report on what boats are available for chartering meanwhile.

March 20.—Deputy to Victoria agent: Your letter, 6th, with reference to lack of facilities for handling aids to navigation in your agency, I have to advise you that plans are being prepared and tenders will be called for the construction of a power derrick scow for B.C. waters. While it may take some time for the construction of this scow you are directed to forward to me a report indicating what boats are available and may be chartered for the purpose of placing gas buoys and other aids to navigation that may be forwarded to you. The department recognizes that the *Quadra* is unable to overtake the work as it stands now in B.C., and pending the furnishing of permanent appliances it is necessary that other steps be taken. Your early attention to this is requested. (Initd., J.F.F.)

Purifier felts wanted for Halifax.

April 15.—C. A. Hutchins to Halifax agent: Will you please order from Ottawa for immediate delivery one dozen purifier felts for No. 11 gas buoys—*i.e.*, one dozen tops and one dozen bottoms. (Letter sent, I.M.S. Co., 22-4-07.)

Freight on buoys.

April 22.—W. Thomson, freight agent G.T.R., Ottawa, to C of L.: I attach dup. accounts for four cars of buoys delivered to the I.M.S. Co. You advised that you would pay freight charges on these cars. Please let me have cheque by return and oblige.

Charlottetown notified by I.M.S. Co. of shipment of three No. 8½ buoys.

April 26.—Charlottetown agent to deputy, telegram I.M.S. Co., date 23rd inst. notifies me of the shipment three gas buoys No. 8½—one for Miscouche shoal, Indian rocks and Pt. Prim. What about buoy instructed get from Pt. Prim which I have asked agent to send Pictou. (Telegram sent, A.O.C. 27-4-07.)

No. 9 Lighted Whistling buoy for Pt. Prim.

April 27.—Deputy replies: The agent at Halifax received instructions to supply No. 9 lighted whistling buoy complete for Point Prim. You will correspond with him.

Quotation wanted for bell attachment to Scout buoy.

April 30.—C. of L. to asst. C. of L.: I have to request you to furnish me with a full report as to the conditions obtaining at the mouth of the river Thames, and advise if there is sufficient water to replace the No. 5 buoy now in service by a No. 8½. I propose shortly to visit this locality, but in the interval require the report referred to above.

Quotation wanted for bell attachment to Scout buoy.

May 6.—Deputy to I.M.S. Co. Be good enough to quote bell attachment for Scout type gas buoys which have been withdrawn from the service, and which are to be converted into bell buoys for the maritime provinces. (Quotes $474 each.)

Arrange for bell apparatus to be used with discarded Scout buoys.

May 7, 1907.—I.M.S. Co. to Deputy: Your inquiry of 6th received *re* bell attachment for Scout type of gas buoy. We can supply our patent sealed ball type of bell apparatus for these buoys with 4-inch diameter hard steel balls and 200 lbs. bronze bells complete, including the required pedestals for the heads of the buoys, for the price of $474 each. F. O. B., Ottawa. We have one of these apparatus ready which we could ship you immediately on receipt of the order. (Written across upper left corner: 'I recommend that one bell attachment be purchased and tested first at Prescott, and later at Halifax. Cost $474 plus freight, J. F. F., 7-5-07.) (Approved, F. G. Attachment ordered to be shipped to Prescott, J. F. F., 10-5-07. Letter to Prescott, 10-5-07. J. F. F.)

Deputy now inquires about St. John Buoys, instead doing what agent wanted.—(Notice the delays.)

May 8, 1907.—Deputy to St. John agent: Your letter 2nd April referring to your former letter 14th January, asking for three No. 11 gas buoys, I have to request you to be good enough to forward to me a list of the gas buoys, which have been sent to you for the Bay of Fundy, and the positions in which these buoys have been placed, together with any recommendations which you may have for additional automatic buoys for your agency.

Depth of water at mouth of Thames river—14 feet No. 8½ buoys draws 9 feet.

May 3, 1907.—Asst. C. of L. to C. of L.: Your letter 30 ult.: 'From the report of Fitzpatrick when this buoy was first placed he states there is 14 feet water on both sides of the buoy for 200 feet. I observe also that in draft notice to mariners which I sent on 23rd July, 1906 (copy inclosed), the draft of water is also given as 14 feet. Consequently a No. 8½ buoy will be quite suitable for this depth of water. Although with a draft of 9 feet there will not be very much to spare. (See letter, 7th May, J F. F., 10-5-07.)

Place No. 8½ buoy and send No 5 to I. M. S. Co., Ottawa.

May 7, 1907.—C. of L. to Asst. C. of L.: I have to instruct you to replace the No. 5 gas buoy at River Thames by a No. 8½ gas buoy, and have the No. 5 buoy shipped to the I. M. S. Co., Ottawa: Please advise me when this is carried out and no draft notice to mariners will be required.

No number 8½ available.

May 8, 1907.—Assistant C. of L. to C. of L.: Your letter 7th received, and your instructions will be duly attended to. I may state, however, that there is no No. 8½ buoy available at the present moment.

Use one from Montreal-Kingston division.

May 10, 1907.—C. of L. to Assistant C. of L.: Your letter 8th. I have to instruct you to utilize one of the No. 8½ gas buoys for the Thames river which were intended for the Montreal-Kingston division, and replace the same by a shallow draft spar gas buoy, compression type.

Noble replies 13th May and says your instructions will be carried out as early as possible.

Ball attachment for Scout Buoy to be tested.

May 10, '07.—C. of L. to Assistant C. of L.: Have to advise you that a ball attachment for 'Scout' buoys has been ordered from the I. M. S. Co., to be shipped to the Dom. L. H. Depot, Prescott. I have to request you to have this tested, and send a

report to the department. (This letter also acknowledged 13th May, and will be duly attended to.)

Tribute of efficiency of automatic gas buoys in B.C., by 2nd officer, C.P.R. steamer 'Tartan.'

May 11, 1907.—T. L. Willson submits a letter of the 2nd officer of the R. M. S. *Tartan,* C.P.R. steamer, showing his appreciation of the self-regulating acetylene gas buoys, &c. This was crossed 'Should the Minister see this? J. F. F.,' and 'The Minister has seen it, C. S.' This letter was addressed to the Willson Carbide Co., of St. Catherines, and referred to Willson, Ottawa.

Buoy supplies for Quebec.

May 11, 1907.—I. M. S. Co. to Deputy: As instructed your letter 19th we have shipped to J. U. G, Quebec, 12 cans of acetylene purifier; 12 complete sets of rubber gaskets for No. 7 gas buoys and 12 complete sets for No. 8½ gas buoys.

Buoy supplies for Halifax.

May 13, 1907.—Deputy to I. M. S. Co.: Ship to agent this department, Halifax, 24 gaskets for valve at lower end of gas buoys, 24 gaskets for purifier, 24 gaskets for carbide door, 50 ⅜-inch brass split cotter pins for water valve. Shipment should be sent by express. (Shipped by express, 17th May. Account sent Halifax for certificate, 18-5-07, J. F. F.)

Spare gas and bell buoy required for Halifax, cost $3,750, No. 689.

May 7, 1907.—Deputy to Gov. in Council wants authority to purchase from the I. M. S. Co., 1 combined gas and bell buoy to be held at Halifax as a spare buoy, as the one previously provided for this purpose has been placed at the mouth of La-Have river, as it is necessary that at least one buoy of this class be held in reserve. —Shipped 21st May.

Station purifier wanted.

May 15, 1907.—Deputy to I. M. S. Co.: Please quote price for one station purifier similar to the two previously furnished by you and shipped to Prescott.

Only three Pintsch Buoys now in service—Want them abandoned.

May 15, 1907.—Memorandum of 12th April again submitted (by J. F. F.), which is as follows: The only Pintsch gas buoys which now remain in the service of this department are three gas and bell buoys in the Quebec agency, viz., at Barrett Ledge, Channel Patch and Beaujeu Bank. For these three buoys and the gas beacon on Beaujeu Bank pier the department is compelled to keep up a Pintsch gas plant at Quebec. Relative to the gas buoy service the policy of the department has been consistent in the past—to replace Pintsch gas buoys by acetylene lighted buoys for various reasons which have been set out in the last three annual reports of the department. The replacing of the Beaujeu bank beacon by a suitable light will relieve the department of the expense of maintaining the Pintsch gas plant at the Quebec agency.

One No. 8½ gas buoy for Sturgeon Bank, B.C.—$3,000.

May 14, 1907.—Minister to Governor in Council: 'Undersigned recommends he be authorized to procure from I. M. S. Co., one No. 8½ C gas buoy at a cost of $3,000 to be placed at the elbow of Sturgeon Bank, B.C. (Initialled J. F. F.)

I. M. S. Co. instructed to ship this buoy only on 21st June. It was shipped on 26th June.

One station purifier for gas and derrick scow for Parry Sound.

May 20, 1907.—I. M. S. Co. to Deputy: Your letter 15th. Will supply one station purifier for acetylene gas similar to the two previously furnished by us for $500 f.o.b. cars, Ottawa. (Endorsed. This is required at once for gas and derrick scow

building for Parry Sound. Cost, $50). 23-5-07. Approved F. G. Ordered 8 June, J. F. F.)

This purifier was not shipped until 30th October. (See file at that date.)

I. M. S. Co.'s report re testing of their Pintsch gas lanterns.

May 20.—Commissioner of Lights to Assistant Commissioner of Lights, Prescott: I inclose for your information copy of a report received from the I. M. S. Co. *re* testing of their Pintsch gas lanterns.

Report missing.

Supt. of Lights reports on towers of No. 11 gas buoys.

May 20.—Commissioner of Lights to I. M. S. Co.: I inclose for your information copy of a report received from the superintendent of lights, Halifax, on the towers for the No. 11 gas buoys.

Report missing.

Gas buoys received at New Brunswick agency.

May 23.—Gas buoys received at N. B. agency:

Type No.	Serial No.	Where placed.	When placed.	Description.
11	572	Old Proprietor.....	21 Apl, '07.....	Fixed white gas and whistling.
11	5	Broke adrift from Old Proprietor. Ashore at Tusket Isld		
11	3	North Wolf.	30 Jany, '07..	Occulting white gas and whistling.
11	664	Point Lepreau.....	9 May, '07.....	Occulting white gas and whistling.
11	3	Anchored in Carleton to be placed N. W. Brier Island.		
11½	589	Anchored in Carleton to be placed S. W. Brier Island, spare buoy, 11th Oct. '07.		
9½	698	1 mile off Partridge Isld.	11 May, '07.....	Occulting white gas and whistling.
7	519	Foul ground	22 Dec., '07	Occulting white gas and whistling.
7	5	Avon River	16 Apl, '07.....	Occulting white gas and whistling.
8½	520	Gas and bell, spare buoy at ballast wharf St. John N. B., spare buoy.		
8	674	No. 9 spare buoy at ballast wharf, St. John, N.B. spare buoy.		

Miramichi River Service.

Three No. 6 buoys shipped Ottawa, replaced by type No. 8.

No. 8 655 At Fairway, 17 May, '07, occulting white.
8 6 At Dredge, 17 May, '07, occulting white.
8 2 Spare buoy at Chatham, N.B.

Restigouche River Service.

Six No. 6 buoys shipped Ottawa, replaced by type No. 8.

No. 8 Fullerton's Bar.
8 Point La Limb.
8 Point Le Garde.
8 Oak Point.
8 Traverse.
8 Spare buoy at Campbellton, N.B.
8 To be placed Zephyr Rock, off Pt. Duchene, N.B. This buoy is in Charlottetown, P.E.I.

T. McAvity & Sons, St. John, N.B., after business with the I. M. S. Co.

June 1, 1907.—T. McAvity & Sons, St. John, N.B., to Minister: The Willson Gas Buoy Company, who supply a large number of gas buoys to your department, use a considerable number of 10" and 12" whistles (steam) which are of American make, and imported from Cincinnati; also a number of bells, which are imported from Troy, N.Y. We would ask you if you would kindly drop them a line requesting them to merely give us the preference on these two items, viz., whistles and bells. We will guarantee to give them equally as good articles in every respect. By doing this you will confer a favour on yours truly, T. McA. & Sons.

Carload of No. 5 gas buoys to be returned to Prescott.

June 19.—Commissioner of Lights to I. M. S. Co.: Have to request you to ship immediately to the D.L.H. Depot, Prescott, one carload of the No. 5 gas buoys which were sent to Ottawa to have the tubes lengthened and new purifying head attached.

Specifications on file here for No. 7 automatic gas buoy; also additional specifications required for No. 9.

Acetylene gas purifier sent to Victoria, evidently without being ordered.

May 31.—Victoria Agent to Deputy: 'I inclose herewith certified invoices for the following:—20 cans acetylene gas purifier containing 1,687 lbs., 20 cans for above, 25 top felts for purifiers, 25 bottom ditto, received from I. M. S. Co. (Accounts certified and forwarded for payment. J. F. F.)

Circular to all agencies showing types and numbers of buoys shipped them.

June 7.—Deputy (per C. S.) to all 6 Agencies of Department: 'I am sending to you, under separate cover, for your information, a blue print, sheet No. 769, showing the various types of aut. gas buoys, together with serial numbers of the same, which have been shipped to various agencies by this department. (Initialled J. F. F.)

No. 9½ imported type now furnished by Department.

June 10.—Assistant Commissioner of Lights, Prescott, to Deputy: Acknowledging receipt of your letter 7th inst., in which you inform me that you are sending, under separate cover, blue print, sheet No. 1001, giving the governing dimensions of the latest type No. 9½ aut. gas and whistling buoy which is provided by this department, and which carries an adjustment for submarine bell. (Initialled J. F. F.)

June 14.—Similar letter from Victoria agent, dated June 14.

June 11.—Assistant Commissioner of Lights to J. F. F. Acknowledging letter, June 10, advising shipment carload of No. 5 buoys which were sent to Ottawa to have their tubes lengthened and new purifying heads attached.

One dozen bronze bolts shipped to each agency of department, evidently without being asked for.

June 11.—C. S. for Deputy: Orders I. M. S. Co. to ship the following:—1 doz. bronze stud bolts for carbide doors, Nos. 8½, 9½ and 11 gas buoys, to the following agents of this department:—Victoria, B.C.; Parry Sound, Prescott, Quebec, Sorel, Charlottetown, P.E.I.; St. John, N.B.; Halifax, N.S.; accounts for same to be rendered to agents. (Initialled J. F. F.) Shipped June 18.

Communication with Trinity House, London, as to the department's experience with automatic low-pressure acetylene gas buoys.

June 13.—Deputy to Secretary, Trinity House, London: There are at present in Canadian waters 201 automatic low-pressure acetylene gas buoys, which have been

obtained for this department from the I. M. S. Co., of Ottawa. The following table gives the number of each type of buoy referred to above, together with the value of the same.

		Av.
143 standard gas buoys	$405,000	$ 2,832
8 No. 8½ gas buoys, with bells	30,000	3,750
46 gas and whistling buoys	347,000	7,543
3 No. 11 gas and whistling buoys, with bell	28,650	9,550
1 No. 14 gas and whistling buoy	15,000	15,000
	$825,650	

In addition to the above, the department has in service 18 aut. low pressure gas beacons, which operate on the same principle as the gas buoys, viz.: 1 No. 7 beacon, which carries a charge of 1,000 lbs. carbide, and 17 No. 7½ beacons, which carry charges of 1,500 lbs. each and cost the Dominion $1,500 each, F.O.B. Ottawa.

Information about Automatic Gas Buoys in the Canadian Service given to Trinity House, London.

These are in use on the Pacific coast. The No. 7½ gas beacons and all the gas buoys referred to above, are furnished to the department at the cost mentioned, exclusive of lanterns. The bell attachment for the buoys is of a special type. The bell is struck by a steel ball rolling in a tube the outer end of which is closed and the inner end covered by a corrugated bronze diaphragm. By this means the rolling ball is not affected by atmospheric conditions. The experience of this department shows that the lighted whistling buoys which have been supplied by the I. M. S. Co. are superior to the Courtenay whistling buoys heretofore in service, inasmuch as the area of the whistling tubes is greater. This department has had in its service compression gas buoys, using both Pintsch and acetylene gas. The Pintsch gas buoys have been discarded by the department and the acetylene high pressure buoys are being replaced as rapidly as possible by automatic gas buoys of the type manufactured by the I. M. S. Co. I have pleasure in sending you under separate cover copies of the annual reports of this department for the years 1904-5 which contain certain information with reference to the gas buoy service of Canada.

Test of 'Scout' Buoy Bell Attachment.

June 18.—J. F. F. telegraphs to W. H. N., Prescott: 'Advise me when you will complete test of Scout type bell buoy. (Apparently no answer.)

I. M. S. Co.'s Book of Instructions for Assembling and Charging Automatic Gas and Whistling Buoys.

June 18.—Commissioner of Lights' circular to agencies: Victoria, Halifax, St. John, Parry Sound, Chatham, Montreal, Quebec, Prescott. 'Am sending you under separate cover a book of instructions issued by the I. M. S. Co., for assembling and charging automatic low pressure gas buoys. I desire to call your special attention to a paragraph on page 5 as follows: 'Replace the carbide door with its rubber packing. The surface on which this packing rests must be perfectly clean. Be careful to screw the bolts down evenly, so as to avoid having the packing tighter on one side than on the other. The attention of the department has been directed to the necessity of having special attention paid to the paragraph mentioned above, inasmuch as two cases of stud bolts have been broken by screwing the carbide door down unevenly. Please see that the officers who are charged with the placing and maintaining of automatic gas buoys have this brought to their attention, and advise me when it has been done.

Gas Buoy Shipped before Order in Council Providing for it was Obtained.

June 21.—C. S. (for deputy) orders I. M. S. Co. to ship Gregory 1 Standard No. 8½ gas buoy for Fly Bank (initialled, J. F. F.)

On this file under date July 10 is the following:—Clerk P. C. On a memo. dated June 13, 1907, from the acting Minister of Marine and Fisheries, stating that representations have been made to him by the agent Marine and Fisheries, Quebec, that it is in the interests of navigation that a gas buoy be established on the eastern end of the Fly Bank. The minister therefore recommends that authority be given to him to procure a No. 8½ gas buoy from the I. M. S. Co., at a cost of $3,000. The committee advise that the required authority be granted.

3 No. 8½ Buoys for Quebec.

June 21.—C. S. (for deputy) instructs I. M. S. Co. to ship to Gregory three No. 8½ gas and bell buoys for Barrett Ledge, Channel Patch and Beaujeu Bank (Shipped June 26, account certified and forwarded for payment, 28/6/07, J. F. F.).

Sundry Expenses I. M. S. Co.

June 22.—I. M. S Co. to J. F. F., Commissioner of Lights: We inclose herewith invoices in triplicate for services and expenses of our Mr. Garry to Quebec in March and April and to Owen Sound and Parry Sound in May.

June 24.—Deputy to I. M. S. Co.: Department will not pass above expense bills without a voucher for hotel expenses.

Tobin Bronze Stud Bolts received at Victoria.

June 27.—Victoria agent to I. M. S. Co.: 'Please find attested receipt in triplicate for 1 doz. Tobin bronze stud bolts for carbide door of automatic gas buoy.

Commissioner of Lights wants 10 No. 9½ Gas and Whistling Buoys sent to Victoria, B.C., nothing of the kind asked for.

June 28.—Memorandum (by J. F. F.). In view of the increase of shipping and the necessity of additional aids to navigation in British Columbia waters, the undersigned has the honour to recommend that 10 No. 9½ lighted whistling buoys be procured from the I. M. S. Co. at a cost of $5,000 each, and shipped by the department to the agent at Victoria, B.C. Signed, J. F. F. Initialled, W. T.

I. M. S. Co. propose a Swap of Buoys, 2 No. 9½ for 1 No. 11 (the latter now at Prescott as a spare). Giving the Department much Trouble but no Compensation.

June 28.—I. M. S. Co writes thus: We beg respectfully to ask your kind attention to the following matter, and we shall be very glad if you can see your way clear to accept our proposition. We have an inquiry from the government of Brazil for a No. 11 lighted whistling and bell buoy, which may require to be shipped almost immediately to Para, Brazil. Unfortunately we have no No. 11 buoys of this type in stock, and it would take us a few months to manufacture one. We understand that there is now at the Lighthouse Depot in Prescott one of these buoys which has been considered as a spare, and we would like to know if you would be good enough to allow us to have such buoy, and to let us replace it by two of our No. 9½ lighted whistling buoys. The price paid by your department to us for the said No. 11 buoy was $9,550. Our price for the two No. 9½ buoys which we offer instead of the No. 11 would be $10,000, so that there would only be a difference of $450 to be paid to us, and you would get two buoys in exchange for one. Trusting that you will be able to meet our wishes in the matter, and thanking you in anticipation. (Endorsed on upper left corner. 'See memo. attached with draft report to council.' J. F. F.)

Department Evidently willing to make Swap, would even seem to be Anxious to do so. Memorandum for Deputy Minister—19 July.

Attached herewith is a letter from the I. M. S. Co., requesting that they be allowed to take back the No. 11 lighted bell and whistling buoy shipped to this department as a spare buoy for the Parry Sound division furnishing the department in lieu thereof 2 No. 9½ lighted whistling buoys. The undersigned recommends that the necessary authority be procured by order in council, and if approved, a draft notice to council is attached. (Initialled J. F. F.) (In red ink 'Accountant to say if expenditure can be met. F.G.' 'Prepare O. C. F.G.')

Two 8½ standard gas buoys for Detroit river, Amherstburg, $6,000.

June 21, 1907.—Acting minister to Gov. in Council: 'Representations have been made to the department as to the necessity of providing 2 buoys for the Limekiln crossing near Amherstburg, to be used during the progress of the dredging at that point. The channel referred to is one of the greatest importance and is used by all traffic bound up and down the Detroit river. The undersigned therefore requests that authority be granted to order 2 No. 8½ standard gas buoys from the I.M.S. Co. at a price of $3,000 each. (Initialled J. F. F.) Above passed council 10th July.

Auditor General asks for statement from each agency of all buoys received from T. L. Willson or the I.M.S. Co., and what disposition has been made of them.

July 4, 1907.—A.G. to deputy: 'I wrote you some time ago asking for a statement from each of the agencies of the department, showing the number of gas buoys received from Mr. T. L. Willson and the disposition which had been made of them, but so far I have not received a reply. These statements I deem necessary to a proper audit of your expenditure in connection with the gas buoys purchased from Mr. Willson, and I shall be obliged if you will cause them to be sent me at your early convenience. Of course I shall expect now that the statements will include all gas buoys received up to March 31, 1907, whether from Mr. Willson or the I.M.S. Co. You will have noticed that the order in council recently passed authorizing the purchase of these buoys, assigns a particular location to each, so that in the absence of the information which the statement I ask for should supply, I am not in a position to report whether or not the directions of the Gov. Gen. in Council have been carried out.'

Statement being prepared.

July 9.—C.S. (for deputy) writes to the A.G. that the statement asked for by letter of 4th July is being prepared.

I.M.S. Co. asked for cost of explosive bell for gas beacon decided on for Helen Point Active Pass.

July 5, 1907.—At the last meeting of the L. H. Board, and after a personal inspection by the minister and several of the members thereof, a recommendation was made which has since been approved, that a gas beacon with explosive bell be provided for Helen Point Active Pass. I may state that the department has before it no official information from your firm as to the cost of the explosive bell referred to, over and above the cost of the gas beacon. Please be good enough to let me have this information.

Ten No. 9½ buoys for British Columbia—$50,000.

July 4, 1907.—Acting Minister M. & F. to Gov. in Council: 'In view of the increasing trade in B. C. waters and the necessity of provision being made for further aids to navigation, the undersigned has the honour to recommend that he be authorized to procure from the I.M.S. Co. 10 No. 9½ lighted whistling buoys at a cost of

$5,000 each. (Initialled J.F.F. per W.H.N.).' (Above recommendation passed council 10th July).

One Standard gas and bell buoy for Queen Charlotte Island—$3,750.

July 4, 1907.—Acting minister M. & F. to Gov. in Council asking authority to procure from I.S.M. Co. 1 standard gas buoy for Skidegate Harbour, Lawn Hill, Queen Charlotte Island, at a cost of $3,750. The above-mentioned aid to navigation has been recommended by the L. H. Board of Canada.

(Above recommendation passed council 10th July).

Blue prints for No. 9½ buoys to be sent to Victoria.

July 19, 1907.—J. B. H. for deputy to I.M.S. Co.: 'I have to request you to furnish Capt. J. Gaudin, agent M. & F. Dept., Victoria, with 3 blue prints giving the weight and governing dimensions of No. 9½ gas buoys. (Initialled J.F.F.)

One No. 11 auto. gas and whistling buoy sent from Prescott to I.M.S. Co., No. 586.

July 19, 1907.—Asst. C. of L., Prescott, to I.M.S. Co.: 'I have sent you to-day in G.T. flat car to your address, charges collect, one automatic gas and whistling buoy No. 11 type, serial No. 586, without superstructure, one box wrenches and one whistle. (Stamped file; no action.—W.H.N.).

Victoria agent advised of ten No. 9½ buoys to be sent him, with blue prints.—Lanterns to go forward in due course.

July 19, 1907.—J. B. H. for deputy to agent M. & F., Victoria, B.C.: Instructions have been given the I.M.S. Co. to ship to you 10 No. 9½ lighted whistling buoys for B. C. waters. I have to instruct you to forward to me, after consultation with Capt. Troup, a list of the points where these buoys are most urgently required. The I.M.S. Co. has been instructed to forward to you a blue print giving the governing dimensions of the buoys referred to. Lanterns for these buoys will be forwarded to you in due course. (Initialled J.F.F.).'

(Five of these shipped July 24th, 708-712, and five July 26th, 713-717.

Proposed swap and explanations regarding same submitted to Privy Council.

July 29, 1907.—Memo. (by J.F.F.) acting minister M.& F. to Gov. Genl.: 'The undersigned has the honour to report that the department purchased from the I.M.S. Co. 1 No. 11 lighted whistling and bell buoy as a spare buoy for the Georgian Bay district, at a cost of $9,550; that the buoy referred to was shipped to the L. H. Depot at Prescott to be conveyed to the Georgian Bay by the gas and derrick scow under construction at Prescott, and intended for the Parry Sound district. Representations have been made to the undersigned by the I.M.S. Co. that they require for export 1 No. 11 lighted bell and whistling buoy, and ask that the department return to them the buoy referred to above and accept in lieu thereof two No. 9½ lighted whistling buoys which cost $5,000 each. It has been reported to the undersigned that the No. 9½ type lighted whistling buoy was not available at the time that the No. 11 buoy was purchased by the department, and that the 9½ type will meet all the requirements of the department. The undersigned has the honour to request that he be authorized to make the exchange referred to above and to pay the difference in price, viz., $450.

Swap approved by Council.

August 1, 1907.—The above was approved by the Privy Council.

Victoria agent consults Captain Troup about placing buoys.

July 26.—Victoria agent to Deputy, advising that he was in communication with Capt. Troup with reference to the placing of these buoys where they are most urgently required. These are the ten No. 9½ buoys.

Accounts for buoys coming in from I. M. S. Co., giving no information as to where they were used.

July 30, 1907.—A. G. T., Assistant Accountant to J. F. F., D. L. H. Depot, Prescott: I am putting through to-day some accounts received from the I. M. S. Co. amounting to a large sum, and as we have no particulars as to the places the buoys are being sent to, we are obliged to charge the whole to general account. As this is not absolutely satisfactory I have to request you to forward to me at your earliest convenience a list of the various places for which these buoys were purchased so that we may distribute the charge in our books.

Victoria Agent in communication with Captain Troup about placing buoys.

July 26, 1907.—Victoria Agent to Deputy. Your letter 19th advising 10 No. 9½ buoys, also to forward me a blue print giving plans and dimensions of these buoys. I am in communication with Captain Troup with reference to the placing of these buoys where they are most urgently required.

Captain Troup wants to hear from Captains in Coasting Trade before deciding to place buoys—No additional buoys to be sent British Columbia meantime—Wire best arrangements you can make for handling these buoys.

July 30, 1907.—Victoria Agent to Deputy: I beg to inform you that Captain Troup has been away on a trip to Alaska, on board the C.P.R. steamer *Princess Royal,* returning yesterday. He leaves for Montreal to-morrow, and requests that the question of placing these buoys be left in abeyance until his return in about ten days, in order that he may obtain a report from the captains engaged in the coasting trade. I beg to acknowledge your telegram of this date: 'No additional buoys beyond the ten lighted whistling buoys shipped you, will be forwarded to B.C. until further arrangements made for additional facilities. Wire best arrangements you can make to charter suitable tug to place number lighted whistling buoys and to tow scow. If more assistance than tug required can you charter any suitable steam barges for the outside work.' The I. M. S. Co. has forwarded me three drawings governing the dimensions of the 9½ lighted and whistling buoys. (Stamped—Refer to C. of L., 7th August, 1907.)

August 7, 1907.—Department to I M. S. Co.: Labour and material loading, one No. 11 buoy, $34.68.

Deputy calls Agent's attention to necessity of keeping sufficient number of spare buoys.

August 8, 1907.—Deputy to Victoria Agent: Your letter 30th ult. in which you advise me that you wish to await Captain Troup's return before sending to me a list of the points where the ten lighted whistling buoys should be placed. I beg to call your attention to the necessity of your keeping a sufficient number of these for spare buoys. Please be good enough to let me have the list referred to at the earliest possible moment. Please note also that I will require a report from you as to the general facilities which you may need for placing and maintaining the new aids to navigation supplied to your agency. The report should be clear and any recommendations made should be specific.

(Practically an invitation to order new requirements and to be decided about it.)

I. M. S. Co. notified that proposed exchange of buoys has been authorized.

August 13, 1907.—Deputy to I. M. S. Co.: I have to acknowledge receipt of your letter of 28th June *re* exchanging one No. 11 gas buoy, for you giving two No. 9½, difference of $450 to be paid by the government. In reply I beg to inform you that authority is given to return to you the No. 11 lighted whistling and bell buoy, and I have to instruct you to ship to the L. H. Depot, at Prescott, for transmission to the Parry Sound Depot. two 9½ lighted whistling buoys, and credit against the account the price paid by the department to you for the No. 11 lighted whistling and bell buoy.

Freight on buoys.

August 16, 1907.—Wm. Thomson, Freight Agent, G.T.R. to Deputy: On 18th July we received from Chatham, Ont., one gas buoy delivered to the I. M. S. Co., freight charges on which were $101. I. M. S. Co. inform me that these charges are payable by you. Will you kindly let me have your cheque at your earliest convenience?

Two No. 9½ buoys sent to Prescott.—(Who paid the freight?)

August 17, 1907.—I. M. S. Co. to Deputy: 'As directed by you under date of 13th August we have shipped by G.T.R. to W. H. N., Prescott, two No. 9½ aut. gas and whistling buoys, Nos. 718 and 9 in exchange for the No. 11 aut. gas and whistling buoys taken over from your department. Inclosed B. L. invoice and credit, covering the above shipment. (File and return. J. F. F., 19-8-07. Accounts sent Prescott, 10-9-07.)

About spare buoys in British Columbia: one No. 11, four No. 9½, one gas buoy, one gas and bell buoy.

August 17, 1907.—Victoria Agent to Deputy: Yours 8th inst. calling my attention to the necessity of keeping a sufficient number of buoys for spare ones, and in reply beg to inform you that after the Swiftsure Bank and the Sand Heads buoys have been installed we shall have one spare No. 11 buoy in readiness for relief. We are only placing six of the No. 9½ and will have four to spare. We have also one each to spare of the gas and combined gas and bell buoys. (Stamped file—No action, 3-9-07, J. F. F.)

Deputy wants to know when the two 9½ buoys for Parry Sound will reach their destination.

August 19, 1907.—Deputy to J. F. F., Prescott: 'With reference to the order in council of 1st inst. approving of the purchase of two buoys for Parry Sound Depot, I am to request you to inform me when you expect that these buoys will reach destination?'

Exchanged buoys have now to be shipped by rail to Parry Sound—Expense no object—The Commissioner of Lights suggesting this if required—(This by the officer chiefly responsible for the whole thing)—Shipped 17th August.

August 21, 1907.—J. F. F., Prescott to Deputy: Your letter 19th inst., I beg to state that it was the intention to send these buoys to Parry Sound on the gas and derrick scow now under construction at Prescott. I returned from Montreal yesterday after having seen the contractor for the machinery and derrick, and I find that so little progress has been made that it will be late in the fall before the scow can reach the Georgian Bay. If the delivery of the buoys is required before this I would recommend that the cars be not unloaded at Prescott, but re-routed to Depot Harbour. (Written across—send by freight, F. G.)

Buoys to go by freight, too late for re-routing.

August 28, 1907.—Deputy to C. of L., Prescott: Your letter 21st. 'I have to inform you that it is considered desirable that these buoys be sent by freight. I understand that Mr. Noble has telephoned you to this effect.—(Initialled W. H. N.)

All No. 5 buoys now changed, except five and one No. 6.

September 12, 1907.—I. M. S. Co. to J F. F., C. of L.: As instructed by you, 1st August, we have finally shipped to you all the gas buoys which you had sent us for alterations, including the No. 7 valveless, to which we had to fit a new lantern support, owing to the original not being returned to us with the buoy. We note that you have not yet returned to us for alteration five of the type No. 5 buoys, serial numbers 505, 530, 1, 2, 4 and also one No. 6 buoy, serial number 550. As these latter buoys were originally shipped to Prescott we presume that these are the buoys which are still at Parry Sound.

September 25, 1907.—C. of L. to I. M. S. Co.: Your letter 12th: In reply I have to advise you that these buoys were left out during the winter at the Parry Sound ship channel, and I think that they have been recovered with the exception of one. Owing to the department's lack of facilities at this point it has not been possible to lift out these buoys and ship them to you, but this will be attended to at the earliest possible moment.

G.T.R. account for Freight not paid yet.

September 25, 1907.—Memorandum for accountant (by J. F. F.): This account (evidently referring to G.T.R. account for freight on buoy from Chatham referred to above), dated July 18, has been left on file, although the file was referred to you. The account is certified and should be paid to G.T.R.

Almost without facilities for handling new Aids to Navigation in B.C.

September 25, 1907.—To W. Kearns, A.G.'s office: I have your note 24th inst. The list promised you is nearly completed. We are almost without any facilities at Victoria for handling new aids to navigation, but they are being attended to with the least possible delay, and boats have been chartered for this purpose. Plans have been prepared for the new buoy steamers, and I expect the coming session will see sufficient provision made for this and other services. I have so far received excellent reports relative to both the gas buoys and beacons.

I. M. S. Co. asked for complete list of all buoys and beacons supplied and where shipped to.

September 25, 1907.—Deputy to I. M. S. Co.: I desire to call your attention to the request made some time ago to furnish this department with a complete list of all gas buoys and beacons supplied to it, together with the points to which they were sent to. Kindly give this matter your immediate attention. (Initialled, J.F.F.)

All freight on buoys to be prepaid.

September 26, 1907.—Memorandum (J. F. F.) Owing to the difficulty experienced by the agents of the department in the various provinces in connection with the payment of heavy freight charges on gas buoys shipped from Ottawa, the undersigned recommends that the necessary steps be taken to prepay all freight charges by the department at Ottawa, before the material leaves for its destination. (Approved. F. G.—See letter to I. M. S. Co. on this file, J. F. F. 7-10-07.)

11 x 14½ ft. buoy, Blonde Rock, Halifax Harbour, $15,000.

September 26, 1907.—Deputy to I. S. M. Co.: Your letter, 25th, advising shipment 11 x 14½ L. S. type gas and whistling buoy, serial No. 720, for Blonde Rock, N.S.

and inclosing invoice in triplicate and duplicate B L. This invoice has been forwarded to this department at Halifax for the necessary certificate.

No. 8½ C. Buoys Manner of mooring—Evidently promulgated for the first time.

September 27, 1907.—C. of L. to all agents: I inclose herewith a blue print showing the proper way to moor the No. 8½ C. automatic gas buoys. Hereafter all moorings put out are to conform in all respects to the dimensions shown on the print.

I. M. S. Co.'s statement of buoys and beacons furnished department.

October 2, 1907.—I. M. S. Co. (J. Bain, G. M.) to deputy: Your letter, 26th ultimo. We inclose herewith the required statement which we trust will be satisfactory for your purpose. (Copy sent Mr. Kearns, Audit Office, 7-10-07, J. F. F.) (See page 231, MS. page 24b.)

Plan of mooring No. 8½ C. buoys at Halifax.

October 2, 1907.—Parsons, agent, Hal., to C. of L.: Your favour 27th ult., duly to hand with blue print showing how our No. 8½ C. gas buoys should be moored. We have used just such moorings as here patterned for some years. We are not troubled with the bridle giving way. The links or shackles break apart by the continual wear of ocean setting our buoys adrift. Since using government test chains, the breaking of our moorings has given no less trouble. (Stamped file, no action, J. F. F.)

Department wants full particulars of all buoys re-shipped from the various agencies.

October 9, 1907.—Deputy to all agencies: With further reference to circular letter, 7th inst., &c. As you are aware from time to time instructions have been received from the department to ship to other agencies certain of these gas buoys. I have to request you to check over the list and send to me a statement giving the serial number and type of the different buoys which have been sent out of your agency, under instructions from the department, giving at the same time the agency to which they were sent.

Victoria wants further instructions as to mooring buoys.

October 3, 1907.—Victoria agent to C. of L.: Your letter 27th ult., as to correct way of mooring No. 8½ C. gas buoys. Up to the present we have not used any wire rope in mooring these buoys and request information as to whether the wire rope is to be in addition to the two or 2½ lengths of chain as the case may be. (Marked file and return, October 8, '07, J. F. F.)

Spare purifier recommended for Prescott.

October 14, 1907.—Memorandum: The undersigned begs to recommend that authority be given to procure from the I. M. S. Co. one station purifier for spare at an estimated cost of $500, respectfully submitted, J. F. F. (Stamped file and return October 23, 07, J. F. F., and in red ink 'This spare purifier would complete two sets of compressors, and in case of accident or fire I recommend this. The vote can also meet this. F. G., 22, 10, '07.)

Buoys at Halifax agency—in service and in store.

October 16, 1907.—Hal. to Deputy, saying they have at their agency: 20 No. 11 gas and whistling buoys on service, 3 No. 9 gas and whistling, 3 No. 8½ gas and bell, 2 No. 8½ gas only, 1 No. 7½ gas and bell, 1 No. 8 gas only. In the dockyard they have 7 No. 11 gas and whistling (one without lantern support), 3 No. 9 gas and whistling, 4 No. 8½ gas only, 1 No. 7 gas and bell, 2 No. 7 gas only. The above No. 11 buoys now at dockyard will be assigned the following places, replacing No. 9 and Courtenay buoys—Shelburne, Brazil Rock (now No. 9, g. & w.), Little Hope (now No. 9, g. & w.), Pubnico, S. W. Ledge, Cape Sable.

(In December.—Steamer *Kildonan* wrecked on Brazil Rock. Had the buoy been changed in the meantime, or was it being made and leaving the rock unmarked for a period during which the wreck took place?)

October 16, 1907.—Halifax to deputy: The following No. 9 type gas and whistling buoys No. 538, 542 and 545 have been sent out of this agency under your instructions to Charlottetown.

No. 9 buoy—No. 546 gone adrift from Blonde Rock, October 1, 1906.

October 1, 1906.—Buoy No. 546, No. 9, placed at Blonde Rock, went adrift about October 1, 1906, and has not been recovered.

October 22, 1907.—J. F. F. to U. P. Boucher, Montreal (telegram): Wire me total number of gas buoys in service at this date in your agency. Required for annual report. (Ans. 57, my letter 21st inst. gives full details.)

October 22.—J. F. F. to asst. C. of L., Prescott: Similar telegram. (Ans. A. Boyle, 36 aut., 3 compression gas buoys, M-K div.)

October 23, 1907.—J. F. F. to Boucher (telegram): Of the 57 gas buoys in service now, how many are automatic? (Ans. 11.)

October 24, 1907.—I. M. S. Co. send in account for No. 8½ C. bell buoy lantern support, $84.

Buoy for Beaujeu Bank, $3,750.

October 29, 1907.—Deputy to I. M. S. Co.: Instruct you to ship to Gregory, Que., 1 No. 8½ gas and bell buoy for Beaujeu Bank (Authorized, October 25.)

Extra station purifier for Prescott.

October 29, 1907.—Deputy to I. M. S. Co.: Instruct you to ship to D. L. H. depot, Prescott, 1 station purifier similar to those supplied by you for this department at your price, $500. (Initialled, J. F. F.)

October 29, 1907.—Deputy to asst. C. of L., Prescott: Advises above. This purifier will be used together with the spare gas plant available at Prescott in case of a break down on the ship channel between Montreal and Kingston, or at Parry Sound.

October 7, 1907.—J. F. F. writes to Kearns, of the Audit Office, inclosing list furnished by the I. M. S. Co. of all gas buoys and beacons furnished the department during the years 1904, 5 and 6, and up to March 31, 1907, and saying he is having prepared a more complete one to indicate the serial numbers, types, &c., whether in service or spare. This should go to him about the 20th inst.

October 7 and 9.—Circular letter of the deputy to all agents of the department, instructing them to prepare a complete list of all automatic acetylene gas buoys under their charge, giving the serial number, type and character of the buoys; whether lighted or lighted signal, position, and the number of buoys held at their agencies as spare, together with a list of the gas beacons sent to them, the position assigned to them, and whether they are in operation—if not, the probable time that they will be put in service. The list should be brought to 15th inst. (October, 1907).

October 10.—Statement (apparently by the department) giving the quantity of buoys, serial number, type, character, date of shipment, sent to the following agencies:—

July 10.—In consequence of a request from the Auditor General for the information, the following letter was sent from the department to the I. M. S. Co.: 'I have to request you to be good enough to furnish me with a list of all the gas buoys furnished either by T. L. Willson or by the I. M. S. Co. up to and including all buoys delivered and paid for in the fiscal year 1906-7, together with the points for which

these buoys were intended, if the same was indicated to you in the order.' (Acknowledged by I. M. S. Co., July 15.)

June 28.—Memo. by J. F. F. about necessity of additional aids to navigation in British Columbia waters, in which he recommends 10 No. 9½ lighted whistling buoys to be procured from the I. M. S. Co., $5,000 each, and shipped by the department to the agent at Victoria, B.C.

July 19.—Deputy to I. M. S. Co.: I have to request you to furnish Captain Jas. Gaudin, agent of this department at Victoria, B.C., with 3 blue prints giving the weight and governing dimensions of the No. 9½ gas buoys.

July 19.—Assistant Commissioner of Lights, Prescott, to I. M. S. Co.: I have sent you to-day in G.T. flat car, chgs. collect to your address, 1 aut. gas and whistling buoy, No. 11 type, serial 586, without superstructure, one box wrenches and one whistle. I inclose herewith the usual shipping list in duplicate, the duplicate of which you might please sign when the buoy has been received and return to me here. I also inclose railway company's shipping bill for same.'

August 7.—A. Boyle, Acct., D.L.H.D., Prescott, to Acct., Marine and Fisheries Department, Ottawa: 'I inclose herewith order to the credit of the Receiver General in my name for $34.68. This is with reference to one No. 11 type buoy which was sent to the I. M. S. Co., Ottawa. You will note in statement of details that it is for labour and material loading this buoy.

August 16.—G.T. Freight Agent, Ottawa to Department: 'On July 18 we received from Chatham, Ont., 1 gas buoy, delivered to the I. M. S. Co., freight charges on which were $101. I. M. S. Co. people informed me that these charges are payable by you. If so, will you kindly let me have your cheque at your earliest convenience and oblige.'

September 12.—I. M. S. Co. to J. F. F., Commissioner of Lights: 'As instructed by you, under date of August 1, we have finally shipped to you all the gas buoys which you had sent us for alterations, including the No. 7 valveless, to which we had to fit a new lantern support, owing to the original lantern support not being returned to us with the buoy. We note that you have not yet returned to us for alteration 5 of the No. 5 buoys, Serial Nos. 505, 530-1-2 and 4, and also one type No. 6 buoy, Serial No. 550. As these latter buoys were originally shipped to Prescott, we presume that these are the buoys which are still at Parry Sound.'

September 25.—Commissioner of Lights to I. M. S. Co., in reply to above. See page

September 25.—Memo. for Acct. by J. F. F.: 'This account, dated July 18, has been left on file, although the file was referred to you. The account is certified and should be paid to the G.T. Ry.'

September 25.—Department to W. Kearns, A. G. Office (unsigned): I have your note of 24th inst. The list promised you is nearly completed, and I hope not to delay you much further in this matter. We are almost without any facilities at Victoria for handling new aids to navigation, but they are being attended to with the least possible delay, and boats have been chartered for this purpose. Plans have been prepared for the new buoy steamers, and I expect the coming session will see sufficient provision made for this and other service. I have so far received excellent reports relative both to the gas buoys and beacons.

September 25.—I desire to call your attention to the request made some time ago to furnish this department with a complete list of all gas buoys and beacons supplied to it, together with the points to which they were sent to. Kindly give this matter your immediate attention. (See July 10, page 251.)

September 26.—Memo. regarding proposed prepayment of freight on all buoys shipped from Ottawa. Initialed J. F. F. F. G. 7/10/07.

September 27.—Circular to all Agencies: I inclose herewith a blue print showing the proper way to moor the No. 8½ automatic gas buoys. Hereafter all moorings put out are to conform in all respects to the dimensions shown on the print.

October 2.—I. M. S. Co. to Deputy: Your letter, 26th ult., received directing our attention to a request made by your department some time ago to furnish you with a complete list of all gas buoys and beacons supplied to it. We take pleasure in inclosing you herewith the required statement, which we trust will be satisfactory for your purpose.

List of acetylene gas buoys and beacons furnished the Department of Marine and Fisheries, Canada, during the years 1904-5 and 6, and up to March 31, 1907. See folio 3, 27858 file extracts.

October 7.—Deputy to Agent, Victoria: I have to instruct you to prepare immediately a complete list of all automatic acetylene gas buoys under your charge, giving the serial number, type and character of the buoy, whether lighted or lighted signal position; and the number of buoys held at your agency as spare; together with a list of the gas beacons sent to you, the positions assigned to them and whether they are in operation. If not, the probable time that they will be put in service. The list should be brought up to the 15th inst.

October 7.—Circular: I have to instruct you to prepare immediately a complete list of all automatic acetylene gas buoys under your charge, giving the serial number, type and character of the buoy, whether lighted or lighted signal position; and the number of buoys held at your agency as spare. The list should be brought up to the 15th inst. (Sent to agents—British Columbia (1), Parry Sound (2), Prescott (3), Montreal (4), Quebec (5), St. John, N.B. (6), Halifax (7), Charlottetown (8).)

October 9.—Circular: With further reference to circular letter of 7th inst., instructing you, &c., &c., I inclose herewith a statement giving the serial number and type of gas buoys shipped by the I. M. S. Co. to you. As you are aware, from time to time instructions have been received from the department to ship to other agencies certain of these gas buoys. I have to request you to check over the list inclosed, and send to me a statement giving the serial number and type of the different buoys which have been sent out of your agency under instructions from the department, giving at the same time the agency to which they were sent. (Sent to Parry Sound (1), Montreal (2), Quebec (3), St. John (4), Halifax (5), Charlottetown (6), Prescott (7).)

October 3.—Victoria agent to Commissioner of Lights: Your letter, 27th inst., inclosing blue print showing the correct way to moor No. 8½C aut. gas buoy, and instructing that hereafter all moorings put out are to conform in all respects to the dimensions shown on this print. Up to the present we have not used any wire rope in mooring the No. 8½C gas buoys, and request information as to whether the wire rope is to be in addition to the 2 or 2½ lengths of chain, as the case may be.

Gas buoys shipped to Montreal (10).

591 No. 8½C gas, September 11, 1907.
2 No. 8½C gas, September 11, 1907.
3 No. 8½C gas, September 11, 1907.
4 No. 8½C gas, September 11, 1907.
685 No. 8½C gas, April 5, 1907.
6 No. 8½C gas, April 5, 1907.
7 No. 8½C gas, April 6, 1907.
8 No. 8½C gas, April 6, 1907.
9 No. 8½C, gas, April 8, 1907.
690 No. 8½C, gas, April 8, 1907.
The above all shipped to Sorel.

Gas buoys shipped to Port Arthur (6).

527 No. 5, gas, April 28, 1905.
8 No. 5, gas, April 28, 1905.
9 No. 5, gas, April 28, 1905.
615 No. 8½C, gas, October 19, 1906.
6 No. 8½C, gas, October 19, 1906.
7 No. 8½C, gas, October 19, 1906.

The last 3 shipped to Mr. J. Cooper, lightkeeper.

587 Owen Sound, No. 11, whistle and bell, black-white occulting, Surprise shoal (8 in all); but by another statement accounts for 17, leaving out the five No. 5's to be shipped to Ottawa.

In supplementary statement gives 2 No. 9½ type buoys, Nos. 718-9; 3 No. 7 type buoys, Nos. 512, 524, 502; all said to be in service, but no place named.

Also, stated in same supplementary statement that there are on hand 5 No. 5 buoys, to be shipped to Ottawa, Nos. 505, 530, 532, 534 and 550.

In third statement additions are made to the original list, which now includes No. 587 (above) and 718-9, No. 9½, gas and whistling, and 512, 524, 502, No. 7, gas; all said to be in service, but naming no places.

Gas buoys shipped to Parry Sound (11).

568 (Depot Harbour) No. 11, gas and whistle, May 3, 1906. Seguin Bank, Parry Sound, chl. Black, white occulting.
9 (Depot Harbour) No. 11, gas and whistle, May 8, 1906. Lone rock, P. Sound. Red, white occulting.
607 (Depot Harbour) No. 8½C, gas, September 29. Hall rock, P. Sound. Red, white occulting.
8 (Depot Harbour) No. 8½C, gas, September 29. Three Star shoal, P. Sound. Red, white occulting.
610 (Depot Harbour) No. 8½C, gas, October 1. S. Extremity shoal S. from Spruce island. Colour, black, white occulting.
1 (Depot Harbour) No. 8½ C, gas, October 1. Lockerby rock, Collingwood approach. Black, white occulting.
2 (Depot Harbour) No. 8½, gas, October 1. Hooper island, P. Sound chl. Red, white occulting.
676 (Depot Harbour) No. 8½C, gas, April 13, 1907. In supplementary statement said to be in service, but no name of place given.
7 (Depot Harbour) No. 8½C, April 13, 1907. In supplementary statement said to be in service, but no name of place given.
8 (Depot Harbour) No. 8½C, April 13, 1907. In supplementary statement said to be in service, but no name of place given.
9 (Depot Harbour) No. 8½C, April 13, 1907. In supplementary statement said to be in service, but no name of place given.

Gas buoys shipped to Charlottetown (6).

Indian rocks, No. 9, gas and whistling, white flash (Serial No. not known), placed by steamer *Stanley* on her way from Pictou to Scotland. Serial No. not given to me by the Halifax agent.

544 No. 9, gas and whistling, August 25, 1905. 'Point Prim,' No. 9, gas and whistling, No. 538. Red flash, white flash.
613 No. 8½C, gas only, October 5, 1906. Spare on Marine wharf.

614 No. 8½C, gas only, October 5, 1905. Taken to Halifax by department's instructions by steamer *Aberdeen*, when placing gas and whistling buoy No. 9 on Miscouche shoal. Miscouche shoal No. 9, gas and whistling, 545.
695 No. 8½C, gas, April 20, 1907. Fitzroy rock, gas and whistling buoy.
6 No. 8½C, April 20, 1907. Zephyr rock, Shediac bay, No. 7, gas only. Serial number unknown.
7 No. 8½C, April 20, 1907.

These last three eventually sent to Halifax.

Gas buoys shipped to St. John, N.B. (16)—where placed.

548 Campbellton, No. 6, gas, January 31, 1906. Campbellton.
9 Chatham, No. 6, gas, February 3, 1906. Miramichi river.
551 Campbellton, No. 6, gas, January 31, 1906. Campbellton.
2 Campbellton, No. 6, gas, January 31, 1906. Campbellton.
4 Chatham, No. 6, gas, February 3, 1906. Miramichi river.
5 Campbellton, No. 6, gas, January 31, 1906. Campbellton.
6 Campbellton, No. 6, gas, January 31, 1906. Campbellton.
7 Campbellton, No. 6, gas, January 31, 1906. Campbellton.
9 Chatham, No. 6, gas, February 3, 1906. Miramichi river.
572 No. 11, gas, June 20, 1906.
3 No. 11, gas, June 20, 1906.
5 No. 11, gas, June 20, 1906.
663 No. 11, gas, March 27, 1906.
4 No. 11, gas, March 27, 1906.
674 No. 8½C, bell, gas, April 12, 1907. Avon river.
698 No. 9½, gas, April 22, 1907.

Gas and whistling, Blonde rock, occulting white. Gas and whistling, Lurcher. N.W. Fairway, Yarmouth. S.W. Fairway, Yarmouth. 8½ 674, gas and bell, Avon river. The above are in charge of New Brunswick agency, but they were received and first placed by the Nova Scotia agency.

Gas buoys shipped to Halifax (73).

504 No. 9, gas, December 31, 1904.
6 No. 7, gas, February 22, 1905.
7 No. 7½, gas, February 15, 1905.
8 No. 7, gas, February 22, 1905.
526 No. 7, special gas, July 3, 1905.
538 No. 9, gas, July 14, 1905.
9 No. 9, gas, August 5, 1905.
540 No. 9, gas, July 18, 1905.
1 No. 9, gas, August 2, 1905. Brazil rock.
2 No. 9, gas, July 27, 1905.
3 No. 9, gas, July 20, 1905.
5 No. 9, gas, September 2, 1905.
6 No. 9, gas, September 23, 1905. Lost from Blonde rock, October 10, 1906.
7 No. 9, gas, September 18, 1905.

3 No. 9 and 3 No. 7.

560 No. 11, gas, 16 March, 1906; Blonde Rock.

(Buoy lost from Blonde Rock about 1 October, 1906, was 546, No. 9.)

1 11 gas, 16 March, 1906 (Dockyard).
2 11, gas, 31 March, 1906; Guzon Island.
3 11, gas, 5 April, 1906; Isaac's Harbour.
4 11, gas, 19 April, 1906; Sambro.

565 11, gas, 14 April, 1906; Liverpool.
6 11, gas (in trouble; see Hutchins' report), 19 April, 1906; inner automatic, Halifax.
7 11, gas, 21 April, 1906; dockyard.
570 11, gas, 23 May, 1906; Sheet Rock.
1, 11, gas, 31 May, 1906; White Head.
4 11, gas 19 June, 1906; dockyard; (no lantern support).
6 11, gas, 25 July, 1906; Louisbourg.
7 11, gas, 4 July, 1906; dockyard.
8 11, gas, 12 July, 1906; Lockeport.
9 11, gas, 30 July, 1906; Liscomb.
580 11, gas, 30 July, 1906; Egg Island.
1 11, gas, 25 July, 1906; Yarmouth Fairway.
2 11, gas, 27 July, 1906; dockyard.
3 11, gas, 4 August, 1906; dockyard.
4 11, gas, 4 August, 1906; Cerberus.
5 11, gas, 4 August, 1906; Canso.
8 11, gas, 26 October, 1906; Lunenburg.
590 8½c, gas, 29 October, 1906; dockyard.
5 8½c, gas, 29 October, 1906; Middle Ground, Halifax.
625 14, gas, 26 January, 1907; Outer automatic, Halifax; also classed as No.11.
659 8½c (bell), gas, 1 April, 1907; East Point Ledge, Lunenburg.
669 8½c (bell), gas, 1 April, 1907; Hen and Chickens, Yarmouth.
1 11, gas, 27 March, 1907; dockyard.
2 11, gas, 27 March, 1907; Cape Fourchu.
689 8½c (bell) gas, 20 May, 1907; spare.
720 11 x 14½, gas, 24 Sept., 1907.

Also, without numbers, N.W. Ledge and S.W. Ledge, Brier Island.
" No. 8½, gas and bell, No. 699, Thrump Cap, Halifax.
" No. 8½, gas only, No. 696, Neverfail, Halifax.
" No. 9, G. and W., No. 540, Little Hope; 541, Brazil Rock; 543, N. E. Shoal.
" No. 7½, gas and bell, 570, La Havre.
" No. 8, gas only, 519, Avon river, Minas Basin.
" No. 9, G. and W., Nos. 504, 539, 547, at dockyard.
" No. 8½, gas only, 590 (see main list), 614, 695, 697, at dockyard.
" No. 7, gas and bell, No. 526, in dockyard.
" No. 7, gas only, 506, 508. Accounts for 47 in all.

The above No. 11 G. and W. Buoys now at dockyard will be assigned to the following positions:—Shelburne, Brazil Rock, Little Hope, Pubnico, S. W. Ledge, Cape Sable. This will leave us with spare buoys as follows: 1 complete No. 11, or 3 when the new Blonde Rock buoy arrives, and when we get a lantern support for No. 574. Five No. 9; four No. 8½, gas only; two No.7, gas only, and one 7 gas and bell.

St. John agency looks after Yarmouth Fairway, Cape Fourchu, Hen and Chickens, Blonde Rock, N. W. Ledge, S. W. Ledge and Avon River.—Halifax Actg. Supt. Lights, 16th Oct., 1907.

Also, 538, No. 9, gas and whistling, Charlottetown.
" 542, No. 9, gas and whistling, Charlottetown.
" 545, No. 9, gas and whistling, Charlottetown.

Buoy 546, No. 9, placed at Blonde Rock, went adrift about 1st October, 1906, and has not been recovered.—Halifax Supt. Lights, 16th Oct., 1907.

Prescott.

Buoys accounted for at Prescott, but not included in list of buoys shipped to Prescott, as shown by the International Marine Signal Co., and as given on page annexed hereto.

Serial No.

549—Received here June 20, 1907; stored at D. L. H. D., Prescott.

555—Received here June 20, 1907; Kingston for Trenton harbour; gas buoy, July 12, 1907. Was lifted a week or so ago at close of navigation, and is lying at Kingston in order to be placed again at Trenton on the opening of navigation.

9—Received here June 20, 1907; stored at D. L. H. D., Prescott.

551—Received here August 17, 1907; shipped to Montreal agency October 1, 1907.

2—Received here August 17, 1907; shipped to Sault Ste. Marie for Vidal shoal, October 23, 1907.

7—Received here August 17, 1907; stored at D. L. H. D., Prescott.

4—Received here August 17, 1907; shipped to Sault Ste. Marie for upper turning buoy, October 23, 1907.

6—Received here August 17, 1907; stored at Prescott for gas buoy 6 T—in Montreal-Kingston division.

548—Received here August 26, 1907; stored at Prescott; for gas buoy 6 U.

528—Received here August 26, 1907; stored at Prescott.

7—Received here August 26, 1907; stored at Prescott.

9—Received here August 11, 1907; shipped to Parry Sound agency, October 29, 1907.

From Quebec Agency.

511—Received here July 21, 1906; shipped to Amherstburg automatic gas buoy, October 7, 1907.

2—Received here July 21, 1906; shipped to Parry Sound agency, Oct. 12, 1907.

6—Received here July 21, 1906; shipped to Goderich for breakwater buoy, June 21, 1907

4 (524 in Boyle's statement)—Received here July 21, 1906; shipped to Parry Sound agency, October 12, 1907.

Boyle's explanations.

The following letter from Prescott accompanied the statement of the disposal of all the buoys received at that agency:—

December 12, 1907.—A. Boyle, officer in charge D. H. L. D., Prescott, to Commissioner of Lights, Ottawa: With reference to your Mr. White's telephone communication of to-day's date *re* serial numbers of buoys, I have to state that Serial Nos. 501 and 2 were shipped to the International M. S. Co., Ottawa, October 30, 1906, and have not been returned here.

Serial No. 503 shipped to the I. M. S. Co., Ottawa, October 30, 1906 received back at this depot September 11, 1907. It was then re-shipped to Amherstburg October 7, 1907.

Serial Nos. 505, 530, 2, shipped to Parry Sound April 23, 1906.

Serial No. 550 shipped to Lockerby shoal, P. S Dist., May 11, 1906.

Serial Nos. 552, 4, shipped to Sault Ste. Marie for Vidal shoal and turning point, October 23, 1907.

Serial Nos. 553 and 8 shipped to Nova Scotia agency, March 8, 1906.

(Note.—This is a mistake; 558; was received back at Prescott August 17, 1907, and is now stored at D. L. H. Depot, Prescott, for gas buoy, 8 U.)

Serial No. 555—This was placed in Trenton harbour by C. G. S. *Scout*, July 12, 1907. Was lifted a week or so ago at the close of navigation, and is lying at Kingston in order to be placed again at Trenton on the opening of navigation.

Serial No. 556—On Montreal to Kingston division; gas buoy No. 6 T.

Serial No. 557—This is lying in our yard here.

If you wish any other information about the above serial numbers, kindly let me know, and I will see that the same has my prompt attention.

October 10.—Continuation from page of C. of L.'s letter to W. Kearns: I would call your attention to the list of gas buoys shipped to Prescott. As you are aware, the authority of an Order in Council was obtained to exchange lighted whistling and bell buoy, Serial No 586, for two No. 9½ lighted whistling buoys, Serial Nos. 718 and 9, the department paying the difference in price to the I. M. S. Co. Consequently, lighted whistling and bell buoys, Serial No. 586, should be eliminated from the list of buoys in the possession of the department.

October 11.—C. of L. to Victoria agent: Your letter 3rd inst. with reference to the mooring for 8½ C automatic buoys. Referring to second paragraph your letter, I beg to advise you that the total length of chain or wire rope used should be from two or two and one-half times the depth of water in which the buoy is moored. This total length to be made up partly of wire rope and partly of chain. The idea of using wire rope is to decrease the weight of mooring to be carried by the buoy; the last five fathoms must be of chain in order to prevent chafing on the bottom.

September 30—Asst. C. of L., Prescott, to C. of L.: Your letter 27th inst. received inclosing a blue print showing the proper way to moor an 8½ C type automatic gas buoy. I am having a tracing made of this in order that blue prints may be made from it and given to the proper parties interested in same.

October 22.—J. F. F. to U. P. Boucher, Montreal (telegram): Wire me total number of gas buoys in service at this date in your agency. Required for annual report. Ans. 57. My letter, 21st inst., to C. Stanton, gives full details.

October 22.—Same to Prescott. Ans.: 36 automatic, 3 compression gas buoys—Montreal-Kingston division.

October 23.—J. F. F. to U. P. Boucher (telegram): Of the 57 gas buoys in service, how many are automatic? Reply: Boucher to J. F. F. (telegram): 11 out of the 57 gas buoys are automatic.

November 1.—I. M. S. Co. to Deputy: Acknowledging receipt cheque, $84, evidently for lantern support.

Buoys shipped to Quebec (15th Oct., '07).

Serial No.	
509	No. 7 gas, Feb. 25, 1905; in service in Quebec district.
510	No. 7 gas, Feb. 25, 1905; in service in Quebec district.
1	No. 7 gas, Feb. 28, 1905; shipped to Parry Sound via Prescott, July 6, 1906.
2	No. 7 gas, Feb. 28, 1905; shipped to Parry Sound via Prescott, July 6, 1906.

Buoys shipped to Prescott.

November 21, 1907.—File 27858. W. H. Noble, Prescott, to deputy minister: 'With further reference to your letter of 9th October, inclosing a statement giving the serial numbers and types of the gas buoys shipped by the International M. S. Co. to this depot, I return herewith the list, which is correct. I also herewith give you a list showing where these buoys are.

(See letter following).

The following is the departments' list, inclosed their letter 9th October :—

501 No. 5, special gas, 22 Aug., 1904; shipped to Point du Chene, P.E.I., 31 August, 1905.

2 7, gas, 30 Sept., 1904; shipped to Ottawa, 30 Oct., 1906.
(New lanterns, 16 March, 1906, sent to breakwater contractor, Prescott).

3 7, gas, 3 October, 1904; received here 11 Sept., 1907; shipped to Amherstburg to mark new cut 7 Oct., 1907. (503 shipped I. M. S. Co., 30 Oct., 1906; received back, 11 Sept., 1907.)

5 5 (stored), gas, 21 Feb., 1905; shipped to Parry Sound, 23 April, 1906.

530 x 5, gas, 6 May, 1905; received here 6 May, 1905; shipped Parry Sound, 23 April, 1906.

1 x 5, gas, 6 May, 1905; received here 6 May, 1905; shipped Parry Sound 23 April, 1906.

2 x 5, gas, 6 May, 1905; received here 6 May, 1905; shipped Parry Sound, 23 April, 1906.

3 5, gas, 12 May, 1905; sent Thames river, gas buoy, 6 July, 1906*.
(*This must have been shipped from Thames river back to Ottawa, as it was received back again from Ottawa 11 Aug., 1907, and reshipped to Parry Sound 20 Oct., 1907.)

4 x 5, gas, 18 May, 1905; received here 30 May, 1905; shipped to Parry Sound 23 April, 1906.

5 5, gas, 12 May, 1905; shipped Ottawa 30 Oct.; received back 26 Aug., 1907; now stored Lachine; as stand by buoy, Montreal-Kingston Div.

6 p 5, gas, 12 May, 1905; sent N.B. agency 12 Jan., 1906; must have been reshipped to Ottawa from N.B. agency as it was received back from Ottawa 29 August, 1907, and now stored at Prescott for gas buoy 27 in this division.

7 p 5, gas, 18 May, 1905; received 30 May, 1905; shipped to Ottawa 30 Oct., 1906; received here again 26 Aug., and now stored at this depot as stand by buoy. (10 No. 5 and 2 No. 7, up to 10 Oct., 1905.)

550 x 6, gas, 12 Feb., 1906; received 14-2-'06; shipped to Lockerby Shoal, P. S. Dist., 11 May, 1906.

3 6, gas, 12 Feb., 1906; received 14-2-'06; shipped to Nova Scotia agency 8 March, 1906.

8 6, gas, 12 Feb., 1906; received 14-2-'06; shipped to Nova Scotia agency, 8 March, 1906; received again ('here' 17 Aug., 1907, and now stored at D. L. H. Depot for gas buoys SU.)

586 11, gas, 24 Aug., 1906; received here 28 Aug., 1906; shipped to Ottawa 18 July, 1907.

7 11, gas, 27 Aug., 1906; received here 28 Aug., 1906; shipped to Parry Sound agency for Surprise Shoal, 3 April, 1907.

618 8½ gas, 23 Oct., 1906; received 2 Oct., 1906; stored at Prescott.
9 8½, gas, 23 Oct., 1906; received 2 Oct., 1906; shipped B.C. ag'cy 30 Apl., '07.
620 8½, gas, 26 Oct., 1906; received 27 Oct., 1906; sent Chatham for Thames river 25 May, 1907.
1 8½, gas, 26 Oct., 1906; received 27 Oct., 1906; sent B.C., agency 12 Dec., 1907.
2 8½, gas, 27 Oct., 1906; received 27 Oct., 1906; sent B.C. agency 12 Dec., '07.
3 8½, gas, 27 Oct., 1906; received 27 Oct., 1906; sent B.C. agency 12 Dec., '07.
4 8½, gas, 27 Oct., 1906; received 27 Oct., 1906; sent B.C. agency 12 Dec., '07.
631 8½, gas, 1 March, 1907; received 7 March, 1907; stored at Prescott for gas buoy 54u.
2 8½c, gas, 1 March, 1907; received 7 March, 1907; stored at Kingston for gas buoy 69t.
3 8½, gas, 1 March, 1907; received 7 March, 1907; stored at Prescott for gas buoy 38t.
4 8½, gas, 1 March, 1907; received 7 March, 1907; stored at Kingston for gas buoy 46t.
5 8½ gas, 1 March, 1907; received 7 March, 1907; stored at Coteau Landing gas buoy 84th.
7 8½, gas, 16 March, 1907; received 19 March, 1907; stored at Cornwall for gas buoy 48t.
8 8½, gas, 16 March, 1907; received 19 March, 1907; stored at Coteau Landing for gas buoy 104s.
9 8½, gas, 19 March, 1907; received 28 March, 1907; sent Campbellton, N.B. agency, 1 April, 1907.
640 8½, gas, 19 March, 1907; received 28 March, 1907; sent Campbellton, N.B. agency, 1 April, 1907.
1 8½, gas, 19 March, 1907; received 28 March, 1907; sent Campbellton, N.B. agency, 1 April, 1907.
2 8½, gas, 19 March, 1907; received 28 March, 1907; sent Campbellton, N.B. agency, 1 April, 1907.
3 8½, gas, 20 March, 1907; received 27 March, 1907; stored at Coteau Landing for gas buoy 102s.
4 8½, gas, 20 March, 1907; received 27 March, 1907; stored at Coteau Landing for gas buoy 98s.
5 8½, gas, 20 March, 1907; received 27 March, 1907; stored at Lachine for gas buoy 86s.
6 8½, gas, 20 March, 1907; received 27 March, 1907; stored at Kingston for gas buoy 8t.
7 8½, gas, 20 March, 1907; received 27 March, 1907; stored at Kingston for gas buoy 12t.
8 8½, gas, 20 March, 1907; received here 27 March, 1907; stored at Prescott for gas buoy 40u.
9 8½, gas, 26 March, 1907; received here 28 March, 1907; sent Campbellton, N.B. agency, 1 April, 1907.
650 8½, gas, 26 March, 1907; received here 28 March, 1907; sent Campbellton, N.B. agency, 1 April, 1907.
1 8½, gas, 29 March, 1907; received here 4 April, 1907; stored at Coteau for gas buoy 80f.
2 8½, gas, 29 March, 1907; received here 4 April, 1907; sent to Chatham, N.B. agency, 4 April, 1907.
3 8½, gas, 29 March, 1907; received here 4 April, 1907; stored at Cornwall for gas buoy 78f.
4 8½, gas, 29 March, 1907; received here 4 April, 1907; stored at Cornwall for gas buoy 88f.

655 8½, gas, 29 March, 1907; received here 4 April, 1907; sent to Chatham, N.B., agency, 4 April, 1907.
6 8½, gas, 29 March, 1907; received here 4 April, 1907; sent to Chatham, N.B., agency, 4 April, 1907.
7 8½, gas, 29 March, 1907; received here 6 April, 1907; stored Cornwall for gas buoy 48f.
8 8½, gas, 29 March, 1907; received here 6 April, 1907; stored Lachine for gas buoy 38s.
665 8½, gas, 29 March, 1907; received here 6 April, 1907; stored Lachine for gas buoy 76s.
6 8½, gas, 29 March, 1907; received here 6 April, 1907; stored Lachine for gas buoy 48s.
7 8½, gas, 29 March, 1907; received here 6 April, 1907; stored Coteau Landing for gas buoy 43f.
8 8½, gas, 29 March, 1907; received here 6 April, 1907; stored at Cornwall for gas buoy 96f.
9 8½, gas, 4 April, 1907; received here 11 April, 1907; stored at Kingston for North Port Shoal.
670 8½, gas, 3 April, 1907; received here 10 April, 1907; stored Coteau Landing for gas buoy 36f.
1 8½, gas, 3 April, 1907; received here 10 April, 1907; stored Cornwall for gas buoy 69f.
2 8½, gas, 4 April, 1907; received here 11 April, 1907; stored Coteau Landing for gas buoy 25f.
3 8½, gas, 11 April, 1907; received here 11 April, 1907; stored at Coteau Landing for gas buoy 40f.
5 8½, gas, 11 April, 1907, received here 11 April, 1907; stored Cornwall for gas buoy 76f.
680 8½ (Kingsville) gas, 11 April, 1907.
1 8½, gas, 11 April, 1907; received here 10 April, 1907; stored Coteau Landing for gas buoy 100s.
2 8½, gas, 1 April, 1907; received here 10 April, 1907; stored Lachine for gas buoy 53s.
3 8½ (Kingsville) gas, 11 April, 1907.
4 8½ (Kingsville) gas, 11 April, 1907, x
691 8½, 12 April, 1907; received here 11 April, 1907; stored Cornwall for gas buoy 68f.
2 8½, gas, 12 April, 1907; received here 11 April, 1907; stored Coteau Landing for gas buoy 46f.
3 8½ (Southampton), gas, 16 April, 1907, x
700 8½ (Amherstburg), gas, 27 May, 1907, x.
1 8½ (Amherstburg), gas, 27 May, 1907, x.
718 9½, gas, 16 Aug., 1907; received here 26 Aug., 1907; shipped Parry Sound 26 Aug., 1907.
9 9½, gas, 16 Aug., 1907; received here 26 Aug., 1907; shipped Parry Sound 26 Aug., 1907.

September 25, 1907.—Deputy to I.M.S. Co.: 'I have to acknowledge receipt of your letter 12th inst., stating that you have shipped all the gas buoys sent to you for alterations, including the No. 7 valveless, to which you have had to fit a new lantern support, owing to the original lantern support not being returned to you with the buoy. I note that the following buoys have not been received yet, viz., type No. 5 buoys Nos. 505, 530-1-2 and 4; also one type No. 6, 550. (See these numbers marked with X on page 260). In reply I have to advise you that these buoys were left out during the winter at the Parry Sound ship channel and I think that they have been recovered, with the exception of one. Owing to the department's lack of facilities at

this point, it has not been possible to lift out these buoys and ship them to you, but this will be attended to at the earliest possible moment.

Nov. 27, 1907.—Deputy to Asst. Commissioner Lights, Prescott: 'I am advised by the I.M.S. Co. that the following gas buoys have been received by them for repairs, &c., and reshipped to the Dom. L. H. Depot:—

Type No. 5, serial numbers 527, 8, 9, 533, 5, 6, 7.

Type No. 6, serial numbers 548, 9, 551-9, and have to request you to advise me what disposition was made of them.

Nov. 29, 1907.—(Prescott writes): 'These buoys are placed as follows (from Boyle's list 16 Dec., 1907):—

Type No. 5—527, in yard at D.L.H. depot; 555, received 20 June, 1907; stored at Kingston for Trenton harbour gas buoy.

Type No. 5—528, in yard at D.L.H. depot; 552, received 17 Aug., 1907; shipped Sault Ste. Marie for Vidal Shoal, 23 Oct., 1907.

Type No. 5—529, shipped to Parry Sound agency; 557, received 17 Aug., 1907; stored at D.L.H. depot.

Type No. 5—533, shipped to Parry Sound agency; 554, received 17 Aug.; shipped Sault Ste. Marie for Upper Turning Buoy, 23 Oct., 1907.

Type No. 5—535, Gas buoy at Montreal-Kingston Division; in depot.

Type No. 5—536, Gas buoy at Montreal-Kingston Division; in depot.

Type No. 5—537, in yard at D.L.H. depot; in depot.

Type No. 6—548, Gas buoy, Montreal-Kingston Division; in depot.

Type No. 6—549, in yard at D.L.H. depot; received 20 June, 1907; stored D.L.H.D.

Type No. 6—551, shipped to Sorel for Montreal agency, 13 Sept., 1907; received August 17; shipped to Montreal agency 1 Oct.

Type No. 6—559, in yard at D.L.H. depot; received 20 June, 1907; stored D.L.H. depot.

October 10, 1907.—Deputy to John Cooper, Light Keeper, Port Arthur: 'I inclose a list of gas buoys shipped to Port Arthur by this department together with their serial numbers. Please give me a list of the buoys now under your charge, with their serial number, and the buoys which have been returned by direction of the department and the point to which they were shipped.

October 10, 1907.—C. of L. to W. Kearns, A.G. Office: 'I inclose for your information, first, copy of records of automatic gas buoys and beacons kept in the office of the C. of L. This gives the serial numbers of all gas buoys and beacons which have been shipped either by T. L. Willson or the I.M.S. Co. to the order of the department, and the points to which these buoys were shipped. It has been necessary to transfer buoys from time to time from one agency to another. In order to have the record complete for your office, I have had this copy of record analyzed, and a statement of buoys shipped to each agency sent to the respective agents together with a circular letter from the deputy instructing them to send in a return showing the buoys and their serial numbers, which have been sent out by them to another agency, after having been received from Ottawa. When this is received I will send to you a copy. I inclose also the list by agencies of buoys sent from Ottawa (with the exception of the buoys and beacons sent to Victoria). This is extracted from the copy of record referred to. I think by giving you the information in this manner, it will enable you to follow clearly the movements of each gas buoy in the possession of the department.

Extract from 'Copy of Records re Gas Buoys,' as Kept in the Commissioner of Lights Office to the 15th October, 1907.

November 12, 1907.—Submarine Signal Company, Boston, to Commissioner of Lights, Ottawa: 'We are advised by the I. M. S. Co. that they have delivered to the Canadian government since September 19, 1905, some 52 combined automatic gas and whistling buoys, with receptacle for submarine bell attached, said receptacle being ordered attached to buoys by your department.

'Will you kindly advise this company as to whether the 52 buoys (as per inclosed list) were sold and delivered to the Canadian government by the I. M. S Co., Ltd., or were part of them delivered to the (Canadian) government for trial purposes only.

In the event of any of these buoys not having been taken over by the department, will you please state the number that the department has actually purchased.

'This information is needed as a voucher for our files, and we write you in regard to the matter at the suggestion of the treasurer of the I. M. S. Co.

594	Pointe Lac Course.	8½ C	"	" 11, 1906.
685	Curve II.	8½ C	"	April 5, 1907.
686	"	8½ C	"	" 5, 1907.
687	Curve I.	8½ C	"	" 6, 1907.
688	"	8½ C	"	" 6, 1907.
689	Isle au Raisin.	8½ C	"	" 8, 1907.
690	Hay Island.	8½ C	"	" 8, 1907.
551	Spare	6 C	"	Sept. 13, 1907.

The above all shipped to Sorel, P.Q.

November 20.—J. Cooper, lightkeeper, Port Arthur, to deputy: 'Your telegram just received 6 p.m., and must say that I answered your letter 10th October on the 14th October, the following day after I received yours.

November 20, 1907.—J. Cooper, Lightkeeper, Port Arthur, to Deputy: The serial numbers of buoys now in my charge are 615, 6, 7 of type No. 8½, returned to Ottawa 527-8-9.

November 25, 1907.—Deputy to Agent Parry Sound: I have to request you to inform me what disposition has been made of the following gas buoys shipped you as follows: 511 from Quebec, 16 July, '06; 516 from Quebec, 16 July, '06; 531 from Prescott, Ont.

November 25, 1907.—Deputy to St. John: Similar letter as regards 515 shipped from Quebec, 6 June, 1906; 536 from Prescott, Ont. With reference to serial 519, you state that this is placed at or on Foul Ground, whereas the agent at Halifax claims that it is at Avon river, Minas basin. For Avon river you state that serial No. 674 is placed at this point. Kindly explain.

November 25, 1907.—Deputy to Charlottetown: Similar letter about No. 542 shipped to your agency from Halifax.

November 25, 1907.—Deputy to Halifax: Similar letter about No. 553 shipped to your agency from Prescott; No. 8 shipped to your agency from Prescott; No. 720 shipped to your agency direct by the I.M.S.Co.

With reference to serial No. 519, which you advise is placed at Avon river, St. John agent claims that this buoy is placed on Foul Ground, and that serial No. 674 is at Avon river. Kindly explain.

SESSIONAL PAPER No. 29a

Buoys shipped to Prescott and reshipped to various stations.

Statement of gas buoys shipped by the I.M.S. Co. to D.L.H.D. at Prescott, and afterwards reshipped to various stations:—

Type No. 5	—505, 530, 1, 2, 4, 550 to Parry Sound agency.	
	536, New Brunswick.

	639, 40, 1, 2, 9, 650, 2, 5, 6, New Brunswick agency	9
	619, 21, 2, 3, 4, British Columbia	5
	669, Northport shoal	1
	620, Thames river gas buoy	1
Type No. 9½	—718, 9, Parry Sound agency	2
Type No. 11	—587, Parry Sound agency	1
	6, shipped to Ottawa	1
		67
On list, but shipped direct. (What numbers and types?)		6
Total		73

November 21, 1907.—W. H. Noble, Prescott, to Deputy Minister: With further reference to your letter October 9, enclosing a statement giving the serial numbers and types of the gas buoys shipped by the I.M.S. Co. to this department, I return herewith the list, which is correct. I also herewith give you a list showing where these buoys are.

November 22, 1907.—W. H. N. to Commissioner of Lights, Ottawa: 'I have to report that Mr. C. E. Stewart is leaving here on Monday with the 7.30 a.m. train. He has been instructed to proceed direct to your office, and if he finds you out of town I have instructed him to report to the manager of the I.M.S. Company.

November 5, 1907.—Telegram Jas. Gaudin, Vict., to J. F. F. C. of L: Two No. 11 type bell and whistle, 6 No. 9½ type, whistling, 2 No. 8½, bell, 6 No. 8½ gas buoys.

November 22, 1907.—Deputy to Gaudin, Telegram: 'Mail immediately complete list of gas buoys in service and held as spare to the 15 October, giving serial number of each.

B. C. Buoys.

November 23, 1907.—Gaudin to Deputy: Your telegram 22nd inst., and agreeably to your instructions you will please find inclosed herewith separate lists of the gas buoys established up to the 15th ulto. Those placed since that date, or about to be placed in position, also a list of spare buoys in stock.

You will find the serial number of each gas buoy with the exception of the buoy on Alfred Reef, which Mr. Halkett has overlooked, recorded in the sheet provided for that purpose. The serial numbers of the buoys for Dall Patch and Hodgson Reef will be submitted to you as soon as I can get them from the Wm. Jolliffe, when they have been placed.

The No. 9½ and 11½ type buoys are moored in Esquimalt harbour, the weather was so stormy that I was unable to send a boat out to ascertain the serial number of each of these buoys.

I beg to call to your attention that numbers of our buoys are changed occasionally; for instance, a spare buoy may be placed in Kestrel or any other rock to relieve the one taken up for cleaning and refilling, and then moved to the next station, so that the serial number will be changed each time the buoys are taken up.

The spare buoys Nos. 709 and 711 were damaged by stranding when they broke away from the tug that was towing them from Vancouver to Esquimalt. The damage is not extensive and can be permanently repaired. The Kelp Bar buoy (Comox) was recently run over by a boom of logs, carrying away the superstructure, which up to the present has not been recovered. This buoy has been replaced by another. The number has not yet been reported by Mr. Halkett. On the 14th inst., a corrected list of gas buoys and beacons established in these waters was mailed to the department.

November 23, 1907.—List of spare buoys under the B. C. agency: No. 619, No. 8½; No. 622, No. 8½; No. 694, No. 8½; No. 628, No. 8½ (superstructure, including bell, carried away and lost). No number No. 11½; 709, No. 9½; 711, No. 9½. (These buoys were damaged by stranding whilst being towed from Victoria.) —— No. 9½; —— No. 9½.

November 23, 1907.—List of buoys established subsequent to 15th Oct., '07:—

New England rock, 716, No. 9½, 8 Nov., '07.
Skidegate bar, 707, No. 8½, 10 Nov., '07.
Dall Patch, ——, No. 9½, is being placed.
Hodgson reef, ——, No. 9½, is being placed.
Barrett ledge, 621, No. 8½, 30 Jany., 1907.
Bird rock, 623, No. 8½, 2 Feby., 1907.
Kestrel rock, 624, No. 8½, 2 Feby., 1907.
Ellinor rock, 630, No. 8½, 16 April, 1907.
Comox bar, 628, No. 8½, 2 April, 1907.
Swiftsure bank, 627, No. 11½, 24 Aug., 1907.
Vancouver rock, 713, No. 9½, 1 Oct., 1907.
Port San Juan, 710, No. 9½, 21 Sept., 1907.
Kyuquot, 708, No. 9½, 24 Sept., 1907.
Haddington reef removed from Ledge reef, 636, No. 8½, 1 Oct., 1907.
Sands Heads, 626, No. 11½, 30 Aug., 1907.
Alford reef (No. not reported), No. 8½, 7 Oct., 1907.

November 27, 1907.—Deputy to Asst. Commissioner of Lights (Prescott): I am advised by the I.M.S. Company (see folio —).

November 27, 1907.—W. H. N. (A. B.) to J. F. F.: Have to inform you that C. E. Stewart intends leaving for Ottawa to-morrow morning and will report at your office on his arrival.

November 29, 1907.—To Deputy Minister: Reference to your letter 27th inst., *re* buoys received from I.M.S. Company, the serial numbers of which are stated in your letter, I have the honour to report where these buoys are as follows:—

Type No. 5, serial No. 527 and 8, in yard at D.L.H. Depot.
529 and 533 shipped to Parry Sound agency.
535 and 6, gas buoys at Montreal-Kingston Div.
537, in yard at D.L.H. Depot.
Type No. 6, serial No. 548, gas buoy Montreal-Kingston Div.
549, in yard at D.L.H. Depot.
551, shipped to Sorel for Montreal agency, 13 Sept., '07.
559, in yard at D.L.H. Depot.

December 2, 1907.—I. M. S. Company to Deputy: As requested in your letter of November 20th, your file 27858, we beg to inclose you herewith copy of all the papers submitted to the Department of Customs in connection with the claim by Mr. T. L. Willson for refund of customs duties paid upon materials that entered into buoys and beacons supplied to your department.

We might mention that it would be necessary for you to attach a copy of your letter to the Commissioner of Customs in the matter to the papers sent you to complete the record.

December 4, 1907.—St. John, N.B., to Deputy: Replying to your letter 25th ulto., requesting information in *re* gas buoys 515 and 536, I beg to report that on 14th June, '06, the steamer *Lansdowne* placed at the Avon river a gas buoy No. 7, 519. This buoy was picked up by *Lansdowne,* 13th Dec., '06, and brought to St. John and replaced in position again April 16, 1907, by gas buoy type No. 7,515. This buoy is in its position at the present time.

In regard to the No. 536, I have not this buoy on my list. I am under the impression that it was sent direct to Shediac and placed on Zephyr rock, Shediac harbour. The serial number was not given at the time. I have written Mr. Lord, and will advise you at a later date as to the number. The Charlottetown agency looks after this buoy.

St. John.

December 5, 1907.—St. John: List of the gas buoys at this agency:—

No. 11, 664, gas and whistling buoy, off Point Lepreaux.
No. 11, 572, gas and whistling buoy, Old Proprietor ledge.
No. 11, 573, gas whistling buoy, North Wolf.
No. 11, 575, gas and whistling buoy, Northwest ledge.
No. 11, 663, gas and whistling buoy, Southwest ledge.
No. 11, 589, gas and whistling buoy, to be placed at Old Proprietor, first opportunity.
No. 9, 539, gas and whistling buoy, at Ballast wharf, St. John.
No. 9½, 698, gas and whistling buoy, 1 mile off Partridge island.
No. 8½, 674, gas and bell buoy, Hen and Chickens shoal.
No. 7, 520, gas buoy, Foul Ground, St. John harbour.
No. 7, 515, gas buoy, Avon river, N.S.
No. 7, 519, gas buoy, at Ballast wharf, St. John.

Campbellton.

No. 8½, 639, gas buoy, on Traverse.
No. 8½, 640, gas buoy, Middle ground below Dal. point.
No. 8½, 642, gas buoy, Big Battery point.
No. 8½, 649, Point Le Garde.
No. 8½, 650 gas buoy, Point Prim (north).
No. 8½, 641, gas buoy, Point Prim (south).

Miramichi.

No. 8½, 652, gas buoy, at Chatham (spare).
No. 8½, 655, gas buoy, at Fairway.
No. 8½, 656, gas buoy, at Dredge.

December 2, 1907.—Halifax to agent Marine and Fisheries, Halifax: Referring to departmental letter 25th inst., requesting to know what disposition was made of gas buoys Nos. 553, 558 and 720, beg to say that 553 and 8 were shipped from here March 8th, 1907, to T. L. Willson, Ottawa, in accordance with instructions received from the department, dated 29 Nov., '06. Buoy 720 now at dockyard will be placed on the outer automatic station off Halifax harbour, replacing No. 625, which will be brought in and put in order for Blonde rock. Buoy No. 519 was placed at Avon river 14 June, '06, and I understood the same buoy was replaced this year by the N. B. agency.

December 5, 1907.—Charlottetown to Deputy: *Re* buoy No. 547, shipped to this agency by the Halifax agency. It was sent by the agent, Mr. J. Parsons, to Pictou by

I.C.R., and was taken from Pictou by steamer *Stanley,* and placed at Indian rocks 15 June, '07.

December 12, 1907.—Prescott (A. B.) to J. F. F.: Ref. to Mr. White's telephone of to-day *re* serial numbers of buoys :

501 and 2 shipped to the I. M. S. Co., Ottawa, 30th October, 1906, and have not been returned here.

503 shipped to the I. M. S. Co., Ottawa, 30 Oct., 1906, and received back at this depot, 11th September, 1907. It was then reshipped to Amherstburg,, 7th October, 1907.

505, 530, 532 shipped to Parry Sound 23rd April, 1906.

550 shipped to Lockerby shoal, P. S. district, 11th May, 1906.

552 and 54 shipped to Sault Ste. Marie for Vidal shoal and Turning point, 23rd October, 1907.

553 and 558 shipped Nova Scotia agency, 8th March, 1906.

555. This was placed in Trenton harbour by C. G. S. *Scout,* 12th July, 1907, was lifted a week or so ago at close of navigation, and is lying at Kingston to be placed again at Trenton on opening of navigation.

556. On Montreal-Kingston division, gas buoy No. 6T.

557. Lying in our yard here.

December 19, 1907.—I. M. S. Co. to Deputy: Referring to our letter 13th December, we inclose herewith invoice in triplicate for $2,021.50, amount of freight charges paid the G. T. Ry., on ten No. 7½ beacons, forwarded to Captain Gaudin, Victoria, B.C.; also duplicate paid expense bills. Kindly send us cheque to cover this amount at your earliest convenience.

December 20, 1907.—Deputy to M. Brais, M. and F., Parry Sound: 'Rush answer, my letter, 25th ulto. *re* gas buoys.'

December 20, 1907.—M. Brais to Deputy: In reply to your letter 25th November, respecting disposition of following gas buoys: No. 511 from Quebec, shipped 16th July, 1906. Gas buoys No. 6 from Quebec, shipped 16th July, 1906. Gas buoys No. 531, from Prescott, Ont., 16th July, 1906. Of the above number 531 is the only buoy registered here and the same was frozen in at Three Star shoal last season and lost.

The following numbers are the remaining type : Five automatic buoys in service here in the year 1906—530, 532, 4, 550. These have been dry-docked at Depot Harbour and are to be shipped to the International M. S. Co., Ottawa, during the winter. This shipment will have my early attention.

December 20, 1907.—(Recd December 26, 1907.)—Victoria to J. F. F., C. of L.: With reference to the paragraph in my letter 23rd ulto. relating to the No. 9½ buoys, serial Nos. 709 and 711 damaged by stranding whilst in transit from Vancouver to Victoria. I have the honour to report that with Mr. J. A. Thompson, inspector of steamboats, these buoys have been inspected. It is found that the lower part of No. 711, where the bottom is secured to the side, is indented so as to involve the necessity of a patch. No. 709 is also indented, but not to such an extent that it will require repairs. I beg to request that you will please advise by telegram as to amount of pressure these buoys are to be tested before they are used.

December 28, 1907.—J. F. F. to Victoria: Telegram—After repairs test buoys to 12 lbs. air pressure, and use soap suds to detect leaks.

December 28, 1907.—Letter confirming above and acknowledging letter 20th inst.

December 30, 1907.—Charlottetown to Deputy : There are at this agency the following gas buoys :—

Indian Rocks, combined gas and whistler, No. 542.
Point Prim, combined gas and whistler, No. 538.
Fitzroy Rock, combined gas and whistler, No. 544.
Miscouche shoal, black buoy, No. 545.

There is also one spare black gas only buoy not in use. Kept as spare serial No. 613, built 1906. With this buoy there are two lanterns to suit one No. 2282, 100 *m/m*, and one No. 2284, 100 *m/m*.

There are two of the five lanterns in use last season which will have to be sent to be repaired. I will have them boxed up and shipped as soon as I get notice where to address them. There is also a black buoy, gas only, serial No. 501 in charge of this agency, but strictly belonging to the N.B. agency. This buoy is placed in Shediac Bay to mark the Zephyr Rock, and since its establishment has been handled by our steamer *Stanley*, and each fall has been brought to Charlottetown, cleaned, painted and refilled and placed again in the spring. The expenses in connection with cleaning, painting, filling, &c., are chargeable at this agency against the N. B. agency.

January 9, 1907.—C. Koenig, superintendent buoys service, Quebec district to J. F. F., C. of L.: According to your instructions I have marked all the gas buoys and their descriptions for the Quebec district on two separate charts which I am sending you to-day under separate cover. I did not mark the buoys on the charts you mentioned, because at the time you were here I did not think to tell you that the former charts sent to Ottawa were the same as the ones I send you to-day. As the two sheets cover the St. Lawrence river from Montreal to Father Point, I think it will be more handy for you to have the buoys marked on these charts. Hoping that this will be satisfactory.

ANALYTICAL INDEX

OF

EVIDENCE

ROYAL COMMISSION ON THE CIVIL SERVICE, 1908

Adams, G., Letter Carrier, Toronto, 986.

Is under the old Act; it took him eleven years to reach $600; did not come under new Act for fear of losing sick pay; there is a chasm in superannuation between the old Act and the new; thinks they ought to receive now $1,000; presents memo.

Memo. pleads for carriers under old Superannuation Act, who, by faithful and long service have proved themselves capable and efficient servants; have struggled for eleven years through the low scale of wages from $360 to $600, are in same position to-day as at beginning owing to increased cost of living, 986. The statutory increases of carriers were withheld for three years, beg for restoration, a workingman's home in Toronto to-day cannot be provisioned for less than $1 a day, and with increased house rent takes up whole salary, leaving nothing for clothing, or sickness; police and firemen of Toronto have received substantial increases; submit details of articles and the difference in cost for the years 1897 and 1907; beg for amendment of Superannuation Act to allow a carrier to retire after twenty-five years' service; they regret there is no sick pay under new Bill, for by the time a carrier becomes unfit for duty he is placed on superannuation list, 987.

Agriculture, Department of.—See *O'Halloran,* 51. Also *Memorials, &c.*

Registrar of Trade Marks, &c., 69. Patent Office, 76. Central Experimental Farm, 82.

Alexander, Thomas, Collector Inland Revenue, London, 395.

Thirty-seven years in service, passing through all grades from $500 up to present salary, $2,400; division ranks as first class; London is a large cigar-making centre; outside of Montreal it is the largest in Canada; McNee's factory turns out 6,000,000 cigars annually, one officer attending to this and two others; officers are supposed to be at factory from 8 to 6 at night; malt is rarely destroyed of itself, there is no duty on beer when made from malt alone, duty is on malt contained in the beer; beer sometimes becomes sour or musty, then it is destroyed in presence of two officers; quantity destroyed is carefully computed, and samples of the beer are taken and sent to department at Ottawa, where it is analysed and quantity of malt used in each gallon is ascertained; refund of duty on malt is thus calculated, 395. His salary is $2,400; has been collector at London twenty-four years; had $200 increase in salary in seven years; speaks of conditions in Manitoba, 396.

Recalled, wishes to emphasize one point not yet touched upon, viz., the protection to public in connection with manufacture of petroleum; all petroleum for

ALEXANDER, THOMAS—*Continued.*

illuminating purposes is made in London division and amounts to about 20,000,000 gallons a year and undergoes special inspection; no duty on it, but inspection has to be done; no stamps put on to show it has passed examination; record of what has been inspected is placed in government books; track of every barrel sent out is kept and a sworn monthly statement is made out by refiner and inspected by officer; if a duty of only five cents a gallon were put on it would yield about $1,000,000 revenue annually, 401. No record is seen of what is done in inspection of petroleum on looking at revenue received; thought this was a matter overlooked and should be brought before Commission; service collects from refiners only one dollar a year for a license; would not like to suggest a duty, but officers have very unpleasant duties to perform; if officers at distilleries receive 'duty pay' same should be granted officers on duty at refineries, 402.

ALLAN, J. B., Vancouver (letter), 1046.

Forwards petition of all post office employees in British Columbia.—See *Memorials,* 1046.

ALLEN, FRANCIS G., Clerk, Ottawa Post Office, 799.

Is still a junior third-class clerk, entering in 1886 at $400; age 51 and salary $1,000; advanced steadily till made junior second in 1903; statements in pamphlet exhibited were got up at request of the Postmaster General and can be sworn to; was appointed secretary of Post Office Employees' Association, and communicated with each city post office—fifteen in number—where the staff is paid by government, in other offices staff is paid by postmasters; in one office a new arrangement was made, at Stratford a semi-staff exists, where the postmaster's salary is based on revenue, and staff paid by government; they get $360 on appointment and after two months' probation receive $400; have annual increase of $50, up to $800 or $900; no more women to be employed, but present ones retained, 799. In Ottawa post office after junior second the grade is senior second, first-class, assistant postmaster, and postmaster; there is a superintendent in each office receiving $1,500 a year; assistant postmaster at Ottawa has been in service forty years; under Act city postmasters and inspectors are political appointments; vacancies outside are not filled from Ottawa post office; thinks if an intelligent boy in outside post office service got up to first-class that would be the limit, 800. Is under old Superannuation Act, the abolition of which was the biggest mistake the government ever made; it is detrimental to the service, e.g., age limit reduced to sixteen to get people to come in; would leave to-day if they would superannuate him; they are taking in inferior material, competent young men will not stay at the salary; they are taking in now a class of men and classing them as labourers at $1.25 and $1.50 a day; after a year if they prove efficient they can be put on as clerks; they are named labourers because there is no appropriation to pay extra clerks; they pass a small preliminary examination; they spend a year as labourers at $500, they are then made permanent clerks at $400; if they continue as labourers they may get $2.25. 801. No more women are coming into the city post offices; the experience is that they are not suitable for the heavy work; patronage in Ottawa post office lies in the two members; new postmaster at Kingston was appointed at instance of local association; considers staff at Ottawa post office is not as efficient as formerly; owing to inferior people, and people of sporting proclivities being appointed, 802. Some men entering now are not good readers, and the writing we have to deal with is not always the best; in consequence of these inferior men, the work of the efficient clerks is decidedly

ALLEN, FRANCIS G.—*Continued.*

increased; the office hours are very irregular, changed every week, irregular meals destroy one's digestion; the reason is there are not enough men to do the work, the first batch of government mails is sent to the departments at eight o'clock every morning; to do that some have to begin work at 6.30 or 7 in the morning; in some branches some clerks have to get up at 4.30 or 5 o'clock to be on duty in time; does two and a half hours' work in the morning, then goes home for three or four hours, then returns to finish the day; doctor ordered him to work the same hours every day; the wickets are opened to the public from 8 a.m. to 8 p.m.; works every fourth Sunday, during session works from 7 to 12, and from 1 to 5 p.m., and gets no remuneration, has as much work as any three men do on an ordinary day, 803. Does not always get his holidays; thinks the inspection of the post office has been transferred to the superintendent of city post offices, who comes in at all hours; work is supervised by deputy postmaster; stamps are sold by an outsider on commission, not by post office staff; is senior officer in the government distribution branch; Sir William Mulock was asked to place the clerks in the outside service as to salaries on same footing as the inside service, though there is three months difference in the work of the branches; would ask the Commission to particularly consider the lower grade clerks and labourers, e.g., the man who takes mails containing annually thirteen and a half million dollars on his back to the Bank of Montreal gets only $600 a year, while men hauling about newspapers get $800; considering increased cost of living an immediate increase of 25 per cent to lower grades, 20 per cent to second-class clerks and 10 per cent to first-class clerks should be given; same percentages also added to maximum salary of each class; number of classes reduced to three; annual increase should be $100; Sunday work and night work should receive special consideration; Superannuation Act restored; age limit reduced from 65 to 60; length of service reduced from 35 to 30 years; no clerk under 18, or who has not passed qualifying examination should be appointed, 804.

ALLINGHAM, H. P.—See *Memorials*—Customs, St. John, N.B., 172.

ANDERSON, J. D., Railway Mail Clerk, Montreal (letter), 916.

Appears before Commission in writing, because some seem to think it is intention of the younger men to entirely ignore the claims and services of older men who have made the R. M. S. what it is to-day for very much less pay than the younger men are getting to-day for doing much less work; thinks initial salary too small; entered at $480, $39 net per month; then salary was cut to $300; mileage added in 1873; salary remained low till Sir Wm. Mulock's Bill raised maximum to $1,200, and it takes five years to reach that; $1,200 now will scarcely do more than $960 then; for the cost of living has so greatly increased; thinks maximum should be raised to $1,500; has never used liquor or tobacco nor wasted money, yet cannot make ends meet; was once asked: what do you do in the mail car? Witness answered 'I am away from home fourteen hours or more, I ride 216 miles, I stand on my feet in the car nine hours, I handle a mail every three or four miles;' thinks it unfair that the superannuation of men who have passed the 35-year limit should be put on the 3-year average plan; leaves his case in hands of Commission, 916.

ARCAND, D., Collector Inland Revenue, Quebec, 379.

Is collector of Inland Revenue for seven months, appointed politically without examination at a salary of $2,000 a year; staff includes thirty-six or thirty-

ARCAND, D.—*Continued.*

seven officers; was a broker and real estate agent for twenty-five years; keeps his own accounts, corresponds in English and French; has no objection to increase of salary; wished staff to come and speak for themselves; these men, some doing high-class work at low rates and having technical knowledge, are as a rule paid insufficient salaries; officers are generally very efficient, 379. There are four officers at distillery; no revenue yet, two years before they put out any product; the men are honest but salaries are too low; cost of living has increased so much salaries should be increased according to qualification, 380.

ARCHIVES.—See *O'Halloran.*

AUBIN, A., Inspector of Light and Gas, and Consulting Gas Engineer, Montreal (letter), 322.

Returns for year 1885 show receipts amounting to $1,859, with an expenditure of $2,135, showing deficit of $276; while in year 1906 receipts equalled $11,050, expenditure $3,818, showing a surplus of $7,232; thinks department would be justified in allowing officers suitable remuneration in proportion to the increased work performed and increased cost of living, 322.

AUDITOR GENERAL.—See *Fraser,* 1279.

AUGÉ, D. L., Letter Carrier, Quebec, 939.

Not necessary to speak both languages, as all English-speaking people here understand French; there are twenty-seven letter carriers and they begin work at 6.45 a.m. by sorting their mail, and start out on rounds at 8 a.m., returning at 10.30 for second delivery, 939. Then they go to dinner; are allowed two hours; third delivery starts at 3.30, finishes at 5.30, returning undelivered letters in office next morning; has a summer uniform complete every spring, winter pants every fall, and a winter tunic and a fur cap every two years; two pairs of boots and car tickets, 940. Letter carrier's salary is $2.25 a day, or $700 a year; receives twelve days absence, time lost beyond this even for sickness is deducted; district might be changed just before Christmas, but not often done, 941. Cannot leave service because having been fifteen years in the service are not fitted for other work and are always expecting better things; not enough letter carriers in Quebec, 942-3.

BALL, THOMAS, Mail Transfer Agent, Toronto, 988.

Wage $2.25; eighteen years in service, wears uniform, goes to station and transfers mail from one car to the other; works eight hours a day one week and ten to eleven next week; thinks they should receive from $600 at start, to $1,200, as in U.S.; is under old Superannuation Act; considering risks thinks he should receive pay when off work through accident; thousands of dollars pass through their hands; should receive pay for Sundays and holidays, 988. Would be satisfied if he could get an increase; hands in statement; cannot get good men in service by cutting salaries; street sweepers in Toronto are paid 25 cents an hour; should be no comparison between a Toronto street sweeper and a clerk handling letters, money and valuables, 989.

Memo. asks an increase of salary based on increased cost of living, two items especially rent and provisions; considering arduous and responsible nature of duties they should receive same salaries as in U.S.; should be paid for overtime, also time and a half for Sundays and holidays; should also receive pay for sickness or accidents, 989.

BALL, THOMAS—*Continued.*

Recalled, forgot to state in evidence, if a man makes a mistake he is fined a day or two day's pay; thinks it is not just; you often report your own mistakes, you may neglect to put a bag on car; does not think that is discipline, you may make an innocent mistake; fining a man for mistakes is against the law, e.g., the G.T.R. and C.P.R. did that, one engineer kept track of fines charged against him, when he left the service he sued the company; judge said a person could not make a man do the work and then take his money; company had to refund money; now if a man makes a big mistake they lay him off a while and he loses his pay; an agent has to stay on duty all the time, rain or shine, 993.

BARCELO, E., Superintendent of Montreal Post Office, 851.

Has been twenty-three years in service, entering as a stamper and passing through all the grades; asks that all officials who work on legal holidays be granted four weeks holidays instead of three, 851. Number of employees, 432; is chief officer after postmaster and assistant postmaster; the junior officers are appointed from Ottawa; the names are given to us by the department at Ottawa; we are asked after a certain time to report as to efficiency; if found inefficient they are got rid of; temporary employees remain in service for years, either because they have passed no examination or they are over age; test of a good letter carrier is that he delivers all his letters promptly, 852. If he brings back much mail he is cautioned, if he still continues to bring it back he is reported, and a way is found to get rid of him; does not think that politics could keep a letter carrier on against the will of the office; letter carriers doing clerk's work are not provided with uniforms and lose their car tickets also; this system prevails to a great extent; it is done from necessity, for by experience it is found that men who have gained experience as letter carriers make better sorters; thinks some compensation should be given them for the sacrifice of these privileges; thinks orders came from Ottawa that nobody should wear uniforms but those engaged in the outside service; thinks that many who are occupied as clerks have been given the opportunity of becoming permanent if they would begin at a lower salary, 853. Does not know if politicians enter the post office to see if there are any vacancies, they would go to the assistant postmaster; when we find that the work has increased and help is needed we apply for assistance; promotion is very slow; does not think there is any prospect of a junior rising to the position of postmaster, 854. Does not know the age of the postmaster at appointment; railway mail clerks and inspectors are distinct branches; the night service proves a difficulty, the work is more strenuous, clerks cannot remain on the work any length of time; the system adopted by the Dominion police of shifting the hours so that day staff and night staff change every week, would give rise to another difficulty in changing the habits of the men, a change of meal hours, that the stomach does not do its work as easily or as satisfactorily under changing conditions; thinks it would be better if all the positions in the service should be open to any member of the service, 855. Revenue of Montreal post office; have been no arrests of letter carriers for theft since beginning of the year; have employed other means than decoy letters; have lately dispensed with services of a few men who were not arrested, but who were not doing the proper thing; two have been dismissed for drunkenness; have at least 150 carriers; the fourteen grades should be very much simplified; would be of much value if some provision were made for pensions for dependents; asks simply that the old system be restored, and that a clerk with twenty-five years' service should, if he desires it, be able to obtain a pension and retire from the service, 856. Frequently in a large

BARCELO, E.—*Continued.*

city like Montreal, post office officials have died after paying for years to superannuation fund and nothing went to the heirs but two months' salary; desire that clerks be allowed to retire after passing a certain age; they remain on staff and staff suffers; our work requires quick action and clear memory; have seventy-three on temporary list; many men are classed as labourers because they have passed no examination or are over age; many enter, remain a few weeks, then leave on account of small remuneration; applications are neither so many nor as good as formerly; stamps are sold by an official to the dealer and cash comes to office; officials handling stamps give fidelity bonds and pay for them; only one man attending to sale of stamps, 857. The idea of shifting the staff around is right to a certain extent, but not in the money order and savings bank branches; would have a good effect if the men were made *au fait* with all the work in the different branches, it takes a long time to get posted in the despatch branch; only daily returns are made to department at Ottawa from the assistant postmaster's office; have always money on hand, not from sale of stamps, but from money order and savings bank; as much as can be deposited is done before three o'clock; have a good brick vault for stamps and post cards, but the money is kept in an ordinary burglar-proof safe; stamps are sold to public by vendor till 10 o'clock at night; he hands over a few to officials to sell for him; in reference to night work, it would not be easy to make a change, because we find a difficulty in obtaining willing men for the work, they make all kinds of excuses; when we find a man willing to do night work we are glad to have him continue it, 858.

BARRETT, Dr., Inspector Inland Revenue, Winnipeg, 274, 435, 1380.

Thirty-four years in service; had various appointments in service; has risen point by point; cost of living at Winnipeg 33⅓ per cent higher than Ottawa; figures given in memorial are taken from Ottawa C. S. Ass., 435. For some classes of officers in the west there is a provisional allowance, necessary to supplement these salaries for the people were actually starving; Civil Service Act fixed those salaries, so government had to supplement those salaries; system began in 1882 until 1887; then it was completely struck off, 436. On his arrival in Winnipeg received an allowance of $1 a day, but cost of living to-day in Winnipeg is at least 30 per cent higher; allowance was based on salary; though the increase in cost of living is general, yet it is at least 30 per cent greater to-day than in Ottawa, Toronto or Montreal; in 1887 this allowance was cut off owing to representations of a member from the west; the halcyon period lasted from 1885 to 1887; allowance re-established about three years ago, 437. Street cars run about five miles from city hall; the doubling in the price of rent is caused by rise in property and great immigration; our collector five years ago paid $22.50 rent per month, this increased to $30, $40 and $50, which he pays now for same house, which in other towns in Ontario would rent for from $12.50 to $15 a month, 438. Inexplicable that beef sells here at Ottawa at 15 cents a pound, and the same beef fed in the west sells for 22 cents; they produce more beef in Winnipeg than they can consume, therefore the meat should be cheaper; beef combine in Winnipeg; population of Winnipeg is about 100,000; thinks Civil Service to-day is suffering from two things, (*a*) politics, (*b*) in the service there are drones and worthless fellows who draw their salary in perfect indifference whether work is done or not, 439. Recites an instance of service suffering from politics; collector of Inland Revenue at Port Arthur has been retired, the district having increased it was necessary to have a man of experience there, it was recommended that a competent man be appointed, there being none from the west

BARRETT, Dr.—*Continued.*

available, one from the east was asked for; politicians said 'no,' we will have no eastern man, we have enough ability in the west; has been no appointment yet; that is what Civil Service is up against everywhere; in Winnipeg there is one collector, a deputy collector, an accountant, five temporary excise men and one messenger; some probationers take position for a month or two then resign; the collector by the increased work knows when an officer is wanted, the department is notified, a name is got from Liberal Association; it was the same with the Conservatives, and all the time the service is suffering, 440. Has been in west twenty-two years and had better men than now; one man, our accountant, entered service five years ago, was a university graduate and industrious, worked for rank and position and is now receiving $1,500 a year; men leave as soon as they get something better; in Customs Department lowest salary is $800, in ours it is $500; abolition of Superannuation Act helped to destroy stability of service; thinks some kind of pension fund be restored and provision inserted for benefit of widows and orphans; if officer dies in harness, widow should be entitled to two-fifths of salary, 441. Has been thirty-five years in service, and if he were to die, family would not receive one cent; under retirement fund when you retire they return the 5 per cent taken from your $500 salary, this class of paternalism is not appreciated; the drones in the service are the cause of a lot of trouble; political influence is against promotion of officers and in favour of bringing in of outsiders; or promote a favourite who may be the most incompetent man in office; the worthy man thinks there is no certainty of promotion; should be two classes, the administrative class and the clerical class; we would thus get the right class of men into the administrative work; seems there is no one in any department on the lookout to have good, deserving men promoted or dismissing incompetent men, 442. Once a man is in service it is difficult to remove him: a man may rise by promotion examinations, but the questions put are taken from old and obsolete books, they will not allow questions asked at previous examinations to be published, so that they may serve as a guide to students; a man by passing all those examinations may rise from $500 to $1,200, but when a higher vacancy occurs then the politician comes in; a deputy collector is the only political appointment under C. S. Act, 443. Deputy collectors having passed all examinations should receive a minimum salary equal to minimum at which collector is appointed; has letters from officers in Post Office Department, receiving a salary of $400, or thereabouts, 444.

Submits letter from post office employees, Winnipeg, 445.

Knows that collector when a vacancy occurs, if he gets his eye on a desirable young man, tries to induce Liberal Association to get his appointment; appointment should be made on examinations testing the intelligence and qualifications from a literary and mathematical standpoint; after admission should undergo promotion examination, 274.

BARRETT, J. K., and others, Winnipeg.

Memo. of civil servants of all departments in Winnipeg: Inquire if Commission is going west, if not, under what conditions they can be heard before Commission; state the cost of living in Manitoba, Alberta, Saskatchewan and British Columbia is at least 33⅓ greater than eastern provinces; salaries are not on a par with this cost of living; the civil servants of eastern Canada have same salary while their expenses are ⅓ greater than theirs; cost of living in the west has in past ten years increased fully 50 per cent; respectfully submit this inquiry must extend to all branches of the service; the conditions as to increased cost of living must be the same whether paid by a member of

BARRETT, J. K.—*Continued.*

the inside or outside service; have two-fold grievance, (1) extra cost of living in the west, and (2) general increased cost of living all over Canada; claim for compensation not only for general increased cost of living, but also for the extra cost of living in the west over the east, 1380.

Memo. of Civil Service Association of Western Canada: Members of association heartily concur in Ottawa memorial of Civil Servants' Association, and request consideration of this memo. in connection therewith. *Superannuation and Retirement.*—Unanimous opinion that Act be amended to allow civil servant to choose which system he would like to come under; the gratuity of two months' pay to widow and heirs is entirely inadequate and request that in case of an officer on superannuation list dying while in service, 50 per cent of the superannuation allowance he would have been entitled to receive be paid to his widow during her widowhood; that in case of a superannuated officer who dies leaving a widow she should receive 50 per cent of his superannuation during her widowhood; this system has been adopted by banking and commercial institutions who give a retiring annuity to their employees. *Increased Cost of Living.*—During these years of great prosperity, salaries of employees in all branches of industry have been substantially increased to meet increased cost of living, except the Civil Service branch of Canada; the same schedule of salaries are paid to-day that were paid ten or fifteen years ago, when living was 50 per cent cheaper; every item entering into the cost of living has increased so rapidly that a civil servant who is working to-day on a salary fixed years ago when living was much cheaper, is condemned to forego many necessaries, or become hopelessly in debt; no doubt cost of living in western Canada has increased 45 per cent during past ten years, and that all wages, except the civil servant, have increased 50 per cent in that time; a salary of $800 a few years ago had as much purchasing power as a salary of $1,200 has to-day. *Peculiar Situation in the West.*—Extra cost of living in Manitoba and provinces west is at least 33⅓ per cent greater than in the east; in other words civil servants of eastern Canada have been receiving same salaries as in west, while the expenses of the people of the west have been one-third greater; true, a small allowance for extra cost of living has been given to the poorer paid officers, but it is altogether inadequate to equalize difference in cost of living; if officers doing the same work and receiving same salary east and west the difference in cost of living should be added to the west; on account of increase of work in west many temporary officers were employed; the memo. appeals for them and asks that they be treated as civil servants; gives table showing increased price on certain staple articles in Winnipeg over those at Ottawa; also table showing comparison of wages between the two places; letters from merchants endorsing increased cost of living, 1381-1382. Increases in mechanics' wages, within last five years; increase of rate per hour to artisans; adding, living per average family has increased five dollars a week; taxes have increased 75 cents per month; Canadian Bank of Commerce giving its employees in Manitoba, Saskatchewan and Alberta over and above allowances made in Ontario; single men $200 a year, married men $400 a year, without reference to salary; Bank of Ottawa, Winnipeg, allows $200 each to men transferred from east; Eastern Townships Bank, Winnipeg, makes a special western allowance of $300 for each clerk in the west; Bank of Montreal, Winnipeg, makes an allowance of $300 a year to junior clerks living in the northwest, 1383-1387.

BATTLE, J. J., Clerk in City Post Office, Quebec, 948.

Some bookkeepers in Quebec receive $2,000 and $3,000 a year, 947. If a clerk is $10 out of account at night, he has to make it up; the inside service have

BATTLE, J. J.—*Continued.*

not; present deputy postmaster was not appointed from clerical staff, but from inspector's department; the men in the post office should have their grades, 948. Though Quebec has one-sixth number of people they have in Montreal where there is a superintendent, yet one is necessary to be in the office early to regulate traffic, also in absence of postmaster; present assistant has earned his position, a better officer cannot be found, yet he should have an assistant or superintendent as he cannot put in sixteen or eighteen hours a day; there are no first-class clerks; vacancies in fourth class are sometimes filled from outside by influence, and men in office left behind; is in Money Order Branch and if help is needed, asks deputy postmaster who writes to Ottawa, if the help is necessary it is sent without reference to us; has two men ranked as labourers serving under him, both old men, one at $1.50, the other at $2.25; they are about alike, that is the way men are treated, 949. As clerks we work more than the inside service do, 339 days a year and two hours a day more than they; they simply take our returns, if anything is short we take the responsibility and make it up; have a right to be put on the same footing; they sit quietly at their desks, we have to attend to the public and are liable to mistakes; if government would give me my pension to-morrow, would leave the service, 950.

Memo. stated yesterday that clerks in outside service had greater responsibilities than the inside service whose salaries are much larger; the reasons are, (1) clerk in inside never loses money, those on outside do, e.g., clerk in Money Order Department after working hard all day finds he has made a mistake of $10, before he balances his accounts has to make up the $10, not so with an inside clerk; the latter's time is his own, for what work he cannot do to-day he can leave it for to-morrow, whereas the work of outside clerk has to be done to time, and work often lengthened to ten hours; might also add when clerk discovers mistake he has a difficulty to have money returned, for people often think it is the government that loses the money and not the clerk; (2) clerk in Registered Letter Department if letter is lost is called to make good the contents; (3) also clerk in General Delivery or Despatching Branch has to make good for losses; in Postmaster General's Report, Appendix H, compare losses of outside with inside service and you will see which has the most responsibility; only fair therefore that we should receive same salary; nine-tenths of the M.P.'s as well as public at large think both services are on same footing, 951-952.

BEAUCHAMP, EDMOND, Montreal Post Office Staff, 893.

Has been working at post office for nine years; also there are some working for fifteen and twenty years and are still on the temporary list; never get an hour of holidays, and when they got an increase had to work hard to get it; is forty-eight years of age, has worked in the distribution, and other work, and has done all the work he was asked to do; thinks that if appointments are made to the staff that the temporaries should be given the preference. 893.

BEAUDET, E., Acting Chief Clerk, Customs, Quebec (letter), 146.

Appointed acting appraiser at Customs House, now assigned to the duties of acting chief clerk, asks salary be raised to the maximum, 146.

BEAULIEU, ARTHUR, representing Mechanical and Labouring Branches, P.W. Dept., 1121.

Painters are often called upon to do lettering, graining, varnishing and paperhanging, outside, these are different trades; is glazing at conservatory in Major's Hill green-house; a man outside doing glazing alone receives more than one for all kinds of works; a grainer is the highest grade of a painter;

BEAULIEU, ARTHUR—*Continued.*

being called upon to do all this various work should be paid accordingly, or at least should get the prevailing wages; there is a good deal of paper-hanging, 1121.

BEAUPRÉ, P. M., Trade Instructor, Kingston Penitentiary, 565.

Outsiders have same privilege of getting things from penitentiary at market prices, 561. Warden formerly appointed guards, now changed by last Act; the criminal insane are generally of himicidal mania, 562. Warden did not have the sole appointment of guards even as far back as 1885, he was subject to recommendations of politicians, 563. Can name two officers in Kingston Penitentiary appointed in 1885 on recommendation of Sir John Macdonald, 564. Is a trade instructor, of whom there are eight, receiving $800, 565. Gratuities are laid down under Act; has been nearly twenty-three years at Kingston; then upon retirement would receive half a month's pay for each of the first five years, after that a month's pay for each additional year of service; would suggest that an officer get on retirement what he is entitled to, or in case of sudden death family or dependents should receive the gratuity; Act says if permanently disabled by a gun shot wound one-half would be added to gratuity; if a person dies in the service widow would only get two months' pay, that is the weak point in the clause, 566. Thinks that when an officer dies in the service his widow or others dependent on him should receive the gratuity; in penitentiary pay ceases at death of officer, not so in Ottawa; case of officer dying before receiving gratuity where cheque was returned and widow got nothing, 567. Since present Act was passed, warden is not allowed to make any appointments at all; has been instructor over two years, was guard for fourteen years, keeper five years; discipline in penitentiary is better now than years ago; inspectors go round three or four times a year, generally they come separately, 568.

BÉGIN, P. A., Interior Department, 500.

Is not a surveyor but a draughtsman; some are only copying prints, but they are real draughtsmen, they make all kinds of maps and compiling; his application for permanency is based upon long service, technical qualifications and increased cost of living; if he had been permanent in the beginning would have been a first-class clerk now; if Superannuation Act is restored would like to come in under it, 500. Passed Civil Service Examination; when survey is made by the field staff he makes the draughtings for them; it would not please the old clerks to have all those called draughtsmen be made draughtsmen and put on same footing; owes nothing to political influence, 501. Has passed all examinations required; one a cursory examination of his work by the Surveyor General; offices at corner of Metcalfe and Slater, 502. Would like the old clerks to be made permanent, with first-class standing and with income according; more work than can be done; office hours from 9.30 to 4.30; attendance book signed in the morning and when returning from lunch, 503.

BELAND, PHILEAS, Clerk of Works, Quebec, 1155.

Has had position for eleven years; has every building under his control; also has charge of buildings at Grosse Isle; all post offices from Quebec to Rimouski; his salary is $1,300; has one assistant and one messenger; repairs are done the year round when needed; began at salary of $1,100, 1155. Has to report on everything that is to be done; spends $150,000 to $200,000 a year; each building requires about $4,000; put up the new hospital and new house at cartridge factory; on repairs if a large work is required we

BELAND, PHILEAS—*Continued.*

call for tenders, if small, it is done by day work; for last two years has asked an increase of pay, but could not get it as there was no minister; thinks salary should go up to $1,800; rent has increased one-third in ten years; provisions, &c., 1156.

BELANGER, R., Proof-reader, Printing Bureau, 593.

Is a proof-reader at Bureau at $18 a week; complains that he is asked to read proof sheets while printers get $20, and machine men, during session, get $44 and $45 a fortnight, and proof-readers for House of Commons get from $1,500 to $1,600; no outside establishments are constituted as is the Printing Bureau, because outside, an author is generally responsible for all he gets printed; not so in the Bureau, proof-readers are required to have qualifications for the work; in outside places the proof-readers are mostly girls and are paid $6, $7 or $10 a week; they have no responsibility, while in Bureau they are responsible for departmental reports, &c.; as far as salary is concerned, here is where the difficulty lies, in the Printing Bureau there is a practical branch composed of printers, pressmen and binders who are protected by their unions; there are other branches as stationery branch protected by C. S. Act, while proof-readers have nothing behind them; therefore they want to be classified; to be included in clerical staff, as their work is just as important; in outside offices the author himself sees the work through; it is not so in Bureau, the departments send in their reports, the House of Commons sends in its copy, the *Hansard,* the proof-readers read the proofs and are entirely responsible for it; no check beyond them, they have to sign for the press, to read the first and last proof and are responsible, 594. Some departments read second proof; if work is in French the proof-reader compares it with the English then signs it for the press or for stereotyping; if his signature is upon it he is entirely responsible; Public Printer in Washington writes that he salaries of proof-readers there are $1,500; they do not require the same qualifications there as at Bureau; e.g., the witness is a French-Canadian, supposed to know English, is now reading the Revised Statutes, not only reading, but editing them; comparing English and French, finds many errors; in Washington, English only is required, but in Bureau many have to know the two languages; formerly Auditor General was translated by the printers as best they could, but all errors in translation had to be corrected in proof-room; they had to act as translators, to which some objected; the work was finally given to another man who received special pay while proof-readers had received nothing extra; for all this work they receive but $18 a week, 595. Has been ten years in service; two men in service twenty years are receiving $22 a week; that proof-readers should be men of education let the Commissioners judge; as witness the work done on Revised Statues; whenever they ask for an increase of salary they have the Printing Bureau Act quoted as an answer; proof-readers do not think that covers their case and authorities say it does; so their case is a question of classification; that they be put under Civil Service Act as technical officers, so they would have something to refer to; if so there would be a chance for the chiefs to classify their men and see that the good men who are doing their duty are put in the proper class; whereas to-day all are put on an even footing; the request therefore is that the proof-readers be made a class under Civil Service Act with increased remuneration; would refer to case of Mr. Harwood who has been in service nearly thirty years, there is no better translator in Canada, 596. He is translating official *Gazette,* than which there is nothing harder to translate; no one would dare to check his translation, has made a special study of the work, no other French-Canadian could

BELANGER, R.—*Continued.*

replace him; witness is his understudy, was not politically appointed; mentions this to show how the men in that office are qualified, and that they are not getting enough salary; witness is obliged to live in a certain position, but has to do extra work; has trans'ated technical reports for other departments; several of his colleagues have to do whatever extra work they can to make a reasonable salary; the English proof-readers are very efficient men; during the sessions of Parliament the night staff are responsible for the correction of the daily *Hansard* and of the Orders and Minutes of the Senate and House of Commons; there is no check on them for this work; it is arduous work, which they must do whether the sittings of the House are long or short; they sometimes have to remain working until late in the morning to prepare these publications for press; now as to overtime; printers, pressmen and binders are paid for every minute of work done after hours, receiving pay and a half or double pay; proof-readers, on the other hand, do all the work, and if after hours, they get no extra remuneration; during sessions of Parliament two or three men are obliged to work every Saturday afternoon and Sunday to keep up with the work, not getting one cent for that extra work, but which is supposed to compensate for the two weeks' holidays; but these cannot be counted as holidays if they are obliged to pay for them by extra work; other departments receive three weeks' holidays but are not supposed to work more than the regular hours to compensate for this; comparisons are not always right, there are clerks in Superintendent's office being paid $20 and $22 a week for keeping the time and entering in the book the numbers of the requisitions; yet receiving $3 and $4 a week more than proof-readers, 597. Does not complain that they are too liberally paid, but comparing proof-readers' work and theirs the former are indeed underpaid: the reason is the clerks are classified under Civil Service Act, 598.

BELLEAU, J. A., Preventive Officer, Quebec (letter), 146.

Appointed in 1905, at $500; assistant has larger salary, hence appeal, 146.

BENNETTS, F. K., Assistant Clerk, Privy Council, Ottawa, 1065.

Submits memo. containing comparative statement of the work of the Privy Council for years 1891-2 and 1905-6, 1065. Is assistant clerk of Privy Council; has been thirty-two years in service; his duties are to assist clerk of the council and in his absence certifies to orders in council; cost of department is practically the same in 1892 as in 1906; there are four clerks including Mr. Lamothe, though his office is quite distinct from ours; an effort is made to apportion the work among the various classes according to grade; there is a great amount of work at which all are required to assist; work in office consists in references from other departments under the several statutes; also despatches to His Excellency from Colonial office to be transmitted to different departments; the preparation of minutes, which are prepared upon every report sent in by the several departments except those referred to Treasury Board, this is confidential work and has to be prepared correctly and quickly; the keeping and classification of records, also make copies of orders in council for the various departments, 1066. The records previous to 1867 are to be transferred to the Archives; the scheme is to deal only with records since Confederation: have records of original council held in 1763; when the Privy Council receive a Treasury Board minute, a minute is prepared and submitted to Council; Council passes upon it, then it is sent to Governor General for approval and signature, then copies are distributed to various departments concerned; every minute of Council is entered in a special register; state books were abolished in 1882; a record of members who attend

Bennetts, F. K.—*Continued.*

Council is kept; when commissions are issued the Secretary of State is advised; those to be published are forwarded to King's Printer; a despatch, if it has reference to the matter of stamp duties after receiving it from Governor General is sent to the Minister of Finance, who replies by a minute and passed by Council and copies are sent to whoever should receive it, 1067. As far as possible all departments are advised in what concerns them; copies of all orders respecting payments are sent to Auditor General, and any payment over $20,000 is sent to Finance Department; it is the aim of officers of Privy Council to be on good terms and advise other departments; office hours are from 10 a.m. to 4 p.m., often later if Council is sitting; orders in council are usually issued within twenty-four hours, 1068. Would require one more man; offices are all together and staff are hard working; chief clerk alone gives work to typewriters; all needed copies of orders in council are now made by the typewriter, which has reduced the work; new clerks do not write as well as the old ones; staff is very industrious and efficient; this should not be lost sight of in bettering their condition, 1069-1070.

Benoit, Dr. Louis Victor, Collector, Inland Revenue, St. Hyacinthe, 342.

This is a third-class division, having in it a distillery, two vinegar factories, five cigar factories, and eleven bonding warehouses; the division is large comprising sixteen counties; collection not large; was appointed in 1901; passed both examinations; is also inspector of gas for district, 342. All gas meters are inspected in office; emolument attached to this office is $100 a year; made special study in acquiring all this knowledge of distilleries, and tobacco and cigar factories; received this office through vacancy caused by superannuation of Mr. Boivin at age of 59; has salary of $1,800 a year; don't think the appointment caused dissatisfaction, because they could not well take anybody outside city of St. Hyacinthe for the position; collection in this division is $175,000, besides duty accrued on spirits, 343. Thirteen men and five temporary officers; formerly division of St. Hyacinthe comprised only St. Hyacinthe proper, Sorel, Victoriaville and St. John were annexed later; collection then amounted to $45,000, last year it was $80,000; considers the staff very efficient and they do their work properly; the relative proportion of the cost of living here compared with Montreal, outside the item of rent everything is just as dear; was appointed four years ago, 344. Lower class of officers are certainly underpaid; the higher class receive remunerative salaries; has to go to the establishment of any one who wishes to establish a cigar factory; has to make a survey of premises, before certificate of license is given; has to have a man at factory even if they do not put out a cigar or a single pound of tobacco in bond; work during current month has to be checked; cigars or tobacco made from Canadian domestic leaf are not taken out of bond; even at Thetford Mines it costs as much to live as in Montreal; a Mr. Lebranche opened warehouse at Thetford Mines; he is merchant, hotelkeeper and real estate agent; bonded warehouse is kept separate from hotel, saw to that before license was granted; gave guarantee bond of $2,000 which was accepted by government, 345. When whisky is consigned to him in bond, he cannot open the door, our officer takes it out; comes under retirement fund, but we do not get as much interest as is given in bank; would be desirable to restore Superannuation Act, or a combination of the two would be better; Mr. Brennan is in charge of distillery; some of our men are sent out at times on dangerous service, then there should be some provision made for extra pay in such a case, or given protection for insurance; one man is called on two or three times a year to spend two or three weeks in the fulminate of mercury factory; should be paid extra for that, or protected by insurance paid by department, 346.

Benzie, J. L. B., Letter Carriers' Department, Winnipeg, 1053.

Was in grade 'C,' receiving $1.75 a day, and succeeded one who found the work too tedious and hard, and who received $2.25 a day; expected to receive his salary but was informed that he could not pass from grade 'C' to grade 'E;' finally he passed through grade 'D' to grade 'E,' but received no increase in pay; his duties are to check time of arrival of carriers at 7 a.m., assist in sorting the mail, then walks out with different carriers trying to equalize their work, so as not to work them more than 8½ hours a day; then writes up a report for the postmaster; finds it very trying to change walks every day; has charge of carriers' ledger for charging up their uniforms; 1053-1054.

Berthiaume, C., Gardien de Nuit à l'hôtel des Postes de Montréal (letter), 1152.

Expose qu'il est employé comme gardien de nuit, pendant sept ans, que son salaire a été toujours $50; que de l'autre côté, les cout de l'existence d'une famille s'est accru d'une façon extraordinaire; qu'il travaille 365. units par année, n'a pas de congé; et surtout que $50 par mois lui permet pas de pourvoir à ses besoins; demande que son salaire soit augmenté de 25 pour cent, 1152.

Board of Civil Service Examiners.—See *DeCelles, Dr.*, 1. *Glashan, Dr.*, 28. *Thorburn, Dr.*, 11.

Boddy, J. S., Clerk, Toronto Post Office, 1013.

Has been in service twenty-four years, entering as letter carrier; at appointment had not passed examination, but did subsequently and received a clerkship; is now receiving $1,000 a year; most desirable to have only three classes instead of six as at present; memorial suggests an equitable system of promotion based on qualified seniority; that seniority, all things considered, should govern, 1013. That annual statutory increase be $100 instead of $50; suggests eight hours constitute a day's work, including one hour for dinner; and seven hours one night's work including one hour for luncheon; clerks now work eight hours without lunch; thinks clerks should receive pay for Sunday work; special clerks working on Sundays get pay; clerk receiving yearly salary gets a day off during week for working on Sunday; should also receive pay for working on public holidays, 1014. Thinks it not advisable to alternate day and night work, because you get accustomed to night work; night work is often a matter of choice with the clerks, they are not compelled to do night work; works in the registration department; some, rather than do carrier's work, would sooner do clerical work at night, using uniforms when they go out, 1015. Quite a few resign their positions; chances are better outside; thinks certainly if grades were reduced, salaries increased and superannuation restored would have a better class of men and they would stay; everywhere there is a gradual raising of wages, not so in Civil Service; civic employees of all grades have all had salaries greatly increased, also in several departments of provincial government; business with the banks has largely increased, and messengers coming from these banks to receive the many money packages all receive larger salaries than the clerks handling this large sum of money, 1016. Consider also the responsibility of their occupation and trust reposed in them; public are dependent on honesty and efficiency of the clerks who are not appreciated as they should; business men and women will inclose money in letters, trusting to honesty of clerks, yet nearly all arrive at destination safely; mentions case of a Greek, four years in this country earning $18 and $20 a week in a factory, yet men in post office twenty and twenty-five years do not get the wages of this man; request an increase of salary because of increased cost of living, 1017.

Bolduc, A., Post Office Inspector, Quebec, 957.

Appointed inspector twenty years ago, being previously four years assistant inspector at Ottawa; on arriving here had salary $2,000, receives now maximum $2,600; has under him eight clerks, two assistant inspectors and a messenger; has no first-class clerk; district includes Three Rivers to Straits of Belle Isle on north shore, and from Nicolet to Gaspé on south shore; is on road about ten days a month, so are the assistant inspectors; sends out also two clerks; has to inspect 1,000 offices; 350 money order offices are to be visited every year; mere travelling expenses are allowed, former system of per diem allowance preferable, 957. The system exists in England and United States, in England it is graded according to title of person travelling, but should be the same for all; in U. S. they get $4 a day; salary of assistant inspector is $1,800; an inspector should be appointed from the service; minimum salary of inspector should be $2,500 up to $3,200; and assistant inspector from $1,800 to $2,500; inspectors are generally appointed through influence; the two clerks travel to learn the business; should be allowed to take out accident policies paid by government; pays ordinary life insurance premiums; is under Superannuation Act, which should be re-enacted; and provisions made to include pensions to inspectors, lighthouse keepers and their widows, 958. Also a provision that if a man dies before time for superannuation his widow should get more than two months' salary; this gratuity is not given when officer has been superannuated; our clerks are on same level as post office clerks, should be some distinction, as our clerks are supposed to have a good education and know the two languages, while a man in post office has simply to sort letters; office hours from 9 to 4; it is a requirement in our office that clerks should speak and write the two languages; a clerk in inside service does only routine work, and a man in post office inspector's office requires general ability, 959.

Boudreau, Rodolphe, Clerk, Privy Council, 1063.

Forwards statements of staff of dept. for 1892 and 1906, 1063-5.

Boudet, Etienne, Assist. Insp. of Weights and Measures, Montreal, 362.

Has served eight years; would be satisfied if he could make the two ends meet; did not know when he entered the service there was no retirement, 362.

Boulet, Wilfrid Albert, Supt. of Letter Carriers, Quebec, 938.

Has been twenty-three years in service, twelve as superintendent at salary of $800; has had no increase for twelve years; some letter carriers get a greater salary at $2.25 a day, with uniform; boots, great coat and Sunday pay; as superintendent wears no uniform; wishes increase if others get it; office hours from 6 a.m. to 5 p.m.; is always present when letter carriers are on duty, 938.

Memo: que sa position comme chef des facteurs est une des positions les plus responsables, à part celle de surintendant des commis; a la surveillance des facteurs, voit à ce que les divisions soient à peu près égales, à répondre à toutes les plaintes des citoyens pour le retard des malles ou mauvais services des facteurs, à tout ce qui regarde la distribution, le soin des lettres enregistrées; à sa nomination il recevait $200 plus que les facteurs, mais par un bill passé à cet effet les facteurs gagnent plus que leur chef; demande justice, c'est-à-dire quelque soit le montant donné aux facteurs qu'il soit donné $200 de plus au surintendant comme autrefois, 939.

Bourgouin, George, Collector, Lachine Canal, 1224.

Collects wharfage on the firewood and lumber unloaded on the wharfs; salary $1,800; keeps the books and statistics of everything going west and returning;

BOURGQUIN, GEORGE—*Continued.*

the returns are sent to Ottawa daily; those who have water rights on the canal pay for the water they draw; a commission was appointed to examine the needs of the canal, and they appointed another man to collect the rents, receiving a commission on the rentals, 1224. Presents statement of salary paid in 1895 and 1896; has been in service nine years; the employees at chief office were nominated by the members; replaced a Mr. O'Neil, an old man over forty years in service, who received $2,000 and collected about $50,000; tolls abolished in 1903; Mr. Marçeau is general superintendent; received pay for August about September 6 or 8, 1225. Mr. O'Brien pays the bridge keepers; ours is the statistical office, collecting the revenue; is not permanent; thinks there should be a protection scheme for the wives of officers dying; though no revenue is collected the work is to keep the records, 1226. office is kept open from 10 a.m. to 3 p.m. in winter; in summer the office is open all the time, twenty-four hours a day, Sundays also, there is a day staff and a night staff; every ship reports; the work has trebled; two less on the staff, or more business and less pay; take holidays in winter; if any one gets sick the public suffers; in this business you take a man, a capable man, he could not do the business until he has been a year there, it is difficult work if you do not know it; it is the main office on the canal; has to keep three books, 1227. Collects tolls for the coal that comes in the canals; it is wharfage not tolls on the coal; this year has collected about $3,000 a month; some coal is unloaded on canal, some goes to Ottawa and other places; coal coming from below is charged 6 cents a ton to go through the canal, and coal from above pays 5 cents a ton for wharfage; books are simply a collection of statistics, how many bags of salt, or grain, &c., sometimes there will be a large number of entries for one ship's cargo, and though they pay no toll, still the work of recording the quantity of different articles carried has to be done and reported to Ottawa, 1228.

Memo.: This office regulates the traffic through the canals in the Dominion, it being entrance of navigation to the west, outlet from the west, have therefore all they can attend to with the small staff; they ask for an increase of pay, because in 1896 staff consisted of eight, now in 1907 there are six, yet traffic has almost doubled; cost of living has increased 50 per cent; office is open twenty-four hours a day, open on Sunday from now on for which they get 20 cents an hour and Customs Department get 30 cents an hour for Sunday work; should receive as much as staff did in 1896; gives table showing staffs in 1896 and 1907, comparing wages then and now; since 1896 traffic has increased and cost of living increased; since 1896 staff has decreased and salaries decreased, 1229.

BOUSQUET, J. O., First-class Exciseman, Montreal, 339.

Is not yet classified, though he has passed special examination; would not have entered the service had he known any better; entered as probationary, and in seven years has risen up to a first-class exciseman, 339. Has control of cigar and tobacco factories; produce of Mr. Fortier's factory; has always an assistant in training; Mr. Cavan visits office every month; the way duties are performed and inspection carried on are all right; not enough special class officers, only two in Montreal division; require four or five more; uses many stamps, these are bought by manufacturer, using one stamp for every box, the number of stamps used should equal number of boxes of cigars made, 340. Manufacturer cannot get out of factory one box of cigars unless stamps are properly cancelled; would detect any missing stamps; had political backing on entering service, but has not used it since for promotion or increase of salary; thinks methods in force in department are efficient; but

Bousquet, J. O.—*Continued.*

would suggest raise of salary, then question of classification, 341. Has worked hard to pass special class examination to be kept as first-class officer, has worked hard for years; the special class list should not be limited, but thrown open to every officer qualified for that class; there is special class work to be done; in Montreal we should have four, five, or half a dozen special class officers, 342.

Bouteiller, G. A., Officer in Charge of Walker's Distillery, Walkerville, 411.

Has been connected with service thirty years; there are thirteen officers each of whom is responsible for and has under his charge and care a particular department; all spirits when manufactured are charged for duty $1.90 per proof gallon; 3,000,000 gallons of spirits are manufactured in a season and duty levied amounts to $5,700,000 in a year; spirits when manufactured are prepared for warehouse for maturing purposes either in tanks, vats or barrels; there are about 400 tanks and vats on the premises, all of which are full most of the time, also nearly 200,000 barrels in use all the time; spirits on hand now is over 7,000,000 gallons, all under control of officers at distillery; about 300 barrels and 1,000 cases are shipped every day; in a season's run about 40,000,000 pounds of grain are used; this shows amount of work and responsibility entailing strictest diligence and vigilance on part of officers; majority of officers are qualified, but later appointments are not young men, it being impossible to get them at initial salary; ordinary workingmen in distillery receive larger pay; one of these salaried employees is in receipt of $15,000 per year, others from $5,000 to $8,000, shipping and correspondence clerks from $1,600 to $2,500 per year, 411. Considers initial salary should be increased in order to attract young capable men; three of our officers have lately resigned to enter Customs, as their examinations are not so difficult; cost of living has increased from 30 to 50 per cent and salaries in all other lines have from absolute necessity been increased; would suggest a graduated scale of increase, the higher percentages being allotted to classes receiving minimum pay at present time, and a descending scale applicable to the higher grades; gives list of officers at distillery, showing salary and length of time in service, 412.

Boville, T. C., Deputy Minister of Finance, 180.

Been in department twenty-five years, and by promotion examinations arrived at present position; graduated at Toronto University; present salary is $4,000; financial business of country has doubled during the last fifteen years, while permanent staff has only increased from thirty-one to thirty-nine, and temporary staff from one to ten, 180. During last three months four more women were added, being employed in signing the new currency and counting and destroying the old; circulation over $14,000,000 in one's and two's; have been keeping the circulation very clean during last eight years, 181. Cannot get new boys to enter service now at $500; have to strain Civil Service Act and give practically $800; some have had slight experience; boys of seventeen or eighteen just after school cannot have the level-headedness or intelligence required for the work; applications from women at $500 are very numerous; generally engage women at twenty or thirty years of age, and all must pass the Civil Service examination, 182. The women in the department are all healthy and of the highest character; many officials who have left department have succeeded in outside life; promotion examinations are on 'duties of office' and arithmetic; vacancies may be filled by the head of the department even without concurrence of the deputy, 183. In practice the deputy is consulted; transfers are made from one department to another with con-

BOVILLE, T. C.—*Continued.*

currence of each department; when appointed from outside, six months' probation is required, but practically once a man is in on probation it is impossible to remove him; thinks it advisable to change practice of annual increase of $50, 184. Thinks consideration should be given a married man in preference to a single man; there is no analogy in the works of the different departments; the Act tries to arrange every department on the same basis, 185. Statutory leave of absence is three weeks, but we give an elastic interpretation; all sign attendance book except private secretary; hours of work from between nine and ten till four o'clock, but when required they work later; hours of attendance are regulated by the work, or by the clerks themselves; they stay three times a month until ten or eleven o'clock at night to prepare special balance sheets at the end of each ten-day period; balance sheet published in the *Canada Gazette* monthly, 186. Women employees in the currency branch are encouraged to learn typewriting and shorthand, and are sometimes transferred to the general work of the department, where they get permanent rank; tests have been made as to the mechanical capacity of the clerks as to the amount of notes they could sign per day, 187. New Dominion notes come from printer in bundles of one thousand sheets, four notes to a sheet; they are counted and handed to the women who also count them; the notes are then put into a cash box, each woman having such a box, and they are counted to see that the thousand notes are there; then she signs the notes, returns them to the controller and are counted again; old notes come to the controller from the offices of the Assistant Receivers General in bundles of a thousand, are handed over to the women to count and label them, then return them with a check mark on them; then they are destroyed by officers of the Finance Department and the Audit Office, 188. The inspector goes into the office of the Assistant Receiver General and checks his cancelling; acts as Secretary of the Treasury Board, and reports to the Privy Council increases of salary, promotions and appointments, 189. Treasury Board grants certificates to banks in case of increase of capital; also to insurance companies; approves of changes of the securities of insurance companies; Board deals with all cases of superannuation in all the departments; probably 2,000 or 3,000 cases go through Treasury Board every year; Auditor General is supposed to examine every item of every account; Auditor usually accepts recommendations of Treasury Board; in some cases Auditor General absolutely demanded reasons for leave of absence being granted, 190. Since the Martineau case, cheques paid by the banks under letters of credit with the statements come direct to Department of Finance for the purpose of adjusting the cash balance of the bank, thus checking the corrections of the payment; cheques are examined back and front; banks return to the different departments the paid cheques at the end of each month; each letter of credit has an account with the bank, 191. Outstanding cheques are adjusted once a month; last year we put through about 600,000 cheques under the letter of credit system; Finance Department found out from the number of cheques being out of order, that wrong-doing had occurred in one department; a messenger had stolen a cheque book; he drew four cheques for small amounts; every cheque is drawn to order, 192. Receive daily statement of deposits in the several banks to credit of Receiver General; when a collector deposits his collections he is given three receipts, the original for himself, duplicate for the department, the triplicate and draft on head office are sent to Finance Department; the statements come in in the morning and are deposited in the bank before three in the afternoon; the receipts are filed; they come in in all shapes; except in large cities the deposits are made in one bank only, 193. Frequent applications are made by banks that want

BOVILLE, T. C.—*Continued.*

to get deposits; no profit to the bank; when a bank gets insistent it is to be watched; check is kept of superannuation receipts, these superannuation payments are made not by cheque from the department but on an official list signed by official; the nearest bank cashes for him; banks send in to us these cheques; supply forms for each year are given to the persons superannuated, 194. Bank is authorized to pay person superannuated only so much per month; terms of the receipt require him to go before a justice of the peace and declare that he is entitled to the money; have twenty-three bank accounts; have not opened an account with a new bank since 1886, 195. Abroad, governments deal with their respective national banks; in 1886 an order in council was passed preventing the opening of new bank accounts; parliamentary work is becoming very onerous; estimates from all departments are collated and put before Council; the department has to be represented at the meetings of the Public Accounts Committee; Banking and Commerce Committee looks after the incorporation of new banks and insurance companies; the Bounty Acts, respecting the payment of iron and steel bounties, were prepared by the department; the sessions add very materially to the work, 196. Work of responsible character and requires frequent attendance at the House; preparation of facts for the Budget Speech; the department has to purchase a large amount of exchange during the year to meet the interest on the public debt, purchase of stores, &c.; discount is practically profit if bills run out their term of sixty days; if discounted before sixty days, deduct discount to show net profit; a watchful eye is kept when exchange is favourable for buying, 197. The right time to buy is when gold is tending towards the importing point; would delay a week if there was a probable fall in exchange; have bought considerably under 8; recently we bought at less than 7¾; everything is prime bills; we buy by tender and lowest tender is accepted; always give the several banks the opportunity of tendering; we arrange in London market for renewal of both temporary and permanent loans; when money is required temporarily Treasury bills are issued, 198. Treasury bills now outstanding; conditions for placing permanent loans on the market now are very difficult; the 4 per cent loan of 1874 was continued rather than renewed for four years at same rate of interest; next year large loan falls due in November; year after the Consolidated Canadian loan of some £6,000,000 is due; loans are falling due practically every year up to 1910; Bank of Montreal, London, is our principal financial agent, getting weekly letters as to state of market; have seven offices of assistant Receivers General, 199. Assistant Receivers General are not subject to Civil Service Act; appointments are made on nomination of minister altogether; Mr. Mather, of Halifax, receives $2,500; is a very methodical man, a man of highest capacity, character and integrity; the inspector, as in banks, walks into any of these offices and takes possession; in these offices large amounts of our reserve and specie are held, also supplies of silver and copper; if a bank wanted to draw specie to the amount of $100,000 or $200,000, it could be got at Halifax; a supply is kept to meet contingencies; assistant Receivers General have always met demands made on them; one of our duties is to see that a bank does not over-issue, 200. Also to see there is no over-circulation; 'window dressing' is shown in the returns, by the average amount of notes held during the month compared with what they held during the last day; loans 'to' ought to equal loans 'from,' 201. Banks generally want to have a fixed reserve in cash and a fixed reserve in liquid securities as against their liabilities; that is not demanded by the Bank Act; Bankers' Association have moved in that direction; the forms of monthly statements to the shareholders should harmonize; a clause in Bank Act sets out in general terms

BOVILLE, T. C.—*Continued.*

what should be submitted to shareholders; the bank charters are carried on till 1911, and parliament will revise year previous; 'records' of department are in very fair shape; all are kept in basement rooms; are weeding out useless records, some of which are destroyed under authority of Governor in Council, 202. Records not in fire-proof vaults, will send them to the Archives later; have documents relating to Civil War of 1812, also respecting early construction of Welland canal; whole staff of Finance Department is in the Eastern Block; Mr. Toller presides in note-room over thirty women; business relating to currency is done in the only one big room we have; each woman has a telling-box under lock and key; note circulation throughout April amounted to $57,000,000; there is a controller of currency and two chief clerks having supervision over the $57,000,000; controller has the custody of all securities deposited and held by the Receiver General on account of the various insurance companies; also cuts off the coupons as they mature and sends them to the different companies, 203. Securities kept in a vault, under the custody of two officers; inner door is also under dual control; securities doubled since 1892; these vaults are guarded by police day and night; Mr. Henry T. Ross is Assistant Deputy Minister of Finance; this appointment was a growing necessity; previously Mr. Fitzgerald acted as assistant deputy; but insurance took up all his time; one chief clerk looks after the bank account, has also general oversight over the revenue side of accounts, the other chief clerk has charge of expenditure; gets out the public accounts, balance sheets, &c.; there is an accountant of contingencies who pays salaries of temporary clerks, of all the departments, travelling expenses of officials, printing and stationery and newspaper accounts, 204. Has control over charwomen; great pressure is brought by politicians to appoint charwomen; would rather renew a loan than appoint a charwoman; limit of number is set by order in council; an accountant of contingencies has proved a very useful appointment; each department is limited to subscriptions for newspapers, but not well observed; department is undermanned, 205. Staff as a whole is very efficient; each class of clerks is doing its own work; some women have been in the service since 1877 or 1878; these are becoming inefficient; they are temporary employees and their pay ceases when they leave the service; what is to be done with them, since they are not under old Superannuation Act? restoration of Superannuation Act is a necessity; an economic necessity for government, in the interest of the State, because there are in the department some five or six persons who have worked for twenty or thirty years, and whom we have to carry on and pay salary until they die; very soon this condition of things will arise in every department, 206. Pension is not a gratuity, but deferred salary; if superannuation still existed there would not be the same demand for increased remuneration; a man would be content with a medium salary, if his declining years were provided for; it would have a very steadying effect on a man's service and integrity; thinks there is a tendency to relax in the entrance examinations; the value of these examinations does not indicate the best men for the service, but eliminates the unfit; same remark applies for promotion examinations, 207. With the superannuation system if you get a good man in your department he will stay with you; with nothing but the Retirement Act there is nothing to hold him; a forgery was lately discovered in Inland Revenue Department; blank cheques were stolen out of one of the cheque books; all cheques are numbered consecutively; difficult to discover unless one had curiosity to examine cheque book; they were stolen from end of book; on June 13, Deputy Minister of Inland Revenue advised manager of the Bank of Montreal that these cheques had been stolen and to notify his branches to be on the lookout;

SESSIONAL PAPER No. 29a

Boville, T. C.—*Continued.*

one cheque came into Bank of Ottawa and paid on June 1; signatures are forgeries; the second cheque was paid on June 15, 208. Paid by the same bank and same teller; thirteen cheques were stolen, but only two were presented; Bank of Montreal perceived the forgery on advice from Inland Revenue Department, 209. Cheques were stolen by some one who understood routine of department; accountant keeps cheque books locked up; Finance Department have urged the other departments to keep these cheque books as carefully as bonds; the thirteen cheques were numbered consecutively; Bank of Montreal got notice that the cheques had been stolen after the first cheque was cashed, 210. The Martineau Commission advises that every blank cheque should be accounted for, whether cancelled or issued, and that no unnumbered cheques be allowed to exist; Inspector Hogan is investigating; so far loss has been borne by the Bank of Ottawa; teller of a bank will cash a government cheque almost without thinking; our department was notified of these forgeries, 211. Would simplify matters if Finance Department made all payments, theoretically, but the business is so tremendous and spread over such a wide area, it is not practicable; Finance Department and Auditor's office make the big payments, but to pay everything would require a staff of a thousand men, there would be constant delay and grumbling; thinks the present regulations would meet all troubles; there may be an odd case of oversight or neglect, but as a rule the cheque books are being thoroughly well guarded, 212.

Statement of number of officers and cost of administration of Finance Department in 1892 and 1906, respectively, 213.

Memo. on superannuation: Different departments view this question in different ways; speaking from point of view of Finance Department; the provisions of the Civil Service Superannuation Act were repealed in 1897 as concerns those entering after that date and a Retirement Act was enacted; consequently there are too classes, one that can look forward to retiring upon a decent pension, if they live long enough, the other who have no prospect of a pension, but under the terms of the Retirement Act will receive, on leaving the service, the product of a saving's bank account in which is deposited monthly five per cent of their salary; having studied the two one can say, the business of government differs from that of an ordinary character; it is conducted on a larger scale, is of a continuous character, therefore staff must be possessed of a certain amount of historical acquaintance with the different subjects dealt with; therefore departmental training and experience are invaluable; an employee becomes a storehouse of useful departmental knowledge, and young men trained in the department make for efficiency; the pension system has been one of the strong levers to retain valuable men in the service; under Retiring Act, there being nothing to hold him, a man seeing an opening elsewhere, leaves the government, taking with him his knowledge and balance of saving's bank account; in the interests of a continuous service the Superannuation Act was highly advantageous; a retiring allowance has a steadying influence on a man's character and conduct; the most important advantage of any system of retiring annuity is its value as a measure of economy, 214. Without discussing moral obligation of the individual or corporation to provide for the future of those grown old in its service, the government, in the face of influences of all the various kinds that can be brought to bear, simply cannot get rid of those, who worthy in themselves, have given years of honest service, have outgrown their usefulness, and must carry them on at high salaries; in other words in absence of any pension the staff in its higher branches must be duplicated; it is more economical and better that such persons be removed from the staff; wonder has often been expressed that

BOVILLE, T. C.—*Continued.*

the country has been able to get and retain in its service men whose abilities were widely acknowledged; the officials regard any allowance under the Superannuation Act as merely deferred salary; some scheme of retiring allowance for honourable service is in the best interests of the service of the country, as well as in the interest of economy.

Temporary clerks: Salary of a temporary clerk begins at $500, up to $700; at present there are forty, some of whom have been in the service for over thirty years; it is but fair that they should be permanent, 215.

BRENNAN, DAVID JOSEPH, Special Exciseman, St. Hyacinthe, 347.

Has been in service seventeen years, 346. Has changed abode with family several times, receiving the cost of packing, actual cost of transportation, cost of unpacking and one week's board for family; whatever breakages occurred had to bear the loss of; when at Royal Distillery at Hamilton acted as special class warehouseman, and passed examination in 1903; was at Gooderham & Worts in Toronto for eight years; here our officers are on duty from seven in the morning until six or later at night; receives extra pay for overtime 50 cents for first two hours and 25 cents each hour after; salary now is $1,300 and $150 duty pay; has passed all promotion, special and qualifying examinations; by going to St. Hyacinthe became officer in charge of a distillery; on arrival special class list was full, four months later this list was enlarged and was first to enter, reaching minimum which was $1,200 per annum, 347. Our junior officers receive $1,000 and $1,200, they are both first-class men; would like to recount experience in moving family from one point to another, especially from Ontario to Quebec; up to a few years ago there were no distilleries in Quebec, now officers are in training to take charge of distilleries; with regard to extra pay, would suggest that duty pay of officers in distilleries, since they are liable to be moved about so much, should be raised to $600 in order to provide for educational expenses of children; is losing money down here every month, expenses having increased more than salary, 348. Cost of living at St. Hyacinthe, with exception of meat and vegetables, is as dear as in Hamilton; more for coal, and double for gas; would suggest that in the event of readjustment of salaries, that officers be so paid as to feel immediate relief, 349.

BRUNET, JULIEN, Electricien en Chef, Lachine (lettre), 1237.

Est l'électricien en chef du canal de Lachine sur tout son parcours; et qu'il est obligé de faire tous les jours l'examen de tous les circuits et de voir à l'entretien et au maintien en bon ordre de ces circuits et moteurs; à parcourir le canal et voir à ce que la ligne de la lumière électrique soit en bon ordre; aussi le telephone du canal; pour se rendre d'un bout à l'autre il lui faudrait $30 par mois; son salaire est $75 et $15 pour dépenses de transport; les contre-maîtres des charpentiers, des forgerons, des machinistes sont logés, éclairés, chauffés et reçoivent $3.50 par jour, avec droit aux extras après les heures réglées, pendant que votre serviteur ne reçoit que $75 par mois ou $2.50 par jour, les dimanches compris, et il n'est ni logé, ni éclairé ni chauffé; le surintendant refusa de lui accorder ses dépenses de transport jusqu'au 31 mai; il demande que ses dépenses lui soient remboursées et que la somme de $30 par mois lui soit allouée, en outre un salaire de $115 par mois, vu ses responsabilités et ses connaissances techniques, 1237-1238.

BRUNET, J. B., Lampiste, Montréal (lettre), 1238.

A été engagé comme lampiste à $45 par mois plus une allocation de $10 pour ses dépenses; il se livrait à l'étude de l'électricité qu'il est competent à réparer les lampes au canal; autrefois ces lampes furent envoyées aux boutiques;

BRUNET, J. B.—*Continued.*

il a rempli ses fonctions à la satisfaction de ses chefs tout en recevant le salaire des journaliers; il demande la somme de $65 par mois; il est souvent obligé de travailler les dimanches; désire un allocation raisonnable pour ces jours, 1238.

BUTLER, M. J., Deputy Minister of Railways and Canals, 1181.

Is deputy minister and chief engineer; these offices were formerly separate, prior to this was assistant chief engineer of National Transcontinental Railway Commission; before that was chief engineer to the Locomotive and Machine Co., of Montreal, and before that again was chief engineer of Hillsborough bridge; was admitted to bar in Illinois, and born in Deseronto; attends meetings of the Railway and Public Accounts Committees; all route maps of railways are submitted to department and causes much correspondence; this work was never under Railway Committee, at its creation the section dealing with the submission of route maps was added to Railway Act; that there should be some responsible control by the political head over the general route of a railway; parliament grants a charter to build a railway, but details are left for minister to adjust; details are left to Railway Committee, and when general route is approved by minister the jurisdiction of Railway Committee begins, 1181. In 1905-6, expenditure was $18,000,000, and revenue $8,000,000; his salary $7,500, and thinks it a very low salary; in a railway company, would get twice the salary and half the work, 1182. Produces statements from the department; has reorganized the branch of railway statistics; in his absence from office the secretary acts as deputy minister; the secretary signs contracts for enlargement of canals, &c.; there is now a new chief clerk for compilation of railway statistics, which up to this have been practically useless; on entering department witness at once impressed on minister the absolute necessity of securing statistics in Canada on same lines as the railways are now supplying the identical information the United States railways furnish the Interstate Commerce Commission; there is a scheme for getting returns from the railways, and have a uniform bookkeeping; the returns are now classified; this bookkeeping has been reduced to the most exact science of bookkeeping in existence; it is easy now to decide whether an item should be charged to capital account or to expenditure, 1183. The English have largely increased their capital account while United States have paid out of revenue items that justly belong to capital; each chief in the department has his own branch to attend to; has a general knowledge of the working of railroads; has had nothing to do with appointment of any permanent official, 1184. A good many have passed the Civil Service examinations, others have not; Mr. Murphy, an Ottawa man, gives half his time to Railway Department and half to Railway Commission, he is an expert on matters affecting telephone, telegraph and electric light and power; half his salary is paid by each department; politics, once a man enters the service, has nothing to do with the men; thinks political influence brought in most of the woman copyists, 1185. Thinks the reason so many women are employed is that they enter for a salary less than $500; cannot get men for less than $500; have to appoint young men junior second-class before they come in, which gives them a salary of $700; desires to get young university graduates; competitive examinations do not test the capacity of a man in comparison with graduates from a university; thinks the examinations are a farce; no examination will test the executive ability or adaptability of a man for work; approves of a probationary term, 1186. Has an attendance book in charge of secretary, but has released chief clerks and professional men at heads of branches from signing it, as being an indignity it would be unfair to put on

BUTLER, M. J.—*Continued.*

them; registering at certain hours will not secure good service; it is proper for the ordinary clerks to sign; clerks are allowed three weeks' holidays; all take their holidays except the temporaries; Mr. Johnson and Mr. Douglas have been working for thirty or forty years, get no holidays; it is not right, 1187. Commissioners suggest giving the above two clerks holidays; as a rule men stay as long as they are wanted; are very short-handed for clerks; department located in Western Block, but two or three have offices in the Canadian Building; during session he holds whole staff till 5 p.m., and a certain limited number by rotation till 6 p.m. every day; all are hardworking, dilligent and industrious; came in under Retirement Act, they retaining 5 per cent of salary, 1188. Could do better, but is content to obey the rule; would be most valuable to restore Superannuation Act, as a means of dispensing with the services of men who are growing too old or becoming inefficient in the service; you retain men now because you cannot throw them out; no corporation should throw out a man who is too old, to starve in latter end of life; superannuation is deferred wages; on the Intercolonial a provident fund was adopted, each employee contributes and the government also contributes, it is a joint fund; in event of death heirs secure benefit of payments, under Superannuation Act they receive nothing; was inclined to issue a circular to outside men, similar to Treasury Board minute of 1879, forbidding use of political influence; thinks the men use more pressure on witness than pass him by; have very valuable historical records in connection with early canals, 1189. Could hardly part with them for the Archives; Georgian Bay canal is a purely political matter at present; is proposing to turn over to the geographer the large railway map; general maps of the country should be centred in Dominion Geographer; Railway Committee reports to department and department transmits it to parliament or Governor General in Council; duties of Railway Commission under Railway Act control all the detailed locations and plans of railway, manner of construction, crossing of other railways, highways and bridges, also of rates; the control is actual and is being enforced; during last year the Railway Commission compelled the railroads in west to reduce their rates to a uniform rate of 3 cents a mile; a great reduction on what they were receiving, 1190. The Commission has its experts; there is nothing so complicated as traffic rates, still the Commission have secured substantial reductions and are doing a wonderful work for Canada; it also inquires into accidents, it is weak in numbers and overworked; they sit together, and they sit separately; they have control over telephone and telegraph rates; when complaints come in they are turned over to the Commission; National Transcontinental Railway Commission was created to construct the Eastern Division of National Transcontinental Railway; it has its own staff, a chief engineer and other officers who report to minister; all plans pass through the department to Governor in Council; there is also a scrutiny of all their accounts by the department, 1191. All matters relating to construction and location of Eastern Division of National Transcontinental Railway pass through department; the government has appointed Mr. Schreiber to keep the Grand Trunk Pacific Company up to requirements of the specifications; security is given on all contracts; securities of National Transcontinental Railway contracts are in cheques, money and bonds; in hands of Receiver General; once parliament votes a subsidy for construction the company submits their plans and specifications; government has also their specification; company enters a contract to build their railway up to the specification; their profiles and estimates of quantities are verified by staff; if the line costs more than $15,000 a mile, a subsidy of $3,200 is given, if it costs $21,000, they receive

BUTLER, M. J.—*Continued.*

$6,400 a mile; as long as they expend amount required to produce the double subsidy they are entitled to it; $15,000 a mile is ordinary cost, if line costs $16,000 they would get 50 per cent of difference in excess, which keeps cost of construction up to a point where, as a maximum, the subsidy becomes $6,400 a mile, 1192. They file their plans, profiles and contracts; work is inspected by engineers and auditor audits their books, their subsidy is paid over; when matter leaves department it is subject to supervision of Auditor General; about 9,000 in service of Intercolonial Railway and Prince Edward Island Railway; about 3,000 on canals; compare difference between rates in summer and winter and you will then see the benefit of canals; people are becoming more alive to the importance of canals; our people who are supposed to take advantage of canals are slow about it; they have not the boats nor facilities at Montreal that are required; length of Intercolonial Railway and Prince Edward Island Railway; the accounts on that railway are not more intricate than on Grand Trunk Railway, 1193. Length of road does not increase intricacy of accounts; have made improvements already; will show later a monthly statement illustrating how the accounting is done; came in during Mr. Emmerson's regime; only comparative statements under old regime, no true accounts; former trouble was rather a case of inertia, 1194. It was fortunate for Canada that she had two such honest men as Messrs. Williams and Pottinger at the head of affairs for the last thirty years; thinks former leakages have passed away; the several stations account daily by telegraph to Moncton, and Moncton pays into Bank of Montreal; everything goes to Moncton and Moncton sends everything up here; Mr. Shannon is justifying the opinion formed of him; is young and active, interested in his work; of course has had benefit of expert technical advice from the gentlemen who were revising the accounts; one, a Mr. Stephenson, a professional accountant who came here to give advice as to how the work should be done; he receives a salary of $30,000 a year; employed a firm of experts familiar with railroad work, they went to Moncton, saw how the work was being done, allotted it to Mr. Brown, who took charge and is in constant communication with Mr. Stephenson; it took three months to train the men so that they could be transferred without confusion; has cost much for the expert service and clerical staff; everything being obsolete had to be changed, 1195. It turned a deficit of $1,800,000 into a surplus, and gives a better show this year; paid out of capital this year what was formerly charged to expenses; receipts at several stations, everything is turned in to Receiver General; the competition of the Grand Trunk Pacific and Canadian Pacific Railway is severe on the Intercolonial Railway; the lower provinces turn over to Intercolonial Railway all their freight by agreement; people down below get the lowest freight rates of any railroad, 1196. Intercolonial Railway spent on capital account in 1905-6, $3,460,000 for locomotives and cars; rolling stock $1,291,000; steel rails and fastenings $350,000, all made under contract; principle of accounting; increased accommodation is the enlargement of the facilities at stations; all stores are bought by lowest tender, except where responsible officer says he wants some specific article, 1197. The large capital expenditure on canals must continue, it is going to increase because Trent canal is now finished and contract for a canal from Holland river to Newmarket has been made; is replacing works of a temporary nature to be more permanent; has the best force of trackmen despite political appointments, 1198. No tendency to appoint more men than needed; the appointment of station masters and telegraph operators are all fixed under an agreement with the Brotherhood of Telegraphers; a telegraph operator should acquire a knowledge of bookkeeping methods and station business generally; a foreman

BUTLER, M. J.—*Continued.*

or a trackman may be appointed on nomination of some political friend, but then he has to make good, he joins the Brotherhood and works his way up; there are about 1,200 and 1,500 employees of the Intercolonial Railway in Moncton, 1199. Mr. Pottinger is the head official there; has shops at Rivière du Loup, St. John, Halifax, Mulgrave and Sydney, but principal shops are at Moncton; has established a Provident Fund; beneficiary pays one and one-half per cent on average pay received for last eight years; if a man gets killed the widow would get the benefit of what her husband had paid into the fund without interest; the fund applies to the 9,000 employees; no provision made yet for employees on canals, 1200. A revision of Civil Service Act excluded lockmasters from participating in benefits of Superannuation Act, except those appointed previous to 1880; the amount contributed to fund is not to exceed $100,000; will not require above $35,000; Act allows railway to take out of the gross earnings a sum not exceeding that much per year; no system on which a lockmaster can retire, nor of our contributing to his support if a lockmaster contracts hernia or is injured; he has to be kept in the service even if useless; Provident Fund does not and cannot apply to canal employees, but to all government railways, 1201. Require about 700,000 ties a year; engineer of maintenance submits his requisition on that, authority is issued to general manager inviting tenders, if reasonable they are accepted; if not an offer is made for a price less than tender; next year they may be dearer, as prices are advancing very fast; people are substituting steel ties, but they cost too much; last year tenders for coal were called for, but on meeting a representative of the mine a price below the tender price was fixed; difference meant about $100,000 a year on coal only, 1202. Gets coal from all the mines in Nova Scotia and New Brunswick, dividing up according to their capacity; gets about 80,000 tons yearly from Springhill mines, also from the Dominion Company; has had both physical and chemical analyses of the coals and a list of them is kept; the Intercolonial Railway coal is very good; the Intercolonial Company gives us 40,000 tons a year, and the Acadia about 50,000; the Nova Scotia Coal and Steel Company has the best coal, but they would not accept our amended offer; the coal is spread over the line of railway; in making the tenders the mine owners were told they could figure on the coal being hauled at one-quarter cent a ton per mile to place required, and they named the price delivered at places required; about 480,000 tons are used in a year, distributed pro rata, not politically, among the mines, 1203. Coal is inspected at mouth of mine; before the Provident Fund was instituted we lost a good many young men; there is now a much better feeling among the men; the skilled mechanics especially were leaving; the Canadian Northern is rapidly becoming a factor in the railway problem and are grabbing young men where they can; government should restore Superannuation Act if only to hold skilled and well qualified men, 1204. Gradation of classes is undoubtedly a mistake; makes the men in government service work as hard as they ever did for private or public corporations; they are now faithful and good men, a man takes a pride in his work; thinks the government secures service for less money than any private corporation could; oil for lubrication is bought by contract with the Galena Oil Company, 1205. Though for the future it will be a question of holding them up to reduce price; nothing to be gained by tender because they are the only company able to perform the duty; they guarantee that the cost per engine mile, per passenger car mile, per freight car mile shall not exceed a certain maximum; then they charge from month to month the oil at a certain price per gallon; if quantity used exceeds the guarantee it is

BUTLER, M. J.—*Continued.*

refunded to government at end of the year; they send on the railway and keep constantly employed an expert who is educating and training the men to lubricate the cars and engines with the minimum quantity of oil; this company has practically a monopoly of the railway lubrication all over the world; it is subsidiary to Standard Oil Company; they have secured about 95 per cent of the railroads in America; some of the printing is done in maritime provinces; also the railway tickets; the accounts for printing done for government railways are all reviewed by the King's Printer; may say all the printers are kicking against his rates; some are refusing the privilege of allowing us to change our advertisements, claiming that rates fixed for printing in newspaper are too low, 1206. Requires fine judgment in answering letters of the department; some of them are troublesome problems; the whole of the conduct of the work in connection with the Quebec bridge falls under the department; the inspection, approval of the plans, thousands of sheets of drawings, checking of the cost of the work; the auditor audits the accounts, inspecting engineer visits once a month; the Quebec bridge is the greatest bridge in the world by a 100-foot span; it is 100 feet longer than the Forth; in past ten years $24,000,000 have been added to cost of canals; 5,131 miles of railway built; changes in the last nine months have resulted in a larger surplus of earnings over expenses than ever before; it is the most efficient railway in Canada, having the best roadbed and passenger service, at a cost of 50 per cent less than other railways; are not charging the customers of the railway much more than one-half the other railways are; freight rates are lower, passenger rates for short haul are about same, but for long hauls they are lower; and pays as good wages as other railways; are not as many free passes as on any other road; it is hard now to get a free pass on Intercolonial Railway, 1207-1208.

Tables of statistics, 1207-1209-1210.

Memo. *re* departmental work increase as due to: (1 and 2) the Transcontinental and Grand Trunk Railway, entailing examination and approval of plans and specifications, awarding of contracts and appointment of officials; (3) Quebec bridge, involving plan examinations and approval, inspections, reports and payments; (4) awarding of all contracts by order in council; (5) approval by minister of railway route maps, &c.; (6) duplication of all out-going letters for filing purposes; (7) demands for information arising from rapid development of country, 1211.

Memo. of increase of work in legal branch: In 1892 and for some years afterwards all legal work in connection with government railways was done at Moncton or through Department of Justice; since 1900 all this work has been done in law clerk's office of department, the Justice Department acting as legal counsel when asked; with regard to government canals, work done in law clerk's office in 1892 and later was done under supervision and responsibility of Justice Department, since 1900 this work has been done in law clerk's office, the Justice Department acting as legal counsel when asked; since 1900 work in law clerk's office has increased almost fourfold; staff being increased from four to five; since 1901 the law clerk and his assistant act as general solicitors for government railways, legal advisers of the department in all railway legislation both public and private.

Table showing number of letters written in office of deputy minister and chief engineer for one week ending June 4, 1907, 1211-1212.

CALLAGHAN, THOMAS, Montreal Post Office Staff, 893.

Employees in post office are paid twice a month; the gross cheque is drawn by the department and is sent here payable to the order of postmaster and

CALLAGHAN, THOMAS—*Continued.*

assistant postmaster; it is deposited in the bank and we draw on that; the cheque is for the whole month's pay; the departmental regulations are that employees be paid on the 15th and last day of each month; deduction of pay for all absence except statutory leave; at end of each month a pay-list is made and completed, showing exact amount earned and paid; this pay-list duly receipted by each employee is forwarded to the accountant, Post Office Department, Ottawa, and on its return a cheque equal to the amount paid out is returned to this office and is deposited in the bank to cover the following month's disbursements, 894.

CANDLISH, CHARLES WILLIAM, Railway Mail Clerk, Montreal, 914.

With reference to retirement fund, department deducts 5 per cent of our wages; it is our own money and they allow us 5 per cent on it; that is no favour, if one had $100 he could invest it at 6 per cent; would like to see the Pension Act restored, and made to cover those dependent on us, something that would benefit the widow and the orphans as well as the man himself; in the nature of a bank pension, 914.

CARROTHER, A., Clerk, London Post Office, 1021.

Senior third-class clerk, entering in 1882, was twelve years without getting any increase, receives maximum of salary $900; thinks the classes should be abolished and to get a better class of young men to enter should start them at $600 and advance by yearly increases up to $1,200 on passing yearly examination; thinks clerks in the London post office are badly treated in matter of promotion; would refer to case of person who entered in 1872, is said to be one of the best posted clerks on distributing there is in the whole Dominion, yet because he had no political pull he only receives $900; is married and fifty-three years of age; was nearly twenty years without having an increase at all; has ceased paying to superannuation fund, still he is an active and good man yet; he is not able to make ends meet; case of two letter carriers acting as clerks, have passed promotion examination, still are only receiving $600; one of them has been in service twenty-three years, 1021. If Superannuation Act were restored, young men would have more confidence and stay in service; two of our brightest young men left the service; revenue of London would justify a first-class clerk; Hamilton has two first-class clerks, 1022. Would remark that deputy postmaster at London was superannuated, no one in office was promoted to fill vacancy, but a gentleman was transferred from railway mail service at Ottawa; also one clerk was promoted to junior first and six to junior second, but they received no increase of pay, 1025.

CARTER, JAMES, Dead Letter Branch, Toronto, 1032.

Though in charge of dead letter branch in Toronto is still on Ottawa staff; formerly all dead letters went to Ottawa, and later officers were sent from Ottawa to outside cities, five out of eight are on Ottawa pay-list, under control of superintendent of dead letter office; has to open unclaimed letters unless they bear printed address on cover, the different clerks working alternately; is now a junior second-class clerk and thirty-four years in service, 1032. Thinks clerk in charge of office should be a senior second; thinks all the clerks are junior seconds; office hours from 9.30 a.m. to 4.30 p.m.: post offices send their dead letter returns monthly, one clerk opens and returns to writer; these letters are accumulating, about 1,500 going over into next month, 1033. Letters without stamps are very numerous; there are six decentralized offices now; has to attend to public all day also; destroys the

CARTER, JAMES—*Continued.*

unsigned letters and those that contain nothing of monetary value; in view of increased number of dead letters staff should be ameliorated; a young lady on staff in a year or two will receive same salary as chief; position of superintendent which chief clerk should have got was given to a person in the money order branch at Ottawa; would have been pleased if superintendent had come and assumed charge, but he gets the salary and chief clerk does the work, 1034.

CARTER, CAPT. W. H., Delegate of Customs Officers, Port of Quebec, 133.

As chairman of officers, submits memorial; thirty-seven years in service; originally a landing waiter, now surveyor; patronage system should be abolished, 133. There are thirty-seven men on supernumerary list and forty-five on permanent staff; non-permanent not made permanent because not qualified by examination; some old men have been on non-permanent list for fifty years, 134. Revenue in ten years increased three-fold, but list has not doubled; Quebec an expensive place to live in; stays in service because difficult to start out anew; about $4,000 of special grant was distributed in Quebec, 135. Some officers in charge of offices receive less salaries than their assistants, 136. Inequalities of positions and salaries; is of that that salaries depend largely on amount of push and influence; when help is required we notify department; last year Mr. Bain came down, many men were sent to him by the members who had the patronage and he chose good men, 137. Thinks cost of living has increased 50 per cent in last twenty-five years; employees can't make ends meet; very few make anything extra; uniforms supplied, 138. Immigrants are treated with courtesy and consideration by officials, 139. Presents statement of increases of permanent staff, 147.

CASSIDY, P., Fireman, Toronto, 1173.

During last three years three firemen were raised to $55; those receiving $50 were put on same level and got $55, 1173. Are all engaged as painters in summer; there is no distinction between any of the firemen, 1176.

CAUGHEY, R. A., Penitentiary Officer, 559.

Is assistant superintendent of binder twine, salary $800; though salaries were readjusted two years ago according to what were supposed to be the circumstances of the case, yet no official objection was taken by the staff to increase then given, many felt increase was not sufficient, but they accepted it; reason for another increase is based on increase of cost of living; two years ago salary of guards was increased $100, others in proportion, but some received no increase, 559. Kingston is as dear a place to live in as Ottawa; guards have about 10½ hours duty, and in summer 11½ hours; has a uniform for winter and one for summer; no perquisites allowed, 560. We get clothing and shoes at cost price plus 10 per cent, outsiders get them also through the medium of an officer; was on staff since 1903 as guard, appointed through political friends, 561. There is constant danger of a guard losing his life; there are fifty-seven guards and keepers, eleven on duty at night, rest in daytime; staffs are not shifted; between thirty and thirty-five of the prisoners are insane; was attacked by four men while showing men how to construct a road, 562. There were two other previous attacks; our plea for consideration is based on long hours, the cost of living and danger of occupation; prisoners' occupation on Sundays; about thirty-six guards on duty; warden's clerk looks after letters coming to prisoners, 563. Admits possibility of political influence in appointing guards, the warden yet has power to reject a man who is not suitable; was examined on appointment by an outside doctor; staff

CAUGHEY, R. A.—*Continued.*

has not increased; when guards become permanent they receive $600; some leave service; guards generally live a few blocks away, 564. Has two weeks leave of absence during year, also the guards, so arranged as to leave a sufficient number on staff; still manufacturing binder twine and selling to farmers, most of the shipments in past seasons have been to northwest; do not sell to traders only to farmers and their clubs; this particular department is run to-day at less cost than ten or twelve years ago, 565.

CAVAN, WILLIAM, Deputy Collector, Inland Revenue, Montreal, 336.

Has been in service twenty-six years, 336. Received appointment in 1882 after passing the first Civil Service examination held; entered Customs as a boy in 1877; was in service in Prince Edward Island, Toronto, British Columbia and Montreal; is under Mr. Toupin controlling outside office; has nothing to do with stamps; examines accounts of the people at factories; sometimes comes across an officer who is careless; has nothing to do with balances that remain ostensibly due to department; those balances are on ledgers in office, they are not on the factory books; present salary, after thirty years' service, is $1,700; passed three examinations and has served almost all over Dominion, 337. Visits alone all the factories once a month; goes to any factory he likes; factories never know of approaching visit; looks into the work of each of these offices from beginning to end; accompanies chief inspector on his visits; does same work here every month that chief does on his periodical visits; does not accompany chief outside Montreal; thinks system in factories is very good; men in these factories are good, but some not as efficient as formerly; we have been getting a good class of men in service; one man appointed a short time ago, not accepted yet owing to small salary, 338. Men who have charge of distilleries and practically decide what a distillery should pay receive $1,800; are responsible men, of reliable character and are trained to the work; have not enough of these men, as there are better openings outside, 339.

CHALUS, JOSEPH OLIER, Inspector of Weights and Measures, Montreal, 352.

Has been twenty-nine years in service, 352. Was inspector, then chief inspector; is the head of everything in weights and measures branch; maximum salary of assistants $800; duties of this branch are to visit every place of business where scales, weights or measures are kept for trade, and verify them; attends to scale factories, for no scale or instrument for weighing or measuring can be legally sold unless first verified; attends to importers and manufacturers of these articles; district includes Montreal and suburbs, and sixteen counties outside, all to be attended to by eight men; inspection in country districts every two years; some scales are verified every year, others every two years, but all scales in public elevators and scales used by the railways are verified every year according to law; stores are visited at reasonable times during day, without notice being given; inspector sends in lengthy report of every place visited and everything inspected, a record of all of which is kept at office, 353. Officers are generally well received on their visits; if on a second visit officer finds scales, weights or measures that have not been verified he can remove them and fine owner; government mark on articles inspected is changed every one or two years; fee for inspection is paid at time of visit, giving own certificates bearing stamps representing amount of money received, and money forwarded to Receiver General; Mr. Lawlor besides inspecting Montreal division counts our stamps as well; inspects every six months; revenue is derived from sale of stamps used in checking receipts, 354. Stamps are supplied to inspectors of each division and an account is kept

CHALUS, JOSEPH O.—*Continued.*

with them; they distribute to their assistants and keep an account with them; eleven varieties of stamps; average value amount of stamps on hand; they are kept in fire-proof safe having combination lock; sends in monthly reports of number of stamps on hand and has to produce cash for balance; number of officers in 1896 was nine, in 1906 there are seven, diminution accounted for by having a better system and duties are mastered better than formerly; weights and measures to be verified before leaving factory; friction points on scales, also bearings must be of hardened steel, 355. Those parts are tried with a file; tested 60,000 weights and measures during year; receipts at first sight seem small, price for each weight or measure verified is only five cents; was formerly a notary and zouave; entered service at thirty-two, but worked hard at duties; cannot get a good man in service at salary of $500, 356. A clerk, dying lately, was succeeded by another of fifty-one years of age; formerly a merchant, a respectable, decent man, married; don't see how he can live on that and feed his family; but he expects promotion soon; weights and measures have never really formed a part, have never been scheduled under Civil Service Act; two officers are under Superannuation Act; five or six other officers paid into fund for nine years, they left and had money refunded them; nothing in Civil Service Act to bring in inspectors of weights and measures or gas inspectors, 357. Amount collected in this division; there has been no scale of salaries established for weights and measures branch; became inspector at $1,200, now after twenty-five years is in receipt of $1,600, 358. Petitions have been sent calling attention to small salaries paid to assistants; received an answer, but that is all; one great difficulty is that men are chosen from the ordinary people and given to us as officers, without any practical knowledge of service required; these should be on probation for two or three months under a practical man before entering service; if this were embodied in your report it would be of advantage, 359.

CHAREST, P., Guardian of Immigration, Quebec, 510.

Has been appointed for about five years; is paid $1.50 a day, allowed uniform and cap, is fifty-nine years of age, 510.

CHENIER, ANT., Menuisier à l'Hôtel des Postes, Montréal (lettre), 1150.

Expose qu'il est employé comme menuisier depuis huit années, qu'il est obligé de fournir lui-même les outils nécessaires à son travail, qu'il est le seul menuisier ici relevant du département; que son salaire a toujours été et est encore de $1.75 par jour; que, vu le coût actuel de la vie, ce salaire est beaucoup trop minime; qu'une augmentation de 25 pour cent ne serait que juste et raisonnable, 1150.

CHILLAS, J. P., Assistant Inspector, Post Office, Montreal, 894.

Wishes in memo. to be put on a par with the assistant postmasters of first-class offices; is inspecting nearly all the time and overseeing the clerical work of the office; there are nearly 900 post offices in Montreal division, 300 of which are accounting offices requiring yearly inspection; has to supervise nearly 700 mail services; office in post office block; there is one inspector, two assistant inspectors and nine clerks; reports to Postmaster General at Ottawa, 894. Has to see that mail contractors properly fulfil their duties; new routes are sometimes organized along the railway line; contracts to stage routes where the railways run parallel are not given as a rule; when a new railway is opened the railway mail service branch advises the department; has to induct new postmasters into their offices and teach them their duties; to see that postmasters render their accounts properly, 895. If an office has

CHILLAS, J. P.—*Continued.*

not been inspected for twelve months we are notified and are called to inspect that office as soon as possible; our returns of inspection are sent to Ottawa; must also inquire into complaints, often the work required of us is of a disagreeable nature, requiring knowledge of the duties of the office, prudence is required; has to inquire into cases of delayed, mis-sent or missing matter; Montreal comprises thirty-eight counties, running down to Three Rivers; it includes Three Rivers and St. Maurice counties; began as assistant inspector at $1,200, for six years had yearly increases of $50, afterwards of $100; all inspectors are paid the same in each division, and not on a revenue basis, 896. Assistant postmaster receives $2,000, and would like the same, if he should receive an increase it should be extended to us as our duties are as onerous and responsible; to reach the maximum one should be an employee of some experience; cannot inspect the whole territory in a year; non-accounting offices are inspected when required; there is one inspector and two assistant inspectors to look after 900 post offices and the several mail routes in thirty-eight counties, each receiving travelling expenses only; it it a hardship to go out on inspection under the conditions; was a little perquisite in per diem allowance to make up for wear and tear; in these thirty-eight counties we have to put up at all sorts of places, 897. Travels in winter as in other seasons; it sometimes happens that long journeys have to be taken in the most rigorous seasons of the year; the first step in establishing a post office is taken by the parties interested asking department; that application is referred to inspector, who visits the place, sees if one is necessary and estimates cost, he then reports to department; if petition is granted measures are taken to install new postmaster, instructs him in his duties and organizes its service; applications are made by members, but inspector's report is based on actual facts; in this division 214 post offices have been erected during the last five years; not a large number considering the Montreal postal division is an old one and pretty well settled, 898. The close inspection of the work allotted to us saves money, that is why salary of inspector or assistant inspector should bear some proportion to the work and responsibility attached to our office; takes ten years to reach maximum from $1,200 to $1,800; thinks that superannuation should be based on the higher salary that a man should be paid; does not know of any case where superannuation was on basis of a reduced salary; office is worked by the inspector, assistant inspector with a staff of clerks; the salary of inspectors was at one time $2,000, the same as postmasters at Montreal and Toronto, now inspectors are appointed at $2,000, rising by $50 yearly to $2,600, whereas postmasters at Toronto and Montreal get $4,000 each, 899. Cannot say that inspectors and assistant inspectors are amateurs; makes a comparison between duties and responsibilities now and what they were ten years ago, 900; Mr. Nelligan, an assistant inspector, was superannuated; he has had thirty-eight years of service and receives a superannuation of $1,240; being the average of the last three years' pay on thirty-five years of service; the four temporaries on the staff are recent appointments, two being women; young men of good or fair education are not desirous of entering the service on account of low salary and absence of superannuation; thinks it would be far better if young men were obtained for the service and after their being trained let them see there is something ahead of them; women are not very desirable in our office unless as duly qualified stenographers and typewriters; if superannuation is not re-established would be strongly in favour of a provident fund such as they have in banks; in the event of the maximum of salary being increased, old employees of twenty or thirty years' service should be made to enjoy at once the maximum figure of salary, and not by yearly instalments; points out

CHILLAS, J. P.—*Continued.*

that where this per diem allowance was paid it was most frequently paid after regular official day; it was a matter of very frequent occurrence that after the full official day had been put in, we had to leave the city by some late train to reach our point of visit, and often we had to put in extra work late at night in order to be able to return to our official duties by early morning train; we receive nothing for this long, arduous work, 901.

CIVIL SERVICE.

Appointments.—Present method satisfactory, *O'Halloran,* 67. Inspectors, collectors and preventive officers may be appointed without examination, *McDougald,* 89. If after limited time satisfactory, appointee should be made permanent, *Forsyth,* 139. Application made to Ottawa for officer, *Scott,* 176. Cannot get new boys to enter service at $500, *Boville,* 182. Six months' probation before permanency, *Boville,* 184. Technical officers on probation one year before becoming permanent, *Low,* 229. Vacancies are filled at Ottawa, *McKenna,* 271. On probation for six months and unless very bad retains his position, *Gerald,* 280. In lower grades are not good, they are just ward heelers, *Freeland,* 302. Does not get as good men to enter service as formerly, *Toupin,* 327. Up to required standard, *Frankland,* 391. Salary of $800 to start on, *Cory,* 455. Men must be admitted at a higher scale of salary than at present, *Cory,* 476. On probation, *Newcombe,* 535. Should not receive less than $800, *Gourdeau,* 641. Would approve of special votes for better salary than $500 on first entering, *Coulter,* 779. Are selected from those who have passed the Civil Service examinations, has no power of appointment, *Fraser,* 1282.

Attendance Book.—All without exception sign book which is closed at 10 a.m., *Pope, Joseph,* 46. One in every building and under his direction, *O'Halloran,* 54. All sign attendance books, *Boville,* 186. All, including technical officers, sign, *Low,* 228. Kept and signed, *Pedley,* 253. All sign except chief clerks, *Gerald,* 282. Signed in morning and afternoon, *Cory,* 457. Clerks sign book, *Dawson,* 588. Signed by all, with two or three exceptions, *King,* 635. Every officer in inside service signs, *Fiset,* 703. Both inside and outside employees sign morning, lunch and when leaving, *Gobeil,* 1092. All sign but chief clerks and professional men at heads of branches, *Butler,* 1187. All sign attendance book, *Fraser,* 1290.

Competitive Examinations.—Would not have competitive examinations for the entrance, *Pope, Joseph,* 41. Has no faith in competitive examinations, 53; opposed to them, *O'Halloran,* 67. Do not test the capacity of a man in comparison with graduates of a university—examinations are a farce, *Butler,* 1186.

Deputy Ministers.—In the advancement of clerks, they should have a greater say than at present; would be better for the department and should be well understood by the clerks that the deputy is the man they have to deal with; deputies should be given larger powers with adequate salary, 44. Deputy should be at liberty, in the case of an exceptionally clever young fellow, to start him at $600 or $700, *Pope, Joseph,* 45. Reports on the fitness of clerks after probation, *O'Halloran,* 54. Should have same responsibility in dealing with clerks as manager of bank, *White, R. S.,* 129. Deputy consulted in case of new appointment, *Boville,* 184. In case of filling vacancy or making a promotion, should make a report, *Pedley,* 252. Should recommend clerks for increases, *Newcombe,* 537. Thinks every large department should have an assistant deputy, *Gourdeau,* 644. In most cases consulted in any promotion, *Coulter,* 778.

CIVIL SERVICE—*Continued.*

Entrance Examinations.—In Archives Branch minister insists that all should pass, *O Halloran,* 55. All clerks at Ottawa have passed examination, 85. Appraisers to pass, *McDougald,* 87. None required for Winnipeg Customs office, *Scott,* 176. All clerks must pass Civil Service examination, *Boville,* 182. Tendency to relax, *Boville,* 207. Temporary and junior second class have passed Civil Service examinations, *Pedley,* 250. None required for Indian agents, *Pedley,* 257. None required for deputy collectors and preventive officers, *Freeland,* 297. Junior second and third class clerks must pass examination, *Cory,* 455. No test for appointment in department, *King,* 622. Post Office Department employees have all passed the examinations, *Coulter,* 755. New appointees should pass examinations, *Gobeil,* 1009. Some have passed, others not, *Butler,* 1185. All have passed examinations, *Parmelee,* 1260.

Holidays.—With sanction of minister interprets three weeks holidays as including twenty-one working days; would insist on clerks taking their holidays, *Pope, Joseph,* 45. All clerks get statutory leave of absence for three weeks, 54. During five years in office have not taken the three weeks holidays, *O'Halloran,* 69. Clerks get three weeks holidays, *McDougald,* 86. Statutory leave of absence is three weeks, but an elastic interpretation is given, *Boville,* 186. Clerks get three weeks leave of absence, *Low,* 228. Staff gets three weeks leave of absence, *Pedley,* 253. All get three weeks, *Freeland,* 304. Three weeks leave of absence, *Newcombe,* 538. Clerks and foremen have leave of absence, *Dawson,* 588. Clerks get three weeks leave of absence, *Gourdeau,* 642. Each man gets his three weeks holidays, *Coulter,* 780. Clerks allowed three weeks holidays, except temporaries, *Butler,* 1187. Three weeks, *Parmelee,* 1262. Usually three weeks, *Fraser,* 1288.

Increases.—When probation expires clerks have annual increases; no provision by which special excellence can be rewarded by larger increase, *Pope, Joseph,* 43. No provision is made, for Customs outside, for fixed annual increment, *McLaughlin,* 103. $25,000 distributed in salaries to nearly all within the limits of Montreal, *White, R. S.,* 117. Recommends increases; knows no other way in which salary question can be adjusted, *White, R. S.,* 128. Increases granted by minister, *Smith,* 153. No annual increment in outside Customs, *McCaffry,* 159. For last two years Customs officers in Winnipeg have been getting increases, *Scott,* 176. Thinks it advisable to change practice of annual increase of $50, as in cases it would take six years to reach maximum of class, *Boville,* 184. Men have annual increments and duty pay, *Gerald,* 285. Does not approve of automatic increases, *Newcombe,* 536. Clerks get increases very slowly, *Gourdeau,* 641. All clerks get annual increment of $50, *Fiset,* 703. Thinks increase of $50 a year is no good, should be $100, *Coulter,* 778. Increases to technical and non-technical classes, *Gobeil,* 1099.

Luncheon Hours.—One hour and a half, *Pope, Joseph,* 46. One hour and a quarter, *O'Halloran,* 54. From 12.30 to 2, *Cory,* 457. Practically one hour, *Dawson,* 588. Half get from 12 to 1, rest 1 to 2, *Gourdeau,* 642. From 12 to 1 and 1 to 2, *Fiset,* 703. Always some one left in department lunch hour to give information, *Coulter,* 781. One hour or hour and a half, *Gobeil,* 1091. One hour, but all do not go out at same time, *Fraser,* 1290.

Office Hours.—Agriculture, from 9 to 4, *O'Halloran,* 54. Customs (inside), from 9 to 5, *McDougald,* 86. Finance, from 9 and 10 to 4 and later, *Boville,* 186. Geological Survey, from 9.30 to 4 and 5, *Low,* 228. Indian Affairs, from 9.30 to 4, *Pedley,* 254. Inland Revenue, 9.30 to 4, *Gerald,* 282. Militia, 9 to 5, *Fiset,* 703. Post Office, 9.30 to 4.30, *Coulter,* 781. Privy Council, 10 to 4, *Bennetts,* 1068. Public Works, 9.30 to 4, *Gobeil,* 1092. Railways and Canals,

Civil Service—*Continued.*

as long as they are wanted, *Butler,* 1188. Secretary of State Office, open from 9 a.m. till 6, *Pope, Joseph,* 46. Trade and Commerce, 9.30 to 4.30, *Parmelee,* 1262. Auditor General, 9.30 to 4, *Fraser,* 1288.

Permanent Commission.—Necessary to secure and maintain an economical Civil Service, *McKenna,* 275. Appointments made by commission, *Newcombe,* 543. Does not approve of an independent commission governing a department, *Gobeil,* 1099.

Promotion Examinations.—Duties of office papers set by department, others by Civil Service Board, *McDougald,* 85. Recommends an examination on duty of office only, *McLaughlin,* 104. On duties of office and arithmetic, *Boville,* 183. Sets duties of office paper only, *Gerald,* 280. Necessary for advancement, *Cory,* 456. Has examinations and recommends for promotion, *Dawson,* 589. All promoted have passed examinations, *Parmelee,* 1261. His knowledge of what a man can do has greater weight for promotion than examination papers, *Fraser,* 1288.

Superannuation.—Thinks service has suffered greatly since change in law, 46. Sooner the Act is restored to the statute book the better; new appointees feel aggrieved that old officials have superannuation and they have none; thinks system should be improved; advantages of militia pensions, *Pope, Joseph,* 47. Thinks superannuation gives stability to service; would be desirable to restore Act, *O'Halloran,* 55. If restored would add to stability of service, *McDougald,* 87. Recommends that system be re-established, as men would work better if they thought their families were provided for, *McLaughlin,* 108. Time served as temporary or supernumerary should count, *Gobeil,* 115. Urges the revival of superannuation, *White, R. S.,* 130. Thinks retirement fund better than old superannuation, *Forsyth,* 142. Personally likes the idea of the retirement fund, though officers are divided in opinion with regard to superannuation, *Smith,* 156. In favour of continuation of existing retirement fund, only object in superannuation is that person must live to enjoy it, *McCaffry,* 160. Restoration of Act is a necessity, there would not be the same demand for increased remuneration, 207. With nothing but Retirement Act there is nothing to hold employee, 208. Memorandum, *Boville,* 214. Abolition of Act was a mistake, technical men are required and without guarantee of superannuation to look forward to there are continual resignations, 228. Restoration of Act would add to stability of service, *Low,* 229. If government would grant superannuation the men on staff would accept two-thirds the salary they could get outside, *Low,* 234. Under Act, which is susceptible of a good deal of modification for benefit of service, desirable to make Act a Pension Act for others than the recipients; pension should not die with the wage earner, *Pedley,* 255. Efficiency in service requires superannuation, 271. Pension Act with provision for widows and children would attract people and hold them, *McKenna,* 272. Most desirable that Act be retained, it encourages men to work faithfully, *Gerald,* 282. Prefers Superannuation Act to Retirement Act, *Freeland,* 299. If restored would tend to stability of service, *Toupin,* 328. Desirable to re-enact Act, *Frankland,* 391. Abolition helped to destroy stability of service, *Barrett,* 441. Thinks abolition affects the individual prejudicially and does not add to stability of service; cites case, *Cory,* 460. When a man gives best time of his life to service he is entitled to consideration, *Smith,* 522. Thinks reasonable provision for retiring annuities should be made, 539. Abolition of Act a mistake, *Newcombe,* 540. The government is alone in having none, *Dawson,* 588. Thinks that when expert is appointed at middle advanced age proper to add a number of years to his service, *Dawson,* 592. Thinks it an element of stability, *King,* 623. Abolition

CIVIL SERVICE—*Continued.*

not fair to those coming in, government should do as the provincial governments, and give an annuity to widow and family, *Gourdeau,* 643. Suffering greatly from the abolition of Act, *Fiset,* 704. Abolition was a mistake, *White,* 762. Thinks abolition of Act was the greatest blow ever struck at the service, *Coulter,* 784. Feels very strongly on question of superannuation, in that there is no provision for widow and orphan, *Montizambert,* 1076. Abolition was detrimental to service, *Gobeil,* 1094. Would be most valuable to restore Act as a means of dispensing with services of men growing too old or inefficient, *Butler,* 1189. Abolition was not a good move, has kept many out of the service, *Parmelee,* 1262. Abolition one of the biggest mistakes ever made, *Fraser,* 1291. Abolition was a mistake, Act gave stability to service, *Fitzgerald,* 1322.

Suspension.—Has in rare instances been compelled to advise suspension and stop salary, 45. Words in sec. 103 should be eliminated, *Pope, Joseph,* 46. Have had to suspend, without pay during suspension, *Cory,* 456. There are frequent suspensions, but mostly for misconduct, *Coulter,* 780.

Temporary Clerks.—Employed only on his recommendation, *O'Halloran,* 53. None in Customs Department, *McDougald,* 86. Recommends that they be converted into third-class clerkships, *Pedley,* 253. Has a few temporary clerks, *Cory,* 456. Would suggest modification with regard to them, *Newcombe,* 542. All must pass Civil Service examination, also departmental, *Fiset,* 700. Many temporaries who are paid by special vote, *Gobeil,* 1097.

Transfers.—Approves of transfers, *Pope, Joseph,* 44. Collectors of Customs seldom transferred, *McDougald,* 89. Montreal Customs office exchanged a few men with Ottawa, *McLaughlin,* 108. Transfers are made from one department to another with concurrence of each department, *Boville,* 184. Has had transfers, *Cory,* 456. Many transfers, the smaller departments get some of our best men, *Coulter,* 778.

Travelling Expenses.—Inspectors receive only actual, should have larger allowance, *McDougald,* 88. Explorer gets his living allowance, which he accounts for from day to day, *Low,* 231. Inspectors for Department of Indian Affairs receive their actual living and travelling expenses, *Pedley,* 258. Would favour a per diem allowance for inspectors, *McKenna,* 271. Inspectors receive their actual expenses, desirable to allow inspectors a per diem allowance, *Gerald,* 294. Inspectors receive only actual expenses, *Stratton,* 392. Penitentiary inspectors receive only out-of-pocket expenses, *Newcombe,* 538. Every officer on travel asks for an advance, and no further advance is given till previous one is accounted for, *Gourdeau,* 650. Post office inspectors receive actual expenses and are out of pocket, *Coulter,* 782.

Women Clerks.—An inordinate number of women entering the service; three women in department; when women marry they give up their position; the employment of women, with some exceptions, is not desirable, for as a rule women clerks claim the rights of men and the privileges of their own sex as well, *Pope, Joseph,* 42. Nearly all temporary clerks are women, *O'Halloran,* 53. Women employed in signing the new currency, 181. Applications from women for appointment very numerous; women in department are all healthy and of the highest character, 183. Employees in currency branch are encouraged to learn typewriting and shorthand and are sometimes transferred to the general work, *Boville,* 187. More applications from women than from men, 249. Some ladies capable of doing the high-grade work, *Pedley,* 250. The employment of women has closed the avenue for young men, and that we are not training young men for the higher positions, *McKenna,* 270. Women

CIVIL SERVICE—*Continued.*

in the department and there are many applications, it is said that the increased number applying arises from the fact that they are better paid at the beginning, *Gerald,* 293. Third-class clerks, with two exceptions, are women; thinks women should not go past salary of junior second-class clerk; cannot control an office, *Cory,* 454. Thinks remuneration is greater than outside, some are not worth $500, *King,* 627. Disadvantages of having women clerks, *Gourdeau,* 642. For certain branches of work, women are good up to a limited point, *Coulter,* 785. Thinks reason so many enter is on account of salary, men cannot be got, *Butler,* 1186. Many more applications from women than men, *Parmelee,* 1262. Women are steady and reliable, good to a certain point, *Fraser,* 1285.

CIVIL SERVICE ASSOCIATION.

Coates, R. H., Civil Service Association, 1334. Collected prices of commodities; food products in Ottawa have increased from 30 to 50 per cent, other products from 20 to 35 per cent; since 1896 there has been a very rapid tendency upwards and is still going up; thinks advance in England has been still greater, 1334. Arrived at figures in statement by budget method; tried to take into account in framing the budgets in the memo. what proportion the cost of each article bears to a man's total expenditure; in United States they multiply the quotation in each case by total per capita consumption; Dun's Index Number and Index Number of Labour Department of United States arrive very nearly at same result as in memo.; is chairman of sub-committee that prepared the report; the survey in prices as stated only went back ten years; a general advance in prices is a great disadvantage to men on salaries; the memo. described effects only; is graduate of Toronto University; has carefully watched rise in prices, which in the last ten years is about one-third; advance in rentals in Ottawa has been very rapid, say from 30 to 40 per cent in ten years, 1335. From 1892 to 1897 prices did not change materially, it was not a period of industrial or trade expansion or of marked contraction; in the budget of a man of small salary, the food and rent bulk larger proportionately than those of a man on large salary; and as increases in the ten years have been the greatest in these necessary commodities, the man on a small salary has been hit harder than the man on a larger salary; his object has been to avoid leaving the impression that compensation might be found in some direction not referred to, or that there has been any picking or choosing of facts, 1336.

Doyon, J. A., Civil Service Association, Ottawa. Would like as much time as possible to prepare their case; asks if September would do, 1327. Was chairman of classification committee; proposes that technical officers be separated into class by themselves; they are not recognized by the Civil Service, and are labouring under a disability, 1336. Technical officers are appointed because of their qualifications; thinks a man should be employed according to his abilities; service suffers from incompetent extra clerks; sometimes a man of special abilities is wanted who is not to be found in the service and a man of his attainments should command a higher salary, 1337.

Grant, M. D., Civil Service Association, Ottawa. Is in department since 1900; thinks it quite possible to devise a scale whereby each member of public service would receive the old superannuation, and widow would receive 25 per cent of the superannuation, and the daughters, if living, would receive something up to age of 21, 1332. Has examined the pension schemes of the banks, also special government schemes, as Militia Pension Act, and N.W.M.P. Pension Act; has a resumé of Militia Pension Act in which basis

CIVIL SERVICE ASSOCIATION—*Continued.*

of superannuation is one-fiftieth of final salary for each year of service, it makes provision for widows of officers who have completed twenty years' service; provides that the total amount paid to widows and children combined shall not exceed total pension the officer would have been entitled to had he lived; contribution of officer is 5 per cent of his salary; officers do not pay on their allowances; has knowledge of Militia Pension scheme and was consulted regarding I.C.R pension scheme: has studied the schemes on American and English railroads; nearly all the railways in England have pension systems for their employees; the great trouble on the great railroads is that with so many people eligible a deficiency of funds may easily become unmanageable, 1333. It is found that salaries paid are inadequate to hold good men; Mr. Henderson on quitting service received $900 and now receives $6,000 in New York, 1334.

Kingston, A. G., Civil Service Association. Deputation of A. G. Kingston, J. A. Doyon, J. L. Payne, M. D. Grant, Coates, R. H.; association has completed its organization; representing 75 per cent of Civil Service; wishes an interview with Commission within a month; in that time would be representing nine-tenths of Civil Service, 1326. Would be glad to receive suggestions from Commission as to evidence; would like to know how far Commission would receive specific details of proposed amendments to Civil Service Act, 1327. Decided it was inadvisable to make any recommendation with reference to entrance into the service, it being a matter which concerns government alone; gives own recommendation that entrance examination should be higher; is not personally in favour of a competitive examination; thinks it impossible to do away with nomination by political head at present, 1328. Thinks interference with politics does not do so much damage in connection with nominations for appointment as later in each man's official life; on the general principle, that nominations to higher positions should be made from officials in lower positions, the position of a postmastership when vacant, should be filled by clerks from same post office; represents only the inside service resident at Ottawa; believes on general principles there should be as much freedom as possible for interchange of officers between departments as well as between the inside and outside service; that promotions and transfers be awarded on sole ground of merit and fitness as shown by candidate's departmental record, 1329. Knows nothing of duties of mail clerk; want to get rid of what may be called academic examinations on duties of office; promotions as law stands now require recommendation of deputy head; thinks most decidedly that promotions should be made on advice and recommendation of deputy head; majority of association are of opinion that minimum of third-class clerk be left at $500; if capability is shown, advancement is rapid, if not he is advanced slowly; tendency is that more women than men enter the service, 1330. This tendency will eventually be injurious; is not sure this is caused by the lowness of initial salary, but the slowness of advancement in comparison with other walks of life; thinks the obstacle should remain that when an official is to be appointed above minimum of his class a special vote of parliament be asked to sanction appointment, except in case of a man having special technical qualifications; memorial recommends that messengers be made permanent; points out that the appointment of ministers' private secretaries to first-class clerkships has prevented promotion of second-class clerks; therefore some legal means should be provided, when a minister brings into the service his private secretary, he should nominate him at his full salary instead of making him a first-class clerk, with an addition of $600; recommends that men in the outside and inside service be gathered into the service under the regulation of an Act; memo. makes no mention of holidays; might be

CIVIL SERVICE ASSOCIATION—*Continued.*

advisable to give four or five weeks leave of absence to those who work hard night after night in the session; in summer most branches are crowded with work and not much in winter, yet one wants his holidays in the summer, 1331. Attendance book signed twice a day; would lay before Commission the grievance of the staff of the Library of Parliament during session; for past twelve years the sessions have averaged 143 days, and all the staff are compelled to be on duty all the time the House is in session, in addition to the regular hours from 9.30 a.m. till 4 p.m.; would suggest an increase of staff during session by appointing temporary clerks; the staff claim that they put in 718 extra hours in the year without any emolument, 1332.

Payne, J. L., Civil Service Association. Might have case ready about end of June; it requires a great deal of work; and hopes to be able to present a great many features of the case; it is suggested that our representations be carefully drawn up and printed; Mr. Kingston stated the case very mildly; thinks they have from 95 to 98 per cent of entire service actively and actually as members; association has no charter but is purely for their own interest, a voluntary and non-partisan association; arranges interview for June 25 to adjourn to September; hopes to impress Commission with their moderation, and with the absolute backing of entire service, 1327. Asked if Commission objected to the memorial being given to the press, 1332. In writing this memo. careful means were taken to ascertain the judgment of members at large, which was done by means of a system of printed bulletins conveying substance of conclusions arrived at, and receiving after a sufficient lapse of time the judgment of members; the memo. therefore represents the judgment of the service; all grades in service from messengers up are represented, including both sexes; the object is to relieve the Civil Service Act of that rigidity referred to and make it more elastic and businesslike; this is the first time all members of Civil Service have been brought together; and the keynote of association is moderation and accuracy, 1337-8.

Memorial: Composed of members of the so-called 'Inside Service' residing at Ottawa; has 1,784 members representing all departments; association makes its requests founded on moderation and dignity; civil servant practically gives up his life to the service of the country; his training practically unfits him for other employment while rendering him increasingly valuable to the state; loss of position is most serious; his income is stationary, while the income of other citizens has increased with the increased cost of living; under existing conditions, having regard to increased cost of living, he finds the struggle growing harder, 1338. *Promotions.*—Thinks the test examinations for promotion unfair and unjust; it often happens that thus men officially incompetent and undeserving have been advanced, while honest merit and efficiency plodded along without recognition; they therefore recommend that the promotion examination prescribed by clauses 22, 23, 24, 25, 26, 27, 28 and 29 of Civil Service Act, 1882, be abolished; that all promotions in each department be made solely on recommendation of deputy head, and be based on merit and seniority, other things being equal; that deputy ministers prescribe written examination for promotion on duties of office. *Classification.*—Civil Service Act has produced a highly organized service, yet twenty-five years' experience shows it is not perfect; clauses relating to classification might be improved, based on theoretical organization of departments; it has for some years worked an injustice to some civil servants, and unless rectified must continue to do harm in an intensifying degree, 1339. In 1882, staffs were divided from top, three chief clerkships, six first-class clerkships, twelve second-class clerkships, and twenty-four third-class clerkships; with a maximum and minimum rate of remuneration; no class could advance unless

CIVIL SERVICE ASSOCIATION—*Continued.*

vacancy by death or otherwise in a superior class; thus no hope of third-class clerks reaching top; this has happened in Post Office Department; and extra clerks are now in service; recommend (1) clause 6 of Civil Service Act be applied in a more liberal spirit, (2) that it should be possible for every deserving clerk, subject to amendments with respect to promotions, to pass to maximum of a first-class clerkship, (3) would be a great encouragement to increase the number of offices above rank of chief clerkships whenever magnitude or character of the work would justify such a course, (4) that a separate class of professional and technical officers be established, (5) that in some departments certain technical officers are classified as clerks, these should be separated and attached to technical class to which they properly belong, (6) that provision for permanent messengerships be restored, 1340. *Superannuation and Retirement.*—In 1898 provisions of the Act relating to grant of superannuation allowance were made inapplicable to all entrants after date; in lieu thereof Retirement Act was passed in virtue of which 5 per cent deduction from salary of each civil servant was made; said deductions to be accumulated at 4 per cent compounded semi-annually until retirement; in 1906 2,573 civil servants came within its scope, as compared with 2,324 who were then under superannuation funds; at present 50 per cent are primarily affected; it cannot be too soon replaced by a measure in the interests of all; principle of superannuation was abandoned in fact as in name; its substitute is essentially a savings bank provision; efficient employees having no reward before them may retire when they choose; retirement fund is increasing at a relatively slow rate in 1906; in eight and a half years number of members was 2,573, and total amount to their credit was $394,027.52, or $153.14 per member, 1341. Table showing meagre amounts which after long periods of service will fall to rank and file of officials; such meagre accumulations after a lifetime are not sufficient for modern needs; deduction is a forced one; all important civilized governments of world, except one, maintain superannuation system; exception is United States government owing to spoils system; there is a pension system for Militia, N.W.M.P. and I.C.R., why not for other permanent employees also; cost of superannuation system should not be borne by employees alone; a scheme embodying both the pension and provident features would meet their needs, 1342. Declares in favour of a measure securing, on adequate abatements, supplemented by a reasonable contribution by government, (1) a reasonable provision for old age, (2) provision for dependents in event of their death either prior to or within a short time after retirement from service; that civil servants under superannuation fund be given option of coming under new Act; a civil servant contributing to superannuation fund for thirty-five years and has reached sixty years should have privilege of retiring; that temporaries paying superannuation abatements should have years of service included in basis of which superannuation is computed; same privilege to future entrants; association asks (1) limitation of insurance on one life be raised to not less than $5,000, (2) that insurance be extended to female permanents, (3) that section 16 of Civil Service Insurance Act be repealed, (4) temporary employees whose duties are of a permanent nature be allowed policies under Civil Service Insurance Act. *Professional and Technical Officers.*—Be placed on a classified standing; such persons are distinguished from ordinary clerical workers and that recognition be made in accordance with time and means expended in gaining such knowledge; an injustice to others that these should be permitted to remain in ordinary grades, as they obstruct advance of others, 1343. *Temporary Employment.*—About 500 male and 300 female temporaries employed at Ottawa; this class though employed

CIVIL SERVICE ASSOCIATION—*Continued.*

originally to meet the 'temporary pressure of work,' have, owing to increase of public business, been assigned to work of a permanent character, as the list shows; no uniformity in treatment of these employees in the departments; same absence of rule with regard to their salaries; matter is worthy of courageous and prompt treatment; association recommends that extra employees whose work is of a departmental nature should be made permanent, 1344. *Salaries.*—Question is of paramount importance; rest the request for consideration of economic facts than make specific demands; have given much attention to collection of evidence with respect to cost of living; Civil Service Act, 1903, was intended as a remedy for inadequate salaries, yet it fell short of that aim in two respects, as shown in table. *Cost of Living.*—The pronounced advance in general prices in past decade has borne with increasing evidence on all, and is a cause of widespread dissatisfaction, discomfort and embarrassment; association has made a detailed examination of existing conditions, 1345. *Nature and Scope of Investigation* covers relative cost of living in Ottawa during first week in June, 1907, and June 1897, ten years ago; a list is compiled of commodities entering into cost of living, including meat, fish, poultry, provisions, &c., list is not minute; covers rentals, land valuations, building, taxation, &c., &c., wages of labour, education, &c.; association has applied to these statistics a system of 'weighting' by estimating the cost of living at the two periods; ten-year period is taken because advance in prices occurred in that period; the general scale of living by which all are bound has altered greatly since the beginning of present era of prosperity; information was sought from representative storekeepers, real estate agents, physicians, dentists, &c., a full list of whom is given in an appendix B, 1346. Material collected and findings based thereon are set forth under five main heads: *I. Retail Prices.*—Covers all staple articles of consumption, appendix A; table contains comparative quotations for 364 commodities; actual number of quotations given is 633, of which 578 show an increase, 75 show no change and only 10 show a reduction; meats (in detail), 1347. Fish, dairy produce, groceries and other provisions, dry goods, clothing, furs, footwear, house furnishings, 1348. Furniture, kitchen utensils, crockery and glassware, hardware, paints, leather goods, books and stationery, druggists' supplies, jewellery, tobaccos and cigars, sporting goods, fuel and lighting, 1349. *IIa. Rentals.*—Two sources were applied to (1) real estate agents, (2) members of the service who have been householders for ten years; from both sources same result, an increase of from 25 to 36 per cent was shown; table of real estate agents showing comparative rentals in Ottawa, 1897 and 1907; in centre-town increase from 20 to 30 per cent; Sandy Hill about 25 per cent; Glebe from 40 to 50 per cent; New Edinburgh about same, since when about 12 per cent has been added to rentals, 1350. Table giving returns from twenty-one civil servants who have lived in the same house continuously for ten years; average increase shown is 36 per cent; growth of city has caused use of street cars, which means an additional expense of from $50 to $75 a year. *Real Estate and Building.*—Compares relative price of real estate in 1897 and 1907, and cost of building in the respective years; estimated increase in land values is 44 per cent in four years; table of comparative assessments, Ottawa, 1897 and 1907. Building contractors charge 45 per cent more than in 1897. *Taxation.*—Tax rate in 1897 was 2·05, in 1907 it is 2·06½, small increase; table showing taxes paid on residential properties, Ottawa, 1897 and 1907; increased expenditure on taxes from these figures amounts to 29 per cent. *Board and Lodging.*—Board has advanced 20 per cent in last five years, and from 25 to 35 per cent for ten years; board in 1897 from $12 to $15 per month now is $15 to $20; board and room in

CIVIL SERVICE ASSOCIATION—*Continued.*

1897 from $15 to $25 a month now from $20 to $33; table showing prices of board of same quality, Ottawa, 1897 and 1907, 1352. *B. Wages.*—Ordinary clerk is affected by variations in price of wages in two ways, in hiring servants, pay of odd job men and other help; in so doing he pays workman's wages with employer's profit, and secondly is concerned in any rise or fall of wages, when he consumes any commodity where labour has entered; table giving comparative wages in 1897 and 1907 of most important classes of labour in Ottawa has an interest of its own; table shows also how government has found it necessary to advance scale of wages on entering the industrial field; wages of printers at Printing Bureau over 300 in number, are paid rates of wages as in Montreal and Toronto, 1353-1354, 1355. Every class of labour in Ottawa has received a material increase in wages during past ten years, ranging from 20 to 100 per cent; those in the more important classes from 25 to 50 per cent, 1355. Increased rates charged by barbers, cabmen, laundrymen; undertakers have doubled charges; a funeral in 1897 costing $40 now costs $75. *Professional Services.*—Physicians remain about same, but surgeon's fees have doubled; rooms in hospitals have increased in price; dentists increase price of artificial teeth on account of increase of price of platinum in greater use to-day. *Education.*—All teachers' salaries have been increased; this must be met by increased taxation; fees for Collegiate Institute $20 for forms 1, 2 and 3, and $25 for forms 4 and 5, are higher than in any other city or town in Dominion; fees for music, painting, &c., in convents, &c., have advanced 20 per cent, 1356. *C. Interest.*—Was steadily downward towards end of 19th century; now a decided impetus in opposite direction, rate to-day higher than any time since 1894; table giving average rates of interest earned on combined mean invested funds of Canadian life insurance companies for each of the respective years specified. *Insurance.*—Decided increase in life insurance rates, e.g., in 1892 a straight life policy for $1,000 could be purchased at thirty years of age from North American Life Insurance Company for $22.25 per annum, same policy now costs $24.25, 1357. Fire insurance has advanced 70 per cent in down-town property; in central portions remains about same or 65 cents for $100; nearer Hull, since fire, rates have doubled and trebled, 1358. *III. Comparative Budgets* 1897-1907.—With exception of lighting gas, fuel gas and electricity, the great staples of consumption have been upward, rendering situation serious; table giving average weekly expenditures on staple foods, fuel, lighting and rentals for family of five; income $750 a year, 1897-1907, 1358. According to above table, cost of living has advanced about 34·3 per cent; if coal oil is used percentage would be reduced to 32 per cent; if gas is used it would be about 33 per cent; a scale of living at present necessitating $1,800 a year would have been ten years ago $1,400, or an increase of 28 per cent, 1359. Typical expenditures for necessaries by a family of five living on a salary of $1,200 reckoned at 1897 and present prices are given in table; increase is approximately 30 per cent; prices of 1897 left a margin of $22.50 a month for insurance, recreation, education, superannuation, church and other sundries; *these have to be met to-day by reductions on the primary necessaries. IV. Corroborative Evidence.*—Up to this applies to Ottawa alone; throughout Dominion the steady increase in cost of living has been found; in Ontario teachers' salaries were raised 30 per cent; in Quebec the increase is much higher, also Toronto; the most convincing evidence is the adjustment of wages and salaries to new conditions in progress for six or eight years among industrial classes in Canada; every demand for increased pay has been based upon increased cost of living; conditions revealed in table of wages in Ottawa are common to almost every centre of Canada of similar size;

Civil Service Association—*Continued.*

Department of Labour states hundreds of increases involving several thousands of employees have gone into effect in the last five years, in 1905 over 130 of such increases took place; municipal employees in every city of Canada had their wages increased during last three years, 1360. Association inquired of general bank managers of Canada as to movement of staff salaries in last ten years, twenty-two answered; a table setting forth in full detail, information received is given in a confidential document to the Commissioners; the percentages of increase of bankers' clerks' salaries range from 10 to 100; that sixteen out of the twenty-two gave bonuses to their staff in addition to their salaries; many of them make special allowances to their staffs of $100 to $300, in larger cities of Ontario and Quebec and in Northwest provinces and British Columbia, to meet greater expenditures in these places; estimated increase in cost of living is from 10 to 20 per cent in small towns and from 25 to 45 per cent in the larger towns and cities. *Prices in United States.*—Much the same as in Canada; quotes findings of Mercantile Agency of R. G. Dun & Co., New York, and United States Department of Labour, Washington, D.C.; of the former, R. G. Dun, the record covers the cost of the same quantity of the same articles on the first day of each month for nine years; under head of breadstuffs are included all grains, meats of all kinds, dairy and garden produce, &c., 1362. Table given showing increase in commodities from January 1, 1898, to January 1, 1907; in other words increase in wholesale prices in United States during nine years was over 34·8 per cent; statistics of Department of Labour, Washington, U.S., are quoted for series of 259 commodities under nine heads; farm products, food, clothing, fuel and light, metals and implements, lumber and building materials, drugs and chemicals, house furnishings and miscellaneous; wholesale prices have increased 29·2 per cent from 1897 to 1905, retail prices increased 27 per cent between same years, 1362. *V. Conclusion.*—The price of nearly every staple commodity has advanced to a degree that will soon cause not only distress, but impaired efficiency in service; it was found that to the man of low salary the increase in cost of living during past ten years has amounted from 30 to 35 per cent, while to the man of higher rank and pay it has been at least from 26 to 30 per cent; better expressed in salary, thus the man receiving $900 in 1897 would require fully $1,200, and the man receiving $1,500 fully $1,900 to live with same degree of comfort in 1907; no sign of change or abatement; prices may be expected not only to remain high, but to show still further advances; while rates of wages are increasing in all directions, yet these phenomena mean hardship and renunciation to the country's servants; association has endeavoured to avoid picking and choosing of facts, but has endeavoured honestly and impartially to find some measure for a condition, the existence of which requires no proof, 1363. *Appendix A.*—Table showing comparative retail prices of staple commodities, Ottawa, Canada, June, 1897 and June, 1907, 1364-1374. *Appendix B.*—List of persons, firms, &c., supplying information, 1375. When before Commission before it was stated the membership in the Civil Service Association numbered 1,780, now it is over 1,900; the association is a point of interest to service, and practically embraces the whole service; Montreal statistics were gathered by the Montreal *Star,* 1376.

Supplementary memorandum *re* cost of living: Since last memo. was presented four months have elapsed; no downward tendency in prices has occurred; but coal, breadstuffs and dairy produce have increased still further; in Montreal as well as Ottawa flour sold in May at $4.35 is now $5.75 a barrel; coal has advanced 60 cents a ton; milk and its products are higher than ever, &c.; wages movement more markedly upward during summer; in railway service 25,000 men had wages raised; in textile trade 10,000; in building

Civil Service Association—*Continued.*

trades 8,000; mining industries 7,500; all since June 1; London *Economist* says prices during first half of present year rose 13½ per cent, and during the past ten years not less than 56 per cent; association presents two statements, (1) cause most commonly recited for recent rise is the prevailing prosperity of the country, by increasing trade profits and creating a greater demand for necessaries and luxuries; up to the present not one sign of any general reaction has appeared; though agricultural yield is less than in 1906 the farmers' income, as result of a rise of 45 per cent in wheat, will not be impaired; and the falling off in crops has effect of increasing price of breadstuffs, &c.; failure of salmon run in British Columbia has increased price of that article, (2) the long duration and wide distribution of present rise in prices requires some more far-reaching influence than the prevailing prosperity; proper to seek an explanation of any continued rise in prices in an increase of the world's production of gold; more gold will be required to purchase goods, if the value of that metal has shown a decline, 1378. In the decade following discovery of gold in California and Australia the course of prices showed a rise of over 67 per cent; during last decade there is an increase of gold supply double as great as that following the year 1848; table of figures from United States Mint, shows that output of gold, $199,304,000 in 1895, is doubled in 1906, $400,000,000; it is to be noted here that whatever the condition of industry and trade during the next few years, no present diminution in the gold supply is to be looked for; refers to the familiar fact that retail prices follow but slowly in the wake of wholesale commodities and raw material; the situation under which the members of the association are labouring has been some time in gathering and cumulative in its effects; but one avenue of relief is open, viz., an advance in the general scale of income, 1380.

See also memo, of Civil Service Association of Western Canada, 1383.

Clark, Ross Cuthbert, Mail Clerk, Toronto, 1009.

Thinks he has a special case; was appointed 1893 and at end of ten years was to have had a salary of $800; began with $480; has now been in service fourteen years and not got $800 promised; gets now $760; has passed case examination obtaining 99 per cent every time; wrote to controller at Ottawa, he replied saying he did not see how witness was entitled to salary claimed; some men complain at having to work too hard; witness hands in letter in behalf of mail clerks on Toronto, St. Mary's and London railway postal division, 1011.

Clendinnen, C. E., Binder, Printing Bureau, 617.

Is secretary of Employees' Association; there are seven or eight employees in bindery who have only received an increase of $1 a week since 1896; they getting then $14 and now $15; these finishers were paid $15 a week in Montreal twenty-five years ago; a finisher is always supposed to get $2 or $3 more than those in any other branch of the trade; in Ottawa they are paid $18, in Toronto $15 to $18 or $20; has been seventeen years in Bureau, at first received $13 and now $15; about forty or forty-five people in the bindery, five of whom are girls feeding ruling machines; the binder takes the book from the girls after it is stitched, glues up the back, rounds the back, puts it in the press and covers it, then goes to the finisher who puts gold work on it, embellishes it on sides and back and letters it; an ordinary binder takes the book as it comes sewed and glues up the back, rounds it, puts the boards on it, presses it, takes it out and puts the leathers on it; finisher should have more pay because he requires more intelligence; he does finer work, just as a job printer does finer work than an ordinary compositor, 617. Got the informa-

CLENDINNEN, C. E.—*Continued.*

tion showing the disadvantages under which the women work from the women themselves; they should be allowed to go up in the elevators; does not think there is any other building where the employees are forced to go in and out through the rear entrance; women leave five minutes before the men, 618.

CLERMONT, ULDERIC, Inspector's Staff, Montreal, 904.

Under the law the clerks in inspector's office are on same footing as clerks in post office where routine work is done; whereas the former are mostly engaged in correspondence in English and French, have a great deal of difficulty in that work having to deal with Austrians, Italians, Finlanders, &c., the work is of an entirely different nature; thinks the clerks of the two branches should be as distinct as is the work of each; the work of the former is more responsible and complicated, 904. Classification of staff; has been twenty-five years in the service; the work which first and second class clerks do in Toronto and Ottawa is done here in Montreal; witness after twenty-five years' service gets $900 a year; in Quebec there are two senior second-class clerks with $1,200 salary; the classes should be represented in Montreal division as in others; present scale of salary is inadequate to our wants; two have signed this memo., both desire to have the pension fund again; thinks the position of assistant inspector should be filled by promotion of a clerk in department, all things being equal, 905. Thinks the fact of there being three assistant inspectors here is explained by the abolition of the Three Rivers division; Mr. Chillas was there and there were two here, Mr. Nelligan and Mr. Madore, when division was abolished Mr. Chillas was brought here; hence the reason for three inspectors here, 906.

COATS, R. H.—See *Civil Service Association.*

COFFEY, JEREMIAH, Montreal Post Office Staff, 887.

Has been twenty-three years in service, and seven months on night work, has to work on Sunday nights; not easy to change off the work from night to day, as distribution at night is different from day; works from 11 p.m. till 7 a.m.; there is often a change in the distribution, e.g., the morning mail is sent by a different route from the afternoon, and the afternoon distribution is different from the night, so that a change of clerk would not be conducive to prompt handling of the mail; would be better all round if duties were changed occasionally; but for a week at a time it would be impossible, on account of change in the various distributions; thinks if men were changed more they would be more efficient; thinks that in a modified form the bank system where the men are continually changed to the advantage of the institution might be applied to public service; that night work is detrimental to the health and opposed to all social and domestic enjoyments; there should be some consideration attached to it, 887-888.

Memo. *re* night workers: That in all trades and conditions of life it is considered that night work being more arduous should be paid for at a higher rate than day work, varying from a quarter additional to double pay; no provision is made for night work in city post offices, though principle is recognized in railway mail service of post office, where night mileage is double day mileage; at beginning when government took over post office scarcely any night work was done, but with the ever increasing number of mails arriving at city post offices at all hours, it was necessary to put more and more employees on night work to give efficient service; one naturally objects to night work; the strain of eyes and brains is much greater than in day; impossible to get necessary rest during the day to repair the wear of the system; all household

COFFEY, JEREMIAH—*Continued.*

arrangements of the night worker must be altered; cannot have meals with his family nor make any social arrangements except at expense of the necessary rest and consequently health; request an additional amount equal to 25 per cent be granted to those whose duties keep them at work from 7 p.m. to 7 a.m. Here follow opinions of medical men on the effect night work has on the general system; effect of electric light on the eyes; effect of continuous work on heart, brain and nerves; on necessary rest and recreation, 889-890-891.

CONROY, JOHN H., Lock 2, Lachine Canal, 1218.

Has been six years at lock 2, with same pay, $45, as on appointment; agrees with memo. presented, has a family of eight and finds it hard to make both ends meet; his salary does not pay his way; was fifteen years with previous employer, 1218. Their work is very laborious, still using the old hand-power; there is often danger in working a windlass; two or three accidents happened at this lock in one season; one man dying, but his family got nothing; they work every day, have no holidays; have to be there on Dominion Day, Labour Day, Victoria Day, 1219. There is no stated pay day, it may be the 9th or 19th, you are never able to say to a creditor 'I will pay you on such a day;' Mr. Morin is paymaster for all canals in province of Quebec; great delay in first pay after being idle five months; thinks they should be supplied with uniform or oil-skins, 1220. Measure was taken for caps with official name on; should also have oil-skins and rubber boots for bad weather; should also get a week's holiday; the men injured were not insured, 1221.

COOKE, Rev. A. W., Chaplain, Kingston Penitentiary (letter), 582.

Agrees with and endorses memo. of Chaplain of Kingston Penitentiary; but it would be a serious mistake to do away with afternoon service; surely two hours out of seven days are not too much to spend in worship of God; speaks with an experience of over twenty years of penitentiary life; there are thirty-two youths under twenty years of age in this prison under his charge; arranges that the seven youngest, one fourteen years of age, should sit together in church, apart from the older criminals; gives a weekly class of religious instruction to these thirty-two youths; intends writing to Minister of Justice that these boys be kept from other prisoners as much as possible, 583.

CORBEIL, JOSEPH ZEPHIRIN, Montreal Customs Staff, 115.

Appraiser, port of Montreal; wishes to speak on superannuation; years served as a supernumerary or temporary should count for superannuation, they do not count now, 115. Have visited Ottawa and offered to pay to fund amount accrued during those eight years as temporary; consideration promised, 116.

CORY, W. W., Deputy Minister of the Interior, 451.

Expenditures last year were over $3,000,000, and revenue $1,800,000; 150 clerks charged to civil government; about 590 clerks; salary $3,700; $4,000 is maximum; has been in service since 1901, was previously in Attorney General's Department in Manitoba; have about eight chief clerks, 451. Mr. Stewart has left service, receiving better salary outside; a custom now quite common; Mr. Ryley was land commissioner, but left service, his salary was $2,700, he now receives $5,000; Mr. Deville is surveyor general for last twenty-three years, 452. Entered department at Ottawa in 1885; receives a poor salary; Dr. King is chief astronomer, was boundary commissioner and is now engaged in the delimitation of international boundary line between Canada and United States; Dr. Klotz also assisted Dr. King; but he went to Australia in connection with some scientific work; Mr. White prepares all

Cory, W. W.—*Continued.*

the maps for the departments, would be impossible to have one bureau under his direction unless staff were largely increased; other departments use his plates; department is far better equipped than any other for getting out maps; does not think we have enough clerks in inside service, we have seventeen first-class clerks, 453. Twenty-five second-class clerks, forty-seven junior second-class clerks, twenty-nine third-class clerks, and seven temporary clerks; third-class clerks with two exceptions are all women, cannot get a desirable man to enter as third-class at $500; many hundreds of applications from women, quite willing to enter at $500; thinks women should not go past salary of a junior second-class clerk; there are some able women, but when one arrives at the top of second-class she is performing the limit a woman should do; could not get them to control an office, 454. For a salary of $1,000 you could get a bright young man with hope and chance of promotion, not so with girls, they do not take the same interest; finds that women do not give as useful service as men; if it were possible to appoint at $600 or $650 it might stop pressure of junior second-class clerks, but where you have a desirable young man a salary of $800 is little enough to start him on; if more help is needed, the branch concerned reports, inquiry is made and another clerk is supplied, many are put on without political recommendation; to become a junior second-class or third-class clerk they must pass the examination; finds that women claim privileges of their sex and the benefits extended to men, 455. They then pass a promotion examination on 'duties of office,' but generally the ordinary promotion examination; the head of the department has to select or reject; have had a few transfers; have had to suspend clerks, who would lose pay during suspension; have a few temporary clerks; all have three weeks leave of absence, and special sick leave on a medical certificate; has never had leave since he has been in department, 456. Attendance books signed in morning and afternoon; luncheon hours are from 12.30 to 2 o'clock, and department is closed, but department is always open to public one way or another; the records fifteen years ago were in a dangerous and unprotected state, but now the survey records are all down in the Woods Building, Slater street; cannot get one building for all, 457. To control these departments there are chief clerks and telephonic communication; all letters from various branches have to be signed by Mr. Keyes, they are brought by one messenger and taken back by another; secretary's signature is quite formal; the chief clerk is responsible for his initials on each letter from his branch; personally signs letters to ministers, members, &c.; health of clerks suffer from overcrowding; department is not overmanned, 458. Statement of increase in work also of staff since 1900; no unnecessary work done, have a very careful system of registration; receives every week a report from every branch as to work done; increased immigration gives increased work; thinks there should be classification clerks, 459. Quite impossible in a department to get every man at the work of his class; promotion is not quick enough; is not under Superannuation Act; thinks abolition of that Act affects the individual, and does not add to stability of service; something in the nature of a pension is desirable; a system of pensions for the militia has been adopted, 460. Also for Northwest Mounted Police, and officials on Intercolonial Railway; there are about 400 people in outside service here in Ottawa charged to other votes; school lands are set apart as an endowment to the schools in Manitoba, Saskatchewan and Alberta; these lands are not given away but are held by the Dominion; sold by publication; interest of the school lands' fund goes to provinces; inspectors value these lands; minimum price is $7 an acre; they may value at $5,000 if conditions justify it; sold openly and provinces get the interest on the moneys realized; federal govern-

CORY, W. W.—*Continued.*

ment acts as trustee and the cost of administrating the lands is charged up *pro rata* against the three provinces, 461. Superintendent of immigration is a cautious man; bonuses are given in the case of British people and certain continental countries; somebody has charge of immigrant from his arrival till he is settled upon the land; foreign arrivals are in charge of people who speak their language; some travelling agents were dismissed for making improper charges on the immigrants; many of these agents are old railway men familiar with travelling; they get nothing but actual and necessary travelling expenses; officers should have a per diem allowance while travelling, 462. Kept constantly on the move; a detention hospital is one where immigrants are detained while temporarily disabled; quarantine station at Grosse Isle merely for small-pox; Dr. Page is officer at Quebec, and has three assistants; they have passed as many as 5,000 immigrants a day; first of all the second-cabin passengers are examined on steamship; third-class passengers are brought into a large room and pass before the inspectors and treated as the others; if suffering from disease he is taken to detention hospital and transportation company pays cost of treatment; if inspectors suspect immigrant is suffering from tuberculosis they ask him to step aside, 463. There are three inspectors, and immigrants pass along quickly, many not requiring minute inspection; inspection of immigrants is handled through Department of Labour in the States; every one entering in at United States ports is charged $2 a head; Canada charges nothing; United States used to levy $1 a head on people coming from Canada, but not now; there is a large expenditure in immigration service for printing pamphlets and leaflets, 464. Printing is done by independent firms quicker than at Bureau; newspapers get a certain amount of patronage; $90,000 last year was spent in United States; Rand & McNally, and Lord & Thomas do work that cannot be done in Canada; they have a very nice wall map which they frame for us and get out for possibly fifty cents each, this would cost in Canada five times as much, 465. The maps published in the United States are the maps the people want, they attract peoples' attention; our maps are up-to-date and turned out at lowest rate; $30,000 went to Streets, in London, for newspaper advertising; department advertises through Lord & Thomas in the United States; but in Canada advertising is done direct with the newspapers; have travelling agents and caretakers and interpreters, they wear a cap with a distinctive mark on it; part of staff in Dominion astronomical observatory are on civil list, rest on list of extra employees; some of our surveyors receive salaries, others go out under contract, 466. When they come back they present their returns; when men go out on surveys they are given letters of credit; surveyors are sent out every spring and return about 1st of December; personal bonds are given; would favour bonds in a guarantee company; land grant to an immigrant is at present 160 acres, but he must become a British subject before he receives his patent; people from United States must become naturalized, 467. Any one can take up land, occupy it, and continue to perform his homestead duties, but to get his patent he must be naturalized; additional land must be acquired from somebody else, it cannot be bought from government; lands are sometimes held for children in their eighteenth year, so they remain near their parents; a man with three or four sons over eighteen years of age may take up the four quarters of an even section, if they are available; they can live with parent and do their duties; under the Irrigation Act of 1898 where a man will undertake to bring water on semi-arid land and irrigate a fourth of it, he can buy the land at $3 an acre, he must irrigate at least 25 per cent of the land he requires; a surveyor wishing a contract applies to surveyor general, who reports to department how many contractors

CORY, W. W.—*Continued.*

he requires, and out of list of surveyors it selects the men the surveyor general thinks most suitable for work; if two men are equally qualified, the one recommended is usually employed, 468. Department selects land to be surveyed; he has to send in a monthly report of work actually done; he cannot go outside of lands in contract; work done outside of contract is not paid for; 10 per cent of contract is always kept back till work is completed and plan accepted by surveyor general; country is classified into prairie land, hilly country and heavily wooded country; department knows the kind of country and inspectors go round to see if work is done; process of selling timber limits; the one paying the highest bonus in cash gets the timber berth; to avoid abuses by speculators no one can get more than 50 miles at a time; if you refuse to put up any more timber limits, the people who bought the lumber berth simply have gold mines, they control the output of lumber locally; the settlers themselves would be the first to cry out if you refused to put up any more timber at competition; the land is not sold, only the timber on it; a ground rental is charged and so much a thousand feet, and buyer pays us a bonus over and above settled charges; every one knows what the specific charges are; stumpage is the rate per thousand paid on manufactured article, 469. They make sworn returns and inspectors go around and check up their books; they have no right to the land, any one can go on these lands and prospect for minerals; once timber is removed department can open it up for homestead; right to cut timber is for a year, but is renewable generally until timber is removed; department has the right to confiscate the timber if not renewed every year; there are what are called forest reserves, fire rangers look after them; every farthing that comes from sale of timber goes immediately to Receiver General; department does not go out and estimate timber on the berths, nor guarantees that there is a stick of timber on them; department does not put up timber in out-of-the-way places; an advertisement is issued by the King's Printer; the bidders are largely independent; buyers may possibly make a pool and get the timber for a mere nothing, but that was done when lands were sold at public auction; would be too expensive to send an officer out and put a solid value upon it, for our lands are separated and scattered, 470. There are hundreds of reckless speculators who buy berths they have never seen; every precaution is taken to get for public treasury the full value of limits sold; always sold to highest bidder; there is no limit of price for it is not known whether there is a sliver of timber on the land; timber areas are not in surveyed areas; in the northwestern country timber is not of a valuable character; in British Columbia the timber is more valuable; people who made fortunes out in British Columbia in lumber got their purchase money somewhere, because you cannot buy lumber for nothing; there is a lithographic office in connection with surveyor general's branch, and one at Bureau; would not be practicable to amalgamate nor put it under geographical branch, 471. Department takes bonds with guarantee companies for agents and sub-agents, also for agents who handle money in the Yukon and in assay office at Vancouver; these companies are either British or Canadian, no American ones at all; the annual premium is as low as 30 cents a thousand; government pays the premium; except in Macleod sub-agency there have been no defaulters lately; have an absolute system of check on returns, 472. Expenditure on Dominion lands is divided into capital and income; staff in Yukon is being reduced very materially; living allowances were revised two years ago, formerly they were $150 a month, now $125 for a married man and $100 for a single man; many people in Yukon break down from nervous

CORY, W. W.—*Continued.*

trouble; officials have no travelling allowance now, if a man has not been out of Yukon for three years he is entitled to nine weeks' holidays with pay, 473. Have still a partial supervision over affairs of Yukon Local Council; government there consists of six appointed members and five elected; population is decreasing, production of gold also; there was a practice up there of using revenue to meet contingencies of office, that was stopped; gross receipts of agents are deposited in bank, and drafts are made for expenses; thinks all the people in outside service in Ottawa should be included in department subject to Civil Service Act; and that all could very well be brought under the present classification, 474. Does not consider there is much pressure to appoint people to positions; when a clerk is wanted a number of those recommended are called up, their experience and educational attainments asked for, and then the selection is made; political appointments are not always the best nor are scholarly attainments either; a political appointment often turns out to be an excellent official; examinations are not conclusive; if there was a strict period of probation and applicants were accepted or rejected on their merits, it would change conditions, 475. Has frequently dispensed with services of unsatisfactory clerks, and once removed they are never taken back; though the ministers are from west we have not had a dozen western men appointed to department here; thinks the staff is very efficient; the great difficulty hereafter will be getting men to take the place of those who must necessarily disappear in a short time; so many women have come in that we have not got efficient and well qualified men to take the higher positions; men must be admitted at a higher scale of salary than at present, 476. There are not enough first-class clerks, second-class clerks or chiefs; other departments object to transfers of their clerks to overcome the difficulty; the greatest difficulty is with technical officers, the surveyor general loses twenty or thirty men a year, after they have passed their examinations, some railway company or corporation offers them twice the salary and they go; would be better if one had the power to give a valuable man a considerable increase of salary; government cannot compete with these outside corporations in matters of salary, 477.

Transmits statements in detail showing the number of officials employed in this department at Ottawa, and the sums paid to each for fiscal years ending June 30, 1892, and June 30, 1906, respectively, 478-491.

COULTER, Dr. R. M., Deputy Postmaster General, 773.

Has been Deputy Postmaster General since 1897; had on June 30, 1906, at headquarters, including temporaries, 366 employees, as against 269 on June 30, 1892; post offices in same period increased from 8,200 to 11,100; letters ran up from 102,000,000 to 323,000,000; the revenue increased from $2,600,000 to $6,000,000; expenditure from $3,300,000 to $4,900,000; rate reduced from three to two cents; in United States they have a deficit of $16,000,000; Money orders sent abroad have increased from $919,000 to $2,178,000; money orders issued have run from $13,000,000 to $37,000,000; money orders paid from $12,000,000 to $22,000,000; total business of money orders from $25,000,000 to $70,000,000; is giving a service now as far as Fort Macpherson, but it does not pay, nor does the Yukon, 773. Uniforms include great coats, boots and caps; two each year, one for summer and one for winter; stamps issued run from 151,000,000 in 1892, to 387,000,000 in 1906; altogether there are about 2,300 employees, or nearly one-third of the Civil Service; has a salary of $4,000; has been to postal conferences held in Rome and Washington; has had no holidays for ten years, 774. All employees have passed the Civil Service examinations; as far as his experience in department goes, any

COULTER, Dr. R. M.—*Continued.*

viciousness in patronage, if such exists, has been modified by the character of the ministers of the department; has never had a man appointed that he did not approve of or whom the departmental officers reported as unfit; under present conditions where prizes outside are greater than inside, men are not inclined to enter the service, and there is an increasing difficulty in procuring men of the right calibre; would not make a man a first-class clerk unless he considered he could take charge of other men and plan and direct work of his branch, 775. Every clerk comes in on probation, if found incapable is unhesitatingly dismissed; age limit is thirty-five; it is no career for a young man; they begin at a salary of $500, with yearly increase of $50; the difference between a controller of the railway mail service and a superintendent of railway mail service, 776. The latter must always be promoted from service; the controller must be in the service, but not necessarily in the railway mail service; his salary is $2,500; postmasters and post office inspectors are often politically appointed, but there have been very few under the present minister and his predecessor also; new postmaster at Kingston, was a successful business man and certainly shows signs of making a good postmaster; thinks inspectors should be made a matter of promotion solely; in the last ten years has lost nine or ten first-class clerks who would not stay in the service; in the west in the outside service we are losing good men constantly, 777. Though the Act gives minister power to promote or reject, yet the experience is that in most cases the deputy is consulted in any promotion; there are a good many transfers in department; the smaller departments get some of our best men; thinks the increase of $50 a year is no good to any man; it should be $100 a year till it reaches $700 or $800; has sometimes stopped a man's increase and reduced a promotion, 778. Would approve of getting special votes for a better salary than $500 on first entering; custom is to make increases on the first of each quarter; all absentees in both inside and outside services are reported, and deductions from pay are strictly exacted if absences cannot be accounted for; presumes all appointments are made through patronage, but no one is taken on unless there is work for him, 779. Each man gets his three weeks' holidays; thinks the holidays are given for the benefit of the department; there are frequent suspensions, but mostly for personal misconduct; once in the department political considerations are excluded altogether, as our records show; after suspension, firmness and kindness reform a man; no dismissals for political reasons, except a few small postmasters; salary of postmaster often depends on revenue; there is an attendance book in each department, 780. The chief clerk sees that every one is at work, the conduct of the staff is very creditable; it is a working department and has to be; office hours from 9.30 to 4.30 p.m.; there is always some one left in department at lunch hour to give information; many of the men work ten or twelve hours a day ; salaries of inspectors and their assistants increase $50 a year for six years, and $100 afterwards to maximum; inspectors when travelling receive actual expenses; English system of a little less salary and more travelling expenses was good, but their lower salaries are a little better than our best; safe to say an inspector is $300 out of pocket, 781. The old system of a per diem allowance was abused, but thinks it possible to devise a scheme that would not admit of abuse; railway mail clerks receive $400 and mileage, half a cent a mile for every mile travelled in the car, and an additional half cent for every mile travelled between 8 p.m. to 8 a.m.; you can trace a registered letter from the time you get a receipt to the time the person to whom it is addressed receives it; a senior railway mail clerk travelling on a train gets $1,200 and an average mileage of $300 or $400;

COULTER, Dr. R. M.—*Continued.*

these railway mail clerks have about the same nervous wear and tear as the railway conductor, 782. Has found it to work well to change a clerk in the office to go on road and vice versa; thinks if assistant postmasters in smaller offices are overpaid yet in large offices where the responsibility is much greater the work much more arduous, hours longer are receiving same pay; if these men in the larger offices are not underpaid then most decidedly men in the smaller offices who are getting the same amount are overpaid; absurd that assistant postmasters of Montreal, Toronto and Winnipeg be paid the same as assistant postmasters of the smaller offices; patronage is used to get a person appointed, but once in all promotions are made on seniority and merit, and stops further pressure; a junior clerk in a city post office can go up to $1,200, coming in at $400 as a fourth-class clerk, by annual increases of $50, reaches maximum of his class $700; is then promoted to class above with same increases to $800; then to class above $1,200, 783. First-class clerks are men put in charge of their employees, who plan and carry out the work; many men of merit are rapidly promoted; in railway mail service no distinction now between first, second and third class clerks; an inspector of a division of five or six counties and his assistant is promoted from the office; the employees of department are not out of proportion to increase of work; all are hard at work all the time; thinks abolition of superannuation was the greatest blow ever struck at the service; may say that to-day we have men who are helping to carry the burden of the department on their shoulders, men with ability, whom we could not afford to lose, and the only reason we are able to hold them is that they are on superannuation list; new officers coming in go out immediately on receiving better positions outside; thinks superannuation should be restored; all our officers are in same building except savings bank branch and the dead letter office, which are in the city post office building, 784. Does not get so many desirable men in service now as formerly; men and women work together; for certain branches of our work women are good up to a limited point; they require the privileges of their sex and you have to give them to them; letter carriers enter at $1.25 a day for a month, then $1.50, after two years $1.75, after two more $2, after two more $2.25; then they are allowed two or three weeks in addition with a bonus of $20 at the end of year, if regular and efficient; they get tips and Christmas boxes from public, though it is against the rule; qualifications are ability to read and write and work smartly; after eight years' service they get $726 a year; thinks it would be well to start them at $1.75; if letter carrier shows ability he has a chance of being appointed a clerk; pay is same in every city, 785. Packers and sorters start at same pay as letter carriers, but have no uniform; system of letter carriers is extending to all towns of 12,000 people and $20,000 of revenue; in smaller towns postmasters are allowed 40 per cent of revenue and they engage their own staff; the revenue and business done decide when a post office becomes a city post office; Pontiac, owing to contiguity of territory is under supervision of inspector of Ottawa district; there is a check on stationery supplies; there is an official called controller of postal stores and has a regularly organized staff watching the prices of everything, 786. Does not know whether stores, more than general accounts, are ever audited by Auditor General; stock taking is done yearly; formerly hundreds of thousands of depositors' pass books were unprotected, but now there are sheet metal casings for all our records; the books are kept in a fire-proof vault running from top to bottom of building, and are absolutely safe; though it would be convenient to have all mapping done in one department, yet in this department everything is wanted in a hurry and therefore would like to keep everything in our own hands, other-

COULTER, Dr. R. M.—*Continued.*

wise they may cause us great delay; would not object if the work could be done as soon as it is wanted, 787.

Statement showing number of employees in Post Office Department, inside service, on June 30, 1892 and 1906, divided into classes, and total amount of salary paid, 769. Money order transactions; orders issued 1892, 1906; orders paid 1892, 1906; Post Office Savings Banks, 1892, 1906, 770. *Postal Stores.*—Receipt and issue of articles of postal stores for fiscal years ended June 30, 1892, and June 30, 1906, 771. *Postage Stamps.*—Statement showing number of mail services on stage routes, and cost thereof, in existence on June 30, 1892, and June 30, 1906; statement for Civil Service Commission *re* mail service by railway and water, 772.

COUSINEAU, PHILODELPH, Electricien, Lachine (lettre), 1239.

Travaille au canal de Lachine aux reparations et entretien de la ligne électrique et souvent comme lampiste; il ne reçoit que $45 par mois; les autres lampistes recoivent une allocation de $10 par mois; que depuis 1er mai il a agit comme lampiste sans allocation pour ses dépenses de transport; il demande $10 comme les autres; aussi comme lampiste il travaille les dimanches, desirant une allocation raisonable pour ces jours, 1239.

CRATE, A. E., Stamper and Sorter, Toronto Post Office, 1014, 1019.

Some of staff have worked for a number of years at night, and think they should receive higher pay for their work, and that a man working at night should not be worked as long as he would in the day, 1014. Wishes to recommend that number of classes be reduced to three; there is a difficulty that in any one of these present classes promotion can be deferred an indefinite time, as there are so many subdivisions, or stopping places that you cannot get past them; the clerks also want an equitable system of promotion based on qualified seniority; implies that at present there is an inequitable system, there is too much room for a person to be overlooked; there are a good many men in favour of restoration of Superannuation Act; the main request, however, is an increase of salary, 1019.

CREIGHTON, D., Assistant Receiver General, Toronto (letter), 221.

Since May 10, 1895, bank agencies in Ontario have increased from 264 in 1895, to 788 in December, 1906, now almost 1,000; from May 10, 1896, to May 10, 1907, increase of business in office has been as follows: New one and two dollar notes received from Ottawa, 1895-6, $1,205,000; in 1906-7, $5,638,000; total increase of business of office is from $12,840,293 in 1896 to $68,050,737 in 1907, 221. Toronto feels the increased cost of living more than any other place; remuneration in an office like this should be on a scale commensurate with the importance of the business transacted, and the great responsibility of handling large sums of money; officer in charge and those associated with him should be paid on a scale at least equal to the main office of our leading banks, 222.

Memorials, &c., 111, 145, 163, 165, 169, 172, 173.

Daoust, Joseph A., Asst., Weights and Measures, Montreal, 360.

Twenty-seven years in service, sixty-two years of age; appointed as assistant inspector at $500, 359. Now receiving $800; this is highest salary of an assistant in Montreal; hours of service 9.30 to 4.30 and often later; has worked every day in the week for twenty-one years with no increase in salary; his net salary is $65 per month; has seven of a family; out-door work being good for his health; pays $18 per month for rent, formerly $13; has lived in same house for twenty-five years and has been notified to pay $20 next year; is obliged to economize and sometimes has not much heart to live, has one son earning money. 360. Was a lawyer before entering service, but was sickly and doctor ordered travel; first appointed to inspect Terrebonne division, remained eight months, then sent to Montreal; work is healthy, having to move about inspecting factories; head office on St. Gabriel street; a petition concerning small salaries was sent to Mr. Templeman, also to Mr. Brodeur; collectively a petition was sent to Mr. Brodeur and also to Mr. Bernier; some years ago collectively a petition was sent to Mr. Bernier, 361.

David T., Guardian at Lachine Canal (letter), 1237.

Is guardian of the electrical station of Mill street, on Lachine canal; has served over one year at $55 a month, including Sundays; the ever increasing cost of living is a reason for an increase of pay; also for the employees in his department, 1237.

Davies, F. W., Stamper and Sorter, Toronto, Post Office, 1019.

Does not think a 25 per cent increase for lower grades is sufficient, it being smaller in proportion than 15 per cent in case of first-class clerks; recommends grade system; there are six stampers and sorters; recommends that $600 be minimum on starting; that married men, after three years, should receive $800; they are steadier than single men who easily get mad and go; the expenses of a married man are much greater and therefore likelier to stay; would recommend when a clerk can establish to satisfaction of postmaster that he is in actual need of same he should be given privilege of drawing on retirement fund to the extent of two-thirds of amount to his credit, thereby saving interest on borrowing from outsiders; certain clause in Civil Service Act is the cause of so much unjust promotion and favouritism; under it the authorities can practically do anything they like, they can suit themselves, 1020.

Dawson, Dr. S. E., C.M.G., King's Printer, 585.

Has been King's Printer since November, 1891; since then staff has increased from fifty-one to fifty-eight, and expenditure from $42,000 to about $60,000 in salaries; amount of business done has doubled from $574,000 to $1,107,000, while I.C.R. work is about $80,000; receives salary of $4,000; there are three chief clerks, one first-class clerk, fourteen second-class, eleven junior seconds, messengers and one caretaker; eight temporaries who are either technical officers or have passed the Civil Service examination; the technical men were needed, 585. Needs a greater number of packers than are usually found in the service, for nearly all the distribution for government is done here; there are 509 operatives in manufacturing department; thinks there is unnecessary printing done, e.g., reports are too bulky, much printing ordered by the House over which he has no control; there are eight *Hansards* printed, three for House of Commons and five for Senate, English and French; of the 509 employees 124 are women, who are employed in the bindery, folding and stitching, sewing blank books, collecting of books, perforating, paging and gathering; can get as many printers as he wants; most of the patronage

Dawson, Dr. S. E.—*Continued.*

comes from the local members and political institutions, 586. When employees come in they remain there permanently, and it is only the vacancies that the patronage touches, as they think they should be consulted; operatives are paid the highest rate current in the market; the day's work consists of eight hours; they are really paid by the hour; during session there are not more men, but they work night and day and extra hours, have no room to put more men on, as room is limited, men have to work extra hours for which they are paid an extra percentage; when session is over and reports brought down the staff is not reduced, for the amount of work is greater than the staff can compass, the overflow goes outside, 587. But there is not the same drive, the extra hours and night work are stopped and less work goes outside; there has not been a lay-off in the Bureau for eight years; staff is practically constant; clerks and foremen have leave of absence; has to sign a statement that all the hours have been served; there is a check-taker who takes all the time of the operators, but clerks sign attendance book; lunch time is practically one hour; Superannuation Act does not apply after 1895; has always a difficulty in getting capable men, often has to take a raw, untrained youth and put him in the lowest place; the abolition of Superannuation Act has been mischievous to the Civil Service, it prevents bringing in men of capacity, since there is no provision made for their retirement; all nations in Europe are striving to bring into operation old age pension systems, all large institutions are instituting superannuation funds, the government of Canada is almost alone in having none; does not see how they are going to keep up service at all; some of the operatives were suspended either for drunkenness or leaving work too soon, but there is a tendency to get reinstated, 588. Has promotion examinations, and the King's Printer recommends the promotion; the grades in the department are each doing their proper work; operatives do not claim annual increments in salaries, they get operative prices; they have increased from $12 a week in 1892 to $15 in 1906; thinks the increased cost of living a valid reason for increase of pay, 589. There is more luxury and you cannot leave the labouring class behind; they are entitled to a certain proportion of general advancement of comfort and luxury; does not think the increase of wages from $12 a week to $15 an extravagant increase; thinks that if government returned to old system of contract the work would not be done better, cheaper, or quicker; thinks the average printer is necessarily a man of superior intelligence; would have to about double the Bureau in size to put in a lithographing establishment to cover all government needs; thinks it would be conducive to economy and efficiency if all the officers engaged in mapping were gathered together, 590. That is done at Southampton in England; the Bureau has nothing to do with the printing of stamps or currency; it is done through the American Bank Note Agency; all bills for work done outside pass through the Bureau audit; the supplies of stationery are got from manufacturer in every instance; most is made in the country, but a good deal comes from England and United States; the printing paper is all made in this country; when importing the duty is paid now, but not formerly; prefers to buy Canadian paper when it can be got; they are making very good paper in Canada; if a department says it needs English paper of a particular kind it is bought; high-class papers now used most extensively in the service are made by Canadian mills, 591. High-class writing papers are not mixed with wood pulp, but printing papers are; wood pulp has superseded rags, for it is much cheaper; the paper lasts long if pulp is boiled by the soda or sulphite process, thoroughly cooked and cleaned; if of ground wood it is rejected at Bureau; manuscript is returned with proofs to department sending it; records of copy coming in

DAWSON, DR. S. E.—*Continued.*

and when printing went out are kept at Bureau: offices are more fire-proof than formerly, nearly all the wooden shelves are replaced by steel shelving; stores are audited annually by the Auditor General; feels very strongly the necessity of a retiring allowance; thinks when an expert is appointed at middle or advanced age it is quite proper to add a number of years to his service; points out that when a man passes thirty or forty years of age and is brought into government service as an expert, it is right as it is allowable on his retiring to add ten years to his service; the question of patronage is a trouble at the bottom of the Civil Service; another difficulty met with lately is that a temporary clerk cannot rank as second-class no matter how capable he is; he must begin at bottom on $500 a year; this is wrong; would prefer the clerk to come in at the salary he is getting. 592. Has a case before him of a man who cannot be promoted without being examined, he cannot be examined because he has not been promoted, cannot examine him because he is not in Civil Service, cannot put him in Civil Service because he has not been examined; the man is an exceedingly capable man; necessary now to take youths into the service; cannot get the right kind of person to come in at $500; would like to have an examination of all operatives coming into Bureau; compositors to be examined by practical men, binders by the foreman and other experts; this would obviate a good deal of mischief from political patronage; memo. showing number of staff. 593.

DECARY, A., Resident Engineer, Quebec, 1159.

N.B.—Original evidence was modified by witness, hence in some cases the original answers are printed as well as revised evidence.

Is in charge of Quebec district; has a staff of five; entered service in 1899. *First answer:* Started at $2.50 a day, then $3, for about three months after entry; from thence until 1905 did not receive any increase, till this district appointment at $1,800. *Revised answer:* Began at $2.50 a day and living expenses for the first three months as a trial, then $3 a day and living expenses, this made his salary $1,095, or practically $1,100 a year and living expenses, this living expenses amounted to $500 or $600 a year, thus making initial salary $1,650; new engagement in 1905 in charge of Quebec district salary was fixed at $1,800 without living expenses, with promise of $2,000 in six months; that promise was not made good; at question, they jumped you from salary of $1,000 to salary of $1,800. *First answer:* Yes, they jumped me from an inferior position. *Revised answer:* No, was engaged for a period of five years as assistant engineer at fixed salary of $1,100 plus living expenses, averaging $550 a year, or forming a total salary of $1,650; then was re-engaged and put in charge of Quebec district at salary of $1,800, without living expenses; receives now $2,000. To question: In eight years you have gone from $2.50 a day to $2,000 a year? *First answer:* Yes, but the man replaced here received $2,500. *Revised answer:* No, it cannot be taken that way, there are two different engagements to two completely different positions with two different salaries; has complete charge and superintendence of all works and absolute responsibility of all money expended for engineering work by Department of Public Works in district of Quebec, 1160. His duties are to direct and superintend construction and repairs of wharfs, piers, breakwaters, dams, wiers, bank and beach protection works, the improvement of harbours and rivers by dredging, the hydrographic and topographical surveys and examinations required for the preparation of plans, reports, quantities and estimates; the control and absolute responsibility of expenditure of all moneys voted for works in this district; in other words the construction and maintenance and extension and repairs of wharfs and piers; to question: you now get $2,000,

DeCary, A.—*Continued.*

and ten years ago you began at $912.50? *First answer:* Yes. *Revised answer:* Began at $1,100 plus living expenses, thus making his initial salary $1,650 a year without any increase during period of first engagement; resigned in January, 1905, and was afterwards re-engaged in a different and superior position at $1,800, without living expenses, with promise of $2,000 after six months; his salary was put at $2,000 two years and three months after his second engagement, 1161. An order in council was passed two years ago fixing salaries of all district engineers at minimum of $2,000, with annual increases of $100, up to $2,700; to question: Then in seventeen years your salary would be increased from $900 to $2,700? *First answer:* Yes. *Revised answer:* It cannot be taken that way, entered at $1,650, as stated before, did not receive an increase for five years, then resigned; afterwards was engaged in another position with initial salary of $1,800, and in 1904, ten years after appointment, he may gain maximum salary of his position. To question: Is there anything else you would like to tell us? *First answer:* You seem to think I have received a big increase, but position is but the same as when he was only an assistant engineer at $2.50 a day with absolutely no responsibility. *Revised answer:* Transcontinental Railway Commission pay their district engineer $4,500 a year; he attends to construction of railway in his district as we do. To question: There will be the position of resident engineer for somebody to look after the work you are doing? *First answer:* Yes, and that position will remain there all my time. *Revised answer:* Very likely, 1162; on staff of Transcontinental, assistant district engineers are paid $3,000, division engineers $2,400: witness has a district 215 miles long, with assistant engineers; may be a difference in kind of work to be performed, to build a line an engineer would have to localize a line, determine the amount of cutting and filling and locating places where railway will cross the river: but to build a wharf you go to the locality, make hydrographic and topographical surveys to localize the best place for a wharf; then prepare plans, specifications, quantities and estimates, test and ascertain nature of foundations, direct and supervise construction, 1163. For a wharf, a petition comes from municipality to minister; is passed to deputy, then to chief engineer, then to local or district engineer; no wharf asked for in his district where there is no traffic; sailing navigation is much more dangerous than steam, and must be given more facilities and protection; his only grievance is that the salaries paid to district engineers and their staff are not sufficient nor in proportion to the importance and responsibilities of their duties; neither Civil Service Act nor Superannuation Act take any cognizance of them; they have no official status, pensions, superannuation, or retiring allowances to look forward to; desirable that the engineering service of Department of Public Works be paid proportionately to their work and responsibilities, and should have and enjoy all the rights, privileges and responsibilities and recognized membership in the Civil Service, 1164.

DeCelles, Dr. A. D., General Librarian, 1.

Member of Board of Civil Service Examiners since board was started; two examinations a year; regulations submitted to government; remuneration; is also Librarian of Parliament; duties take up great deal of time, 1. Board has regular office: did not in 1892 approve of competitive examinations and is still of that opinion; in England and United States the highest candidates were ambitious for higher positions than the poorly paid ones, and were consequently dropped from the list; also a man who has obtained the highest marks is not always the best fitted; if candidate fails in one subject he may try again, 2. About one-fourth try a second time; superintends examinations

DeCelles, Dr. A. D.—*Continued.*

in Montreal, Dr. Thorburn in Toronto and Mr. Glashan in Ottawa; the board is represented by sub-examiners in other places; the number of lady candidates, during the last five years has been superior to that of men; some departments employ a large number; at examinations there is not much copying, but there is great danger in the personation of candidates; three cases of personation during the last two years, 3. Every candidate is subjected to examination; those holding certificates from Royal Military College, Kingston, or certificates of Bachelors of Universities are exempt; by section 14 of Civil Service Act a person who personates another, or allows another to personate him, is on conviction liable to imprisonment for six months or to a fine of two hundred dollars; several instances of personation during his experience of twenty-five years; has nothing to do with the selection for employment of passed candidates, though has been asked to point out a man well up in a certain branch of the examination, 4. Three hundred and forty-nine candidates passed successfully in November, 1906, of whom 193 live in Ottawa; they are published in alphabetical order, but the government gets a list of the candidates with the number of marks gained by each; these examinations cause young men to study more than formerly; the questions prepared every year are afterwards published in pamphlet form; the questions are also found in the Annual Report of the Civil Service examination in England, so by so studying a person will go through the history of England, the United States and Canada, 5. Women are generally employed in copying, typewriting and shorthand; the latter being their best point; we require of candidates testimonials as to character from a clergyman; in England three testimonials are furnished, one from a clergyman, and two from friends, justices of the peace, &c.; we might increase the number of testimonials, but would have to have sanction of government; a medical certificate is also to be presented; the law is the same for both sexes, 6. We require also a certificate of age; one cannot go through the entrance examination before the age of eighteen, and the age limit for the inside service is thirty-five; the subjects for examination are grammar, arithmetic, history and composition; does not find that the French are better handwriters than the English; in province of Quebec the writing is not as good as in the other provinces; optional subjects do not count for anything now; there is in Ottawa much coaching for the Civil Service, 7. 'Catch questions' are not numerous; large questions have been given for quite a number of years; a few months ago suggested a re-arrangement of questions to government; suggested three scales of examinations according to the work of the department in which the candidate intends to enter; the questions would be the same, but the board would not exact the same number of marks to qualify for employment in the different branches; we formulate our examination papers and send them to the Printing Bureau; no papers get out; we take the greatest precautions to have the papers printed on the same date; we count the number of papers that are sent to the Bureau and those papers and even the type set up are put under lock and key, 8. The number of sheets are counted and the papers are printed in either language; among the applicants are some who go in for college courses and sometimes there are lawyers; some of them come every year, lawyers and students-at-law; some of the professions are overcrowded and people often get discouraged and pass our examinations in the hope of getting employment; we have given certificates to men who hold university degrees as Bachelor of Science, of course such candidates pass without examination; a French-Canadian may request the papers to be printed in his own language, we provide for that; if on the list of candidates there are no French names then we have the papers printed in English only; would

DeCelles, Dr. A. D.—*Continued.*

be desirable that candidates from the different departments should pass a promotion examination on the same subjects; a deputy in response to political pressure and to his own desire might simply examine them in the duties of their office, the papers being prepared by himself, thus annulling our examinations altogether; engineers come before a special board and have to have certificates from some board of examiners, 9. They are called experts and belong to the Civil Service; we pass the candidates and the government appoint, that is the minister on the recommendation of the deputy head; probation of six months establishes that the man is right; board forwards to the Secretary of State a list of successful candidates with their respective marks, 10.

Desjardins, C., Chief Clerk, Public Works, Montreal, 1148.

Has control of the elevator men and pays them; there are fifty-seven men on elevators and through the buildings; has an office, but no assistant; does the correspondence; gets $90 a month; has been eleven years in the service; no fixity of tenure, but nearly all are paid by the month; would like to become the same as any other public servant and enjoy benefits of pension system; the men paid by the day are temporaries; there are about twelve places here under the Public Works Department and three workshops; the charwomen start at 4 p.m. to 9 p.m., receiving 75 cents a day; does not think pay is sufficient, 1148-1149. Petition of fifty-one signatures of Public Works Department in city of Montreal, asking government to establish a system of superannuation or old age pension fund, and that time already served may be counted in computing their period of service, 1149.

Dixon, Joseph, Clerk, Winnipeg Post Office (letter), 1059.

On present salary cannot make ends meet in providing for a wife and three children; monthly pay is $48 less five per cent retirement fund; out of that pays $25 rent; wood at $9.50 a cord, and everything else dear in proportion; dreads coming winter; was helped considerably last winter by postmaster; had just the one suit, and children were poorly off; wishes very serious consideration, 1059.

Dominion Arsenal.—See *Memorials*, 759.

Dominion Police.—See *Sherwood*, 548. *Kennedy*, 556.

D*fl.5, P(98|3æ, Immigration Agent, Quebec, 505.

Immigration agent for over fifteen years, at $1,800; there are twenty-one on the staff: has been over thirty-eight years in service; four clerks in the office, paid $2.50 a day the year round; Mr. Anderson is interpreter at $800; about 135,000 immigrants arrived this year; has a strenuous life for about eight months; work accumulates in winter and papers to be put in proper shape the rest of the year; with nearly the same help is doing six times the work of ten years ago; all steerage immigrants land at Quebec; it takes about ten or twelve hours before a shipload of 1,000 can be got through; two trains for each ship; 2,200 is largest number on one ship, 505. There are seven or eight interpreters; notified that a ship has passed Father Point and will arrive between four and five o'clock in the morning; the whole staff is present on arrival of vessel; sleeping accommodation in sheds for females only; there are fourteen rooms with double beds in each; every attempt is made to make the immigrants comfortable; instructions to matrons are to see that no

Doyle, Patrick—*Continued.*

person in building is allowed to be hungry, the ship has to provide for them; if one is found physically defective or likely to become a public charge he is put aside and reported to Ottawa, if an extreme case he is deported; the lowest salary of any other agent is $2,200; there are six federal officers here, of whom two get $2,200 each, one $2,500, and another $3,000, 506. His long and valuable experience entitles him to a higher salary; has got as good clerks as thirty years ago; when more help is needed the department looks into it; were forced to wear uniforms; on the caps each one had his own title; immigrants on landing bring their hand baggage only; the heavy baggage is taken on the ship and brought on lorries to our building where it is spread out, each one claiming his luggage and has it inspected by Customs officers; the railway cars are then backed down, each one of which is labelled; the people are kept back till each one is loaded, 507. Every sympathy is shown the immigrant on his arrival; broker changes foreign into Canadian money and is responsible for any mistake; in summer crowds witness the arrival of ships; the immigrants arriving now much superior to those arriving formerly: a few societies are sending out people; English-speaking immigrants are always in the majority; out of 115,000 who arrived this summer not 11,000 went to the United States; contractors visit the sheds to secure labourers; we cannot supply the labour market; if a farmer wants to make a contract with an immigrant, we make a price for him, 508.

Memo. of employees of immigration office, Quebec: Names, salaries, years of service; government departments in Quebec city, 509-510.

Doyon, J. A.—See *Civil Service Association.*

Drolet, Pierre, of Lachine Canal Staff, 1214, 1216, 1222.

Asks that Commission recommend payment at beginning of month; in the office, engineers and other employees are generally paid on the third of the month, and the poor workingmen have to wait to 14th or 20th, 1214. Is employed at bridge No. 2, from May to December, seven months at $45 a month; gets extra pay at 15 cents an hour on Sundays; during the other months if they can get work they take it; is an electrician, but could not get work when canal closed up, it being too late, 1216. Formerly staff was paid for working season, and sought work elsewhere; gets same salary now as on appointment thirteen years ago; thinks they should have a rise in wages during the seven working months to enable them to live the other five, 1217. Asks for shelter on the bridges; should be protection at centre of bridge for the man who stands on the bridge, 1222.

Drysdale, William, Montreal Customs Staff, 114.

Assistant appraiser; appraiser's position is responsible and salary inadequate; in book trade for thirty-two years; has technical knowledge of cost of books; is fifty-six years of age and knew there was no superannuation; appointed at $1,000, now receives $1,300, 114. Having technical knowledge expected maximum, 115.

Duchesne, P., Bridgemaster, Lachine Canal, 1221.

Wants gates for the bridges as at railway crossings; it is dangerous for people when the bridges are open, and gates are necessary to prevent accidents, 1221. In cold and rain would ask for a small shanty; there should be a small shelter at each end of bridge, 1222.

DUGAL, TELESPHORE, Fireman, West Block, Ottawa, 1136.

There are three engineers and three firemen in West Block, but only one engine, they only fire in the winter time, but one boiler is kept going all summer for hot water; receives $50 a month from Public Works Department; is not a qualified engineer; is there now nearly fifteen years, beginning at $37.50; it is pretty hard to live on present salary; work in summer is lighter, but works twelve hours a day; in summer they act as watchmen in the other blocks, 1136. Is stationed at building on Queen street in summer and West Block in winter; thinks, having regard to rent and other necessary expenditure, $50 a month is not sufficient, 1137.

DUPUIS, A. M., International Money Order Exchange Office, Ottawa, 827.

Arranges the exchange for all money orders payable out of Canada; this office is the only one sending foreign money orders for all the foreign money order business; has nothing to do with local money order branches; all the money orders that come from the different post offices, country or city, are converted into the currency of the country in which they are payable, and send them to the country indicated where they are drawn upon; Mr. Larivière is the chief officer; office was formerly in Montreal, but was transferred here last fall, with six clerks; our duty is to make the exchange on the money order; and each clerk is held personally responsible for the correctness of his computations, 828.

DUTRISAC, JOS., Messenger, Post Office, Montreal (letter), 1151.

Expose que la responsabilité attachée aujourd'hui à ses charges devient de plus en plus lourde, que les affaires du gouvernement augmentent vu qu'il faut être au service de plusieurs ministres lorsqu'autrefois je n'en avais qu'un attitré; que le coût de la vie ayant doublé il espère qu'une augmentation lui sera accordée, 1151.

Memo.: Solicitent une augmentation de salaire parce que le coût de la vie s'étant accru de 50 pour cent depuis dix ans, et que le salaire actuel de $1.50 par jour est insuffisant pour le maintien d'une famille; les corporations municipales et entrepreneurs payent leurs employés de $1.75 et $2 par jour; et que leur salaire aurait pour base le mois et non le jour; enfin que ce salaire soit fixé à pas moins de $50 par mois, 1152.

Recalled: There are two messengers especially appointed to attend to Dominion government rooms, witness being one; and is chief over the others; thinks, therefore, should dress a little better than the rest; ran the elevator for five years, but not now; and has to live on a little higher plane, 1154.

EMPEY, M. M., Letter Carrier, London, 960.

Has heard of letter carriers doing clerks' work in office, yet graded still as letter carrier in London, 960. Letter carriers in Toronto, Hamilton and London practically work the same number of hours, 962. Submits memo., 976.

ENRIGHT, THOMAS J., Fireman, Toronto, 1172.

Produced a statement on behalf of several classes of employees in public works, Toronto; over whom Mr. Hamilton is practically superintendent; two watchmen who put in their full time, and one special one who works on Sundays and holidays; twelve cleaners, over thirty in round numbers; all are paid by the month the year round; pay-cheques come through Mr. Hamilton, 1172. Predecessor got $550 from one department, $100 from a second, $120 from a third, and $128 for supplying clean towels; he had also a house, fire, and light; in changing position to preventive officer he got $250 in lieu of a

ENRIGHT, THOMAS J.—*Continued.*

house; the fireman gets $60 a month, elevator man $50, 1173. Among cleaners, one or two of them have been reduced and still retained in the service, 1175.

Memo.:(1) Mechanical staff at Toronto: an engineer, $70; assistant engineer at $60; six firemen, $55; all buildings are steam heated; at armouries are two firemen, one at $60, the other $55; last building is heated with hot water; in summer staff is on repairs and cleaning; government has always received the benefit of the services of high-priced workmen at fireman's wages, e.g., whole interior of Union Station and examining warehouse has been painted by the staff; in winter these men are on duty seven days, and are only entitled to one week's holiday; as cost of living has so increased, should be some corresponding treatment as has been granted to officials in Customs and other departments; average rate of pay is greater outside of government than in it; (2) cleaning staff: twelve men working nine hours each day or night, receiving $45, no overtime is paid for, are docked for sickness; have one week holiday; they ask for $50 and an eight hour day; that all in service over six months be made permanent, as employees of Public Works Department, and not at will of H. E. Hamilton; (3) watchmen: two in number, put in eight hours a day for 365 days at $50 a month; each man puts in seventy-eight hours a year extra without pay; get one week holidays; cost of living has greatly increased more so in Toronto than in other cities; ask for same holidays as in other departments, 1177-1178.

EUSTACE, JAMES, Bridge Tender, Burlington Canal, 1179.

Has been for eleven years bridge tender for Burlington canal at $1.50 a day; for eight and a half or nine months period of navigation; no revenue from the canal; is only canal under Public Works Department; thinks they should get an increase of pay according to increased cost of living; there are four employees on canal; too cold in winter to do repairs, though what repairs are done are done by staff; bridge has been floored once in eleven years; has nothing to do between seasons; Burlington Beach is a summer resort, it being expensive to live there; is about twelve miles from Hamilton; was ordered to do outside work on account of rheumatism; swing bridge worked by electricity; can repair battery if out of order, 1179-1180.

EVANTUREL, G. E., Post Office Staff, Quebec, 953.

Superintendent of office, graded as second-class, salary $1,200, going up from $800 by annual increases of $50; has the title of superintendent, and the responsibility of assistant postmaster, without receiving a cent for either; in Montreal they will take a clerk who is in charge and give him a first-class, and push him on; if a man is in charge of an office he is generally paid more than those under him, 954. His senior is not much listened to by the clerks, the assistant postmaster chooses the man he thinks most suitable for chief over the office, and being such should receive higher grade and higher salary; is far from satisfied; they are not treated like other clerks in Civil Service: has to pass an examination when others do not, and because of deficient memory fails and is blocked, on a question about what postage would be on a letter to an island in the middle of the ocean; questions on duties of office are like questions put to a lawyer which he cannot answer without referring to his book; was in money order branch some years ago, one evening was $11 in error, made it good, discovered error, and proved it, they promised to refund money, has not got it yet, though it happened ten years ago, 955. Pay stops during sickness; though regulations have to be strict, yet this

EVANTUREL, G. E.—*Continued.*

system has lasted ten years; has been under both governments for thirty years, the last ten years have been the worst; was docked three days for attending funeral; general dissatisfaction during last ten years and many would leave if pensioned off; ten years ago had a right according to statute to get $50 increase each year, that was taken from us three years ago, 956.

EXPERIMENTAL FARM, CENTRAL.—See *Memorials, Agriculture.*

FAGAN, MICHAEL, Letter Carrier, Ottawa Post Office, 841.

In regard to the unpaid postage, they now use what is known as the 'postage due stamp,' and the carrier when he receives the money puts his initials across the stamp, which has been affixed to the letter, and cancels it; has to buy that stamp before we leave the office, 841. Might say that the letter carriers are always looked upon in all city post offices as the best posted men for city distribution, because they have the experieice; there are six carriers now doing inside work in city post office; they get the same salaries as the letter carriers for doing clerks' work; they lose their uniform and car fare, which is considerable, 843. With respect to men going out, at present some coming in are not physically able to stand the strain of the work, but they have to live, and must be provided with work; they are not efficient physically; are puny compared with the older ones, who look upon their work with interest, who do their best to find out party to whom letter is addressed; but the new-comers, if addresses are not exactly correct don't take the trouble to find the person, though he may be two or three houses further on; thinks there are letters returned that could have been delivered; they do not take the same interest, 843. Is a letter carrier and getting a letter carrier's pay, yet is doing the work of a clerk; deputy city postmaster frequently promised to settle the matter; a year ago he recommended me to pass an examination, which was done; yet the matter is in *statu quo*; could get political influence to help, but wishes to get the promotion through his merits, and twenty-four years' service, 845. Must say justice is not done us; lately a man was put over our heads; has nine children, and all but one are dependent on this salary of $2.25 a day; was under the old Bill, and like others, when new Bill came out, grabbed at the $2.25; we do not know what we are, whether clerks or letter carriers; though we have passed the examination for clerks, we are still kept as letter carriers, 846.

FAGUY, L. G., Examining Officer, Quebec (letter), 151.

States that he is assistant bookkeeper in the principal office of the custom-house, checks the entries, signs the orders, examines the goods in all original entries and various other duties, for a salary of $750 a year; sees no obstacle that should hinder him from obtaining a suitable and reasonable salary according to his position; has passed both examinations and has given entire satisfaction; enumerates expenses of family, which greatly exceed salary earned, 151.

FINANCE, DEPARTMENT OF.—See *Boville*, 180.

Assistant Receiver General's Office, Toronto.—Creighton, 221. Ridout, 216

Charmen.—Maveety, 223.

Memorials.—Charmen, 225. Charwomen, 225.

FIRTH, JAMES, Printer, Printing Bureau, 615.

Went to Bureau when it started in 1889; remuneration for printers is $15 a week; During thirteen years it has only been increased from $11 to $15; as a rule wages in Montreal and Toronto are higher than here; hours of work, forty-eight hours a week; a tradesman is a man who engages in a trade; many men in Bureau are not tradesmen, *i.e.*, elevator men, press feeders or men who wheel trucks; the word tradesman in the printing world applies to a person who has learned a trade, 615. Gets only legal holidays; if absent through sickness the time is lost; if late, is docked an hour; thinks a flat scale of $20 a week should be paid, and strictly speaking it would not be more, because there is hardly a firm in Toronto or Ottawa that adheres to that scale; the outside offices cannot pay lower than $15, but they can pay as much as they like; $20 a week in Ottawa would be about equivalent to $19 in Montreal or Toronto; wishes the Act amended, and so informed the King's Printer and the Secretary of State, 616.

FISET, COL. EUGÈNE, Deputy Minister of Militia and Defence, 699.

Has been Deputy Minister of Militia and Defence for last four months; salary $3,500, presents memo. of suggestions and proposals for consideration; with pay in higher appointments of military and civil staff; object of the creation of Militia Council was to absorb department, but in practice it is not the fact; defensive forces of country are administered by a military board and are not under control of the civil authority; the president is the Minister of Militia, and vice-president is his deputy; forty members on staff, of whom five are chief clerks, and nine first-class clerks; administration of department affects both civil and military branches, 699. Accountant is paymaster general as well, filling an office that could be filled by a military officer; impossible to do with a less number of chief clerks; staff has increased in fifteen years from thirty to forty; and expenditure from $2,000,000 to nearly $6,000,000; increase of expenditure is on account of taking over Esquimalt and Halifax, which cost us $2,500,000; since he took charge of department, has divided it into practically five branches, each under a chief clerk, responsible for special details, if recommendation for an extra clerk is recommended by this chief clerk, it is considered by minister and an order in council passed; has names of seventeen persons strongly recommended from outside for positions of extra clerks; all must pass Civil Service examination and a departmental examination as well, 700. Has appointed five extra clerks on account of pressure of work, four of whom were women: salary of these is $500; has barely enough clerks for department; lately clerk of over forty years' service was superannuated on two days' notice; the recommendation went to the minister three months before; a clerk, through mistake, pigeon-holed the notice; when session of parliament was over and money for superannuation voted he had to go, but it was decided to employ him for three months more on extra list, giving him the difference between his superannuation and former salary to compensate for loss, 701. Clerk did not know of superannuation till it was practically accomplished; thinks clerk was not treated generously, but this happened before witness held office; the clerk had no bad habits, and was a faithful officer; it all happened in not giving him due notice; he had been notified three years in succession that he was to be superannuated; pressure was brought to bear, and it was decided to keep him on; though his successor was not appointed for three months; thinks the minister could have given the clerk three months' leave without any hesitation, but he was away in England, 702. Frequent promotions of staff chargeable to civil government; there are examinations when promotions are made; all the men in the several classes get their annual increment of $50, except one

FISET, COL. EUGÈNE—*Continued.*

undeserving clerk; officers receive three weeks leave of absence a year, with fifteen days' sick leave; every officer on inside service signs attendance book; lunch hours from 12 to 1 and from 1 to 2, some one always being in office; hours of duty in civil branch from 9 to 12 and from 2.30 to 5 o'clock, and often later; part of records connected with war of 1812 are in the department and part in the military library, 703. Nearly everything has been transferred to the Archives; the chief of the staff met practically all the men in charge of the surveys of the different departments with regard to having all survey maps done in one department, but no practical results were obtained; the actual proposal is that a department of mapping should be formed here in the Canadian service, and be divided into sub-branches, the military branch taking the military surveys, but all the reports should be congregated and be embodied in an annual report, submitted to the heads of these different branches through Canada; then we will have a compilation of maps not only from a military point of view, but for other purposes in Canada; department occupies the Woods Building on Slater street; the Treasury Board minute of 1879 forbidding the use of political influence in the Civil Service has already been published in this department; the department is suffering a great deal from abolition of superannuation; does not believe in present system; with regard to classification of chief clerks or the increases, they are not adapted to suit the service at all; it is impossible to ensure any continuity in the work of the department unless the deputy minister or his representative is present at all the meetings of Militia Council; there are branches of department administered by technical officers, e.g., a director of contracts, he deals with all contracts entered into by inside military branches and outside service to a very large amount; has to study the markets, obtain quotations and competitive prices, and has the largest duties to perform of any officer in the service, 704. The director is a lawyer, was a bank accountant; has no hesitation in saying he is one of the best men we have; has had only four years' experience as director, yet one would be surprised at the change he has accomplished; he is only thirty-three years of age, but has the ability; was accountant of a bank at Canning; witness regards abolition of Superannuation Act as a mistake and more than that; would classify officers and pay technical officers as such; then would come first and second class clerks, the lower grades should be treated as temporaries; these lower grades should be enabled to leave service at any time, but should be made permanent on reaching second-class; would apply Superannuation Act with pension for highest class, 705. Other classes should come under Retirement Act; if promotion is too slow, or they wish to retire, pay them their money back with interest; if promoted to second-class, money paid to retirement fund should count under superannuation system; this retirement allowance is of no use whatever, it does not afford any protection to family; imitate the banks and bring in young men and train them for the special work they have to do; Canada is divided into districts, but since 1892 some of those districts have been grouped into commands, 706. In 1892 cartridge factory employed fifty hands, now there are 500; also two additional schools of infantry; about 40,000 men trained last year; at each camp there is practically a school of training for every branch in the service, where officers can qualify; school of musketry at Rockliffe added to expenditure, where from fifty to one hundred officers and non-commissioned officers trained for three months; then Petawawa furnishes a concentration training camp for every branch of service, and will have over 1,200 of the permanent force there; can accommodate 10,000 men there; the commissariat is organized and buildings have been erected at a cost of $50,000,

FISET, COL. EUGÈNE—*Continued.*

also there are some fifty huts which include recreation rooms, 707. The chief of the general staff is a British military man of distinction; guns have been bought and forts are being built; since 1892 there have been organized the Ordnance Corps, the Army Service Corps, the Army Medical Corps, a pay corps; office of General Lake does not resemble the former Major General Commanding; the chief of general staff is responsible for actual training of the militia and the permanent force, he gives the syllabus for the training; he is the officer advising the department for the training of the militia; but the officer who reports on actual training of the troops is the inspector general; for every branch of the service there is an officer responsible at headquarters; the duty of the chief of the general staff is to advise the Minister or the Council; his salary is $6,000 a year; the other members of Militia Council receive $4,000; it is on advice of the chief of general staff that the whole militia force is run; he is receiving about $1,000 less than he would receive in England, 708. General Lake was appointed for four years; he is carrying out the organization in the English way as far as it is practicable; he is the man who advises his colleagues in the Council, in fact is the spirit of that body; the adjutant general has the most responsible position in the whole department, everything goes to the adjutant general, who is also in charge of the whole discipline of Canada, 709. Col. Lessard is a very good man; Col. Macdonald is the quartermaster general, and has charge of the stores; this year $400,000 was spent on stores; the capital account is a special vote got four years ago for buying heavy ordnance; current expenditure on stores is about $500,000; capital account provides for construction of rifle ranges, 710. The inventory of stores will in future be continuous; an abstract showing issues and receipts will be sent to headquarters monthly, and a general inventory at end of every year; there is a board that inspects and checks off stores every year and at end of every five years there will be a general stocktaking all over Canada in order to balance the account; it costs about $10,000 this year, but it is worth while; if the stores are condemned by the board they are burned or sold at auction; system of inspection; at end of each month a report showing the issues and receipts of stores is forwarded from each local store to headquarters; contents are entered in ledger kept in Audit Branch of Militia Department; the requisition for the purchase of stores comes from the officer responsible, passes to the deputy minister for approval or refusal; if approved the accountant gives it an audit number which is checked against the appropriation, and the requisition is then returned to the officer, 711. When goods are delivered into the store they are examined by qualified inspectors; those accepted are brought into the stores, and counted, placed, and entered in the ledger and on tally boards; if Auditor General wishes to examine he can be shown everything in a moment; there are stores also in charge of each unit; a requisition comes from officer commanding unit, then to officer commanding district who sends it, if approved of, to the officer in command of ordnance stores at headquarters, 712. Col. Cotton is master general of ordnance, with a director of artillery to assist him; Col. Cotton is responsible for the engineering service, for cartridge factory at Quebec and the inspection of the Ross rifle factory; is in charge of everything except expenditure; if a large expenditure is to be made, it is brought before Council, if chief of general staff thinks it is right, he will support it, but it rests with the Minister finally to approve of it; the Minister has full control over department, more especially with regard to expenditures, the members of the Council are only his advisers, 713. The three civil members of Militia Council; under Colonel Herbert the system of district paymasters was abolished, but reinstated within the last twelve

FISET, COL. EUGÈNE—*Continued.*

months; there are now eleven district paymasters; an officer of the permanent corps acts as pay officer to each command, 714. Having a district paymaster, who is well informed of everything, saves numerous inquiries being made at headquarters, and an amount of correspondence; the paymaster is now responsible; he advises the officers commanding the district in all financial matters, and has already saved money; his usefulness comes in in advising the officer commanding regarding what scale of pay, expenditure or allowance is authorized; we control about 40,000 active militia, who drill twelve days a year; there are about 240 officers to administer the permanent force and active militia; have now a permanent corps and headquarter staff that would suffice for at least 100,000 men, 715. Officers have to be trained for special service; the staffs that have been organized will give the results when action is necessary; the eleven district paymasters handle the pay-lists in each district and they pay the whole of the militia during camp; they teach the regimental paymasters how to prepare their pay-sheets; when men have finished camp they want to be paid before they go home, and regimental paymasters do that; in the Canadian Army Pay Corps there are accountants engaged in instructional work, 716. All have been trained in the accountant's branch and are qualified auditors, they had to pass examinations; rank of warrant officer is purely honorary and given to non-commissioned officers who have been in the army for a number of years; highest grade among non-commissioned officers; some receive pay with allowance instead of barrack accommodation; all these warriors have pensions after having served fifteen years for the men and twenty years for the officers; and widow receives a pension if husband dies after twenty years service; pension abatement of these officers enjoying pay and allowances would be 5 per cent on pay, not on allowance, 717. In Imperial service officers get the same pension exactly without paying a cent towards it; also the civil servants; it should be done here also; Col. Aylmer had salary of $6,000 and had a retiring allowance of $4,200; witness was formerly head of Army Medical Corps, and was seconded in order to become deputy minister; special Act of Parliament was passed to permit of paying him a pension; had paid for five years into pension fund and by the transfer would have lost that money, because he was not entitled to a pension upon being transferred to the Civil Service; permanent force consists of 2,800; hard to get men, for the average Canadian wont do the soldiering at the salary; the service is troubled a great deal by desertions; not being able to recruit up to 3,000 in Canada, had to enlist time-expired men in England, 718. We got the pick of them and most of them are technically qualified; they are good men, with no desertions so far; they have sworn to remain for three years; our pay is 25 cents higher than in England, but our allowances are not as good; their ages vary from thirty and forty years; amusements at Petawawa; from January 1, 1906, to June 30, there were 345 deserters; at St. John the cavalry are stationed and they have special duties at 5 o'clock; if they go out at night they go on passes, 719. Most of the time the men are hard to get unless they have had three years' service and are able to draw $1 a day pay; perhaps there is a feeling among officers who do not belong to the permanent force and staff in favour of reducing the staff as far as the commands in each district and headquarters staff are concerned; we want to encourage the formation of the active militia; an officer has to pay full duty on uniforms from England; thinks there are only six or seven military tailors in Canada; duty has to be paid on uniforms of the Governor General's Foot Guards; the service has protested; we have to pay duty on the guns we import; tried this year to get $170,000 put in the

FISET, COL. EUGÈNE—*Continued.*

estimates to compensate officers for the duty they were paying, but Council refused it; that sum represents about the amount the militia in Canada had to pay more than they did two years ago, it includes rifles, bugles, uniforms for the corps, &c., 720. Every officer in militia who buys his uniform is out of pocket; department has 28,000 Ross rifles; the Imperial army uses the Lee-Enfield; it is always the case that when government is buying a new rifle the manufacturer is allowed so much per cent in excess of the price in order to help in the process of manufacture; the Lee-Enfield cost $17 in England; it has been manufactured for fifteen years, process of manufacture paid for, so now they can turn out those rifles at nearly half the cost; it was business that produced the Ross rifle, 721. 27,000 rifles have been delivered, 9,000 of Mark I and 18,000 of Mark II; some defects in Mark I to be remedied; $359,000 have been paid for 52,000 Ross rifles, 15,000 rifles yet to be delivered before further money is paid; payments have been made on the certificate of an independent chartered accountant, chosen by both parties; about ten drafts of contracts were made by Justice Department, 722. Inspector of small arms certifies to the accounts submitted, showing amounts expended for labour, superintendence and materials, which is also certified to by the chartered accountant; thinks the Boer service was one of conscription, yet it was a patriotic army; the Martineau defalcations lasted nearly two years, the amount was over $75,000; they were discovered because the balances of the letter of credit instead of being on the right side of the account were between $50,000 or $60,000 on the wrong side; Martineau was in the accountant's branch; seemed to have command of the situation, got hold of cheque-books, forged signature of deputy and accountant; a clerk found that the account rendered by the Bank of Montreal showed a balance on wrong side; his superior went to bank and then consulted Minister, who sent for Chief Sherwood and culprit was arrested getting on the train with $10,000 on him; the bankers allowed an account to be opened on account of the official cheque Martineau had with him, 723. Whole system has since been changed, now body of each cheque is numbered and abstract also; the rules laid down by Treasury Board are followed; thinks there are more permanent officers than there should be, but if the army is to be organized you must have a staff; as the army grows the staff will not be increased; thinks the deputy minister always got authority from the Auditor General to expend beyond the amount voted by parliament, 724. At least Auditor General was notified that the account was overdrawn; is afraid the expenditure was incurred without the department being aware that it had incurred such heavy expenditure; it was in connection with the work of training or purchase of heavy ordnance, and when bills came due they were much larger than we had anticipated; to correct that, in future the estimates will be prepared by districts, every item will be fully covered; they will be submitted before October; compiled at headquarters then submitted to Council; if these commands ask for such an equipment as will complete their establishment they might not get the whole of it in one year, but distribute it over a number of years and thus cut down the estimate; tenders are always called for; 10 per cent security is deposited with Receiver General; no such security in Ross rifle contract, for it was approved by Governor General in Council, 725. Difficult to get officers for the city corps on account of Customs duty of 35 per cent on officers' clothing; hopes to provide in regulations next year for giving each officer an increased allowance for purchase of uniforms; have found that the formation of the Pay Corps has saved the department in cost of administration ten times the amount of salaries we are paying those people, by the care over the pay-lists, the issue of uniforms, clothing and ammunition; payments to con-

FISET, COL. EUGÈNE—*Continued.*

tractors are made by cheque issued from headquarters; of an expenditure of about $6,000,000 the paymasters control about $2,000,000, 726.

Draft of a militia order about to be issued in connection with preparation of estimates for 1908-9:—Attention of all officers invited to Acts 31-34, part III., Financial Instructions; estimates to be prepared in September and forwarded to headquarters; in these estimates will have regard to economy including those items only which are necessary for various militia services; any items, though necessary, not contained in prepared estimates, will remain unprovided for; after estimates have been voted by parliament, officers will be notified of the amounts allotted for their expenditure; in framing the estimates the following is to be noted: *Pay A.—District staff*, includes officers of staff holding permanent appointments as such; officers of permanent force attached to staff, *i.e.*, district engineer officer, senior army service corps officer, principal medical officer, command paymaster, &c., are to be included in *Pay B., permanent force;* officers of active militia, i.e., principal medical officer attached to staff, are to be provided for under this head. *Pay B.—Permanent force*, includes all permanent force and military staff clerks; at Halifax and Esquimalt, civilians at ordnance stores and officers of Royal Canadian Engineers, permanent army service corps, are of the permanent force, 727. Officers' pay and allowances to be shown in detail; total amount for non-commissioned officers and men to be given; an estimate in detail of amount required to pay any authorized increase of force; a copy of the latest parade staff to be attached. *Pay D.—Allowances*, to be shown in detail for each regiment and corps. *Pay E.—Guards of honour, salutes, &c.*, provides for their pay, also of officers of active militia on board or on special duty not provided for elsewhere. *Annual drill*: in three parts: Pay—supplies for camp, transport to and from camp, total pay of each corps at authorized strength for training to be computed, artillery sixteen days, other arms twelve days, also total efficiency pay at 40 cents a day; estimates for Petawawa camp to be made at headquarters; estimates for camp supplies based on cost of previous years; transport at 2 cents a mile for officers, 1½ cents for non-commissioned officers and men, between all points east of Port Arthur; west of that, 3 and 2 cents respectively. *Salaries and wages*: list of caretakers, watchmen and other civilian employees, with their pay, is to be shown; also for probable requirements. *Military properties, care and maintenance*: to provide for rents, fuel, light, water, telephones; list of various buildings. *Military properties, construction and repairs*: to include ordinary and necessary repairs to all properties; proposals for new buildings to be submitted separately, 728. *Clothing and necessaries*: statement showing number and quantity of various articles for active militia and permanent force; each corps to its own officer during July. *Military stores*: same as above; special stores for artillery and departmental services to be shown separately. *Provisions, supplies and remounts*: to provide fuel, food, light, forage, and medicines, &c.; also to include purchase of remounts to extent of 10 per cent of establishment; careful estimate of last twelve months to be made; thus an average cost of everything can be made. *Grants to rifle associations and bands*: to provide for above; list of associations drawing grant to be made, also provisions for others likely to be made; same with regard to bands. *Transport, freight and contingencies*: estimates made at headquarters; suggestions and proposals for consideration for Civil Service Commission. CLASSIFICATION, GENERAL PRINCIPLE: an absolute necessity to provide for continuity of an efficient and economical service; officers are expected to make the service their vocation for life, or until retirement, to live as

FISET, COL. EUGÈNE—*Continued.*

gentlemen and educate their families as such; on retirement should be pensioned, and for families in case of death of officers; if higher ranks are to be filled by capable and efficient officers then no occasion for permanency in lower rank, 729. Following would be a good classification: Higher ranks—Deputy minister, and assistant, technical or grade A. officers, chief clerks, first and second-class clerks; Lower ranks—Temporary permanent clerks, temporary clerks and messengers. PAY: for lower ranks on appointment, $500 is ample for a young man, and should be encouraged to join service; clerks at minimum rate of lowest rank, $500; for temporary permanent clerks, should be a retirement fund, if promoted all time to count for pension; minimum pay of a higher class clerk should be $1,200 per annum; submits table showing scale of pay, minimum and maximum for each class, annual increase, &c., 730. THEORETICAL ORGANIZATION: Should be theoretical organization for each department, fixed by an independent commission, and changed only on recommendation of a permanent Civil Service Commission. *Examinations*: should be very stiff examination to qualify for first appointment; subsequent examinations should be on 'duties of office only.' *Organization of Department of Militia and Defence*: *Deputy Minister*, is an important position, as vice-president of Militia Council; is also a large spending department, some $6,000,000, and his pay should equal that of chief of general staff, $6,000; *Assistant deputy minister*, should perform duty of secretary of Militia Council; should have charge of interior economy of department; sign all routine correspondence; in absence of deputy he should take his place; be charged with receipt, registration, distribution and custody of all official letters and telegrams; prepare everything for Council, &c.; his pay should be $3,600; *Accountant and paymaster general*: should be considered on his merits; is a member of Militia Council, and as such is responsible for the efficiency of his branch, 731. His duties are such that he might be an officer of the permanent force or civilian employee; if on military staff should receive same pay as other military members of Council, $4,000; *Director of contracts*: his duties entail all work appertaining to purchase of clothing, necessaries, equipment, fuel, stores, &c.; the calling for and scheduling of all tenders; preparation of all cnootracts and checking of claims; should be rated as technical officer with pay. Militia Department: Memo. respecting salaries—comparative statements: *Military division*: Chief of general staff, $6,000; adjutant general, quartermaster general and master general of ordnance, each $4,000; directors, $3,200; *Civil division*: Deputy minister, $4,000; accountant, $2,800; chief clerks, $2,500; the memo. shows the rates of salary in civil division are too low; salary of deputy minister should equal that of the chief of general staff; compares salaries of Canadian military division with Imperial forces; also mentions the different branches; compares years 1892 with 1905-06, 732, 733, 734.

FITZGERALD, WILLIAM, Superintendent of Insurance, Ottawa, 1320.

Appointed in 1885; amounts of fire insurance premiums received; amount of premiums paid for fire policies has trebled while he is in office; fire losses paid; fire losses in good times are not as large as in bad times, in almost every country; amounts of fire policies taken; net amount of fire insurance in force at end of 1886 and in 1896; number of fire companies under license; gives tables in regard to life insurance business; staff consisted formerly of four, now it is ten; undermanned; prefers men having had actual experience, but they cannot be got; has two good men, both Fellows of Institute of Actuaries of Great Britain; there are two more in Montreal and two more in Toronto, 1320-1321. Mr. Henderson when he left got $850; left to better

FITZGERALD, WM.—*Continued.*

himself, and now receives $4,500; he is a Canadian, graduate of Toronto University, as is also witness; receives salary $4,000; Mr. Blackadar, $2,800, and Mr. Grant, $1,950; understood on entering that he was to get an addition of ten years to bring service up to maximum of thirty-five years; cost of office in 1886 was $8,578.46, in 1906 it is $18,045.06, including cost of printing annual report; levies on amount of premium income in Canada, which was in 1892 one-twentieth of one per cent; now it is about 45 cents to the $1,000 premium; to get at amount of reserves held for life insurance policies you must do it by actuarial calculations once in five years for every company; needs more room; has only three small rooms to house ten men, 1322. Present salaries not sufficient to keep in the good men; recommends a raise; is of opinion that the abolition of superannuation was a mistake; it gave stability to service; there is nothing to retain a man; it is a great loss to the office to lose a good man; in consequence of this a system was devised of giving public servants life insurance, whose limit maximum is $2,000, allowing six per cent interest; only loss in system is the difference between six per cent and the rate at which the government could borrow its money; there are now 202 policies in force for $361,000. Though public service are provided with cheap insurance they have not availed themselves of it to a great extent; no reason why men entering since 1893 should not take advantage of it, but for those who were in service there was a stipulation that an additional one per cent should be paid for superannuation purposes; this kept out almost all the old men; and hundreds of men have joined service since Act was passed, 1323. Only 193 lives insured, some having two policies; thinks small salaries is the cause of so few taking advantage of Act; the system of deducting five per cent from salaries has also a deterring effect; retirement fund simply takes a man's money and allows him a less rate of interest than he himself could get for it; thinks the Act prepared by Mr. Grant is feasible with certain amendments, the provision relating to the pensioning of widows under certain conditions is very desirable; in restoration of Superannuation Act some provision should be made for widows and orphans; Mr. Grant in preparing his Act looked into systems in vogue in Germany, Holland and France, 1324.

Sends revised evidence, also memo. regarding fire, life and inland marine insurance, accident, sickness, guarantee, plate glass and other forms of insurance; staff in 1886 consisted of four; now in 1906, ten; also table showing cost of insurance superintendence, 1325-1326.

FLEMING, WILLIAM, Porter, Montreal Post Office, 892.

Is one year on temporary staff as porter, age 49, formerly bank messenger; applied to member for present position; expects to be made permanent, having passed the examination in 1878; if a man is competent to do the duties he has to perform, after a probation of six months, he should be entitled to the credit of what he has done; there are several here who are competent to do the work and think they should not be debarred from being appointed permanently, and having two or three weeks' holidays; if we do not have these holidays there is a certain amount of extra work on our shoulders on account of the permanent staff going on their holidays, and we get no benefit for that extra work; is doing a labourer's work; receives $1.50 a day and has to support a family; there are ten or twelve men in the post office in the same circumstances; thinks if he is able to do the work expected they should remunerate him properly; if appointed permanent and are capable they should start at $500 and run up to $900 or $1,000, 892.

FLETCHER, HUGH, Geological Survey, Ottawa (letter), 240.

In 1892 the third commission investigating conditions and needs of the Civil Service reported there had been legislation concerning Civil Service reform every year since confederation; that public opinion had extorted a promise from government that service would be conducted on business principles; of many improvements suggested, some were adopted, yet it is doubtful if service is more efficient; deputy heads of every department were called in to point out and remedy defects; the commissioners discussed the constitution of the Civil Service, duties of its officers, cost of salaries, &c.; they found that in case of service of a professional character no definite scale of remuneration existed; they found also persons doing the same work whose salaries differed as much as 300 per cent; also that the highest salaries are low compared with the higher offices of railways, banks, and other mercantile corporations; they tried to ensure that men doing the lower description of work should be paid accordingly; while the higher range of salaries be reserved for those who have responsibilities, or whose services require a higher degree of education; they also fixed an equitable scale of salaries for various clerks and employees; common justice and exclusion of partisan tests in selecting and promoting civil servants are essential for securing the most useful; British statesmen act upon their own conviction of duty. and have shown that competition has given bright men of learning, of strong physical system, high character and practical administrative capacity to the service; he quoted a United States writer on the Civil Service, 'The merit system, with its test of character and capacity, and its claims of justice and principle against favouritism and partisanship has achieved a victory over patronage'; several ideas for improving service were discussed; but so much for Utopia and what might have been; it is said that every government makes laws for its own advantage; the Civil Service belongs to the party in power; much can be said for this system, but it produces discontent, half-hearted service and discouragement; this commission is appointed to deal with a defective civil service; it is a matter of grave concern that the civil servants should be properly heard; one member of the commission, Mr. J. M. Courtney. a friend of government and the civil servants, has already proved a strong advocate of fair-play and justice, 240, 241, 242.

FORSYTH, COL. JOSEPH B., Collector of Customs, Port of Quebec, 139.

Appointed in 1881 at $3,000; appointments made in Ottawa; once recommended a man and he was appointed; would be a good thing if patronage system was abolished, and appointments made probationary, 139. If after a limited time satisfactory, appointee should be made permanent; about same number of employees permanent and non-permanent; would prefer all to be permanent; not convenient here, as more men are wanted in summer than in winter; surplus of men in winter might be sent to other places; outside service of customs should be classified and given annual increases until maximum is reached; Mr. Hamel's father was in custom-house, he died suddenly and son succeeded him; he is a very good man, 140. Minimum salary should be fixed at a liberal amount to cover increased cost of living; 75 per cent rather an exaggeration, 50 per cent nearer the mark; Mr. Beaudet was appointed appraiser, but at death of Mr. Gouin he was appointed chief clerk; experienced in hardware; not same inducements for young men to enter service as fifteen years ago; work at custom-house at Quebec is very much up to date; cannot say if superannuation has been beneficial to the service, 141. Thinks retirement fund better than old superannuation; present salaries are not adequate to needs of majority of officials; many are getting behind or pinching their families, 142. Officials at Quebec are efficient; they are good men

FORSYTH, COL. J. B.—*Continued.*

and of good habits; all agree as to increased cost of living; government may not agree to give 50 per cent, but thinks if they gave 25 per cent it would not be too much; public servant is now retiring to the background, because he has not the means to live as he used to; in examining warehouse has three appraisers with different salaries; the lowest salaried one has really more to do than the others, 143. Discrepancies of salaries, 144.

Memo: Cost of living 50 per cent more than formerly; press states, 'there is no branch of the Civil Service worse paid than the members of the Customs staff'; men are well conducted and do their work well, no complaints or reprimands; great increase of work but little increase of help; maximum allowance twenty-five years ago should not obtain now; clerks should be classified and made permanent; desirable that pensions earned by officials should be continued to widows; this port has more outports and preventive stations than elsewhere; here ships discharge immigrants and passengers, sometimes three or four steamers arriving in one day, 149.

FOX, JOHN DAVID, Accountant, Inland Revenue, Montreal, 323, 325.

Canada Refinery manufactures whisky; 50,000 proof gallons monthly out of 80,000 used for consumption in and around Montreal; part of revenue is collected here, balance collected in other divisions to which the whisky is sent in bond; could not say that revenue collected here is made up by amounts collected from other divisions; in a way distillery here is analogous to Walker's, Gooderham's or Seagram's, 323. In Customs and some other divisions they permit only one ex-warehouse entry from each warehouse on an entry; in Montreal division we permit, one, three, five, seven or ten, from as many entries ex-warehouse as they choose, on that one warehouse entry; would say taking the average three entries for each original entry would be a very low estimate; there are 20,000 separate and distinct entries in Montreal division each year, 325. When collections come in after office is closed, they are deposited in safe till following morning; collections from our office are deposited once a day, ostensibly from 12 o'clock noon one day to 12 o'clock noon next day, but in reality it is from 4 o'clock one afternoon till 4 o'clock next afternoon; then the deposits are made up the following morning and money deposited for the previous day; at night have always a day's revenue in vault, but most of payments made by cheque; cashier has combination of vault, also the collector; money is kept safe in a vault at night; money is paid in the bank in forenoon, or as soon as deposit can be made up and checked and entries verified, then deposit is sent to bank, 326. More than twenty-six wholesale warehouses, but they have not all bonded warehouses; one license covers a large number of grocers or merchants; conditions in Montreal are different to those in other cities, 328. Gives one month's statement of transactions in stamps in Montreal division; supposed to keep three months' supply on hand; stamps stored not in vaults but in cupboards; two men have access to them; are checked by inspector; could not store them in vault, unless vaults consisted of a large room; advisable there should be some security though stamps in se are not actually so much money at all until we collect for them and they go into use in factory; two clerks are at present in charge, 330. Packages of stamps are numbered and used in numerical rotation; could be no dead packages that did not contain what was represented on outside without being found out, 333. Does not see any immediate necessity for any change or modification in returns made to Ottawa; system of book-keeping is very good; knowledge of distilleries, breweries, malt houses and vinegar factories is purely technical; excise officer determines quantity of tobacco, raw leaf, malt or spirits; if officer was in collusion with manu-

Fox, John D.—*Continued.*

facturer he could give them any quantity he wishes, and that is all they will have to pay duty on to government; has no knowledge of any officer thus becoming rich, they are poor men, but they are honest; none of officers in Montreal keep a horse, an automobile or yacht, 334. By 'a continual audit is proceeding in the office' is meant that entries after being posted are checked through the different books before they are sent to Ottawa; we wish a special scale for Montreal; department determines the several classes with salaries for each class according to collections given plus warehouse entries passed; now work in a division collecting $1,000,000 has no comparison with work and responsibilities involved in collecting a much larger amount as in Montreal; officer collecting $1,000,000 will get same salary as collector in Montreal collecting $6,000,000, and who may not have one minute to himself, while the other man may have plenty of time; collection in Toronto is not as large as collection in Montreal where they collect pretty nearly as much as in whole of Ontario; but Toronto manufactures an immense amount of spirits, duty on which is collected outside; why Montreal officers should be treated better than those in Toronto is this, that if two men are equally competent and one has to work to the full limit of capacity he should be allowed something extra for that; has no objection to Toronto being well treated, we want fair play for all; that Montreal be put in a special class which might apply to any other division of equal importance; has seen cases where some people have been forced over the heads of their seniors, 335. Thinks there are instances where men have been shoved on through politics over the heads of deserving seniors, and this must have been in the minds of those writing the memorial; would like staff to be paid bi-monthly; the labour should not be reckoned with; monthly salaries paid three days before the end of the month; in December we are paid before Christmas day, 336. Some spirits were stolen some years ago and permission has been asked to write them off; never suspected that an officer was living beyond his means, but if he were disposed to be dishonest he could reap personal benefit by it, 337.

Frankland, H. R., Collector of Inland Revenue, Toronto, 387.

Entered as deputy collector, serving six months, therefore not required by law to pass promotion examination; collections last year amounted to $1,600,000; there are two distilleries here, Gooderham's and Wort's, and Canadian General Distillery; revenue from former about $60,000 a month, mostly collected in Montreal and Winnipeg; if all revenue were collected at place of manufacture revenue at Toronto would be about $2,000,000 more than now; during past ten years cigar production has increased; there are ten maltsters in division, 387. Four tobacco manufacturers in division, and twenty-two cigar factories; examinations deal with mensuration, computation, &c.; feels that the emoluments the inspectors for Ontario receive are not what they are worth by any means; nothing less than 50 per cent increase would meet requirements; this applies also to inspectors; practically three departments are engaged in collection of duties; requires a man of great tact and good judgment to look after adulteration of food and inspection of canned goods; pay of officers in distilleries, 388. Duty pay means overtime, so much per hour paid by manufacturer; if Gooderham & Worts want an officer to remain till 8 or 9 or 10 at night they have to pay him a certain sum for the first hour and so much less for other hours; lower officers receive $100; no product in distillery destroyed, only in breweries and tobacco factories; at 7 in morning officers open all doors, they having the keys; considers that deputy collectors class B might be done away with, 389. Thinks it desirable to re-enact Superannuation Act, in interest of widows and orphans, and in stability of service; desirable also

FRANKLAND, H. R.—*Continued.*

to have Pension Act include widow and orphans; thinks it absolutely necessary that inspectors and collectors should hold a conference every three years in Ottawa; desirable in order to avoid friction that collector should know something about the patronage; men entering service now as efficient as they were seven or eight years ago, and up to required standard; lost an officer and curiously no one applied for position; not many applicants now; a young man entering now would get $600, and after passing examination would get $850 and go on to $1,200, 391.

FRASER, G. N., Sorter, Railway Mail Service, Toronto.

Has worked at night for seven years, ever since he entered service; works seven and nine and sometimes ten hours; for months has never worked less than eight hours, often as much as ten and eleven hours, 1015. There are seven or eight people assisting the railway mail clerks: they get no mileage; Toronto and Montreal clerks do this class of work; some are not clerks, but are hired by the day, receiving $1.25; men have not passed an examination, but there are four permanent clerks to do this work; one man doing day duty has passed examination but has no clerkship, 1018.

Memo. of city department sorters: They represent (*a*) that they are compelled to do railway train duty while holding appointment as clerk for office work; (*b*) that they receive no mileage whilst on train duty; (*c*) that they have excessively long hours whilst on train duty; holding that from 9 a.m. till 6 a.m. or later six days a week is too long for the preservation of health, 1018.

FRASER, JOHN, Auditor General, 1279.

Thirty-two years in service, thirty of which were in Finance Department, and two years as Auditor General, with a staff of fifty-one permanent employees, fifteen extra clerks and three messengers; is an office of verification, also audits all expenditures; to see that appropriations are not exceeded or misspent; that expenditures are supported by vouchers; and as being correct, fair and just charges, according to contract; expenditure under audit has run up from $42,000,000 in 1892 to $83,000,000 in 1906, 1289. Receives salary of $4,000 fixed by statute, removable only by majority of both Houses; expenditure mentioned does not cover all that is audited; in regard to savings banks and money order business there is a certain amount of audit; to pass certificates for all cash expenditure of Dominion, about $150,000,000; audits revenue as well; turnover in cash now amounts to about $1,000,000 a day roughly; staff about large enough, but as work is growing staff must also; offices are in two buildings, 1280. The other building is three or four blocks away, under a chief clerk; frequently visits it; our staff has to exercise more discretion and judgment than in other offices; work is partly mechanical but a knowledge of prices is necessary; the more knowledge the better; have to look into everything of a suspicious nature in connection with an account; the staff are taught to use their brains, and have almost daily conferences over different points that crop up, 1281. Whenever a letter is written to a department containing a principle, or objection raised, five or six copies of the letter are made and one is sent to each chief clerk, to see they are all on the alert; has no political head, but communicates his views to the Finance Minister; his officials are selected from those who have passed the Civil Service examination; has not power of appointment; office created in 1878, Mr. McDougall being first incumbent; he resigned lately, holding different views from government on certain things; he wanted also some amendments to Audit Act to which government could not agree; wanted more power than he had under the Act; witness finds the Act sufficient for his purpose, 1282.

FRASER, JOHN—*Continued.*

Thinks the most objectionable feature about his standpoint was that he wanted to take a responsibility and have a power vested only in a government; the fullest power the office demands is sufficient power to properly safeguard in business ways; all wrong should be punished; Mr. McDougall's case was threshed out for days and days in Public Accounts Committee; all of which is on record; it is printed, 1283. Is satisfied with present system of getting help for his office; does not want a man who is not worth $800; Mr. Fielding offers the choice of his list; good handwriting has come to be a lost art; to get men at $800 a special clause must be inserted in Supply Bill; when he gets a man he wants to be able to turn over accounts to him, and with little training can rely on his doing good work to commence with, 1284. Not being able to get men, women are nearly the only applicants; prefers men who have had some little experience in business, and not make the office a training school; young men with a little business training outside learn very rapidly, and are useful at once; women are steady and reliable; and good up to a certain point; about thirty on the staff, and thinks only one or two could take charge of an office; thirty women out of fifty-one permanent employees; their critical faculty does not develop half as fast as men, and would never be competent to take charge of men; not enough men in view to fill the higher places; women get the same annual increment, 1285. The grades in the office are pretty fairly diffused and reasonable prospect of promotion; wants more chief clerks, as there are men in charge of branches who are not chief clerks; work is done conscientiously; of course witness does not see all the work; what he sees has generally the element of trouble in it; the accounts undergo a very close and searching scrutiny; all, but one, are in good health, 1286. Government does not recognize responsibility in taking care of sick people; but if doctor recommended sanitarium it would be considered and acted on; the invalid only recently became unwell and is on his vacation; thinks all the clerks entered at as low a grade as junior second-class clerks, 1287. Prepares some of promotion examination papers; his knowledge of what a man can do has greater weight for promotion than examination papers; sometimes somebody will take a friendly interest in asking for the advance of a clerk; most of the clerks entered under former régime; leave of absence is usually three weeks; office hours from 9.30 a.m. to 4 p.m., though later when the report has to be got out, 1288. Has no test of work each one does, but one can see how it is going on; no two departments in the service doing the work in the same way or have same class of work; can only tell the amount of mental effort by the results; hours are sufficiently long when conscientious work is done; if staff are treated well they are all willing to work longer hours for the sake of getting out the work, 1289. If staff do their work conscientiously, wishes to treat them liberally; no pay for extra time; thinks the staff take a pride in their work; one hour for luncheon, but all do not go out at same time; has little to do with the public, but receives visits regularly from contractors; has no objections to their discussing a matter from their standpoint; all sign attendance book, in outside office it is in charge of a clerk, 1290. Has power of promotion providing parliament votes the increase; is under old Superannuation Act, its abolition was one of the biggest mistakes ever made; at present a man has no hold on his appointment; it was one of the strings we had to hold good men; you have no hold upon your men, if you say anything to them, out they go, 1291. In witness' absence in Mexico, one clerk left, getting a better outside offer; there was nothing to hold him; another getting $1,200 received an offer of $2,100, yet cannot offer him any

FRASER, JOHN—*Continued.*

special inducement to remain; the offer was from a contractor on the Grand Trunk Railway; the sooner the old Superannuation Act is restored the better; thinks an ideal system would be to have the right kind of a man for deputy minister, such as you would select to produce dividends in order to hold his job; such a deputy would select from the employees the best men to do his work and pay them for it, 1292. In government service a deputy minister does not have to produce dividends; during Mr. Courtney's time in the service he did not have to produce dividends, but to conduct the work of Finance Department without any visible results to outside world; this branch is different from the rest of the service, there is no political head, so there is not much use trying to bring political pressure to bear; comes in contact with the accountant's branch of every department, the majority of which branches in the service are efficient; saw a good deal of the work of the outside accountants in reorganizing the work of department in question, 1293. They were special chartered accountants; thinks their duties are now completed; had to do with general extravagance, critics said that the staff was inefficient, that there was gross extravagance and no business system, no proper supervision; as Auditor General, has only the power to criticise and point out faults; was in Finance Department when the Martineau defalcations occurred; the provision that is made in the Act for a thing of that sort is that the Treasury Board has the power to make regulations for the keeping of the accounts in the various departments; has no administrative power at all, but power to show defects in existence, which is often done, and we are listened to, too; defalcation was due to forgery; thinks the accountants' branches are efficient, 1294. Results of recent reorganization of chartered accountants are not yet visible, and accounts have been in better shape during the last year than they were before; the branch pointed out the weaknesses of the transactions, and criticised them before the accountants began to work; has not the power to go to a department and say, 'you must change your system and adopt some other method of keeping your accounts;' there was more than bookkeeping at fault, i.e., a point involved was the system of ordering goods; the Merwin case was criticised and prices objected to; another thing was the establishment of a system in the departmental workshops in connection with the purchase of goods; the weaknesses did not lie in the bookkeeping alone; it was after being criticised that Minister appointed these outside men to investigate; something had to be done; can see to a pretty large extent where a defective system exists; if anything he objects to he can summon accountant of that department and discuss matters, there is no trouble on that score, 1295. Can examine their books if necessary; to see that the most economical and most efficient methods of bookkeeping are observed; our men would need to be familiar with the method in each department; a good accountant creates a system; bookkeeping to be efficient must be suited to business done; when parliament votes a sum of money it is necessary to examine details of expenditures and have the vouchers, and see the expenditure is within the limits, that amounts are spent according to regulations; on a purchase of stationery by a department, we not only examine accounts and see the price is right, but raise the objection that that department had no business to buy the goods, they should have been bought by the stationery office; has to see that regulations governing expenditure of money are carried out; stationery must be bought from the Printing Bureau, 1296. Two departments were buying cement at different prices per barrel; the case was criticised and discussed in Public Accounts Committee; in this case the deputy minister was notified, and purchases stopped; many

FRASER, JOHN—*Continued.*

accounts are paid before audit; usually audit takes place before payment, but not in England; salaries and ordinary petty cash are paid before audit, but in contracts, &c., audit precedes payment; does not receive amount of current expenditure of each department till after payment is made; then credits are given in name of deputy minister and accountant in each department; generally, therefore, all accountants are efficient, 1297. Thinks department from beginning has been efficiently managed and administered; all departments know they are closely watched; no arrears in any department in auditing their expenditure for more than a month; once we start to compile the report, the audit has to go behind; cannot do both concurrently; we generally get the original vouchers and ascertain their genuineness; when everything is clear on surface of account it is treated as all right, 1298. If they suspect anything they probe it to the bottom at the expense of other work; they are to neglect other less important work and take the suspicious accounts up; recites case of some officers in Immigration branch of Department of Interior, who received immigrants at Quebec and travelled with them; they charged for meals and sleepers they did not take; how case was found out; culprits refunded money and lost their jobs; recites also another case of fraud, 1299. Has power to administer oath and to command appearance at inquiry; in Departments of Interior and Public Works a large proportion of staffs are charged to outside votes; in Department of Public Works the whole of engineering staff and whole of chief architect's staff are thus charged; and are removed entirely from the terms and conditions of Civil Service Act; some may regard it as a grievance when time for superannuation comes, the old ones especially, because they have nothing to retire on; such persons can be appointed at any salary the ministers see fit, 1300. In Agriculture Department a new branch is established, a man is put at head, i.e., live stock branch, he can employ a staff there at any salary he sees fit; difficult to understand, yet they claim they are specialists; thinks if there was a proper Civil Service Act all employees at headquarters should be under it; not much to audit in those cases, as they are appointed by order in council; exemptions from Civil Service Act are increasing all the time; large proportion of officials employed at Ottawa are not under the Act; Minister can increase salary as he sees fit; they are all temporary employees, though looked on as permanent; thinks they should all come under one system, 1301. After sessions of Public Accounts Committee are over, records required for audit are returned to different departments; parliament, and especially the opposition, read the Auditor General's Report pretty thoroughly; report is read principally to exploit possible wrong-doing; gets a good many pointers from them; keeps two years' vouchers on hand in case anything came up later; our work is very interesting, it is not mechanical, new features are coming up all the time, 1302. Sometimes sends the chief of a branch out to get acquainted with the matters he is working on inside; it is very useful information, and they take the best means to inform themselves; our officers audit the stationery office; have to see to expenditure of money voted, that proper certificates that the goods have been received and put in store; it is important that stock should be taken of all stores; no documents to show waste or leakage in stores, except in Intercolonial Railway, where the stores are fairly correct, 1303. The Intercolonial Railway and stationery office are the only stores appearing on balance sheet of the Dominion; purchases for artillery are paid for out of year's appropriations, and that is the last of it except the record they themselves keep in the department; desirable that special inspectors go around and take stock from time to time;

FRASER, JOHN—*Continued.*

thinks it possible that inferior goods are sent in; quantities and prices as called for, but not the good articles; it is possible, and mentions a case where a man's salary may be charged to more than one work, 1304. Under previous commission it was found that staffs charged to civil government came under the Civil Service Act; in Public Works Department architect's is not under Civil Service Act at all; whenever the appropriation will stand it, the remuneration of certain employees has been charged to more than one branch; same practice is still going on; thinks all employees at Ottawa should come under Civil Service Act; all collected under one vote, and then you can see what you are paying; some employees are paid for working on Sundays; made suggestion last year for a sub-committee to take into consideration the growing size of the Auditor General's Report; is willing to curtail report if parliament gives permission, 1305. There is a lot in the report that is useful and some that is not; report is published in English and French; table giving number of employees and salaries on staff of Auditor General; twenty years ago there were paymasters in Militia Department; were afterwards abolished, and are now restored again, 1306. The system gives a great deal more work, because payments are not made direct to individuals, but are made out of the letter of credit, and have to go all over the work; if payments were made direct one cheque and one voucher would conclude the transaction; as it is it involves the employment of a larger staff, for every time you repeat or subdivide a transaction it means more work; there are five or six paymasters now; system was restored two or three years ago; in addition to paymaster general here, there is an assistant paymaster and staff, and a district paymaster in outlying parts, 1307. Describes system, 1308. Produces another pay-list; the new system of certificates arranged by Deputy Minister of Marine and Fisheries is not more satisfactory than formerly; have to be continually taking up accounts and going back of the certificate; the certificates are not reliable, they may be good or not; a case exists at present on the ship canal where a number of men are employed by the day and are boarded on the vessels, 1309. These men may be boarded in boarding-house, for whom the captain receives 75 cents a day; asked them to make out two lists, the pay-list and board list; the same names occur frequently down there; men give receipts for their own pay, but the man who has boarded them gives a general receipt for board of whole list; thinks a man should back up certificate with some other evidence; it is practically a man receiving the money certifying his own account is correct; if certificate is once wrong you suspect all others from same man; return of an officer's travelling expenses were found to be wrong, he refunded, but his certificates are of no value since; he is still travelling and his accounts may be right or not; advances to maritime province command were continually increasing, they were written to, that the advances were too large apparently for requirements of paymaster, they admitted such was the case, and agreed to reduce advances within reasonable limits, 1310. If money were expended from here, it would lie in a solid balance in the bank and would be much safer; Col. Guy was first paymaster in Halifax; he is now superannuated; large sums were paid in 1906 to Merwin and Strubbe; no further special care has been taken to see that only proper sums are charged for the articles they supplied; there were professional accountants working in the Marine Department for some months, and made a report to the Minister; if a change of bookkeeping was established would know something about it, 1311. They are men who systematize businesses; understands they started out at beginning of year, took a whole year's business, and entered it up under their system, etablish-

FRASER, JOHN—*Continued.*

ing a plan and showing how a year's accounts should be kept; but it will depend on the parties carrying out this plan whether the result will be good or not; imagines the system is a good one; certainly an improvement as far as bookkeeping is concerned; for there was no system at all; the department was much smaller in Mr. Smith's time, since then they have taken over a part of the Public Works Department, so that the system that was good for the small business would not be suitable for the large business; thinks five or six of these accountants have been working for about a year, since the new Minister came in, 1312. Knows the results of the old system were not good; thinks these men did not get as generous assistance as they should have got; they were brought in by the Minister; one reason they gave why it took them so long was they had to take and do a year's business themselves, to handle everything, accounts, vouchers, books and everything else; Department of Marine say that they get the best prices they can, but there is a large amount of their purchases made at retail prices; when asked what steps they have taken to get the best prices, the stereotyped reply is that they have asked a number of parties for prices and they have always taken the best, 1313. Thinks prices are not as good as could be got if there was open competition; has no control so long as account does not exceed $5,000; a man's yearly dealings with the department may be for $50,000, but each individual purchase may be under $5,000; there is a provision in Act that for purchases under $5,000 they are not required to call for tenders; contracts must be called for and lowest tender accepted for all purchases over $5,000; Marine Department are not subject to the same rules as other departments owing to different circumstances, i.e., an item running up into hundreds of thousands of dollars, as the illuminating apparatus for lighthouse service, for lenses, lanterns, &c.; there are only two or three firms in the world that can supply these goods; Chance Bros., in England, until recently furnished everything required; but within the last two or three years most of these articles have been supplied by a house in Paris, through Mr. Merwin or Brooks Co.; difficult to distinguish between prices, 1314. The quality of Chance's goods is known to be first-class; does not think the goods of the other firm are as good; Merwin is the Brooks man and the Brooks Company is a New York firm; with Chance Bros. department deals direct; sees no excuse for dealing with a middleman; there was an examination by the committee as to the price of cement furnished by Strubbe; Railway Department calls for tenders for all the cement they require during the year delivered where, when and in what quantity required; they get competitive prices from all the large firms, getting lowest possible price; has made suggestion that price for one department should rule all departments, 1315. No way at present of auditing Marine stores; i.e., there is a quantity of goods bought and charged to Prescott depot that never went near that depot; Prescott is the headquarters of a particular service; gas buoys would not be sent to Prescott for the sake of putting them on the books there and then delivering them down the St. Lawrence; the man at Prescott could say where they were placed if they went through his office; has never been an audit in the Marine Department or Militia Department; but there has been of the King's Printer's stock and of Railway Department stores; there is an examination by Boards of Survey, not actual stock-taking, 1316. Thinks an audit of stores of different departments should take place; is not anxious to do it; quite possible that two men might certify to receipt of same goods, that the charges were fair and just, and person sending the goods might be paid twice over; so long as they were properly certified we would have to accept them; might possibly be

FRASER, JOHN—*Continued.*

collusion in signatures; no record of stock in Art Gallery; there is an annual appropriation for buying works of art; no inventory of what is on hand; but if there is no check there is no reason why some of the pictures might not be there, 1317. Presumes if a storekeeper gave certificate to a contractor, who delivered 3,000 instead of 5,000 as contract called for, that he had received the goods, the money would be paid; new deputy is to install a new system and have everything checked and inventories taken; if witness had to attend to that he would have a staff of men for all departments; sent a man last year to Prescott to take stock, but found nothing at all it could check it up against; stores at Sorel can be checked; sent a man there, he returned saying everything there seemed to be kept in a systematic manner, 1318. Thinks in Sorel when there is much construction going on, there must be much waste, especially in lumber; the man on the ground alone can check it; the new accountants were going to establish a system that could account for everything and show what it went into; the great thing about a system is to make it as simple as you can; thinks the outside accountants who were working in Marine Department are competent to establish a system that would be satisfactory, provided the system is carried out, 1319.

FREED, A. T., Inspector of Weights and Measures, Toronto, 418.

Has been in service about thirteen years, was formerly a newspaper man; present salary $1,600; average cost of living is 50 per cent higher than twelve years ago; two factories in Hamilton; one man in each factory, an assistant in office and three men on the road; these factories make all kinds of scales except the fine finished scales; are the largest manufacturers in Dominion; has supervision over seven counties; service for outside men is dangerous; exposed to all sorts of danger having to get down under scales in the dirt and wear out clothes quickly; man cannot travel without spending money, and anything in account but legitimate is thrown out, 419. Authorized statement in Mr. Hayward's evidence that service was self-sustaining for this reason, officers waited on Mr. Brodeur for increase of salary, he told them service was not self-sustaining; officers long in service lose grip of former professions and therefore stay in the service; strongly urges former superannuation system; a man at maximum salary of $800 cannot provide for old age; will gratefully take whatever you see fit to grant us, but assistant inspectors are very much under-paid, 420.

FREELAND, DR. ANTHONY, Collector of Inland Revenue, Ottawa, 297.

Entered service at Ottawa in 1901 as collector; a doctor of medecine; his predecessor left, resigned, and Mr. Stewart was looking around for a man; they wanted a man who had passed the Civil Service examination, or a man who had a degree; having both qualifications the choice was easy; cannot say if inspectors of weights and measures are appointed without examination, but deputy collectors and preventive officers are; present salary $1,800; revenue in this district amounts to nearly $400,000 a year, 297. There is no distillery or tobacco factory, but there are three breweries and one cigar factory; staff consists of seven men; district is very large, having one outpost at Hudson bay; offices are in the Woods Building; bonded warehouses at Ottawa, with the exception of one at Hudson bay and another at Ville Marie; had experience in mensuration, taught school, fond of mathematics and chemistry; divisions are graded into first, second and third classes; Ottawa division ranks as third-class; there is a vinegar factory here; the limit of salary for collectors in class three is $1,800; minimum now is $1,600, formerly was $1,400, 298. Collectors are so graded that no assistant can get a higher salary; is under

FREELAND, DR. ANTHONY—*Continued.*

Retirement Act and contributing 5 per cent, which is childish; would prefer Superannuation Act; does not look upon retirement allowance as anything at all; has no means of earning anything outside; was formerly coroner, making $500 or $600, but was not allowed to hold both offices; superannuation is a guarantee of permanency, whereas the present system is not; now take the deputy minister, supposing in the department he gets $4,000 under the old system of superannuation he would be superannuated when he put in his full term at $2,800; in order to supply his place it would cost the country $6,800; superannuated officer $2,800 and new deputy $4,000; under the present system a new man replaces the old one and at no cost to the country; the point desired to be made is that there is no financial reason why they cannot dismiss a man at once, if they want to, for political reasons; formerly if they wanted to do this they were confronted with the position, if we do this we will have to pay the dismissed man $2,800 and the new man $4,000; therefore superannuation is a guarantee of permanence; under the present system, when a change of government takes place, political expediency takes place and the new party can dismiss a man and advance the plea that it costs the country nothing; politicians are sometimes very hungry for positions and will not stop at anything to get them, 299. If a man has a superannuation to live on he feels independent; the abolition of the Superannuation Act was a mistake and there is no stability in consequence; under Superannuation Act old age is provided for, now it is not; they stop $90 of present salary, leaving $1,710 to live on and educate one's children; so it would just be possible if pendulum swung the other way, you might be asked to give place to some prominent man on the other side and take your retiring allowance with you; has passed several examinations since accepting office; though possessed of all the knowledge of all the spheres could not become collector at Montreal for instance, for having entered the service here you are pretty much limited to here, 300. Then we pay for guarantee bonds; the cost of these bonds is taken out of salary, practically a reduction of salary; revenue money is deposited to credit of Receiver General every day; our inspector visits us every three months; we do not know when to expect him; there is no way of defrauding government by emptying the casks in bonded warehouses and filling them with water; the excise duties on tobacco and cigars are collected by selling stamps; there is no stamp for whisky; the barrels are in bond and when they want a certain barrel they tell us the gauge marks and number of that barrel and the number of gallons it contains; we have that information in our books, the department has it in theirs, and the merchants have it in theirs also; out of a staff of seven, three are deputy collectors, 301. Could do with less than three deputy collectors if they were good men; would not like to say that political appointments are made; men receiving the higher appointments are generally good men, but in the lower grades the appointments are not good, they are just ward heelers; yet in office they are amenable to discipline; the accountant is not paid at all efficiently, 302. We have a complicated system of book-keeping, it is not only a straight keeping of books, but checks and counter checks have to be provided; acts as an actuary; a deputy collector attends to the bonded warehouse and to the vinegar factory; has to be there pretty much all the time testing the vinegar going through it and see there is no fraud practised; another in the cigar factory; though there are no preventive officers here our men do preventive service; all officers in outside service are started at the minimum, 303. Reports against men are not over-ruled; have sympathies with some men who have failings, especially drink; has no hesitation in reporting a young man who drinks; if there is anything wrong in the department in that line, will take some

FREELAND, DR. ANTHONY—*Continued.*

responsibility; Mr. Gerald is a strict man and Mr. Bernier is also very strict in that matter; are busy at all seasons, though there is an increase of work at Christmas times and around the holidays; we get three weeks of absence; all take the three weeks except one who loses the time off and on during the year; has no attendance book, as it does not apply to outside service; office hours from nine to four in the office, extra hours outside are paid for, 304. Thinks that first and second class collectors should receive more; a collector should get as much as a chief clerk; a collector holds a responsible position; cannot get on without deputy collectors, they take the place of a collector in his absence; no harm in having an officer under you to take your place in your absence; he should have the title of 'first clerk' or 'accountant,' the title should convey the distinct measure of responsibility; if you give him title of assistant or deputy the question arises as to extent of responsibility; every man's position should be as correctly defined as possible, 305. Classification of officers is not satisfactory; examinations are the most difficult in the service; some years ago there was a protest as to nature of questions; there were twenty questions in mensuration, each one would require from one-quarter to three-quarters of an hour to answer; examined in higher mathematics; in order to understand malting, vinegar making, distillery, &c., must be a good chemist; fermentation must be thoroughly understood; the same fermentation that causes diseases in human system brings about the same fermentation that makes the vinegar and alcohol; responsible position, because a man by neglecting his duty could make a lot of money; one man was dismissed years ago, but he had made thousands of dollars before found out; he was at a distillery and was winking at things, 306. Should have officers as competent as possible, and thinks there should be text books for them to study; even after they are in the service, for a man enters as third-class exciseman and works his way up; would suggest that examination papers of past years should be obtainable to give a chance to others undergoing the examinations; you cannot take away or copy the questions at examinations; questions are not only catchy, but of an arduous nature and put in ugly figures; questions set entail a lot of unnecessary work, 307. Probation exciseman begins at $500, and after probation goes up to $800; a man in Ottawa can never get up to $2,500; there is no position in the outside service of the Inland Revenue to which it would be desirable to appoint women; have no ladies in office; should be special writer class for smaller paid men; any man of ability will rise, a man of ability entered Post Office Department as letter carrier, he is now a second-class clerk and can go still higher, 308. Does not think it desirable to abolish political appointments, yet sometimes get very good men; Dr. Frankland is a political appointment and is an excellent officer, was a business man who wishes to do away with a lot of red tape and do business on business lines; there always will be political 'pull;' thinks it reasonable that the special class of exciseman in charge of some distillery should have some hope of getting a collectorship, but thinks he has to have a 'pull,' 309.

GEOFFRION, VICTOR, M.P., Verchères, 1223.

Appears for the employees of Lachine canal at their request; many have had no raise of pay for many years; shows increase in the work since 1896; the clerk says in a letter when he came in the expenditure of the staff of the canal was $18,400, now it is $28,300; expenses on repairs were $14,000, to-day they are $30,000, it needs more men to do the work; that clerk is doing more than double the work and is receiving less pay than his predecessor got;

GEOFFRION, VICTOR, M.P.—*Continued.*

during winter months some of these men are doing repairs and others are taken into the shops; thinks the great delay in payment should be remedied; these men have to take the statement of their time to the shop-keeper and sell their pay to get something to eat, 1223.

GEOLOGICAL SURVEY.—See *Mines, Department of.*

GERALD, W. J., Deputy Minister of Inland Revenue, 278.

Has been deputy since 1901, and forty years in the service; revenue has gone up from $8,000,000 in 1892, to $14,000,000 in 1906; had in 1906, 519 collectors and inspectors, inside and outside; receives salary of $4,000, with no emoluments; with such an increase of revenue an assistant commissioner is absolutely necessary; would be no conflict between the two, 278. He should be also a man thoroughly acquainted with the outside work of department, because that is where the revenue comes from; inside service not large staff, thirty-five in all; the work is not all the same, for on the statistical staff we want good, careful men to check every paper coming in; we have a branch of our department in all the large cities, 279. When clerk is appointed he is on probation for six months, and unless his conduct is very bad he retains his position; in promotion examinations only sets the paper on 'duties of office;' in promoting officers has to report on conduct and efficiency; the only chance of getting a man in at $500 would be to advance him to junior second after promotion examination, 280. Thinks that the minimum of the third-class should be not less than $700 or $800; no temporary clerks paid out of the inside vote; does not recollect dismissing any one in recent years, 281. All sign attendance book except two chief clerks; office hours from half-past nine until four, at times some remain later; all the inside service are in West Block; no one gets extra pay for extra services; most desirable that Superannuation Act be retained, it encourages men to work faithfully; many men leave our service for larger salaries than we can pay them; main revenue of department comes from distilleries; all grain coming into a distillery is weighed by our officers; distiller must produce a gallon of proof spirits from every twenty and four-tenths pounds of grain; the whole process of manufacture is carried on under supervision of our officials; rate of duty is so high that we cannot trust anybody; when grain is mashed and fermented it is placed in the stills where alcoholic vapour is driven off; from the time the beer or wash is placed in the still all the connections are sealed, 282. A large staff required at each distillery; chief man in charge would be present from 9 o'clock or earlier, till six; at Walker's distillery we have fifteen or sixteen men watching every operation; we follow the process from the time the grain comes in until the spirit runs in the vessel at which we determine the quantity subject to duty; if a mistake is made by distiller and he spoils a batch of grain we require him to pay the duty on the spirit that should have been produced from it; there are thirteen distilleries in Canada; to check the amount we have a stock book in which all grain coming in is debited to the distiller, against that is credited the grain taken for use in the distillery; when spirit is completely manufactured it is taken from the closed spirit receivers and rectified, then it is placed in storage tanks under lock and key, where it must remain two years, or indefinitely; certain allowances—for evaporation—are made on account of length of time in storage; bottled in bond under supervision; label over the capsule of the bottle is a guarantee of the age of the spirit; the date on it is the date of the manufacture of the spirit, 283. Spirits are reduced in the presence of officers; if there has been a loss in reducing, we require the distiller to pay the duty on it; then it comes back

GERALD, W. J.—*Continued.*

in barrels at a reduced strength of say 25 under proof, it remains there till sold; our collections are all made on the basis of a gallon proof; our officers follow it, whether in barrels or bottles until it gets back to examining warehouse and duty is paid; no smuggling of late; there can be no collusion between distiller and exciseman; special skill is required in making whisky; yeast being the great secret, for on proper fermentation depends the production of spirits, 284. Men have annual increments, also duty pay; we pay them sometimes $75 to $200 per annum; we keep no control over beer as there is no duty upon it; but collect tax on malt used; if malt is unfit for use it is destroyed in presence of two officers; they pay duty on malt before used, and brewer gets credit for that; if malt is destroyed they may appeal to Treasury Board for refund of duty paid, 285. With regard to cigars, the raw leaf comes in in bond, is locked up and delivered to manufacturer as he requires it, and every ten days he pays duty on the quantity taken out; every twenty-two pounds of leaf produce 1,000 cigars; duty on raw tobacco; nine-tenths of stemming is done in this country; cannot follow production of cigars as closely as whisky; stamps and labels are printed at British American Bank Note Company; cost of stamps on spirits is borne by distillers; cost of labels; stamps on cigars and cigarettes show duty has been paid; duty of preventive officer; about thirty preventive officers, but they are not generally known, 286. We prefer to turn confiscated liquors into the gutters; manufacture of methylated spirits is a monopoly of the department; manufactured at Ottawa; selling price, 287. May cover expenses before end of year; not potable; supply varnish manufacturers, that they will only use it for a specific purpose; the standards of weights and measures we use are sent out by British government; Imperial gallon is the only legal gallon here; inspectors visit all stores and other places every two years; they do not go to farmers, only to dealers, 288. Occasionally a scale is found false; case now is proceeding in Montreal; first case we have had for some time, and being of so serious a nature we feel an example should be made; we have an inspection of electric light and gas; we have a chief inspector for weights and measures, and an electrical engineer in charge of gas and electric light branch; the wiring in connection with the electric light is subject to provincial laws, while we inspect the meter by which subject is charged for his supply of electricity; we do not enter private houses unless asked to inspect; meters of Ottawa Gas Company are all tested and sealed before they are sent out, and are brought back every five years for inspection; another important matter under our jurisdiction is the adulteration of food; our food inspectors go and select samples just as they are offered for sale; the Act is a hard one to administer, but it is doing a great deal of good, 289. It applies to every article of food and drink, also to drugs; the inspectors are not supposed to make themselves known at first on entering a store, they buy an article, then they state 'we require this for analytical purposes;' they then divide article into three parts, leaving one part with the seller, sealed and labelled, so that seller can protect himself; the bulk of these samples come to Ottawa, where we have trained analysts; there is an analyst also in Toronto, Victoria and Montreal; liquors are analysed when a collection thereof is ordered; a question was raised in House of Commons some years ago that very bad liquor was being sold in Montreal, a collection was made, and in not one sample was anything found more injurious than the alcohol itself; there is a revenue from vinegar, in the shape of licenses and vinegar produced; a license to manufacture in bond is granted to the person who uses spirits free of duty in the manufacture of an article in which the alcohol is destroyed; in the manufacture of vinegar the alcohol is converted into acetic acid, 290;

GERALD, W. J.—*Continued.*

Mr. McGill is assistant chief analyst and receives but $2,300 a year, no salary at all for such a man; with his professional knowledge he ought to get at least $4,000; fertilizers are analysed, as well as food products, to protect the farmer; a city excise man must have some idea of mensuration, for he cannot improve his standing unless he passes an examination on our technical subjects; an examination in these subjects cannot by any means be called easy; if a candidate obtains three-fifths points he is entitled to a second-class certificate, if four-fifths, a first-class one, 291. Has not known of a single case in twenty years of any officials being offered a bribe; officers in the outside service give bonds of a guarantee company; reports we get from outside indicate that instead of there being too many officers in the department, there are not enough; no man is put in charge of any survey or distillery unless we know his character and work, and until he has proved his fitness; outside service could be improved if we selected the men; highest salary of an outside officer, 292. There are eight women clerks in the department, and there are many applications to enter; it has been said that the increased number of women applying for entrance arises from the fact that they are paid better at the beginning and have better prospects than bright young men, such, however, is not the case, for women, as a rule, never rise to the high positions; correspondence with the Auditor General in regard to a refund of duty on raw leaf tobacco; the Department of Justice has given an opinion that the Governor in Council had no authority to pass the order granting a refund, and a draft Act was prepared last session to legalize those payments, making the Act retroactive; at same time the government had under contemplation a rearrangement of the manner of collecting the duty on tobacco, which in itself would have nullified the order referred to, but session came to an end without the question being reached; the contention of the Auditor General was right; we still, however, follow the order in council; the formal opinion of the Department of Justice is that the Governor in Council had no power to pass the order, 293. The inspectors receive their actual expenses; no one but the department is over them; would be desirable to allow the inspectors a per diem allowance to encourage them to travel and do their duty; would not ask a man in the department to produce a hotel bill; they have to swear that all their expenses have been incurred on government business, and if a man swears that he should not be asked to produce vouchers; we have a good lot of inspectors; these returns go to the Auditor General, 294. The returns of excise collections are remitted to the department daily or as soon as they reach $100; all collections are on the same basis; collectors of inland revenue, weights and measures and gas make returns every month; district inspectors send in a report; and is sent to Ottawa, where it is chequed with our books to see that it is all right; the department receives no actual money; everything comes in in the way of bank drafts sent to Department of Finance.

Statement showing departmental staff during years ending June 30, 1892, and June 30, 1906, with salaries, 295.

GIROUX, JOSEPH, Bridgemaster, Lachine Canal, 1212.

Is keeper of bridge No. 5, at $45 a month and $7 a month for rent; gets pay for overtime from Saturday night till Sunday 6 a.m., gets 15 cents an hour; and from 9 p.m. till midnight, three hours more, or $2.70 per month for eighteen hours' work, and for seven months till closing of canal, 1212. Or $20 and $45; works all Sundays during two months, or twelve hours' extra a day; all bridge keepers get $45 a month; wishes to have a pension system; since 1903 pay is $45; was formerly $38, 1213. Presents memorial of employees; when

GIROUX, JOSEPH—*Continued.*

lock is not open a man has to be kept on watch, and that without pay; the bridgemaster alone is paid the year round, the rest for seven months only; carpenters and plumbers work the year round; were all recommended for work by respective deputies without any examination at all, 1214. Custom-house officers get a suit of clothes a year; and on Intercolonial Railway they get uniforms; when a man is sick he has to get a supply or lose his place, 1221.

See *Memorials*, Lachine Canal, 1215.

GIROUX, THEOPHILE AVILA, Montreal Post Office Staff, 882.

Has given attention to the pension system; considers that with a proper system of pension a stability would be given to the service and an inducement to good men to come in; would get better qualified men; it would be better for the state that a man looking for a pension should accept a lower salary; is chief of letter despatch branch and is twenty-three years in the service; change of duty would be beneficial to a certain extent, but the sorting of papers and letters could not be well interchanged with other branches; the change might be made in some instances but not regularly, 882. Theoretically the work of a clerk should be varied, but the number of employees being so limited, we cannot afford to let a man go into another branch to learn the work of that branch; will translate the memorial, and send in a copy in English and one in French, 883.

GLASHAN, DR. JOHN C., Examiner, Board of Civil Service, 28.

Member for ten or twelve years; formerly examiner for the Military College; now inspector of schools for the city; a graduate of Toronto University; has had thirty-five years' experience as official examiner in connection with the Ontario government; was for eight years a member of the Central Committee of Examiners; superintends examinations in Ottawa; candidates in Commons and Senate sit at every second desk; we seat 120 in Commons; when candidates are numerous we use Senate and Committee rooms, with examiners and assistants in each; does not think there is much crooked work here, 28. Can easily detect copying, especially if one or two mistakes are the same; never known a case of personation in Ottawa; number of marks returned to Secretary of State, but names are published alphabetically; would be advisable to have the results published in order of merit, but might have to divide them into classes; candidates are just as good as formerly, but many now are women, 29. People with degrees do not come before us; more graduates of colleges are applying for positions than formerly, and that for three reasons; examinations are still about the same standard; in Ottawa last November out of 193 successful candidates 117 were women; thinks that the pay of women in the service relatively to the pay outside is much higher than the pay of men in the service relatively to the pay of men outside; there are more prizes for men outside the service than for women, and men will go where prizes are to be won, 30. A woman who can do simply typewriting has as much advantage as a woman doing translation from half a dozen languages, in fact a typewriter is perhaps paid higher; we get one testimonial of character from each candidate; personally would not require a testimonial of character at all, should be left to the deputy when making his appointment; does not think an inquiry into the character of the candidates is a part of our duties, because we cannot do it effectively; medical certificate is looked into by the secretary; the question of health should also be referred to the deputy at the time of appointment, as he may not be appointed for five years

GLASHAN, DR. JOHN C.—*Continued.*

after he has passed, 31. Rejected candidates return for examination; age certificate required; though the law at present admits a candidate at eighteen, but would recommend and two deputy heads agree, saying, 'We cannot take any of these young men, according to statute, until they are eighteen; but if we could take them in at seventeen and put them on work they could well do, we could be training them for permanent appointment at eighteen; would not like boys to act as messengers; would prefer no age be set for examination, but the age should be set for appointment; many of our candidates would have passed better examinations if they had come up three to five years earlier; physical defects should also be left for the deputy to decide, 32. At present there are two standards of examination; would recommend three, one for messengers and such like, about the same as the Preliminary; one somewhat lower than the present Qualifying, and on different subjects for temporary writers, copyists and railway mail clerks; there is great difficulty now in getting enough railway mail clerks for service in Northwest; for the higher appointments a third and more advanced examination than the Qualifying, and any person who passes should not be asked to pass any further academic examination for promotion; in England there are different examinations for different departments and offices; here one common examination; deputy head should have the right to regulate the questions for his department and should be consulted; transcription should be struck off; composition should include precis making, for second-class omit bookkeeping, 33. Shorthand and typewriting might be made compulsory instead of transcription; punctuation should come under composition, and certain attention paid to it; also to capital letters; candidate should be allowed to choose which language he shall write in; would like to add translation, 34. For promotion examination, subjects are penmanship, orthography, arithmetic, composition, duties of office and a report on efficiency; order in council reduced these to two; Minister of Justice decided that there should not be less than two; and those two should be at the option of the department concerned, 35. On being transferred from one department to another the deputy head should not be obliged to receive a person unless he has passed an examination or its equivalent in that department; at examinations candidates are numbered, if the names are unknown our consciences are easy; thinks examiners should not preside at centres, 36. Teachers are the best to preside, but owing to the times at which examinations are held all teachers are engaged; if the time could be changed we could have the teachers and better rooms in high schools and academies; more liberty should be given to the Board in regard to examinations; promotion examinations should be held before March 31, or during Christmas holidays; if the competitive system could be carried out it would be an excellent thing, 37. The competitive system means that you would have to give the more successful competitor the particular advantage he should have; men appointed solely on account of their intellectual attainments as a rule turn out to be men of high character; there was bitter opposition to this in the Indian Civil Service at first, but that prejudice was swept away, and these men are the best administrators in England to-day; competitive examinations if wrongly applied to Canada would be more mischievous; logical result of competitive examination would be that when a vacancy occurs application should be made to the Civil Service Commission, politics would be eliminated and you would get the best trained men in the service, 38. Also besides exclusion of politics the deputy might reject a man who is not suitable; temper or disposition would render him unsuitable, 39.

SESSIONAL PAPER No. 29a

GOBEIL, A., I.S.O., Deputy Minister of Public Works, Ottawa, 1088.

He is senior deputy minister; has gone through all grades; thirty-five years in service; appropriations for department totalled last year about $11,000,000; salary $4,000, no other emoluments since defunct board of arbitration; the permanent officers do nothing but actual work in department; has a staff of thirty, including Mr. Gelinas, who has charge of official correspondence, and the whole of the records, also in charge of the accounts; although we have an accountant who is responsible for accounts, the law makes the secretary responsible; there was a little overlooking of the rules by Mr. Gelinas in his travelling expenses, there was nothing wrong, it has all been arranged; Mr. Kingston is accountant, 1088. He is not sufficiently paid; though the expenditure is the largest of all departments, yet the accountant is the least paid; Mr. Lafleur is chief engineer, is in service now twenty years; has acted as chief engineer for seven years, though not appointed; Mr. Ewart, architect, has been in service thirty-six years, appointed in 1897; though sixty-four years of age and on retirement fund, if anything happened, would only get the amount to his credit; he is one of the most efficient and best men for the position; outside architects working under Mr. Ewart draw more fees in a month than he does in a year; architects a long time in department on going out into business are at a great disadvantage in competing with younger men, 1089. Mr. Steckel, senior chief, is forty-seven years in service; was transferred from inside to outside, then came back; as a result of these changes he lost advantages of superannuation for all the time that lapsed between first appointment to the inside service and his second appointment; while rendering service to government he was working harm to himself; in eight years he would have ceased contributing to superannuation fund; late appointments to inside service have either been university graduates or have passed the examination; is consulted in most recommendations, 1090. Would be a matter of justice to the architectural staff and other staffs at headquarters if put under civil government; all on the temporary list are liable to suspension, they are under the control of their immediate chiefs; have about 300 men on the list, and number who do not behave is very small; has same careful supervision over outside as over inside service; all the engineers, architects and other professional men are in outside service; for luncheon an hour or hour and a half, 1091. All both outside and inside sign attendance book in morning; then there is a luncheon book they sign going and coming back; sign at end of day also; possible for a man to sign book then walk out; office hours 9.30 a.m. to 4 p.m., some later; since fire in West Block the records are in a good state, but there is not enough room; has adopted the flat file system, 1092. There are stores for Georgian Bay canal in Imperial Building, also in Corry Block; records of department are not sorted out yet; records relating to city of Quebec since conquest remained in Department of Railways when divided in 1879; there are some very valuable historic documents relating to 1835 or 1840 as far back as 1825; thinks all these records should be sent to the Archives; lately it was proposed to establish a mapping bureau, and the departments have come together and discussed it, but this department was the only one adverse to it; other departments make their own maps, Public Works only makes sectional maps or plans of its own works, 1093. Same number of men are employed by department at Ottawa as fifteen years ago; officers, in trying to get increased pay, get help from whatever quarter they can; abolition of Superannuation Act was detrimental to the service; without it there is no stability or interest in the service; its abolition was a serious blow to the service; some leave service for better positions, but as a rule, since classification of non-permanent officials, they are much better satisfied; number of architects about forty, all acting at

GOBEIL, A.—*Continued.*

headquarters, Ottawa, 1094. In the extra engineering staff there are fifty-two; thirteen assistant engineers, seven draughtsmen, twenty-eight book-keepers, clerks and copyists, and four messengers; hydrographic work for the purpose of charting the rivers for navigation is done in Department of Marine; our department does the work necessary for execution of important works; in giving out contracts the security is sent to Finance Department; government is carrying out systematic surveys of Georgian Bay canal with the view of taking it up as a permanent project, the surveying is practically completed; besides staff at headquarters there is an outside engineering staff, all paid from Ottawa and under control of chief engineer; they are all qualified engineers or surveyors, draughtsmen, 1095. A draughtsman must know how to take a copy from a tracing plan, then be able to draw a plan of a building, make a perspective of it and colour his plan; there is less dissatisfaction on account of pay than formerly, formerly the increasing of salaries of engineers was left to the Minister, engineers now are made into three classes, they go from one to the other automatically if there is nothing against them, with increases of $100 a year: the man who does his duty knows that if he works well he will get his increase; there are no shiftless ones among the engineers, if any are found they are dismissed; there is one paymaster at Ottawa and three outside; where works are being done by day labour, the cash is sent to the paymaster, who gives a guarantee bond, he pays out the money, sends back the pay-sheets, and when they are signed they come back as vouchers for payment, and credit is given for the amounts sent him; have practically no stores, everything is bought at current rates; there is a system of requisitions and a system of books by which we keep track of requisitions made and of where the stuff goes that is bought, 1096. There is no check to show stock on hand agrees with the books, because there is hardly any stock on hand, for what is required only is bought; there are forty-two extra assistants employed, most of them are clerks, appointed by order in council, but instead of deriving their status from the Civil Service Act, they derive it from a special vote of parliament every year; can tell when clerks are needed when the work is going behind, 1097. Percentage of inferior clerks coming into department is very small; the mail clerks attend to the sending away of letters, numbering them, entering them in a book, indexing them and keeping the registered letter book, work requiring to be done by a careful man; thinks every one on that list should be made permanent, contribute to and have benefit of superannuation fund; if deputy minister, with approval of Minister, reports that these persons are good officers and worthy of entering the department that certificate is worth as much as any examination; means those who are in department for some time, 1098. But new ones should pass examinations; does not approve of an independent Civil Service Commission governing a department; record clerks file away our documents and index them, hunt up any record that is required; non-permanent officials are divided into two classes, technical and non-technical; the latter receive an increase of $50 a year, and are divided up to $2,000 a year into first, second, third and fourth classes; as the technical men require to be better men and have probably to spend more money on their education, they receive an increase of $100 a year; the draughtsmen are divided into three classes, and engineers into four, and they are promoted from one to the other as they show qualifications and good work; the monthly pay-list is certified to by the secretary, who declares the clerks to have been in constant attendance, 1099. Thinks there are about 3,000 persons altogether in connection with department; there are about 6,000 miles of telegraph under our control; a superintendent is stationed at Ottawa and country divided into districts; all temporaries are now paid out of same

GOBEIL, A.—*Continued.*

vote; the general superintendent of dredging and his assistant have an office in Ottawa, not much dredging been done in the Yukon, 1100. In appointing inspectors of dredging on recommendation of local men, we insist on them being men of good standing and repute, that they make a declaration that they are not in any way connected with the contractors; the government engineer or his subordinates could not be present at all the works going on, but the engineer or superintendent of dredging visits the places at times; would have inspectors under control of department, and with no local interests; was no clerk of works for the tower that collapsed, the clerks of works of all buildings being carried on in Ottawa are government men; architects are drawing plans all the time; George Goodwin was the contractor and there is no doubt it was a faulty construction, 1101. Mr. Goodwin is personally a good contractor, and while doing other work relied implicitly on a foreman to build the tower; it was with the open consent of the department that there was no clerk of works; it was right under the eyes of department that all might see what was going on; he put up tower and is now before the courts trying to get $14,000 or $15,000; for buildings away off outside architects are employed on commission; 2 per cent on estimated cost of building if they only prepare the plans; 3 per cent for plans and sketches and 5 per cent when doing work to completion; this department furnishes furniture to other departments, at retail prices according to catalogue, 1102. Chairs are bought by the hundred, but not the desks, as no two men want the same kind of desk; the sum of $193,000 for repairs and furnishings included maintenance, repairs to roof, stonework, glazing, plumbing, heating, gas fixtures, &c.; Ottawa Electric Company supply light for $33,000; heating of buildings cost $95,000; thinks $300,000 a year not an excessive sum for maintaining; government buildings are carried on more economically than those of United States, England or France; thinks from experience that the taking care of the grounds could be done cheaper by paying better wages to good men and not having so many, 1103. In architect's and engineers' branches there are very few graduates of Kingston Military College, but get a few from Toronto universities, McGill, Polytechnique of Laval; build armouries for militia; has also control of harbours and piers, expenditures on all of which were made on reports of district engineers; wharfs are built on petition of inhabitants through local member, it then goes to Minister, 1104. The Minister himself is responsible for the places where the works are to be done; wharf at Hull cost $35,000; a conductor of a wharf is the same as clerk of works, or inspectors, in Quebec they are called conducteurs, or conductors; derive our main revenue from slides and booms; has charge of graving docks at Lévis, Kingston and Esquimalt, 1105. Last year there were 1,100 votes connected with the department; Mr. Steckle prepares the estimates; the expenditure of department in 1880 was $850,000; now it is over $10,000,000; yet the increase of pay has not been commensurate with that increase; thinks engineers have no great hopes of the future, there is no superannuation and family will receive nothing; inspectors and engineers when travelling send in their account declaring everything they spent was on government business; anything he spends on a cold or when sick, comes out of his own pocket, 1106-1107.

Memo.: Department of Public Works, Canada, comparative abstracts of staff lists for fiscal years 1891-2 and 1905-6, including official positions, architectural branch, engineering branch, telegraph service, general departmental service, outside telegraph service, 1108-1109.

GORMAN, R. H., Lockmaster at Lièvre Lock (letter), 1170.

Asks for an increase of pay, also for back pay, the increase lockmasters got four years ago; was appointed in 1897 at $40 a month; as this lock is under Public Works Department and not under Railways and Canals Department he did not come in for the increase other lockmasters got of 25 cents a day on May 1, 1893; should have got that increase, amounting now to $365; is informed they got another increase May 1, 1907; lock not in operation for last three years on account of landslide; that, however, did not lessen his work, as he had two booms to attend to, a safety and a swing boom, that had to be opened and closed when boat passed through, to prevent sawlogs and flood wood filling space wanted for boat; has done this without assistant since landslide; also other works, as keeping grounds in repair, &c.; general pay for labourers here is $2 a day, 1170.

GOURDEAU, LT.-COL. F. F., Deputy Minister of Marine and Fisheries, 639.

Has been in the service forty years; present salary $4,000; if retired now would receive $2,800; department spent last year over $6,000,000; duties of officers, 639. Tidal survey; Lighthouse Board; board does not increase expense, it hears all suggestions, and informs Minister what is required; board acts as a buffer between Minister and applicants; when board sits and decides on any question a report of its decision is prepared by secretary and presented to Minister; notices to mariners are sent to Admiralty in England and all over the world; commissioner of fisheries, 640. Clerks could not be lessened in number; had sixteen first-class clerks, nine second-class clerks, twelve juniors; all doing good work; one extra clerk has been twenty-five years in service is now made permanent; has lost many men on account of small salary; if a man is a good clerk he should not receive less than $800; thinks $800 is the lowest salary that should be offered to a man of education and some ambition to get on; banks can get smart young men for less than that because in a bank if a boy is intelligent and smart he can get on in five or six years, but in Civil Service even a good clerk will get increase very slowly; in his first five or six years he will get into debt to live decently; and will have to live to a good old age to get out of debt, 641. There are two women on staff; in the employment of women there is disadvantage, you cannot utilize them as men, you cannot confide to them outside business necessitating travelling; there are forty odd people as extra clerks; the fishing bounty business takes between twenty-eight and thirty-two clerks; there are over two thousand cheques to be made out in a limited time; every application for a bounty has to be strictly examined; vessels are paid by the tonnage, and the fishermen so much per man provided a certain quantity of fish is taken; clerks get three weeks leave of absence; has dismissed clerks for intemperance; lunch hours are from 12 to 2, half go from 12 to 1, rest from 1 to 2; origin of this department was the Trinity House, at Quebec, and its records are in possession of the Harbour Commissioners of Quebec; a lot of valuable records were lost when Western Block was burned, 642. Offices are in several buildings; our maps have as good a reputation and standing as the Admiralty maps; hydrographic work is absolutely distinct in England, no other department interferes with it; political influence used by clerks to better their positions does not help them much if a good clerk, if a bad clerk the Minister will not pay any attention to it; the abolition of Superannuation Act was not fair to those coming in; government should do as the provincial governments and give an annuity to the widow and the family, 643. Would be fair to employees if some kind of Pension Act, including a pension to widows, were re-enacted; thinks every large paying and receiving department should have an assistant deputy; the assistant deputy cannot clamour for more money if

GOURDEAU, LT.-COL. F. F.—*Continued.*

there is a stated amount attached to his position; in one branch of the department there are cases in connection with registration of ships, pilotage administration of different provinces, &c., and unless an officer makes a special study of that he is absolutely at sea; many lawyers consult these officers; the increased business of department justifies the increase of staff; the increase of business is 450 per cent; dictates every day at least fifteen or twenty letters in English and French, 644. There are about 2,000 men in outside service; stores are kept at different places; store books are kept; in the store books are kept accounts of receipts and expenses, i.e., if a foreman at Sorel wishes to repair a small boat, he makes a requisition for what he wants, &c., that is sent to the supply man, who examines and checks them, list goes to storekeeper and is checked again and charges are made to an account for that service; audit made once a year; suppplies are got by lowest, advertised tender; there are some professional men in department as accountants called in by the Minister, as an onslaught had been made on department and confidence of people was shaken; they found two duplicate payments for some few dollars in each case and were making such a fuss about it that the Minister, on recommendation of Mr. Butler, who said these same auditors had done good work in his department, engaged them to go over the accounts in our department for the preceding year, but they found nothing wrong; and the bookkeeping of department was perfectly sound, 645. These accountants were paid at rate of $75 a day; a scale of salaries applicable to lighthouse keepers was prepared last winter; they have been divided into seven classes, the first class where they have whistling apparatus and a complete set of machinery for working it, and the lowest is where there is simply a pole light, with a salary of $25; has agents at several places; supplies are purchased at Ottawa; the steamers placed at Quebec are the *Montcalm*, the *Druid*, the *Constance*; has succeeded in three cases to give the victualling of the officers and men to the captains of the boats, and in each case has been able to save several thousand dollars a year; thinks this is best system; Commander Spain submitted a memo. of daily rations, which was approved by Minister and which the men are to receive; agents have no right to carry on any transactions with the public without sanction of Minister; lowest tender is accepted, 646. Were several grocers to unite and send in a circular it would be known right off as it would be under consideration in a couple of weeks; the clerk examines it; if he finds a person is offering to sell above market price he is reported to Minister and cut off the list; goods are not kept in stock; case of Merwin recalled; where the officer who purchased the goods on authority of acting Minister, that has ceased, it cannot be done now, 647. Case of Strubbe recalled, he being paid $11,000 for cement at $2.20 or $2.30 a barrel, whereas Owen Sound Portland Cement Company was paid for apparently same cement, $1.85 a barrel; the difference in weight, however, made the price even; Mr. Coughlin is a manufacturer of chains, &c., he gets custom if tender is lowest; Canadian Fog Signal Company received large payments for fog signals delivered on tenders; the parts that were under patent could not be called for; Mr. Wilson, of Ottawa, supplies the automatic gas and whistling buoys, 648. The filling of these buoys with acetylene gas is not more dangerous than lighting a gas stove; the faulty buoys were brought from England; there is no danger in the Wilson buoy; the process adopted in department in preparing the estimates is that the different agents are asked to send their estimates, but previously the inspector visits all lighthouses in his district, noting everything that is wanted or is out of repair; tries to keep within the estimates for the year, the present

GOURDEAU, LT.-COL. F. F.—*Continued.*

Minister saying he would hold the accountant responsible if anything was paid for that was not estimated for; and is particular in exacting a monthly statement showing how appropriations stand, 649. At end of every year the officials would let matters stand till the beginning of next fiscal year and pay for them then, though they belonged to previous year; present Minister squared off all such matters last year; he got from the accountant a statement of every agency and insisted that not a single dollar was to be paid this year that should be charged to last fiscal year; the overlapping amounted to about $300,000; the practice was a legacy of many previous years; marine service comprises thirty-six vessels; every officer on travel asks for an advance, states the purpose for which he is leaving, the time he leaves, how long it will take him to do the work; and the amount advanced is based on probable time of absence; no further advance is given till the previous advance is accounted for, 650. There are seventeen Marconi stations all under control of department; no one can establish a system of that kind without license from Minister; each application to build a station is considered on its merits; we get lighthouse supplies from whoever puts in lowest tender; Minister is revising salaries of officials in meteorological office in Toronto; as well as the lighthouse service, 651. Engineer in charge on Atlantic coast; chief engineer in charge of St. Lawrence ship canal; all dredges and vessels of the district are looked after and repaired at Sorel; wages at Sorel shipyard amounted last year to $250,000; all kinds of vessels and steamers there, 300 men being employed there all winter; in the height of the season there are nearly 600 men working there, 652. Work for three or four of the departments is done there; building two more vessels for fishery protection in British Columbia; it is estimated that in British Columbia waters alone about $4,000,000 worth of fish are illegally caught; department has cold storage for bait, and has bait freezers on Atlantic coast; a company is formed with sanction of local government, they then come to department and receive one-half cost of building and a bonus for the first five years; development of herring-curing scheme, 653. Fresh fish trade is increasing, $60,000 being in the estimates to facilitate the transfer of fish in refrigerators, so that now the fish will be bought from our own fishermen; though the dogfish is used as a fertilizer and for oil, yet more money could be got by selling it in the Japan market; no conflict with Auditor General, and are always happy to follow his advice; coal was bought from Archer & Co.; it was unscreened and so dusty it could not be used; engineers refused to burn it; it was sold back to Archer, and he mixed it with good coal that would burn and it was bought back again; there is now absolute control over cheque books; a messenger stole some cheque books, filled up two or three blanks, and forged the signatures for $300 or $400 and bolted; Bank of Montreal had to refund; it was a very poor forgery; now cheque books are kept in a safe; revenues derived from the wharfs, 654. Government builds a lot of wharfs in different parts of the country, and so long as they are not transferred to department they do not come under the Act; but when they are, the vessels using them have to pay top wharfage and tide wharfage according to tonnage of vessels; top wharfage is paid according to whatever goes over the wharf; then a wharfinger is appointed and the trouble begins; would hand over wharfs to municipality, if they would keep them in repairs, but they refused; the wharfinger gets 25 per cent of returns and the balance goes to Receiver General, 655.

Statement showing special votes, out of which clerks are paid, in 1891-2 and 1905-6, 656, 657.

Gow, John Eckford, Special Class Exciseman, Joliette, P.Q., 349.

Appointed in 1888; collector at Joliette division is Mr. L. V. Labelle; there are three clerks at head office; is distillery officer at Berthierville, but attached to Joliette division, one of the third-class; was moved about much before marriage, not much since, 349. Suffered great disability in moving from one province to another in the education of family; salary $1,500 and $150 duty pay, cost of living is a little lower here, rent is lower, education fees high; sent here because distilleries are of recent origin down here; office hours are from seven to four for some, his own are from eight to six; extra pay for overtime; there is a night officer and one officer working all night, both receiving $25 a month in addition to salary; men change about for night work; would draw attention to fact that an officer does not get more money because he is in largest distillery, 350. Compensation for officer with 'long service'; have men in service appointed at an age when difficult to pass an examination, yet have been in service twenty-five years and over still giving good service; young school boy outstrips the old man; would suggest compensation of about $50 a year; would say that superannuation is based on salary received for three years past; contends that it is unjust that officer pays into superannuation fund for thirty-five years and may die while still in service, yet family receives no compensation; if increase of salaries is recommended would suggest that time of payment be assured; if government decide to acknowledge grievances and increase salaries that remedy be applied at once, at least half now, balance before two years; considers the advance in price of commodities will last some time; would plead for an additional raise for lowest class officers for they suffer the greatest hardships in matter of salary; these men should be placed in a comfortable position; average salary, 351. There is a lack of men in one or two of out offices; one man at St. Jacques not satisfactory, he is not an officer, but divides this duty with others, admits his own unsatisfactory work, but considered he was doing enough for the pay he got; legitimate to conclude that good men will not enter service; remarks are made about insufficiency of pay; a young man in this service in the third-class and in an average town should receive $900 or $1,000 a year, 352.

Graham, William, Second Engineer at Printing Bureau, Public Works Department, 1134.

Receives $75 a month; has been there since 1888; shares the day's work with Mr. Thompson; began at $65 a month and has had one increase in eighteen years; is paying principal and interest for house at same time, or about $15 a month; was formerly railroading at $125 a month, but had two accidents and family persuaded him to work at something less dangerous; cannot compare steam plants in neighbourhood with that in the Bureau as to salaries paid; engineer at Eaton's store at Toronto told me what he was getting and thought it was very reasonable compared to his, 1135.

Grant, M. D.—See *Civil Service Association.*

Gravel, A. T., Inspector Weights and Measures (letter), Three Rivers, 374.

Que le salaire qu'il a n'est pas suffisant au prix que coûte la vie aujourd'hui; car depuis dix ans le coût de la vie est monté tant qu'au loyer etc, de 35 à 40 pour 100, et le salaire est le même qu'il était il y a vingt ans; de 1887 à 1897 les revenus du bureau ont été de $9,859.82 et le salaire des trois employés pour ces dix années a été $22,000; de 1897 à 1907 les revenus ont été de $13,225.80, et le salaire des deux officiers a été $15,000, 374.

GRAY, F. WOOD, Assistant Tide Surveyor and Preventive Officer, Quebec (letter), 152.

Appointed preventive officer in 1884 at $600 a year; from 1893 to 1898 was assistant tide surveyor at $1,000, since 1898 has acted as shipping clerk; names the many and varied duties of such; also performs duties of tide surveyor in that gentleman's absence or sickness; as preventive officer holds a 'writ of assistance' covering the whole Dominion, and has made inportant seizures; hopes Minister, for length of service, twenty-four years, and importance of duties performed, will grant increase of $200; would refer to collector for the manner in which he performs his duties; J. B. Forsyth, in a letter, concurs in the above reasons and recommends increase, 152.

GREGORY, JOHN URIAH, I.S.O., Agent, Marine and Fisheries, Quebec, 686.

Has been in service forty-four years; his salary is $2,200 for the last twenty years, while expenses of his agency have gone up from $200,000 to over three-quarters of a million; in his office fifteen or eighteen clerks, on the premises there are about 100 workmen, and has to look after all lighthouse keepers from Montreal to Atlantic, including Baie des Chaleurs, Anticosti Island and Straits of Belle Isle; agency takes in all the lights from Montreal to the gulf; looks after steamers *Druid, Montcalm, Champlain, Eureka* and the *Princess;* also four lightships, 686. Coal is bought by contract from mines in Nova Scotia; contract is let by department at Ottawa, and the company delivers the coal to us here on wharf at so much a ton; other articles as chains and anchors are bought by tender; the plates of the screws of an ice-breaker cost from $275 to $300 each; if Drolet's price is not higher than other peoples he gets the contract; he has an establishment on the ground, and the fitting has to be so well done that it is an advantage to have it done here; Drolet gets preference in purchasing fine machinery, as revolving lights and gear, as there is no one else in city to do the work; the superintendent and inspector certify that work has been done, that the prices are fair and the work necessary, 687. Does not get goods by public tenders, but gets prices from seven or eight different men in the trade, friends of administration, groceries are obtained in same way; oil for lights is got in Ottawa by contract; small articles are got here by tender and divide up orders; store books kept here have been inspected by Audit Office; they went all over store; has books showing what was taken in and where everything has gone to, 688. Has buoys of different sizes in our shops, we do not keep many on hand for you can never tell what kind you want most of; one man may have a bill of $23,000, but item after item of that has been charged to a different service, so that he can tell what each lighthouse or steamer costs to keep a year; has large forge and boiler shops, we make our own boilers, boats and gasolene launches; has about sixteen or eighteen of these acetyline buoys in stock, they get out of order and our captains will not load them while in the water, but will take down a buoy that is already loaded and put it in the place of one that is out, they bring that back and after it is well dried it is loaded; has about twenty acetylene buoys in agency; replacing the Pintsch gas buoys with the acetylene a far superior light, 689. Twenty tons of carbide in stores now; cost of labourers has increased from 10 cents an hour to 25; cannot get a labourer to work for $2 a day of nine hours; wages of carpenters, blacksmiths and mechanics have gone up from $1, $1.50 to $3 or $4 a day, and the agent gets no increase; has had no increase for twenty-three years; officers on Dominion steamers, and the men also have had their pay considerably increased; many of our lighthouse keepers are paid less now than thirty years ago; the lighthouse keeper at Bird Rock had $1.500, now he has $1,800; these men have the fog alarm to run night and day; they generally need an assistant; department is considering the question of raising the rates of pay

GREGORY, J. U.—*Continued.*

for all lighthouse keepers and classifying them; has no difficulty in getting extra men at stores; wages of labourers, seamen, officers on board Dominion steamers have been increased, and pay of lighthouse keepers are being revised, the only ones not increased are the clerical staff, 690. Believes pension to a lighthouse keeper is a necessity; we would get better men and they would stay with us longer; lighthouse keeper at West Point, Anticosti, writes he cannot live on his salary, cannot get an assistant for what he formerly could, is getting no more salary to-day than his father did forty years ago; matter is before Minister, and it is put off from year to year; the lighthouse keeper at Belle Isle who succeeded his father had to resign because he could not live on his salary; the man recently appointed at Heath Point, Anticosti, cannot get a man to help him under $300 a year and board, his own salary being $600; it seems no more than right that men placed in the most God-forsaken positions should be able after a certain number of years to retire on a pension; it is cruel to these men; has made out a schedule of salaries which we think would be fair and just for these men, 691. They have to pay extra hazardous premiums if insured, and often they cannot get insured; the first two men at Bird Rock lighthouse went out of their minds from the monotony of the life; another went to kill seals on ice, was carried away and lost; another was blown to atoms firing off the gun; reliable and excellent men in these positions are absolutely necessary for the safety of navigation of St. Lawrence; thinks that if a lighthouse keeper be taken away his widow should be paid half his superannuation at least; a man at Baie St. Paul had to resign on account of illness, his wife applied for aid; she received no aid, although like a great many other women at lighthouses, she had done a good deal of the work herself; would suggest she get half the pension as long as she lives after death of her husband, 692.

GRIBBLE, WILLIAM, Toronto, 1176.

Is night cleaner; as such they deserve consideration; have to work six nights a week, gets one week's holidays; could hardly change day staff for night, 1176.

GUY, R., Letter Carrier, Hamilton, 960, 974.

Has heard of letter carriers doing clerks' work in office yet graded as letter carriers in Hamilton, 960. Hours of work in Hamilton differ on account of trains coming in at all times; thinks carriers in Hamilton are not as well off as in Toronto, 962. Cannot say why living in Hamilton costs more than in New York, but such is the statement of the president of the Board of Trade, 963. Hands in memo., every word in which can be substantiated; wishes yearly salary with definite scheme of promotion; letter carriers doing clerical work in post office; thus being deprived of their privileges; says politics in the Civil Service is the curse of to-day; this applies to both sides; get rid of politics and you will build up a service, a credit to this young nation; give young men in the service something to aspire to and not hold them back; other young men are doing far better in other walks of life; have a scheme of promotion and let those get to the top of the ladder who have the ability; young men in Hamilton are leaving the service, they sized up the situation in a very short time and left, 974-975.

HAMEL, PIERRE, Clerk, Customs, Quebec (letter), 147.

Appointed landing waiter at $600; passed both examinations, wishes therefore a larger salary than examining officers; has given satisfaction in the various departments, 147.

HAMMOND, W., Letter Carrier, Toronto, 985.

Working under new Bill; was sick two weeks and lost pay; lost three days when father died, and lost pay again; when he approached Mr. Lemon about it, he said, 'it is very unusual for you to come here and ask for pay, we cannot help your father or anybody else dying, you will get your pay for the time you work;' other men get sick pay; is twenty-nine years old and has eight years of service; receives $2.25 a day, with five per cent deducted; would accept any position to better himself, 985.

HARPER, JAMES F., Transfer Agent, Hamilton, 989.

Work hours irregular and depend on arrival of trains; did not accept new Act; transfer agent requires mental activity; if trains are late, mail is despatched by some other route; has to undergo examinations on train connections, and duties; previous to his appointment as transfer agent the position at Hamilton was held by a mail clerk, receiving $800 a year; now those duties are doubled, hours lengthened, yet witness does not receive the salary the mail clerk got; has also to despatch over 500 letters from various mail services and put them on proper train; has been transfer clerk for twenty-three years; position is harder as the trains and mails increase in number; mails have more than doubled; thinks he is the only transfer agent in the division under the old Act, and if the duties he performed ten years ago were worth $600, his present duties should be worth $1,000, considering increased cost of living, 989-990. Asks an increase of salary; is still after twenty-three years' service receiving $600; to get an increase had to come under new Bill; his dangerous occupation did not justify him in risking loss of sick pay and full superannuation; if he had accepted new Bill would have had to receive day-pay, and if injured would lose sick pay; 'good times' have increased cost of living; $600 years ago was equal to $1,000 at present time; with present salary cannot do justice to his family, much less if he became incapacitated; works every day in the year including Sundays, and full time on all statutory holidays, receiving no extra pay; duties have more than doubled while salary has not increased in eighteen years; wishes a recommend for an increase of salary, 991.

Memo.: Supplements memo. with a few facts; during twenty-three years was never fined nor reprimanded; thinks a man should be paid for what he is worth; if capable in discharge of duties his salary should be increased and his only pull should be merit; at Hamilton two transfer agents perform the work day and night; suggests a third, making an eight-hour day; seven years ago rented an eleven-roomed house at $15 a month, paying rent, &c., by keeping roomers; now the rent has increased to $35, forcing him to seek another at $10 a month; cannot exist on $40 a month; could not accept new Bill without losing sick pay and superannuation; suggests that after fifteen years' service transfer agents be advanced to maximum of new schedule, if capable and qualify in examinations, 992.

HARTLEY, J. McL., Mail Clerk, Toronto, 994.

Average run of a mail clerk in Toronto district is 180 or 200 miles; travels alternately day and night from Toronto to Montreal; mail clerk has to alight from train to clear pillar boxes at stations, and at last moment to enter cars hurriedly by two or three perpendicular iron bars; thinks accommodation on Canadian Pacific Railway is much better to-day than the Grand Trunk Railway in general; mail car could be much improved and made heavier, 994. Has had nothing destroyed so far by fire, but a suit of clothes was spoilt by blood in an accident in 1897, but received no compensation; about twenty-five mail routes in Toronto district; the Great Northern runs out of Toronto,

HARTLEY, J. McL.—*Continued.*

but with no postal car, it has a mail service from Toronto for about eighty miles; the line goes to Muskoka lakes and back; has been twenty-one years in service; does not think the English system of moving mail clerks in and out would be beneficial to service, but would lead to greater confusion: does not see how a man could stand being changed from branch to branch, 995. State of mail clerks is nearly analogous to that in United States; not much chance of promotion in his own class: there is no time on the runs to lie down; in his car there are five or six men and only one chair: of late has had striking evidence of breakdowns and nervous incapacity, from close proximity of car to engine; thinks Post Office Department should dictate to railway companies what kind of postal cars there should be; the brighter young men are leaving service to better themselves, 996. If a clerk gets less than nine-tenths marks at examination he loses his annual increment; it is almost inevitable that an old man in service and whose nerves may be affected by the hardship and arduous nature of his duties should wear out as he gets old and lose increment, 997.

HAYWARD, W. J., Inspector of Weights and Measures, Windsor Division, 415.

Is inspector of weights and measures for London division, comprising eleven counties; salary $1,600; entered service twenty-eight years ago at $1,000; has not been much on road since coming to London; two divisions amalgamated ten years ago, since then has attended to office duties, 415. One scale factory in London, one in Aylmer, and one in Chatham; every two years coal and grain elevator scales are inspected; Messrs. Coughill and Thomas do most of travelling, receiving out-of-pocket expenses only; never was a per diem allowance allowed; does not think a per diem allowance would induce more frequent inspection; has eighteen years experience on road; as far as travelling expenses are concerned the contingent account is sufficient to pay what they incur and they give a fair account of them, 416. Would suggest that assistant inspectors should have some classification, should rank as junior second-class clerks; should be men of good education, good business tact and have practical knowledge of mechanism of scales, 417.

HENDERSON, JAMES, Post Office Inspector, Toronto, 1029.

Began as clerk in inspector's office, Toronto, thirty-six years ago, at $600; was assistant inspector twenty years, on change of government was made inspector, at $2,200; now receives maximum $2,600, 1029. Thinks some consideration is due him for length of time he remained stationary; present position is second to none in Dominion; is familiar with postmaster's accounts, audits money order books, conducts investigations; considers inspector at Toronto should have a great deal more than $2,600; Mr. Ross, the superintendent, receives at least $5,000 a year, viz., $3,800 salary, and has quarters provided for himself and family equalling $1,200; as inspector he has longer service to his credit and duties equally if not more responsible; has about 1,800 post offices in his division; travelling is getting a little better; formerly received $3.50 a day allowance, now only actual expenses, 1030. No inducement to travel often, being out of pocket; has a great deal to do in criminal cases; not getting in as good men as formerly, robbery is more frequent; a dishonest carrier was arrested lately, his salary was $1.50 a day, is a married man and pays rent, grand jury took ground that $1.50 a day for a letter carrier was not enough and expect good service; there are sometimes carriers employed that he would not hire in his own business; we are getting less and less efficient men, if inspector was allowed some latitude he would often be able to get better men; has two lady typists in office, 1031.

HENDERSON, WILBUR, Deputy Collector, Toronto, 413.

Is deputy collector and has been twenty-four years in service, they are not eligible to enter charmed circle of special class excisemen, are supposed to be in line for collectorship; deputy collectors can be and are appointed without examination; class A is not a promotion after examination from class B; officers enter class A without passing through class B; special class excisemen should be recruited from those who pass the examination; has passed all the examinations; would call attention to a certain class of officers receiving greater salaries than deputy collectors; there are five deputy collectors in the same position, 413. Salaries should be in proportion to duties and standing in the service; as deputy collector is next to collector, but there is another officer in division below who receives a greater salary; he is a special class exciseman; instance of an inferior officer receiving greater salary than his superior; would have been on special class list had he not been appointed deputy collector; claims that a deputy collector should rank higher than a special class exciseman and be paid more in proportion to his duties and responsibilities,414.

HIGMAN, ORMOND, Chief Electrical Engineer in Department of Inland Revenue, Ottawa, 445.

Administers four Acts; reads letter stating his position, 445. Formerly did most of technical work connected with weights and measures; was appointed chief electrical engineer; all the old inspectors who were in existence prior to passing of Act retain their offices, exofficio; has thirty-five inspectors outside paid by salaries; ranging from $500 to $1,800; receives salary of $2,600; commenced electrical service in England; came to Canada and was for twenty years chief of operators' staff and electrician for Montreal Telegraph Company at Ottawa; in 1892 was called on by government to inaugurate the electrical inspection work; inspectors are placed in sixteen districts, they have to visit every electric lighting plant; if private owner wanted meter inspected officers would have to do it; inspectors map out a week's work where meters need inspection; they go wherever required, an electric lighting company may get in a dozen or two new meters to be inspected before use, and inspector goes as soon as notified, 446. Receives bare travelling expenses, sometimes their accommodation is not very decent and rough; by experience one does not cover his own expenses; service would be greatly improved under a per diem allowance; revenue from electrical inspection amounted last year to $35,000, and expenditure about $8,000; revenue from combined gas and electric light inspection was about $58,000; some assistants get as low as $500, while one inspector gets $1,800; salaries about same as fifteen years ago; higher standard is required for inspectors and assistants; electric companies insisting that we provide better men, 447. A graduate of university with diploma of electricity would not long remain in our service at our salary; the universities are turning out hundreds of these young men every year and they cannot all find employment, so some may remain with us if we treat them fairly; for efficient administration and due regard to economy a consolidation of the weights and measures and gas and electric inspection should take place; there would be no additional cost as we have all the officials we require; present work is an anomaly; considers the consolidation should take place, and that a superintendent of standards should be appointed, 448. Receives $2,600 salary since 1904; districts same in number now as then; revenue in 1894 was $5,000, last year it was $35,000; fees the same; is not under Superannuation Act, but if Act is restored hopes to receive benefit; hours of work irregular, often far into night, when away office is closed; undertook alone introduction and administration of Electrical Inspection Act; it is harder

HIGMAN, ORMOND—*Continued.*

now with the four Acts to administer; has no proper assistance, is not allowed assistance and pays typewriter out of his own pocket; deputy minister is his chief; necessarily often absent from Ottawa installing new inspectors and supervising their work; spends about three months away from Ottawa; has one assistant lately appointed, 449. There was no Department of Trade and Commerce when this system of inspection of weights and measures, gas and electricity began; the standard pound weight was obtained from Imperial authorities; Sir Henri Joly de Lotbinière thought a metric system would be desirable in Canada, and on many occasions expressed that belief, also published a pamphlet on the subject, 450.

Memo. on classification and reorganization of inspection service: As same set of officers perform this work of inspection, all candidates should pass qualifying examination in electricity prescribed by section 11 of Electricity Inspection Act, 1907; should also pass Civil Service qualifying with some special features added, e.g., mensuration, construction and testing of weighing machines; as inspection of gas, &c., is a part of weights and measures system, thinks the three branches of service could be administered as a distinctive department of government by a single chief officer, called the 'Bureau of Standards,' presided over by a technically trained man, a graduate in applied science with a thorough practical and theoretical knowledge of electricity; two technical experts are suggested as chief inspectors, one for east and one for west of Canada; such inspectors to supervise all three branches; such system would not increase cost and would result in a decided improvement in service; that inspection districts be co-terminous, and classified as to revenue earning capacities; that salaries of inspectors and assistant inspectors be arranged proportionately thereto, minimum in each case not less than $800 a year, 450.

HILL, WILLIAM, Fireman, Supreme Court, Ottawa, 1143.

Has been fireman there since 1891 and assistant nine years; by orders of Registrar has to open the law library early every morning; figures in the statement handed in are partly from Toronto and Peterborough; wages mentioned therein are those actually paid by manufacturers; has no connection directly or indirectly with the union; engineers in charge of city waterworks in Ottawa get $79 a month for an eight-hour day, 1143. Oilers get $50 a month; there is quite an amount of skill required to become a fireman; or he will waste coal and not obtain the pressure required on his boiler; there is a great knack in spreading the fire and getting the best results; is in full charge of the building; is now acting as fireman though over seventy years of age; has had no complaints about his work; did not get position through politics, 1144. Superannuation does not apply to a man in his position; he worked on these buildings under contractors; has engineer's qualification papers; leaves his case to Commissioners; the engineers he is acquainted with get from $85 to $120 a month; a fireman makes from $70 to $80; has to regulate heat in the buildings and is at call of the judges and officials, 1145. Compensation for labour is inadequate and not reasonable compared with increase of wages; may say that Mr. Cameron exacts a great many things to be done that one could object to; entered the service because there was an opening suited to his physical capacity, 1146.

Memo.: At Supreme and Exchequer Courts, there are two men on heating staff, one on in the day and the other at night; they work seven days a week of eleven and a half hours a day for six months, and at sixty hours a week for remaining six months; has to deliver and receive parcels per express, and open library for lawyers; has to perform duties of engineer and caretaker

HILL, WILLIAM—*Continued.*

since 1891; he receives the small salary of $55 a month, and is responsible for the fire apparatus and its condition; his assistant, in service for nine years, now receives $50; does not see why they should not receive remuneration for long hours; cites scale of wages of engineers and firemen; at City Waterworks Pump House, engineers in charge on eight-hours shift, per month $79, with $2 increase a month up to $1,000, and for overtime; oilers on waterworks get $50, the duty of oilers is not to be compared with firemen; a competent fireman often makes a competent engineer, 1146-1147.

HILLMAN, N. F., *et al,* Lock and Bridge Tenders, Welland Canal (letter), 1239.

The lock and bridge tenders of Welland canal ask a readjustment of their salaries on a fair and living basis: (1) salaries remain same as twenty-five years ago, $45 a month for eight and a half months a year, yet cost of living has greatly increased; (2) the other branches on the canal got increases three years ago and shorter hours; (3) are required to be on duty twelve hours day and night, others nine hours; (4) the labourers receive $1.50 for nine hours; they $1.66⅔ for twelve hours work; (5) outside labourers receive $1.75 to $2 per day of nine hours; (6) in winter, when on two week's water watch, in all weathers, they receive no pay whatever for the two Sundays of the watch; cannot bear the expense of meeting the Commission; (7) from December 15 to April 15 canal is closed, therefore are out of employment in hardest part of the year, 1239.

HUGHES, MICHAEL, Inland Revenue, Montreal (Letter), 322.

Has been in service of Inland Revenue for eleven years at $500 per annum; employed at factory of American Tobacco Company as second officer, often replacing first officer, and has given satisfaction; finds it a hardship not to be permanent and to work for above salary (less than a labourer); at his age difficult to pass required qualifying examination, though has filled the position and performed duties of officers with higher salary; asks for a recommendation covering persons situated as he is where, having served for a number of years with satisfaction they should be made permanent at an increased salary, 322.

HUGHES, M., Excise Officer, Montreal, 364.

Temporarily employed; has been in service eleven years; has passed preliminary examination; is employed in one of biggest surveys; three months after entering service, went into Mr. Fortier's tobacco factory, then to American tobacco factory; was on pay-list in 1896 as temporary clerk on contingent account, 364. Before entering service was an inspector in employ of municipal corporation, 365. Wishes to be made permanent without passing examination; desires recommendation of chairman to assist in obtaining promotion and waiving examination; if made permanent expect salary would be doubled, 366.

HUGHES, W. S., Accountant, Penitentiary, Kingston (letter), 584.

Has been an officer here for fifteen years, the last four years as accountant and clerk of industries; before present appointment was chief keeper and clerk of industries at $1,400, and was having $116.66 added to his retiring gratuity allowance each year; on last promotion he lost this $116.66 gratuity and salary was lessened to $1,330, thus losing a gratuity of $116.66 and $70 in cash each year; asks Commission for consideration; would suggest that he be placed back on gratuity fund as before, that money deducted from salary be refunded to him, government keeping the interest, 584.

Jacques, Alfred, Superintendent of Letter Carriers, Montreal, 883.

Was a letter carrier for ten years; the Bank of Montreal and other banks all have letter boxes; a letter carrier at $700 if appointed a clerk has to start again at $600; it is not very encouraging to a carrier to have to lose $100 in salary to become a clerk; superintendent regulates the beats and districts for the carriers; thinks the beats are too large and is putting them on a proper footing, 883. Will make the beats shorter if we get more men; men looking for Christmas boxes in better part of city have been changed to Griffintown; was once changed himself, but does not know why; it may mean a difference of $100 to a man, and he feels rather queer to be treated that way; would not do it myself and know what it is; thinks the department is entirely against carriers being appointed clerks; the letter carriers have done the work of clerks for years, perhaps eighteen or twenty years, and during all that time have been deprived of uniform, car fares and Christmas boxes, 884. We want good men to sort letters; a carrier is a better man that is why they are asking to be appointed clerks after five years; sorting is work which it takes a long time to learn, and the best way is to go around delivering letters; thinks if a letter carrier can do the sorting he ought to be made a clerk; there are about forty-five carriers inside doing the work of clerks or porters; some of the carriers are doing night duty as well as day, besides losing uniforms, car

JACQUES, ALFRED—*Continued.*

fares, and Christmas boxes, &c.; some of old carriers contribute to the superannuation fund, but those appointed since 1902 contribute to retirement fund; those appointed now contribute to retirement fund with interest at 4 per cent, 885.

JAMIESON, R. C., Chief Officer, General Distillery, Toronto, 403.

Has been in service since 1877; the General Distillery got its license in 1906 for manufacturing spirits from syrup obtained from refuse of beet roots; it is a company organized by several distilleries; presents petition signed by forty-eight officers or about one-seventh of total outside service of Dominion; cannot say from own knowledge that the work is often done amidst disagreeable surroundings, 403. Officers have to travel often two miles to get to work, and in winter months have to get up at 5.30 to reach distillery at 7; statement handed in shows that cost of supervision amounts to about three-tenths of one per cent; another statement showing the manufactures at Gooderham & Worts for six periods; also a statement of the manufacturing of malt; has been twenty years in service and is a special class exciseman; in Gooderham & Wort's distillery there were manufactured 838,297.63 gallons proof spirits, and 605,100 pounds malt; duty on spirits was $1,592,765.54, and on malt $9,076.50; officers in that year got $9,500, including duty pay; one result of this statement is that total duty has about doubled and percentage of salaries has about halved, 1404.

Statement showing the spirits and malt manufactured at Gooderham & Wort's distillery and malt house from July 1, 1901, to March 31, 1907; also by General Distilling Company from July 1, 1906, to March 31, 1907; this statement shows gross salaries, including duty pay of officers employed in these surveys, also cost of bottling labels for same period, 407.

Statement showing cost of supervision of distillery, &c., and cost of bottling labels actually used in bottling spirits at price charged by department to manufacturer, 408.

JESSOP, W. G., Railway Mail Service, Toronto, 1003.

Irregularity of train service increases length of day, a night run often lasts after eight o'clock next morning, consequently is a loss of pay; in this case, therefore, the longer the work the less is the pay; in winter the average of late trains is greater than in summer, 1002. Wishes to say that men who are in positions of responsibility, as bankers, &c., are paid in proportion to responsibility; witness gets registered bank packages to value of $5,000,000 at some seasons of year much more; the money is brought to post office at Toronto by armed bank messengers; the money is kept in a vault till he is ready to be driven to Union Station, to a dark hole, where there is no light and is left alone in charge, any one could hold him up; then in charge of this money he goes to North Bay with the danger of being held up; therefore thinks services should be recognized in proportion to responsibility; mails are taken to station in horse vehicles, not in trolley cars as in Ottawa; some routes are better than others and senior clerks should gravitate to these, but they do not always; the more mileage the more salary; there are about 100 railway mail clerks in the district; at return of every trip has to send in a report, 1003. Dissatisfaction at the way vacancies are filled; thinks the next senior qualified officer should be promoted; wishes to speak of the hardships of his assistants, labourers and porters, who are doing the work of mail clerks, yet have not passed the examinations; thinks a man should either pass examination or go out; there is the matter of sickness; we have ninety-two clerks and last year forty-six were off duty, not all at same time; was on continually for ten

JESSOP, W. G.—*Continued.*

weeks as result of holidays and sickness of other clerks, 1004. Thinks number of trips should be lessened, or some definite number established, we run too much, and are not paid enough; describes postal cars; does not think it wise to move clerks about much; if you want real efficiency put a man on a run and leave him there as much as possible; a new man would make mistakes; badly lighted cars injure our health and eyesight, 1005. Question of having proper mail cars is important, for if an accident should occur the clerks are utterly helpless and hopeless; they can see nothing ahead or behind; was once in a car that rolled down hill and was burned, they smashed the car and got him out, but mails and registered matter and his clothing were burnt; the cars are not heated, sometimes they are 30° below zero, 1006. Wishes to add to previous statement (1) that when a clerk on a night run is detained and has to work after 8 a.m., instead of lessening his mileage it should be increased; could be arranged by counting as night miles, more than ten hours a day; (2) where clerks are required to work before departure of train, a stated mileage should be allowed. say 30 miles per hour; (3) that provision be made for appointing relieving clerks, e.g., on the run from Montreal to Toronto, with seventeen clerks each entitled to three weeks' holidays, or fifty-one weeks in all, it would require one man's service for a whole year; incloses an extract from a young clerk to a superior officer; that as a result of serious injuries received on duty as a railway mail clerk he became so unnerved and completely exhausted at end of each trip that he was compelled to accept another position with less pay, 1007-1008.

JOBIN, ARTHUR, Clerk, Railway Mail Service, Quebec (letter), 928.

Was on January 1, 1907, appointed permanent fourth-class clerk in the superintendent railway mail service branch at Quebec; since his appointment has passed Civil Service qualifying examination and respectfully submits that this examination and law of 1903 (3 Edw. vii. c. 49, s. 6) entitles him to third clerkship; recently two clerks (fourth-class) in city post office have been promoted to third clerkship, 928.

JOHNSTON, Dr. J. K., Gas Inspector, Toronto, 429.

Thinks that as officer is working overtime, and the gas company pays the fees, some extra remuneration should be given him, 429.

See *Memorials.*—Inland Revenue, Gas and Electric Light.

JONES, ALBERT, Mail Clerk, Belleville, Ontario (letter), 1011.

Salary $800, stationary since 1896; thirty-seven years in service; with present salary cannot meet the necessaries of life; in 1896 case examinations were introduced, passed four up to 1901, when he was interfered with by Mr. Hetherington, the examiner; two boxes that were necessary were absent, so that he could not do the sorting; on application in 1903 to pass another examination, received the answer very firm, 'no matter what percentage you make at case examinations, it will have no bearing on your promotion;' wishes his case looked into, and if necessary will give further information; to receive arrears of salary due him; also to be transferred from Toronto to London division, 1011-1012.

JONES, T., Watchman, Custom House, Toronto, 1176.

Has been in Public Works Department nearly six years; is on duty eight hours a day and eleven hours on Sunday; has had no increase in salary; is paid by cheque from Public Works Department; has always received $50, 1177.

KAIN, SAMUEL W.—See *Memorials, Customs, St. John, N.B.*, 172.

KENNEDY, DAVID P., Engineer, Quebec Examining Warehouse, 1157.

Receives $900; entered in 1897; predecessor got same salary; wishes an increase in salary; has charge of three boilers, an engine, an elevator, and a heating apparatus; planned the heating apparatus himself last summer, made an estimate of it sent it to department, was accepted and apparatus put in; is present to-day because he is not given a residence as the engineer in Montreal has one along with a salary of $1,200; complains of having had no raise in salary for nine years, 1157. Does not make five cents out of his office hours; thinks he should get the same as the engineer of examining warehouse at Montreal, who gets $1,200 and free rental; would be satisfied with $200 a year increase; would speak a word for his fireman, who has no residence either, 1158. Law of Quebec requires that a man attending steam heating should have a certificate; the foreman attends to three boilers, which are old and require more attention; receives $640 a year; both have work the year round; boilers are inspected once a year by an insurance company, 1159.

KENNEDY, GEORGE W., Constable, Dominion Police, 556.

Has been ten years on force; on joining force received $1.25 a day, now receives $2.05; exhibits budget of expenses for family of four children; did not keep account of expenses ten years back; could live better ten years ago on salary of $1.25 than now on present salary, 556. Has been at this sort of work all his life; was on Kingston city force, also keeper in Rockwood Asylum for insane; comes from Guelph; if health broke down, would on recommendation of Commissioner, get a month's salary for every year up to the ten first years, and half a month's salary for remainder; Sergeant Hughes dropped dead on duty and family received two month's pay, though he was on force for thirty years; Mounted Police and permanent force get pensions, so should Dominion police, as duties are far more irregular, 557.

Memo. of expenses, 558.

KENNEDY, M. J., Messenger, Penitentiary, Kingston (letter), 583.

Was appointed teamster in 1872 at $156 per annum, receiving several small raises in salary; in 1884 was named messenger at $600, free quarters, light and fuel, which were taken from him in 1897, has nine children and finds it very hard to keep out of debt; on these grounds asks for an increase of salary, 583.

KENNING, J. H., Inspector of Distilleries, Windsor, 393.

Is inspector throughout the Dominion; is half time on the road and half time engaged in office; travels from Quebec to New Westminster; has been inspector five years; visited New Westminster only once in five years, Minister thinking it unnecessary, having a good officer in charge; his travelling expenses not very large, 393. Stays about one day at each distillery; with reference to Gooderham & Wort's he says a thorough inspection would

KENNING, J. H.—*Continued.*

require the taking of stock, this he leaves to district inspector; but takes stock at Walker's distillery, his arrival being unknown to them; takes one week to take stock at Walker's; gauges approximately what is in the vats; makes tests during examination; does not meddle with collector's cash, but checks collections in cash book from last visit, then goes to see that stock is in warehouse, and sees that money collected has been placed to credit of Receiver General; has been in service about forty years, going up through all excise branches, 394. Recalled, in previous evidence overlooked a matter, that is, the quality of officers coming in; in Windsor distillery, its capacity has been increased, and a demand made for a greater number of officers; there are fourteen officers now, new applicants, without passing Civil Service examinations, apply, coming in at $500 a year as temporary officers; hard to keep them in at that figure; they prefer the Customs, where a good deal of overtime is put in attending to boats and trains, 402. One young man entered at Kingston, passed all the examinations and immediately after joined a manufacturing firm offering better terms; there are great attractions for young men at Detroit, 403.

KINDELLAN, F., Post Office Staff, Quebec, 954.

Has salary of $700; came in five years ago at $1 a day; passed examination then got $400; got an increase of $200 last year, is in fourth-class; was formerly a tailor, 954. For each examination he passes he receives an increase of $50, it ought to be $100; wishes a wider scope to postmasters, e.g., if one had misfortune to fall sick on the 14th of a month, and remained sick for a month, he would not receive any money for that month, and possibly for two weeks later, though then the money is most needed; cannot put aside any money out of present salary, often not able to buy medicine prescribed; thinks sick pay should go on, and greater scope given to postmaster who knows better than any one else if his men are sick or not, 955. If there is sickness, death and funeral in family, the time is deducted from holidays, which are twenty-one days including Sundays; can get sick leave, yet you have to bring a doctor's certificate for one day's sickness, postmaster should be given wider scope in such cases; thinks there should be a different gradation of clerks, first, second and third class, 956.

KING, W. L. MACKENZIE, C.M.G., Deputy Minister of Labour, 620.

Graduate of Toronto University and Harvard; appointed instructor in political economy at Harvard, but resigned it for present position; spent a year in Europe studying industrial conditions; was travelling in Italy when cable from Sir William Mulock reached him asking him to take position of editor of the *Labour Gazette;* Sir William subsequently intimated that the department would be established and would entrust him with direction of it; any member of government may be selected as Minister of the department; was allowed rather a free hand in the choice of one or two to be immediately connected with himself, 620. One was the late Mr. Henry Harper, who acted as assistant editor; selected Mr. Coats, his successor. Mr. Edgar is in the department; in creating the department he followed the requirements of the Act; in connection with the department the work of some of the officers is technical; thought it advisable to have the staff graded, which, if based on merit, helps to preserve discipline; *Gazette* is published each month and at end of year the twelve numbers are bound in one volume; other governments publish statistical periodicals; English government publish a *Labour Gazette;* investigations and statistical records are confined to Canada; there are also two ladies as typists; printing costs $16,000 a year, 621. Have clerks whose

KING, W. L. MACKENZIE—*Continued.*

duties are special; their duties require them to investigate wage conditions, and disputes between employers and their men; it was thought advisable to get men who would do that kind of work efficiently, familiar with the labour world, and possessing the right kind of judgment and ability; a Civil Service examination would be no test; in most cases they were chosen with regard to the manner in which they would carry on their work; one of our fair wage officers, Mr. D. J. O'Donohue, died, and was succeeded by Mr. McNiven; the department had had occasion to call on him to prepare special reports, he had proved himself reliable, trustworthy and able; there have been one or two appointments in which personal or political considerations may have entered too largely; is obliged to be absent from city too frequently; in his absence Mr. F. A. Acland acts as head of office; he is secretary of the department; three years ago an appropriation of $1,900 was voted for a secretary; knew of no one better qualified for position than Mr. Acland, under whom witness had served twelve years ago when he was editor of Toronto *Globe;* but he would not consent; allowed the appropriation to lapse for two years; finally told Minister it would be necessary to increase appropriation, the amount was increased to $2,600, and Mr. Acland entered department at a sacrifice of $400, 622. Was ashamed to try and influence him to that extent, if it was not known that once he was in the department he would demonstrate his efficiency that government would see the injustice and place him financially in the position he was in prior to entering the service; has a salary of $4,000, has had repeated offers to leave the service at a considerable increase of present salary; but thinks there are opportunities in the service which would more than compensate for the financial sacrifice; Mr. Acland is in the same position; men who are really qualified to fill responsible offices are not paid salaries at all adequate with what they might receive from private corporations; many good men leave service for that reason; thinks superannuation an element of stability; only one on staff, Mr. Ardouin transferred from Post Office Department is under Superannuation Act; about forty-five correspondents, one in each of the cities of Canada, each receiving $100 a year, 623. They are required to furnish a monthly report on industrial and labour conditions in their city or district; important changes in rates, wages, accidents, strikes or lockouts; character of the reports are seen in the *Labour Gazette;* these men are appointed by the Minister on recommendation generally of local member; thinks department has been the direct means of saving to the country hundreds of thousands of dollars which would have been occasioned by industrial disturbances; losses of many kinds by this department: if it came down to a matter of dollars and cents the department would be found to have paid for itself several hundred times over; it has both prevented strikes and been the means of ending many serious industrial conflicts, 624. Information is gathered which is of great use to parliament in any legislation; the reports from only a small part of the information we gather; when a threatened or expected strike is heard of, authoritative statements are secured from both parties; revenue from the sale of the *Gazette* is small, yet over $1,300; would be better to have an accountant for the department, though it would cost more. 625. Thinks it would improve the efficiency of the department if all its officers were independent of other departments; could not divide work of accountant among our own officers, for they have already too much work; at the beginning there was not work enough for an accountant, but now the work has grown so much there is plenty of work for one; has given the matter of pensions for officials some thought, 626. Would be better for public service if some kind of a pension fund was created or Superannuation Act re-enacted; it would influence a

KING, W. L. MACKENZIE—*Continued.*

man to remain in the service; if you want to get a clerk that can be relied on to do work efficiently and to your satisfaction it will be difficult to get one at $500; finds it necessary to keep on two ladies pretty continuously; thinks the remuneration in the service for women is greater than outside; there is one young lady should be paid higher salary; if he were to judge from most of the young ladies serving as temporaries and who have passed examinations, would say they were not worth $500; they would do a little work, but could not be relied upon; the class of women we want are employed elsewhere, and the ones that apply are those who could not get employment elsewhere, 627. The fair wages resolution was passed by the House before the department was created; it is to be inserted in all work or contracts executed as government contracts; investigated the sweating system and found that government clothing contracts were being thus made up; spoke to Sir William Mulock, who readily agreed to remedy the evil; asked to prepare a report in which certain recommendations were made; Sir William introduced the resolution providing that all government contracts should contain a clause preventing sweating; he began with all contracts in Post Office Department; the Militia, Public Works, Railways and Canals, Marine and Fisheries Department followed; to carry out resolution it was necessary to appoint special officers to see what were the current and fair wages in the district; when Labour Department was created, it became its duty to see the contract carried out; it ensures that part of the money spent would go to the workers instead of into the pockets of contractor; the wage fixed is the minimum; now contractors know what they tender for; it does not involve extra cost on government and ensures that some of the money goes to the workers; contractors not paying fixed wages, employees complained to Department of Labour, which notified the department giving the contract; officers investigated and reported; some eighty cases of that kind have been investigated and hundreds of dollars saved for the people, 628. Our officers interview both sides, then the department notifies the contractor unless he makes good the amount outstanding, the department awarding the contract will send our department the cheque to pay the labourers, and will deduct it from what is due on progress estimates; Several departments have repeatedly paid the labourers and deducted the amount from sums due on contract; the next step in the evolution of department was to inquire into grievances, especially the grievances of the Italian labourers against an agent in Montreal; Conciliation Act was passed which provides for the intervention of an officer in industrial disputes, it was taken advantage of by companies in the east and west, 629. Strikes; government appointed a commission which unearthed in British Columbia a situation that revealed where the whole matter had originated from; the commission revealed the methods of these men, so the working men withdrew their affiliation, and the Western Federation of Miners have no longer anything to do with the coal mines of this country; then the Railway Labour Disputes Act of 1903 followed; this related to threatened or expected strikes on railways; it contained provisions whereby government could appoint a board to inquire into the trouble and report on it; they could not stop the strike, nor enforce the award; publicity was the first step necessary; in 1904 the telegraphers of Grand Trunk Company threatened to strike, a board was established and an inquiry took place, and an award was made, not a day's work was lost, no strike took place; the men got a slight increase in wages, and no interruption on the railway whatever, 630. The corporations and labour unions fall in largely with the decision reached; the Industrial Disputes Investigation Act was passed last session; this Act makes it illegal in certain classes of industries for a body of men to strike or a corporation

KING, W. L. MACKENZIE—*Continued.*

to declare a lock-out before there has been an investigation by a board appointed by the department; each party to the dispute names a member of the board, and the two agree on a third, or the government appoints him; if award is not accepted they are free to do as they please; the trouble in Crow's Nest was rather an acute one; seven companies formed the Western Coal Operators' Association, and tried to arrange a contract with the unions of the United Mine Workers of America, numbering some 3,000; they were unable to agree, then the men, through their leaders, made the regular application for a board; the dispute was over wages, hours and general conditions; the men were trying to make a new contract, the old ones being about to expire; the association undertook to make application also; Act requires that any persons making application must notify the other side; the operators notified the men there would be a reduction of wages at end of thirty days, by posting up notices at pit head; the men took this as a defiance on the part of the operators, and without consent of leaders quit work; thus in reality violating the law; government established a board and witness was sent to Fernie; when there he called a meeting of the men, explained the Act, and men decided to return to work during investigation, 631. Many men in distant mines, not having heard the Act explained, decided to remain out until settlement; an agreement was reached the same day the board arrived to investigate: this brought both parties together and they were able to adjust their difficulties for at least two years; the best instance of the working of the new Act occurred a week or two ago in a dispute between Grand Trunk Railway Company and their machinists; the latter had difficulties with the company for some time past and applied to department; board met at Montreal and in three days a settlement satisfactory to both parties was arranged; no time of men or wages were lost; to-day a board is inquiring into the troubles in a coal mine at Springhill, but mining is still going on; another board is appointed to investigate trouble of longshoremen at Montreal; many Canadian unions are affiliated with American unions, but the local men manage their own affairs mostly, 632. Thinks that the influence of United States on labour conditions in Canada is very much exaggerated; still there are instances of interference, as the closing of the mines in British Columbia and the tying up of the railways was part of the general plan engineered in United States; thinks the two parties each year have come to have more confidence in the impartiality of the department; labour matters are sensitive problems, and have to be dealt with with some care; American Bank Note Company considering a pension arrangement for its employees; large corporations are working in that direction; also thinks the railways companies' law should be passed providing that no corporations should have a charter without a condition in it that before paying more than 4 per cent to its shareholders an efficient pension fund be established for all employees and their dependents; a suggestion of that kind would effectually aid in reducing the possibility of labour troubles, 633. Thinks if country were less prosperous the department would still be as successful: had hoped that the department would be able to lay before this Commission a statistical table showing the movement of the cost of living; it has a great deal of information with regard to wages, the staff is quite inadequate to deal with the question in regard to prices; during the six years the *Labour Gazette* has kept the most complete record of wages and prices to be found in the Dominion; it is hard to say when the growth of the department will stop; Mr. Monk last session introduced a bill on subject of co-operation; and department had the whole onus of the work; cites that instance to show that from one session to another our department is likely to have extra duties thrown upon it, 634. The staff is not adequate for the

KING, W. L. MACKENZIE—*Continued.*

work; office over Molson's Bank; attendance book is signed by all, with one or two exceptions; officers get three weeks holidays; there is a great need for men of training and education; there are too many clerks, not enough officers; Dr. Coulter and other civil servants broke down in health through over work, 635.

Memo.: Department is in its seventh year of existence; during which it has steadily increased, in consequence of its existence and purpose becoming better known and on account of parliament imposing additional duties upon it; the *Labour Gazette* appears monthly, in English and French, has increased from 599 pages in 1900, to 1,394 in 1906; has forty-five correspondents; increase in circulation is shown; the intervention of department in disputes under Conciliation Act, 1900, has increased as department has become better known; requires the services of one or two special officers; carrying out of Fair Wages Resolution of 1900 has steadily increased; not only have contracts of departments increased, but they call upon department for detailed schedules of rates and wages to be inserted in such contracts; number of special investigations into industrial conditions have increased from year to year; not only was the actual time of members of the staff taken from their regular duties in connection with commissions appointed, but additional work of a delicate nature was occasioned, 636. Preparation of statistical tables on strikes and lock-outs has increased yearly; though these tables are essential for the framing of laws, the present staff cannot conduct the work extensive or thorough enough to serve the end for which it is intended; a library is an essential part of Department of Labour; correspondence necessitates the addition to the staff of a class of clerks qualified by ability and training not only to conduct correspondence properly, but in obtaining the necessary required information; correspondence should be properly filed and indexed; legislation of last session gave a sudden and exceptional increase to our work; parliament has voted a sum of $10,000 for the amount of clerical labour which the additional work demands, but no provision has been made for an increase in the number of the staff, 637. There is not a single member of the staff who is not engaged in doing work of two or three different kinds, whose whole time could be devoted to any one of them, e.g., some of staff are engaged in culling from newspapers, notes of threatened strikes or lock-outs, changes in wages, industrial accidents, &c., &c., others are reading the proof of *Labour Gazette* during the days in which the copy is received from the printers; might state that both the witness and his secretary during the past winter spent at least three or four nights every week in office till ten or twelve o'clock, on Saturdays also; at present there is a volume of work in department which should be overtaken, but it is impossible to do it with present staff, 638.

KINGSTON, A. G.—See *Civil Service Association.*

LABOUR, DEPARTMENT OF.—See *King*, 620.

LAKE, MAJOR GENERAL, Chief of the General Staff, 735.

Appointed in 1904 for four years; was here with General Herbert and General Gascoigne; was in service in English army thirty-four years; belongs to infantry branch; military districts in Canada are similar to those in England, and latterly grouped into commands as in England; at present there are four commands and three independent districts in Canada; an officer commanding is selected according to his general efficiency, seniority and experience; Militia Council acts as a selection board, 735. In regulating

LAKE, MAJOR GENERAL—*Continued.*

flow of promotions, a list of officers eligible and suitable for promotion is examined and a selection made; might say that the attempt is made to combine active militia applicants and permanent force men so as to have a proper proportion of each; in permanent corps each officer has to qualify by examination for the rank he holds, he is not allowed to hold the rank until he is qualified; officers, with one or two exceptions, have to qualify before appointment; an active qualified militia officer has to pass necessary examination before permanent appointment; an officer in Imperial service is subject to examinations all through his career; a Canadian officer wishing to get in Imperial service has to pass the same examinations as an Imperial officer has to do; the papers come from England and are passed upon by the same examiners; one modification is permitted, that Canadian conditions may be substituted for British conditions, 736. Pay and allowances of an officer commanding are $4,000 a year; proportion of officers to men in permanent force in Canada is one to twenty-three, in England one to twenty-four; every unit of the Royal Canadian Artillery is a school of artillery in itself; there is also a school of gunnery which teaches the same as in England; a school of musketry, a school of military engineering at Halifax; a signalling corps; and there is the Royal Military College, which corresponds to Sandhurst and Woolwich combined; the only government factory is the arsenal at Quebec, established in 1892, its scope has been broadened; about 39,000 officers and men of the active militia received twelve days' training, artillery drills sixteen days; amount voted by parliament for annual drill was $850,000, 737. Practically rural corps are never called together except for annual drill, while city corps drill as suits them according to convenience; the city corps drill almost all summer, giving more time than the equivalent of twelve days' training and drill; the largest number of men at Petawawa at one time was 3,000; pay of lieutenant colonel in Canadian militia is $5 a day, a lieutenant $2 a day on appointment; the pay of privates varies from 50 cents the first year to higher with efficiency pay for the following years; thinks the militia pay is too small; efficiency pay has undoubtedly increased the number of men, 738. Instituted as a means of assuring that a man would behave himself in camp and try to learn, and to earn this pay they have to make a certain score at practice, and non-commissioned officers to be certified to as efficient at their respective duties before receiving this pay; as a general rule uniform is the same as that in British service; the men get their uniforms free; officers themselves resist all attempts at reducing the cost of their uniforms, possibly to prevent a man of moderate means from becoming an officer; at present a new officer besides purchasing uniform has to pay duty on it, often amounting to more than his pay for the year; obligatory part of officers' uniform is not expensive, but the voluntary part is; an officer is only required, as regards upper garments, to appear in camp in his serge or patrol jacket, which is not expensive as there is little gold lace on it; regiment has also a full dress tunic, and a young gentleman joining a city corps usually gets it; purpose of drill is general efficiency and good shooting, 739. The different rifle associations work together, and the best shots as a rule come to Ottawa; the highest scores in a certain number of matches entitle the makers to be chosen on Bisley team; there is no public allowance made for their travelling expenses; throughout the country drill halls are used; many boys are now formed into cadet corps, the number authorized is 11,000 and about 7,000 are enrolled, 740. Militia Act of 1904 created the Militia Council; this council is modelled on Army Council in England; the political and military elements are alike in each case; in Militia Council no new principle can be decided without reference to political head, but in Army Council any three of its

LAKE, MAJOR GENERAL—*Continued.*

members can exercise all its powers, 741. Thinks it undesirable for the two parties in Militia Council to be distinct; what is desired in England by the military authorities is the freedom to expend money, provided in estimates by parliament, with complete audit afterwards and responsibility to Public Accounts Committee; chief of general staff has under him a director of operations and staff duties, an assistant to the latter, an assistant director of intelligence, with some staff lieutenants; the adjutant general and quartermaster general have each other officers under them, the same as is laid down in Army Council, 742. If a corps wishes to go to Petawawa, the district officer commanding gives the orders for it to go, which implies that he has received the necessary authority from the Militia Council; thinks there is an amount of unnecessary correspondence, but it has no doubt its advantages. 743. Might mention one change of importance made by Militia Council: formerly the general officer commanding was practically responsible for everything in the militia on the military side, now that system is replaced by making every member of the Council responsible to the Minister for his own branch of the work; there is an inspector general, a *quasi* auditor general, but with no financial responsibility; he is absolutely independent, but cannot refuse certain credits; as all camps take place about same time, the chief of general staff and inspector general between them inspect all the camps and at end they compare notes; there is no conflict of authority on these occasions as we consider ourselves as guests of the officer commanding, 744. There are on a gradation list of officers of the staff and permanent force about 220 officers to look after a force of nearly 60,000 men on militia force and 3,000 on permanent force, but these 220 officers include the headquarters, command, district staffs and instructors of militia; is trying to arrange that the systems of peace administration and of war administration should be the same; the ordnance stores corps were organized in 1903, 745. As civilians they were independent of the officers and solely responsible to civil authority at Ottawa; they are now a military body organized to work in the field, doing same duties as before, under military discipline with a wider scope of work; thinks the organization of army should be as much as possible the same in time of peace as in time of war, so that should emergency arise it could pass from one condition to the other with as little disturbance as possible; army service corps attend to transport and supplies at camps; outside of camps have duties with all permanent stations, the staff is largely a temporary staff and paid only for the days they work; signalling corps are disbanded in winter, they belong to the active militia and are paid for the twelve days at camp only; the corps of guides' business is to know thoroughly the roads and country, they are trained for reconnaissance work and scouting; General Herbert was opposed to paymasters, proposing that the cheque be sent by deputy minister to each man, 746. Appointment of Lieut. Col. Guy as paymaster at Halifax, 747. After Superannuation Act was abolished an Act was passed enabling officers of permanent staff and officers and men of permanent militia to obtain pensions; there is a fixed age for retirement; Lord Aylmer went out under an order of Governor in Council which put a term to his appointment when he was appointed; there is an officer, born in 1837, especially employed, among other things to prepare the militia list, only temporarily employed, does not consider him on the active officers' list, was retired long ago, nor does he receive an officer's pay, but a certain daily salary; note, stating last answer is incorrect, 748. Pensions to widows provided by the Act; officer must have completed twenty years' service; Lord Aylmer's retirement went to Governor in Council; secretary of Militia Council receives all

LAKE, MAJOR GENERAL—*Continued.*

correspondence and distributes it, including tenders: knows very little about the Ross rifle contract; there are continual changes made in military arms, 749. The various marks on Ross rifle mean improvements applied to that arm as time goes on; has made a report on certain points observed at some of the camps, but not a general report; two reports of Militia Council published, one 1905, the other 1906, in the former a part was devoted to clerical staff, but not in the latter; the report is made up in this manner, each officer of Council drafts that part affecting his own branch, all of these reports are submitted to Council; they are combined by the deputy minister and witness in one report, which is printed, and as a rule Council accepts what we submit, 750. The present fixed establishment of the permanent corps was laid down at 3,000, but it is considerably under; difficulty in getting recruits; got some men from English corps that were about to be reduced and they have done admirably; the difficulty in recruiting is mainly owing to small pay; desertions in 1904-5 were about 492, or one in three, and in 1905-6, in six months there were 348, or one in six, 751. It is an enormous proportion; there is a general disregard for an oath; the demands of employers for labour help desertion; stations are too small, and barracks poor; no prospects of change as in England, where they have a chance of seeing other countries; their drill comprises the whole of military training; they have a recreation room and well provided reading room, their canteens are clean, cheap and well conducted, but officers do not take part in the men's sport as they do in England; no barrack building in Canada for about twenty years; the barracks at Tête de Point at Kingston, especially the officers' block, are wretchedly bad; the difference in accommodation is that in Canada you supply quarters for married officers, which is not done in England, except in a very few ranks; mistakes in militia list, 752. It is desirable to have a slight appropriation to encourage rifle shooting; in camp during the twelve days twice as much time is given to rifle shooting as to drill; at Petawawa, where there is ample accommodation for rifle shooting, every man spends twice as much time at the target as at the drill; this year the efficiency pay depended on the man being able to make an average of outers at both 100 and 200 yards, 753. It was proposed to pay the adjutant of the brigade who is not a permanent officer a small allowance for being adjutant throughout the year; there is mapping done in the department to help the corps of guides; thinks there should be one central bureau for all the mapping in the different departments; the only two civilized countries that have not a surveys department are Canada and Turkey; thinks if the Swiss system were possible in Canada enormously better results could be obtained for the expenditure of the same amount of money; with reference to increase of staff at headquarters, much of it is made up of officers who were doing the same work as civilians as they are doing now as military officers, and by officers performing duties which at a previous date were not done at all; in those days the militia as a whole could not have kept the field a week; the impression that there is too much paraphernalia is not correct now, 754. Could increase the number of men if there was more money; it is difficult to arrive at the whole cost of training; could not economize largely in other directions and devote the money to the training of the militia; argues that expenditure should depend on the necessity for it and your ability to pay, and like insurance be decided by the risk against which you wish to ensure and the extent to which you are prepared to insure yourself; the government has taken over the expenditure at Halifax and Esquimalt, and has undertaken the rearmament of the militia with modern rifles and guns; seems government at least for ten or fifteen years since 1870 has been living on capital, i.e., the stores left by the Imperial

LAKE, MAJOR GENERAL—*Continued.*

troops to a great extent, 755. Thinks it necessary to have an up-to-date modern rifle, whether it be the Ross rifle or Lee-Enfield; thinks expenditure on sub-target guns justified by its results; speaking for Militia Council, it watches very closely not to order anything that is not positively needed; parliament has always granted to the militia what the government of the day has asked for; some half dozen high power Maxim guns were ordered, but order was cancelled and the firm agreed to turn over the money to one of our other orders for field guns of the ordinary pattern; the number of batteries now authorized to be equipped is twenty-six; a cavalry man going to camp is allowed $1 a day for a horse; if horse is killed by accident $100 compensation is allowed; this is too low and will be increased, 756.

LALLIER, JOSEPH, Railway Mail Clerk, Montreal, 907.

Railway mail clerk begins now at $400; if he passes the case examination he gets $50 increase after first year, and after two years $550; case examination every twelve months; accuracy is more important than time; the superintendent is the examiner; if one does not pass examination he is liable to decrease of salary; have to pass examinations every year even at maximum of class up to sixty years of age; there are about sixty mail clerks in the division; some clerks are always on same route, others are changed; witness' route for seven years is from Montreal to Island Pond, 907. Goes to car at 2.30 p.m. to get ready to leave at 4.15; leaves Island Pond on return at 1 a.m. in winter and at 2 a.m in summer; turning night into day; night mileage is one cent a mile, therefore, $2.50 per trip, or $7.50 a week, or $30 a month, which is about the biggest mileage salary; some clerks get $90 a year in mileage, but have to spend twice that in expenses; mileage is to replace old night allowances of years ago; the travelling affects the nerves, many retire before the usual age; feels the effect on nerves after every trip, 908. A mail clerk has to be retired at an earlier age than other officers; for after thirty years on route he is practically a physical ruin; there are seventeen routes in all out of Montreal; there are two train porters to lift and handle the bags on the trains; a 'mail transfer agent' is a man employed at a station to look after the arrival of the trains and to look after the despatch of the mails; takes the bags and puts them in the wagon; no difficulty in getting men to replace clerks broken down; have had clerks coming into the service thinking all they had to do was to throw the bags off at different stations, but on having to work, they left at once; a boy begins at eighteen, at $500 a year, with $10 or $15 a month mileage, but often has to spend $25 to go round to odd places; one man gets 84 cents in mileage and his expenses are $1.50; average age of those entering is twenty-five or thirty, 909. On account of small pay some mail clerks are tempted to steal; a brakesman gets more salary than the mail clerks and they can live better; thinks on account of arduous nature of the duty, the liability to accidents, destruction of health, there should be some compensation for the mail clerks as against other branches of the public service, 910. Pays on a policy of the New York Life, $30 a year; would pay less if he were a clerk in the office; has been refused insurance in societies on account of being a mail clerk; thinks a man doing night work shortens his life by ten years; is liable to catch cold when car door is open and handing out bags; trains are frequently delayed by snow storms, thus we lose much mileage after 8 a.m. when mileage changes from 1 cent to ½ cent a mile; if sick, can usually get sick leave; there are emergency men for such cases, and often you have to act as one yourself; we leave on our trip at 4.15 p.m., arrive at 10, and after having two hours' sleep, start on return trip at 1 a.m., 911. Arrive at Montreal at 7 a.m.;

LALLIER, JOSEPH—*Continued.*

having to take two meals or more on board, the mileage allowed does not pay; owing to abolition of Superannuation Act and inability to insure our lives we are unable to make proper provision for old age and our families as we ought. 912.

LAMADELEINE, T. DE., Post Office Staff, Montreal (letter), 916.

Entered service June, 1889, filled various offices until he was made fourth-class clerk in 1896, always at $600; in 1907 was made third-class junior at $700; yet all comrade clerks are third-class at $900, some clerks serving only three or seven years, yet after nineteen years' service witness stands at same classification and salary as the late comers; is it justification that after having lost so much valuable time, witness should be kept at same level as those that have only a few years of service to their record, being almost last in the class, having been overheaded by a large number of younger ones with three or four years' service? 916-917.

LANE, P. E., Clerk of City Post Office, Quebec, 946.

Represents clerks of Post Office not letter carriers; entered service in 1880 in fourth class at $360, and passing the various examinations, is now at limit of junior second, receiving $1,000; thinks there should be a higher grade in office at Quebec; also a post office superintendent who should be present when men start at 6 a.m. and late at night; there are upwards of forty on the list, including labourers; four letter carriers graded as such are doing clerks' work in office, thus being deprived of uniforms and car tickets, 946. Are not paid as employees in other institutions; a bookkeeper in Quebec receives $1,000 a year; have responsibility of money letters and their work is onerous; if young again would not enter post office; has been twenty years in service and receives only $1,000; to maintain family of five persons has the assistance of brother-in-law; has insurance in two assessment societies; work hours are from 6.30 a.m. to 10 a.m. and from 12.30 p.m. to 6.30 p.m.; work every second Sunday from 8 a.m. to 1 p.m.; are on duty on all legal holidays; should be put on equal footing with officials of inside service, 947. Has to account for savings bank, registration and money orders; asks that deputy postmaster be chosen from staff of office; a man from inspector's office does not understand the work of our office, it is a different class of work altogether, outsiders have not the experience; the assistant postmastership is the highest position a clerk in post office can get, yet political influence is often in the way; should have a superintendent, 948. There should be one in office early in morning to regulate traffic, also in absence of postmaster; would like Superannuation Act restored and its provisions extended to include widows and orphans, 949. Seems that putting letter carriers in to do office work is done because they do not want politicians to know there are vacancies on staff; when he entered service had recommendations from two firms, came from a commercial academy and was fit to take any position; there is too much politics in this matter, 950.

LANGLOIS, PLACIDE, Acting Preventive Officer, Quebec (letter), 148.

Nommé "acting preventive officer" en 1906 à $550 par année, plus tard recevait $650, le salaire le plus bas d'un employé des Douanes à Québec; fut mis en charge des "Posts et Refunds"; demande sa permanence; a fait un cours classique, porte un diplôme de B.A. de l'université de Laval, 148.

LARDEN, A. J., Pressman, Printing Bureau, 614.

The rate in Ottawa is $15, but many offices are paying more than that; in Toronto employers cannot pay less than $16.50, but many are paying more, 612. The press girls are classed with the bindery girls and are paid the same rate; there should be a difference between the two classes, 614.

LAROCHELLE, JOSEPH, Staff, Dominion Arsenal, Quebec, 757.

Is paymaster at Dominion arsenal or cartridge factory; Colonel Gaudet and Captain Panet are superintendent and assistant respectively, Mr. Dupré, accountant ,and Mr. Denechaud, clerk; there are about 370 labourers, who are paid by cheques signed by Col. Gaudet; factory turns out about 240,000 empty cartridges in boxes of 1,000 each week the year round, they are sent every month to the Citadel and kept in a boom-proof building; the militia ask for 240,000 cartridges a week; appears on behalf of clerical staff at factory; was appointed five years ago as stenographer and typewriter at $1.50 a day, 757. Then got $2.05, and in July, 1905, got $800 a year; Mr. Dupré was appointed twenty-five years ago at $1 a day; now gets $800 a year; office hours 9.30 to 12 a.m. and 1.30 to 5 p.m.; labourers receive $7.50 a week or $1.25 a day; no increase of men at election times; hard to keep the younger men, they work for two or three weeks then leave, 758. If a man works on piecework steadily he can make from $15 to $17 a week; no favouritism is shown; thinks clerical staff is insufficiently paid; would suggest $1,000 a year, 759.

LARUE, J. B. A., Deputy Collector, Inland Revenue, Quebec, 366.

Is a deputy collector in class B, appointed in 1898, at $700, now receives $1,000; salary of deputy collector class B is at discretion of Minister; in 1898 there was no class A or class B, therefore wonders how he could have been appointed as class B; divisions in department are classified as first, second and third class; present salary $1,000; his class as deputy collector has no reference at all to division, 367. Considers that he should have got at first the salary he was entitled to; and when two years ago collectors and deputy collectors got an increase of $200, his salary should have been $1,700; could have improved his position, but being a married man and having a family he had not time to study; a deputy collector should know something of mensuration; wishes to get out of grade of deputy collector and improve his position without passing an examination; wishes to get a change of work in the office, 368. Handles over $100,000 a year, checks every paper and verifies it; is doing duty of cashier; has to do duties allotted to him by his chief; was appointed without examination, has not the means nor time to go up for examination, 369.

LAURIE, WILLIAM, Inspector of Steamboats, Montreal, 677.

Appointed in 1894; formerly an engineer on steamboats; on Mr. Burgess' resignation was recommended by him for the position; made application to department, was sent to Toronto and passed examination and was offered $1,000; replied would accept nothing less than Mr. Burgess' salary of $1,200; was six years on the Allan line as chief engineer on the *Rocket* and the *Merritt;* another man received Mr. Burgess' place, but was shortly after dismissed; then witness got the position at $1,200; received increase of $300 under Mr. Préfontaine, 677. Board of Steamboat Inspectors does not meet often, its regulations have to be approved by Minister; his inspectorship extends from Newport up to Sudbury; all ocean steamships come here and require inspection; had about twenty-five ocean steamers this year;

Laurie, William—*Continued.*

inspects machinery, there is another inspector for the hull and equipment; there are over 200 boats in this division; has an assistant who inspects tackle along the wharfs for loading and unloading steamers; such an inspector was necessary owing to numerous accidents; witness inspects all foreign registered ships trading between Canadian ports; this law has only been in force for a couple of years, owing to shipowners on the upper lakes getting vessels built on the other side and getting them registered there; it was considered a drawback for these upper lake men to come under own inspection, the law was introduced also to get at the boats up there, and in getting at those boats they brought in all these Norwegian ships that are trading between here and Sydney; fees for inspection were done away with three years ago, 678. They get a certificate if they pass inspection, and it is posted up on boat; with this increased work there is no corresponding increase in salary; in winter work consists in going over plans of any new work that is being built; also has to examine engineers coming up for examination; has to look after all boilers and machinery built for the boats; is not under Superannuation Act; formerly when inspectors of steamboats retired they drew annual allowances; desires an increase of salary as he considers he is the poorest paid inspector in whole service, 679. There are twenty-one inspectors, all of whom, except two, get $1,500; thinks that with his previous experience he should get at least $1,800, but from $2,000 to $2,500 would be a very fair salary and quite low enough for such work; such is the salary in America, and they are a poor class in comparison with our inspectors; the boats that trade between Sydney and Montreal are chartered by the Dominion Coal Company, the Intercolonial Coal Company, and the Inverness Coal Company; in inspection work you destroy a lot of clothing, having to crawl into all kinds of places; if a man does his duty conscientiously he has a lot of trouble and hard work, 680.

Letter: Gives more particulars in regard to requirements to fill the position of steamboat inspector; before being appointed one has to pass a very severe examination on construction of boilers and engines, calculations and designs, it requires a man to be a first-class engineer, boiler-maker, arithmetician and draughtsman or consulting engineer, and to speak both languages in Quebec; was appointed in 1894 at $1,200, with understanding that it would be increased from year to year; got no increase for ten years; then was raised to $1,500, which, owing to increased cost of living, left salary as before; four years ago was offered position in New York at $3,000 to start with; consulted Mr. Magee, who advised me to remain and that I would get a good salary later; department forbids an inspector doing any outside work; considers that a man who has served four or five years apprenticeship for nothing, should be paid a reasonable salary of at least $2,500, 681.

Lavoie, Dr. J. P., Quebec, 511.

Was appointed only since April 1, at a salary of $1,400, consequently cannot give a great deal of information, 511.

Leak, W. W., Letter Carrier, Toronto, 984.

On entering service they stopped statutory increase and brought in a new Bill 106, accepted it, but is still under Superannuation Act; had a bad knee from stair-climbing, then had grippe, took holidays in sick bed and had no vacation that year; other men in Toronto office had pay during their sickness, though they are under the new Bill 106; assistant superintendent said 'it was a matter of pull;' asked if his record was as good as theirs, he said 'yes, and probably better;' so it appears that unless a man has pull with a politician he must lose his pay and his holidays, 984.

LeBel, Charles A., Assistant Agent, Marine and Fisheries, Montreal, 662.

Is assistant agent of Marine and Fisheries Department in Montreal; agency established by Mr. Préfontaine; agency consists of the agent, assistant agent, assistant engineer of buoy service, a messenger and a typewriter; there is also the pilotage office; there is the inspector of steamboats, the inspector of live stock; the duties of this agency were taken over from Quebec and Ottawa; duties of this agency and buoy service extend to Platon, thirty miles above Quebec, 662. Offices of agency are at 223 Commissioner street; the greater part of the building is leased, nearly all one flat is occupied by the Commissioners' Court; also the engineer's draughting office; Mr. Boucher was in department twelve years before decentralization of Ottawa and Quebec agencies took place, and he made a specialty of buoy service; the putting down and taking up of buoys is a work of great responsibility and to see they are always in position; staff was constituted in 1903, and occupied part of Boyer building; there was an investigation concerning charges for furniture in that connection; salaries settled four years ago, 663. Great difference in cost of living now and four years ago; a man may be forced at beginning to take a salary he does not care to remain at; have not made complaints to Ottawa, but were advised to wait for this Commission; witness has to attend to office work, and be in continual communication with the large shipping interests and the public, the 'phone is never idle; if movements of government vessels are desired to be known, they apply to office here; a man in the office must have initiative, 664. Record of arrival and departure of vessels is kept at pilotage office; in Montreal district there are 348 buoys, 59 of which use the new illuminant; have been no accidents in refilling these buoys here; though task is dangerous there is no difficulty in getting men to do the work; the buoys are tested for capacity and pressure before being put down; there is a good deal of carelessness on the river, barges coming up loaded with wood and sand displace these buoys; when light goes out the engineer takes care before the buoy is reloaded that there is no stuff still in it; at end of season buoys are opened up and examined, 665. Stuff put in the buoy is supposed to last ninety days; the number of these acetylene lighted buoys is increasing rapidly; machinery of buoys is sometimes defective and they have to be watched; carbide calcium for buoys is supplied by contract; it is known that if these buoys are not handled with care there is danger; and no buoy is filled except when engineer or assistant is present; have received instructions from engineer of ship channel when to put down or remove a buoy for dredging purposes, 666. A pier in Lake St. Peter came to grief by canting; it was said bottom of lake is too soft, and would require a large expenditure to put down one strong enough to withstand ice coming down in the spring; Mr. Cowie looks after the supplies on the dredging vessels, and Mr. Boucher for the *Shamrock* and the *Acetylene,* the last named practically doing the filling of the buoys; Mr. Boucher gets 60 cents a day for officers, and 50 cents for men; the crew of *Shamrock* numbers fifteen, and on *Acetylene,* 9; and in bad weather they have to engage extra hands; vessels are supposed to be under steam by April 1, 667. Mr. Boucher practically lives on one of these boats; but has to be in the office during the week to certify to everything; apart from the buoy service the Montreal agency looks after all the expenditure made on the construction of new lights and piers and repairs to wharfs; last year seven or eight new lights replaced the old lights; sometimes the Shipping Federation finds fault as to position of these lights and they are to be changed; the lights are built on plans of chief engineer, and generally on recommendation of Shipping Federation; there is a wharf at Sorel for Public Works and one for Marine Department, 668. Construction accounts are kept apart from buoy service accounts; the disbursements for construction are

LeBel, Chas. A.—*Continued.*

controlled by department, these bills and the men's time have to pass through the agency, and examined and certified by Mr. Boucher; there is a contract for broken stone only in these constructions, the building is all done by day labour; timekeepers' lists for constructions made up twice a month, 699. Timekeeper has a little book for each work, in which he keeps the time; that book is examined every time the engineer or superintendent goes around, finds that the men in it are on work, checks and initials it; and end of every fifteen days these books are sent to Sorel office, where the clerk under guidance of engineer and superintendent, makes out the pay-lists and sends it to our office; not to his knowledge, that a name may be on the list and not perform any work, that it has ever been done here, 670. All accounts and pay-lists for construction work come to the office, we prepare four copies, and the statements, four vouchers for every account; we keep a ledger where all the entries, accounts and cheques are entered; every voucher is numbered so that if anything is referred to we can put our hand on any record in the office; cheques for pay-list and construction come in Mr. Boucher's name, he cashes the cheque and pays the men; he receives also a small amount from Ottawa for advances; when supplies are required for the men on board the boats, they are allowed to buy what is necessary and accounts are sent to our office for approval; there are five boats, the *Shamrock* and *Acetylene* for buoy service, the *Verchères* for resident engineer at Sorel, and *Hosanna* and *Alpha* for construction; we sometimes charter other boats when work is pressing, 671. On chartered vessels, it depends on contract with them, how the men are paid; Mr. Arcand feeds all the crew on the *Vercheres;* last year Mr. Roy had the contract for feeding all the men engaged on construction, this year it is Mr. Charland; some chains are called for by tender, chains for buoy service are expensive as it is important they should be the very best; there is no open tender for buying these chains, prices are called for, the prices are sent to Ottawa and approved before we buy any chain; the engineer knows what the chain is worth; there are two or three firms who have the patronage, to whom we go and get these things; if a large purchase is made it is by tender, always sending the prices to Ottawa, 672. If cedars for buoy service are wanted, we apply to lumber dealers; supplies for agency are mostly got from Ottawa; have also to look after 'Aids to Navigation,' for which there is an appropriation, for lighthouses, lanterns for lighthouses, buying or leasing a piece of land for a new lighthouse, boats for lighthouse keepers; next year it is said we will look after our own lighthouses; the oil comes from the Quebec agency; salaries in our agency are all fixed, but increases are expected; we make out an order for everything we buy, and it is sent to Ottawa, with the account; we buy coal for our boats, but at standard price, it is steam and hard coal, 673. Government gives large contracts for coal at Sorel by public tenders; our boats when at Sorel are supplied there; but when our boats are away in an emergency they buy coal from other parties, but at same prices as at Sorel; we buy coal from those who have patronage of department or from the shipyards at Sorel; the member divides up patronage among friends as much as possible, but we do not pay any dearer for the coal; all wood bought for buoy purposes is inspected by an inspector, 674. Our engineers on board the boats would complain if they received coal of an inferior quality; to his knowledge no collusion exists between the coal men and the engineers; witness is present not to plead his own case only; pleads for Mr. Boucher, the buoy engineer; engineers who do equally important work as he get far larger salaries; he is a technical man and his minimum salary should be $1,800; now he gets $1,800, his maximum should be $3,000; he does a great deal of work and has

LeBel, Chas. A.—*Continued.*

great responsibility; he has to keep the marine companies posted on the position of every buoy between Montreal and Quebec; shipping people expect a great deal from us and we do all to assist them; there was an accountant here to look after the books, but he was removed to Ottawa, and have none now; the assistant engineer of buoy service is only getting $1,200 a year; the typewriter and the messenger should have increases, 675-676.

Lebel, Joseph, Assistant Inspector of Weights and Measures, Quebec, 369.

Receives $1,100 salary, 369. Assistant inspectors should be put on same footing as other civil servants; they are not classified, are left at a low salary, with no prospect of increase, are left entirely to good will of government, and if a man has no influence he has to remain at a low salary, 371.

Leblanc, Alphonse, Railway Mail Clerk, Montreal, 912.

Instances the hardships of a mail clerk, being on duty on one occasion for three days and three nights; thinks they should get better pay; is six years in the service; is now in superintendent's office on sick leave; has been off the road for eighteen months; is still a mail clerk, receives no mileage, only his salary of $700 a year; passes case examination yearly as if on route, 912. In each division there is generally a mail clerk in the office; there are nine districts; there is one difference between the post office clerks here and the railway mail clerks; in Montreal post office the clerks are not asked to pass the qualifying examination, only the preliminary, and they start at $400 in the fourth class; they often are promoted to the third class at $700 inside of two or three years, and it takes us four years to get into the $700 class; mail clerks should know all that pertains to the railway, and it takes years before a clerk is proficient in his work; thinks it better to have the railway staff separated as now; accommodation on Canadian Pacific Railway is very good, on the Grand Trunk Railway it is faulty; between Montreal and Toronto they have a car 39 feet 9 inches long, and six men are working in it during the night, sorting, &c., there is no room to turn about, it is a nuisance, 913.

LeBourdais, A., Magdalen Islands (letter), 1171.

Makes an absolutely necessary appeal for an increase of salary; relates story of his shipwreck, found one week later in land wash, with both feet frozen, having had no food all that week, driven in an open sleigh for twenty-five miles, had both feet cut off by Rev. Mr. Riopel, with a hand-saw; next spring had second amputation of legs; entered marine service under Mr. Mitchel, obtaining temporary work; established signal service from Quebec to Macquereau in Chaleur Bay in 1880; sent to Magdalen Islands in charge of telegraph service at $500 a year; has been superintendent ever since; rebuilt line in new and all its branches, now thirteen, and instructed all the officers; receives all moneys and pays salaries; in 1890 salary increased to $600, and in 1904 to $700; has brought up family of two girls and four boys; is sixty-four years of age; gives list showing cost of articles has doubled and trebled; can barely make both ends meet, and saving nothing for old age; all salaries in this service require revision, as all are poorly paid; imagine an operator receiving from $50 a year, 1171.

Letray, Thomas, Painter, Public Works Department, Toronto, 1175.

Served thirty-two years at trade of painter; was to be a painter in summer season, and a fireman in winter; has charge of painting branch of Public Works Department, yet he receives only the pay of a fireman; could earn far more outside; remains in government because he wished to get some occupation under government; claims he is worth to government double the amount he receives in salary, 1175.

LEVASSEUR, NAZAIRE, Inspector of Gas and Electric Light, Quebec, 380.

Appointed inspector of gas and electric light, 1878, at $1,000; extent of district; office hours from 9 a.m. to 4 p.m., averaging six hours a day the year round; at times has to work from 5 to 9 making phonometric experiments to ascertain power of the light; when travelling he gives vouchers for travelling expenses; goes to places easy to get at, and other places when called for; is under Superannuation Act; has an obliging assistant; no difficulty in getting assistant inspectors, 381.

Memo.: Divisions and subdivisions might be established as follows: (1) one inspector general in Ottawa for Dominion (already existing); (2) inspection office under district inspector authorized to inspect all offices; to superintend repairs, opportune or necessary, selecting a person for that office having technical and mechanical experience; (3) classification of inspectors respecting salaries and powers, in proportion to annual receipts and extent of district; assistant inspectors are included in above three classes; complains that present salary is not according to Act 64, Victoria A 1901, annex B., page 196; has assistant inspector at $300, who is also food inspector at $300, out of which he pays guarantee of 30 cents per month for goods entrusted to his care; important in the interest of stability and efficiency of Civil Service that salaries be fixed on highest minimum to comply with average cost of living; that members of civil service faithful in their duties, be made sure after seven years, of being paid according to their class, the fulness of their salary; increased work without increased salary; recommends (1) inspector general; (2) assistant inspectors; (3) district inspectors, 382-383.

LOW, A. P., Deputy Minister of Mines, and Director of Geological Survey, 227.

This department is now Department of Mines, including old Geological Survey, Dr. Haanel's branch of the Interior Department; joined survey in 1882; has been director, explorer, geologist; present salary $3,600; does not require much clerical assistance, but technical officers; taxidermists, museum assistants and photographers are paid out of ordinary vote; is deputy as well as director, 227. Clerks get three weeks leave of absence; all, including technical officers, sign attendance book; office hours are from 9.30 to 4 o'clock, but most remain after five; we still publish our own maps; would be desirable to have a cartographical department in which all maps would be published; are much crowded on Sussex street; all officers under Superannuation Act prior to 1897; abolition of that Act was a mistake; technical men are required, and without a guarantee of superannuation to look forward to they can make twice as much outside; there are continual resignations, 228. If Superannuation Act were restored it would add to stability of service; all technical officers appointed by order in council; on probation for one year; are appointed on their scholastic attainments, most of them being graduates of some university; in the service they get $1,800 or $2,000, and on going out they receive $4,000 or $5,000; there is great demand outside for men on our staff; not much chance of a scientific man coming into the service getting more than $2,500 or $2,600 a year, 229. A number of our reports are printed at the Bureau, owing to maps, &c., it is generally a year before a report is issued; formerly waited to bind reports together; classification of staff; nearly all officers collect specimens for museum; Dr. Whiteaves is curator of one part, and Dr. Hoffman of another; present building is not very safe; have hydrants in building and night watchman; there are many fossils and mineral specimens it would be hard to replace; a list is made out where each exploration party shall go, and submit it to Minister, 230. These explorers require sub-explorers; usually there are about twenty-five expeditions; we explore for geology and natural resources of the country; each

Low, A. P.—*Continued.*

party consists of about six men, one or two of whom are students, others are canoe men and packers; they get a certain proportion of the money appropriated to them, and an order on a bank somewhere; we have a form which each man fills showing the places he is going to, and how much he requires; we give cash to pay canoe men and buy supplies; an explorer gets his living allowance; if he treats any one to get some information he is that much out of pocket, 231. An explorer is nearly always out of pocket; there should be some allowance for obtaining information; the survey is undermanned, for we cannot get the men at our salaries; about $1,500 would be a fair salary for a young man leaving a university, it is now only $1,200; an ordinary clerk would not do, a man must have a scientific training, good physical strength and moral character; owing to extensive mining all over the world our men are continually passing from us; their salary should be $3,500, with yearly increases of $100, and a Superannuation Act; mine owners are beginning to appreciate the worth of college trained men; director goes out inspecting and adjusting difficulties; travelling allowance would be better for an explorer than a lump sum, 232. One woman in the library, is very capable; has a high scientific knowledge and can direct attention to almost any book in the library; has been there nearly twenty years; two other women are stenographers, two in the statistical branch and two in the library; permanent staff prefer title 'geologists;' temporary staff are called explorers and draughtsmen; one photographer acts also in Department of Interior, 233. Petrographer is one who examines sections of rock through a microscope; would suggest that technical officers be classed in two grades; any of these officers can go out and get double the pay they receive from government; new men coming in without superannuation in view go out a good deal easier than men who have; if government would grant superannuation the men on staff would accept two-thirds of the salary they could get outside; there are three parties of surveyors now on the line of the new Transcontinental Railway; about one-third of the area of Canada has been explored, 234.

Statements showing the number and salaries of the permanent and temporary employees in department for years ended June, 1892, and June, 1906, 235.

Memo. accompanying statement of director: Increase of salaries to permanent officers appointed under the Geological Survey Act are not statutory, as are those appointed directly under Civil Service Act; clerks directly under the provisions of Civil Service Act receive the usual statutory increase of $50, until they reach maximum of their respective classes; promotions, as a rule, are made from staff employed, but salaries are in no way adequate to the services rendered, nor to those paid by outside corporations to men of equal standing and ability. *Retiring allowances.*—Twenty-four officers on permanent staff in 1905-6 came under provisions of Superannuation Act; eleven contributed to retirement fund. *Retirement Fund.*—This fund is unsatisfactory and should be abolished; Superannuation Act should be revived for permanent officers, thus securing a moderate provision for old age or infirmity; an incentive also for young men to take lower salaries than they might receive for outside work, 239.

McCaffry, J. R., Chief Clerk, Customs, Toronto, 158.

Is oldest officer in the service to-day; gets $1,450 now; a junior receives more salary than his senior; on death of predecessor became chief clerk in 1894; passed promotion examination in 1895; entered service at eighteen, passing through all the grades; was passed over by a junior at a higher salary; about 140 employees in Custom-house, about fifty being temporary; some

McCaffry, J. R.—*Continued.*

pass oral examination; do not think we are getting so many good men in the service now, 158. Service has deteriorated last twenty or twenty-five years; of those who entered at the same time there is not one who is not getting at least three times his salary; have a little private means; no annual increments in the outside Customs service, 159. The trouble is the absence of an annual increase; the maximum salary of a clerk is $1,200, but no one gets that amount; Bank of Montreal does not allow a clerk to marry on a salary less than $1,500; Customs laws hard to administer; Customs clerk supposed to be familiar with the Customs Act, the Audit Act, the Merchant Shipping Act, the Chinese Immigration Act, the quarantine regulations and a larger area of matters than is required in any other branch of the service, 160.

McClanaghan, J., Guardian in Lobby of Post Office, Montreal (letter), 1153.

Asks an increase of salary, as cost of living has increased from 75 to 100 per cent, house rent in proportion, while wages remain same; cannot live on present salary; asks for $65 a month as that is lowest amount a family can be raised on in Montreal, 1153.

McDonald, Rev. Father, Chaplain, Kingston Penitentiary, 561.

Chiefly officers' friends get clothing and boots at cost price plus 10 per cent, 561. Number of juvenile offenders is very large, boys of fifteen or sixteen are sent there for petty and trifling offences; report of 1906 gives number of prisoners under twenty years of age as 156, out of a total of 1,423 in all penitentiaries, or about 11 per cent; the criminal insane are not sent to Rockwood, public protested, 562. Case of prisoner escaping mentioned by Mr. Reid (p. 570), the convict was an inmate of the asylum therefore surveillance was not as strict in a sense, 570. Guards are longer on duty in case another guard is sick, 572. Guards twenty-four hours on duty or ready to be called, 573. Reason for disallowance of house for farm instructor was that all perquisites were cut off by new Act, 573. Has been nine years constantly in attendance at penitentiary; attends also to the families of the guards, they have a church of their own outside, is parish priest of Portsmouth, composed of the families of the guards; is at prison morning, afternoon and very often at night; the only attempt at isolation of youthful convicts from the hardened criminals is by placing them near a discreet man; last report says about 11 per cent of prisoners at Kingston under twenty years; thinks judges are not discreet enough in checking this growth of crime, 574. In this way that they jump too quickly at conclusions, and to rid a place of this element they foist them on the penitentiaries; ticket-of-leave is now in force, and has been very beneficial; only two or three convicts have been returned; on release a convict is given money enough to carry him to place of conviction; thinks it desirable that part of what he earns in prison be put to his credit to encourage him to lead a better life; many on release desire to go to other places, but do not receive enough money; many prisoners are tradesmen; some are sent here to learn a trade which they drop altogether on leaving, 575. There is considerable office work in connection with binder twine; a prison of a reformatory character for convictions for first offences between ages of sixteen and thirty, was suggested but never carried out; it is a matter of daily conversation at penitentiary to see young boys being continually with hardened criminals of all classes; Protestant chaplain gives all his time to the prison and the convicts; the chapel in connection with church at Portsmouth has a famous name 'The Church of the Good Thief,' and was

McDonald, Rev. Father—*Continued.*

erected in time of Sir John Thompson, 576. Chaplains are still without houses; would be more economical for chaplains if they had houses; they receive $1,200 each; did not know that salaries in other penitentiaries were to be raised, so did not complain, 577. Hours of duty vary very much; no week day services now; has never taken any holidays; thinks Mr. Cooke never took holidays; has given catechetical instruction for confirmation; practically at Kingston the chaplains give their whole time to their duties, 578. Takes exception to retirement fund, because they are labouring under a disadvantage, not having even the same advantage as a guard has; gives $60 a year to retirement fund and on retirement gets his money back; heartily approves of a sort of pension applying not only to officer, but to those dependent upon him; the warden also approves of such a pension, 579.

McDougald, John, Commissioner of Customs, 83.

Appointed May 1896; increase of ports, outports, stations and duties; salary $4,000; has an assistant and three chief clerks; eight first-class clerks, 83. Fifteen second-class clerks; eighteen junior seconds; their salaries begin at $800; cannot get good men at $500; number of women applicants increasing; removal of statistical staff from ports to Ottawa where work is done better and more promptly; Customs laboratory employs an analyst and examining officers, 84. Mr. Bremner is inspector at Halifax; all clerks at Ottawa on Civil Service list have passed examination; many applications; promotion papers on 'duties of office' set by department, Civil Service Examiners the other papers; staff increased but work has trebled; third-class clerks start at $500, 85. Attain to other classes by promotion; no temporary clerks now; clerks get three weeks of absence; no dismissals; office hours from nine to five, with hour for luncheon; office open all day; in West Departmental Block; statistical staff of some eighty officers in Wood's Building; every chief, first and second class come under old Superannuation Act, 86. Superannuation Act if restored would add to stability of service; have been slight changes since scale of salaries in 1882; collector at Montreal receives same salary as in 1882; preventive officers are of two classes, some for special service, others merely guarding the ports; appraisers to pass examination, 87. Inspectors receive only actual travelling expenses; should have larger allowance; most of them getting old; inspectors' duty; the manifests are kept at ports, entries sent to Ottawa when passed by the importer; inspector checks them, 88. A check at large ports to prevent fraud, danger is at small ports with only one officer; little serious trouble from defalcations; two inspectors for province of Quebec; from special vote last session each officer received $100; where salaries were low; inspectors, collectors and preventive officers may be appointed without examination; collectors seldom transferred; staff at Montreal stay till death or retirement; a few are sent elsewhere to relieve pressure, 89. Collectorship is generally under local patronage; a junior officer appointed at Montreal may get up to an outside chief clerkship at $2,000; about 2,000 officials in service; collector would be more efficient if he knew subsidiary duties from bottom to top, 90. There are some good collectors, but a few do nothing; young men in west leave on account of the salaries; a spirit of unrest in the west; appraisers of dry goods, grocery, hardware and drugs at principal ports; smuggling about the same, but better watched; appraisers must have knowledge of the kind and value of goods imported; more justifiable to appoint appraisers from outside, 91. Check upon appraisers; gaugers measure and test the strength of liquids; office hours for outside officers from eight to six, but in Customhouse hours are from nine to four, business must be finished before leaving;

McDOUGALD, JOHN—*Continued.*

always an officer on duty when a ship arrives; officers are paid 30 cents an hour before eight and after six; same men meet the steamers; Customs inspectors should be put on the same scale as Inland Revenue and Post Office inspectors; packers and messengers are paid too low, and appraisers should be increased. 92. Present tariff has increased work; 50 per cent more work now; liquor smuggling is now almost wiped out; there is still smuggling in tobacco and small stuff; informers receive one-fourth, seizing officer gets one-fourth, and half to revenue; order in council regulates that no officer of the inside service can profit from seizures; entries made in duplicate by importers in the several Custom-houses; one comes to the department with the invoices, the other is kept at the Custom-house, 93. Inspectors deposit moneys on making entries; in banks designated by Finance Department daily at large ports; collector must remit all the money received; in smaller ports remits twice a week to department, but daily in bank; entries, numbered in rotation, add them up and compare with amounts deposited; in making a remittance, original statement is kept by the collector, duplicate goes to Department of Customs, and triplicate and draft to Finance Department; Excise people will not accept our cheque if it is not made payable to the order of Receiver General; Hobb's defalcation: would take two invoices, each representing say one car of iron; he typewrote the two cars on the one invoice and suppressed the other; it is alleged the Customs officer was incompetent; the Canadian Pacific Railway, for whom Hobbs was acting, claim they gave him the cheques to cover the whole amount; he deposited the cheques with Customs cashier and got the difference back contrary to departmental orders. 94. Are making claim on Canadian Pacific Railway to cover the amount of unpaid duties; defalcation spread over about two years; was entry clerk for Canadian Pacific Railway, and his duties were to enter contents of everything imported by them; most entries were right, the wrong ones were special cases; amount of defalcation about $60,000, of which about half was returned; Customs claim now is over $30.000; collectors as a rule at large ports are men who have seen other service; the Minister adjudicates cases of seizure on written report from commissioner; Minister approves or not, then party can appeal to the court. 95. Mr. McMichael has had supervision over cases before he makes a seizure; informers paid by collector or inspector; defalcation at Drummondville, there was a transfer of liquor in bond, was question as to where the liquor was, it was traced up and found that it had not been accounted for; it was done by the suppression of the manifest used in forwarding goods from one port to the other, 96. Commission in 1892 asked what was to hinder a collector at a small port from suppressing an invoice; that is really what happened at Drummondville; our check is very good, but more inspectors would make it more efficient; if invoice honestly represents the goods we do not interfere if difference in value is trifling, 97. Vacant collectorships are not kept open very long; tide waiters require medical certificate; have no physical test as in England; officers meeting the public wear uniforms; officers of inside service no uniform; we supply the buttons and the bands and they supply the rest; Sunday service is refunded by railway companies; service is under-manned at present, owing to work increasing so rapidly. 98. Cost of collection is less than 4 per cent; as revenue gets bigger it costs less to collect, for salaries are low; would call attention of the Commission to monthly report, it is one of the heaviest works of the staff at Ottawa; there are some eighty men employed on it, and on annual report; thinks clerks in outside service are not as efficient as in the inside service, because latter is the supervising division; outside service scattered; salaries for outside amount to $150,000 a year, while for inside

McDougald, John—*Continued.*

they amount to over a million dollars; work of late has been getting more complex, 99.

Memo. respecting department for fiscal years ended June 30, 1892 and 1906, 101.

McKay, James, Collector of Customs, Port of St. George, N.B. (letter), 174.

Appointed in 1879 at $600; there was also a preventive officer at that port at the time, but was superannuated in 1885; his place was never filled; therefore had to perform both the inside and outside work of the port; have had no increase of salary; have served twenty-seven and a half years, during which the average annual collections have exceeded those of predecessor; has given satisfaction in his work; under the circumstances and owing to large increase in cost of living feels that he has a fair and reasonable claim for an increase of salary of at least from 30 to 50 per cent of original salary; on appointment possessed about $2,000 worth of property; is not seventy-one years of age, considerably rheumatic and not likely to work much longer; would like an increase of salary or a liberal superannuation allowance or his prospects for the future are not bright, 174.

McKenna, James A. J., Assistant Indian Commissioner, 264.

Assistant commissioner, $2,600; entered service at Ottawa 1886; appointed to present position 1901, 264. Made treaty No. 8 with Indians, also treaty No. 10; thinks one more treaty would practically settle Indian question; in Peace River district we allowed Indians to take their lands in severalty; formerly all lands were held in common; we allow agricultural implements and seeds; live stock was formerly bought in east, now all can be procured in west, 265. Meat is dearer in Winnipeg than here at Ottawa, because cattle are no longer allowed to roam at large and herds have to be kept within a certain defined size; first-class beef sold here is Ontario stall-fed beef; may get western beef at times, but only when old country prices have fallen; in Winnipeg rents, taxes and help are higher, thus affecting price of meats; schools were built by government, then handed them to certain religious denominations, paid salaries of teachers and met all expenses; under late government system was changed, allowing so much per capita to same people for running schools, retaining, however, ownership of buildings; government pays teachers $300 a year, they receiving also an allowance from respective churches; in these schools the state acts in *loco parentis;* can bear witness to civilizing influence of missionaries; not wedded to new system it is too economic that principals of schools have difficulty in making ends meet, 266. Different grades of Indians requiring relief; at one time accounts were passed on by commissioner and paid by him; since 1897 accounts come to Ottawa; former system the better; estimates are made in west and tenders called for here; goods received are checked by invoice, 267. Process of Indians becoming self-supporting is rather slow; tuberculosis—glandular tuberculosis is the great cause of death among Indians, 268. Thinks that the Indian charge upon the public would be very much lessened by a systematic throwing open of reserves for settlement; finds that Indians tilling land near the whites show a better idea of cultivation; would like to see all Indians in same condition as Six Nation Indians, even these would be better off to-day if the land had been divided and allotted in severalty years ago; we sell land at auction or tender at an upset price, 269. Desirable that lands be sold at auction and have payments extend over ten years instead of five; longer terms bring better prices; have two women stenographers; thinks that the employment of women has closed the avenue for young men, and that we are not training young men for the higher positions as we should do; we expect

McKenna, James A. J.—*Continued.*

an inspector to visit each agency at least once a year; they are paid their actual expenses, 270. Would favour a per diem allowance; when a vacancy occurs, we notify Ottawa and a person is appointed; are not immune from political influence in regard to appointment of agents; efficiency in the service requires superannuation, 271. Farmers are good instructors; a Pension Act with provision for widows and children would attract people and hold them; a classification of salaries should be made; great difference in cost of living between east and west; cost of living during last four years has increased 40 per cent, 272. Bank of Commerce allows to men transferred from east to west, if unmarried, a special grant of $200, if married $400 a year; other banks an average allowance of $300 a year; clerks out west receiving $400 and $500 on appointment cannot live properly, but have to get extra work; essentials of good service; have heard that men of inferior grades are doing higher grade work, 273. Suggests a permanent commission to secure and maintain an economical Civil Service, one of whom having had large experience in the work of departments, the other two in the management of extensive business concerns, 275.

Memo.: Agencies scheduled in order of size and importance; suggest three classes, agents, farm instructors and clerks; agents from $1,000 to $1,800, farm instructors $600 to $900; same for clerks; the basic principles should be appointments and promotions regardless of extraneous influence, on test of merit and participation in a pension system; would suggest drawing men from experimental farms and agricultural colleges as farm instructors; cannot see why the same classification could not be applied to the outside service as can be applied to the inside, 275.

McLaughlin, Henry, Surveyor at Port of Montreal. 102.

Served in all capacities up to present position; no fixed statutory increases; assistant appraiser examines the goods and the appraiser deals with the invoices and the department, 102. 'Examining officers' are officers heretofore known as tide waiters and lockers, and who could thus obtain increase of salary without passing the qualifying examination; tide waiters were men dealing with the cargo on the docks and at freight sheds; when appointed at minimum no provision is made for fixed annual increments; may get higher by promotion; no clerk can get beyond $1,200; of the special vote last year Montreal received roughly $25,000; none at maximum of his class could receive any of it, 103. Should be annual increases recommended by head of department; condition with regard to increases has been most deplorable; for promotion should pass an examination on 'duties of office;' appraisers are officers who collect the proper rate of duty; salary inadequate for technical knowledge required; salaries of appraisers in United States are three times those in Canada, 104. Some clerks graded in the lower class doing work of superior class; tide waiters though not able to pass qualifying examination they are fit to do the work; men in the supernumerary list nominated by the department, were employed all last winter; promotion examination should be only on 'duties of office,' 105. Supernumerary men to be made permanent; nearly all appointed by this administration; can give statement presented to the Minister last winter as to cost of commodities, 106. Nine-tenths of goods destined for other places go through Montreal in bond; issued 38,000 manifests; some officers are paid less than corporation labourers, 107. Has exchanged a few men with Ottawa; could get more efficient men if emoluments were greater; men work well; recommends that superannuation be re-established; men would work better if they thought their families were provided for, 108. Officers do not participate in share of

McLaughlin, Henry—*Continued.*

seizures; some years it would amount to a few thousand dollars; extra pay from such source very small; no officer at Montreal receives anything directly or indirectly in addition to his salary, 109.

McLeod, Rodk., Caretaker, Public Building, Guelph (letter), 1180.

Though not under Civil Service has acted as caretaker of the Dominion public building at Guelph for seven years, at $400, without an increase; received $50 a year for work done in post office, but that is cut off, so he receives less than formerly; has quarters in building; in his time building is double its former size; thinks that if a man's work is doubled he is entitled to extra pay, to say nothing of increased cost of living; asks for $600, 1180.

McMordie, Alexander, Letter Carrier, Toronto, 960.

Five hundred letter carriers are formed into an association, in which there is a mutual benefit fund for members who fall sick or die, each man paying $1 a month; dues this year amounted to $7; never heard of a letter carrier obtaining an outside position; has heard of letter carriers doing clerks' work, and yet graded as letter carriers, here in Toronto, 960. They lose their uniform and car tickets; has eighteen days' vacation, lost time over that even for sickness is deducted; begins work at 6.45 a.m. in London and Hamilton; after first trip is over, we return to office and prepare for next trip before dinner, for which one and a half hours are allowed, 961. Has to go out in all kinds of weather; not many letter carriers can find the means for insurance; twenty-five years is the limit for a man to stand the job; thinks it desirable to have some system of superannuation making provision for the widow and the orphan in case of death, it is done in Germany, 962. Meats, clothes, &c., have increased 75 per cent, 963. Refers to firemen and police uniforms being better made and of better material than the carriers'; complaint as to fit and material is general all over; in United States the men are responsible for the make of the uniform; are measured in Toronto and it is made in Ottawa; always carry the mail in a bag; would like all carriers to be put on an equal footing with senior third-class clerks as to pay and promotion; also an eight-hour day; that some record of a man's standing be kept and open to him at any time, 964. That some decent system of superannuation be devised, at present we would draw our own money, which at end of thirty years would not give you a living; has been twenty-three years in service; what the carriers really want is a proper system of equality with the third-class clerks, both handle letters, but carriers have more responsibility in case of wrong delivery or loss in delivery; in case of lost registered letter they pay full amount; would like promotion ensured; there is no system at present, only to work in office at greatly reduced salary for eight or ten years, starting over again, no man can afford to do that; states case of letter carriers of Winnipeg; that cost of living has increased 67 per cent during last seven years, that their living allowance of $15 a month be increased to $25; that salaries be increased 33 per cent, 965.

McNaughton, F. M., Railway Mail Service, Quebec, 924.

Staff of four permanent clerks and one mail clerk; is senior clerk under the superintendent, at $1,200; was transferred from inspector's office when the railway service branch was established; presents a collective memo., from Ottawa, Montreal and Quebec; mail clerk above mentioned is in poor health and receives $1,200; was put in office in rather shattered health after long service, and he makes himself useful; he is sixty-four years old and the

McNaughton, F. M.—*Continued.*

oldest of the railway mail clerks; he is a very respectable man and has had twenty-four children, some of whom are richer than he is; ten of them are still living with him in his own house in suburbs; judging by mother's household expenses, thinks the cost of living in Quebec has increased at least 50 per cent, 925.

McPhee, D., Gas Inspector, Hamilton, 423, 432.

About twenty-five inspectors in this district; suggested there be two grades of inspectors and two grades of assistants, according to the money they collect, or work done, 423. Has been in gas business fifty-four years, and inspector of gas since 1876; classification is necessary because to become efficient gas and electric light inspectors, technical, mechanical and clerical knowledge is required, also a knowledge of instruments; vacancies should be filled by promotion, 424. Explains electric business when introduced in Ottawa by late Commissioner Miall, 425. Now repairs old instruments, has two provers from Ottawa under repair at Hamilton, 429.

Presents letter of those officials whose whole time is not devoted to gas inspection service, to share proportionately if increase is granted; about twenty-six officials of this class in Dominion; three in Customs, eleven in excise service, and twelve are weights and measures inspectors, all of whose salaries range from $100 to $300 a year for extra work of gas inspection, 432.

McPherson, Donald, Special Class Exciseman, Hamilton, 408.

Thirty-five years in service, now a special class exciseman, salary $1,500 and $200 duty pay; is in charge of Tuckett's tobacco factory; office hours from 8 a.m. to 6 p.m., often gets away at 4 p.m.; not necessary to supervise manufacture, only take care of warehouse and see such raw material as is brought in, 408. Duties of an officer are intricate; work to be done accurately; then when manufactured tobacco is exported the government returns a rebate; all tobaccos do not contain same percentage of raw leaf; supervises the plug and cut tobacco, 409.

Statement showing the amount of excise duty accruing at the tobacco manufactory of the Geo. E. Tuckett & Son Company, Limited, at Hamilton, from July 1, 1902, to June 30, 1907, each period of twelve months shown as an item, 409-410.

Macdonald, Alexander R., Representing Mechanical and Labouring Branches, Public Works Department, 1114.

Presents a statement from various mechanical and labouring branches of Public Works Department; has been in service since 1898; is paid for the time he works; outside the service he got $3.25, on joining service he got $2.50, 1114. Men outside when working overtime receive time and a half up to midnight, after that and on Sundays double time; plasterers, carpenters and metal workers all receive more pay outside; have to be clothed better than outside workmen; if we meet with an accident or are sick, it depends on generosity of department to pay us or not, 1115. The individual employer fears the Employer's Liability Act, and if a man is seriously injured, the employer will compromise by supplying a doctor or paying for loss of time; receives check on beginning work in the morning at workshop on Queen street and returns check at 11.50 a.m.; takes out check at 1 p.m., and returns it at 5 p.m.; about 150 men in this branch; may be sent to Experimental Farm or Rideau Hall; are asking to be paid according to the fair wage scale in government contracts, 1116. Day labour as carried on by city corporation

MACDONALD, ALEX. R.—*Continued.*

has proved very successful; all sidewalks during the last eight or ten years have been made by day labour and at one-third of contract price; is paid $1.25 a day less than labourers on new addition to government building; politics do not interfere very much with mechanical trades, as they do not wish to impose unskilful artisans on the foreman; as a rule have no unworthy men forced on us; class of mechanics about these buildings are of a superior character, 1117. Plumbers are paid by the month, also for Sundays, and have two weeks' holidays; thirty years ago carpenters were receiving $2; receiving in all that time an increase of only 25 cents a day; painters also; the staff, man for man, is superior to the general run of mechanics outside; refers to condition of printers at Bureau, where wages are based on scale of wages prevailing in Toronto, 1118. The trades union system has not entered into our staff. though many of them are organized men; for masons, there is lots of work in winter, as all furnaces are going and are to be kept in repair, the winter is busiest season, 1119.

Recalled: A mechanic has very little chance of promotion; if the position of superintendent or foreman were vacant it would be given to political preferment: had a mechanic been made clerk of works that tower would never have fallen; such a position might be filled by one of mechanical staff and more efficient inspection, 1122.

MAHON, —, Electrical Staff, Public Works Department, Ottawa, 1127.

Represents the men before the Commission in case they wanted more information; when he came on staff ten years ago there were no electric elevators in use, with them came elevator men at $45 or $50 a month, so he got a rise of $2 a month in ten years; does not run the elevator, but if it goes wrong he is the doctor called in, 1127.

MAINVILLE, C. P., Excise, Montreal. 318.

In charge of stamps since 1899 at a salary of $850; has an assistant at $630; wishes to be appointed as 'clerk stamper,' with medium salary, 318.

MANHARD, L. E., Letter Carrier, Toronto, 962, 981.

Some carriers have to work till 6 p.m., 961. Reads statistics in regard to house rent in Toronto, 962. Submits memo. similar to Federation Association of Letter Carriers, 966. Carriers get very shabby material as well as fit for uniforms; Mr. Jamieson of Toronto was making the clothing and supplying material, but government had to take contract away, uniform not standing wear and tear, 981. Reads detailed statement of cost of living for a family of four, amounting to $47.63, the man's salary $48.25, leaving a balance of $62 out of which to procure clothing, boots, provide for sickness and sundry expenses, 984.

MANKEY, W. J., Letter Carrier. Toronto.

Is still under old law, seeing nothing attractive under the new one; is twenty-three years in service; would not come under new Bill on account of loss of sick pay, superannuation and the possibility of being degraded, as Bill 106 distinctly states that men can be moved either up or down; hard to work under a salary adopted thirty years ago; if $600 was enough then we should now receive $1,000; carriers in United States start at $600 and go up to $1,200, and it is no dearer to live there than in Toronto, as statistics prove, 986.

Marine and Fisheries, Department of.—See *Gourdeau,* 639.

Officers.—Gregory, 686. Laurie, 677. LeBel, 662. Payne, 693. Riley, 682. St. Pierre, 659.

Memorials.—Meteorological Service, 696.

Maveety, R. H., Representing Charmen and Labourers, Ottawa, 223.

Represents twenty-one labourers, all of whom receive $400, except Gallagher and Stack, the latter being sick his son does his work; both the latter have been in the service about forty or forty-five years; Conroy has control of the East Block, West Block, Langevin Block, Museum, Cory Block, Wood's Blocks, 66 Queen street, and the building at corner of Slater and Metcalfe streets; starts work at half-past six to finish offices at half-past nine; common labourers get from $1.50 to $2; should receive $1.50 per day; often work till half-past eleven or twelve o'clock; are often called in afternoon and sent on messages, 223. Have to work sometimes on Sundays; work dirty and hard; has to be done quickly, could not keep up that rate all day; twenty-two rooms and grates to attend to; cannot get outside work for the two clash; we cannot live on $400 a year; are always in debt; charwomen get 75 cents a day for last two years; do not make $10 a year extra; cannot save anything; no superannuation; pretty hard to look forward to the Perley Home, or the Old Men's Home; would rather die than go there, 224.

Memorials.

Agriculture.

Experimental Farm (Central).—Staff urge the advisability (1) of making positions permanent through regular appointment by order in council; (2) of granting distinctive rank in the Civil Service by placing us in the class of technical officers of the Civil Service; (3) of increasing salaries so as to make them equal to those of technical officers in other branches of the service, who have been employed for a similar number of years, and to point out that the fact that we have had to devote a number of years to acquire special qualifications to be in a position to accomplish our work is deserving of special recognition, 82.

Patent Office.—(1) The importance of patent law and practice; (2) the nature and importance of the examiner's work; (3) the esteem in which like work is held in other countries and the lack in Canada of proper regard for the examiners as technical officers doing skilled work, and of adequate remuneration; (4) the sufficiency of the office income to provide for satisfactory remuneration and for better facilities for work; (5) request for improved conditions, 76.

Registrar of Trade Marks, Copyrights, &c.—Administers three separate Acts; his duties clerical, professional and technical, 69. Must be ready to give evidence in any suit or action; increase of business in the branch, 70.

Customs.

Mutual Benefit Association.—Delegates present from Ontario, Quebec, New Brunswick, Manitoba, Nova Scotia, British Columbia and the Northwest Territories; sessions of associations held at Ottawa; delegates supported by Senators and Members of Parliament; the Hon. R. F. Sutherland presented the memorial and spoke strongly for an increase; compared salaries of Canadian Customs officers with those of the United States; other members followed, advancing strong arguments why

MEMORIALS—*Continued.*

Customs—Continued.

Mutual Benefit Association—*Continued.*

Minister should give a substantial increase to Customs officers; the memorial asks consideration of appeal for an increase of salaries consistent with increase of work and cost of living; increase of Customs receipts proof of additional work; it has been truly said 'that the Customs officers, with an almost unchanged salary, were never so poor as now, amidst all this abounding wealth,' 165. Gives details of cost of living per month for a family of six persons, i.e., $100.80 or $1,209.60 per year; also gives increase in market prices of various articles, 166. Companies which have increased wages to their employees; the great railway corporations, manufacturing concerns, companies and firms have voluntarily increased the wages of their employees in sympathy with the advance in the cost of life's necessities; asks for a revision of salaries it being impossible to support families respectably on present incomes; impossible to make ends meet or save anything for old age or illness; would suggest an increase of 50 per cent; it is admitted that a salary of $800 a few years ago was as satisfactory and had as much purchasing power as $1,200 would have to-day.

Memorial from west: Officers concur in the general statements in the previous memorial; having regard to the more expensive standard of living in the west we desire to request that a special provisional allowance of at least $15 per month be added to all officers of that district; cost of living west of Lake Superior is now and always has been from 25 to 40 per cent higher than in the east, 167. The Hon. Minister, in reply, said the whole subject would receive very serious consideration, 168.

Montreal *re* staff August, 1907, 110.

Montreal, memorandum from delegates (1) a general increase in salaries; (2) a change in the classification of officers in the outside service, with minimum and maximum salaries attaching to each class, and statutory increases in salary; (3) promotion from class to class on passing examination on duties of office only; (4) provision for the permanent appointment of acting officers after three years of supernumerary service; (5) re-enactment of the Superannuation Act, 111.

Montreal, memo. showing cost of living and increase in price of necessaries of life in ten years, 113.

Ontario Customs Officers.—Contrasts living now with what it was ten years ago; advance approximates closely 50 per cent; civil servant at a disadvantage with other men; question of salaries, hours of service, superannuation and retiring allowances of great interest; Customs officers on outside service receive no annual statutory increase; many officers twenty years in service never received an increase up to this year; such plan does not produce best results, nor the greatest efficiency; but has driven out good men; asks that officers be assured a minimum salary of at least $900, with statutory increase of $50, until maximum is reached; that superior officers be paid in proportion to responsibilities; that officers west of Lake Superior should receive increase consistent with the higher cost of living; that officers in the service a number of years be allowed such an increase as would equal the amount they would be entitled to had they entered the service at the minimum salary now proposed, with annual increase in accord therewith, thus granting Customs officers same treatment as other officers in the Inland Revenue and other branches of

MEMORIALS—*Continued.*

Customs—Continued.

Ontario Officers—*Continued.*

the Civil Service; eight hours for outside officers and seven hours for inside be a fair day's work; in emergency cases, on Sundays or holidays should receive extra remuneration not less than 40 cents an hour; that in frontier and other ports, where there is continuous service, the twenty-four hours should be divided into three shifts of eight hours each; an eight-hour day is now almost universally recognized as fair and just between employer and employee, 163. (1) Provision be made in Superannuation Act for those dependent on officers who have been paying for years into the funds and who die in the service; (2) would suggest that government add an equal amount to officers' retiring fund and allow 4 per cent interest on total, instead of present plan; for sake of efficiency and fairness all branches of Civil Service be placed on equal terms, 164.

Quebec, Recommendations by Customs Officers of Port.—(1) Patronage system should be abolished and appointments left in hands of Civil Service Board; (2) all officers should be on permanent staff; transfer of officers from place to place during winter and summer; (3) outside service should be classified, and annual increase of salary granted on favourable report by head of department; (4) promotion examinations on duties of office, faults of present system of classification; (5) minimum scale of salaries be fixed at a liberal amount to cover increased cost of living; (6) increase of Sunday service to 50 cents an hour, 145.

St. John, N.B., Appraisers and Clerks.—Points out that salaries of appraisers reach a maximum of $2,000, by yearly increases; rooms used at present too small, require twice as much space; not desirable that public should have free access to these rooms; suggests salaries; maximum salaries in all cases by yearly increases on recommendation of collector; do not approve of employment as clerks of officers holding rank of tidewaiter, &c., practice should be discontinued; favour Superannuation Act, with an amendment giving legal representative of a deceased officer for fifteen years or more in service a sum equivalent to one year's superannuation; hours of duty satisfactory; offices are well lighted, but poorly ventilated, and not cleaned often enough; promotion by merit; examinations on duties of office; holidays satisfactory; appointments should be of young men of fair education and ability, and good standing in community, 173.

St. John, N.B., Outdoor Staff.—Points out that the undeniably large increase in cost of living makes it necessary that salaries be increased; at ports collecting $1,000.000 and upwards, suggests salaries; increases to be recommended by collector of port; vacancies filled by next officer in merit; examinations for promotion on duties of office; no Sunday work; holidays satisfactory; all appointees be men of fair education and good standing in community; favour Superannuation Act with amendments securing to relatives of deceased officer some return, where decease occurred before superannuation, 172.

Vancouver, Victoria, Nanaimo and New Westminster, B.C.—*Retirement Fund.*—Present method is to deduct 5 per cent from salary of officers (permanent staff), with interest at the rate of 4 per cent per annum compounded half-yearly; thinks this is not best arrangement; quotes an example; not prepared to say what form of relief is best; but if retirement fund is continued, the money deducted from officers' salaries

MEMORIALS—*Continued.*

Customs—Continued.

Vancouver, Victoria, &c.—*Continued.*

should be supplemented by a sum from government; something should be done to keep good officers and an efficient service. *Salary Increase.*—Civil Service Act sets forth amount of salary each officer is to receive, with regard to the Customs officer the provisions have not been carried out; an officer in service for fifteen years receives same pay as a temporary officer in the service only a few days; when Act became law salaries were sufficient, conditions are different now, and the minimum and maximum will need to be advanced by about 50 per cent. *Cost of Living.*—Question most difficult; advance in price of everything has caused dissatisfaction, discontent, discomfort and embarrassment; and is felt by every officer in the province, yet salaries remain the same; give comparison of prices ruling in 1900 and 1907, respectively; these comparisons not mere guesses, but obtained from reliable sources, from books of merchants, from records of trades unions, and can be verified at any time, 169-170. The above being summer prices, one sees the high cost of living in the west; in winter the increase is considerable; matter a serious one; in rent alone 50 per cent of salary is required; in no place in the Dominion is the living so high as on Pacific coast (Yukon excepted); almost everything comes from eastern Canada or from United States, to which is added freight and duty; new tariff places extra duty on articles of daily use; increased salaries were given in 1904; want the same policy to be continued. *Conclusion*—Are opposed to present system of compulsory savings, and look for another scheme having essence of fairness in it; that salary of every officer be increased until maximum is reached; present salaries are entirely inadequate; that west shall have increased salaries over and above what is paid to eastern officer; officers of United States working side by side of our officers receive salaries from 58 to 90 per cent more than our officers, 171.

Finance.

Charmen and Labourers in connection with Government Buildings.—Their claim for an increase of salary for the following reasons: (1) have to clean out ashes and relay twenty fires every morning, fill scuttles and break coal, and cut wood for next day; (2) sweep two large corridors, some five or six flights of stairs; (3) attend to water filters in each department, with ice; (4) clean two or three sets of water-closets every morning; (5) sweep walls of thirty or forty rooms, japan front of fireplaces, &c.; (6) run messages for Mr. Conroy, carry supplies for outlying buildings, &c., for which we receive only $1.09 per day, and considering the cost of living, we ask for an increase of salary, 225.

Charwomen in employ of Government.—Desire an increase of salary; receive at present 75 cents a day; to be at service of employers the rest of day if called upon; many have to main.ain fam.lies on these wages; considering arduous work, we are entitled to more substantial remuneration than we receive; charwomen of Senate receive $1 per day for work of similar character, 225-226.

Geological Survey.

Technical Officers.—Submit the following facts and suggestions: (1) the status of the technical officers; (2) methods of promotion and appoint-

MEMORIALS—*Continued.*

Geological Survey—Continued.

Technical Officers—*Continued.*

ment; (3) superannuation and retirement fund; (4) inadequacy of present rate of remuneration to technical officers—(1) at present no definite minimum or maximum salary, nor any reasonable certainty of regular increase or promotion for technical officers of this staff; a more efficient service could be maintained and better men secured; increase not less than $100 per annum, and possibly more at end of five or ten years; (2) make pay commensurate with services rendered; all appointments based on ability, efficiency and character, will give satisfactory results, to be obtained only by the removal of the Civil Service from political control; (3) principle of superannuation should be restored to Civil Service; would suggest an insurance endowment providing that if an employee died in service his family should receive reasonable protection, or if superannuated he might have privilege of accepting either an annuity, a stated sum, or other option; it is felt that rate of interest now allowed by government on retirement fund is too low and not commensurate with value of money in commercial world; (4) we take it for granted that government desires to retain the best men and attract good men; to do this present rates of pay should be considerably increased; we would call your attention to the large number of good men who have resigned from the staff; the provincial governments of Ontario and British Columbia, the Geological Survey of the United States, and of India, all pay higher salaries than Canada; graduates from our scientific schools are now offered salaries on graduation, higher than the government pays to university men of ability fifteen or twenty years in service, 242-243. Government of India, Department of Commerce and Industry, geology and minerals; owing to expansion of mining in America, Australia, South Africa there is great and growing demand for mining and geological experts, who command very high salaries; only alternative would be to recruit officers and train them after their appointment; this would result in loss of power, and no guarantee for work of department; rates of pay not liberal enough to retain them, once trained, 244. Tables comparing annual salaries previous to July, 1906, and since July, 1906, 245. Appendix giving conditions for Indian Geological Survey appointments, 246-247.

Inland Revenue.

Deputy Collectors, Class A.—Hold special class certificates showing a fitness for duties of their respective offices; as such they are receiving a less salary than that received by special class officers at certain surveys, apart from additional salary received by such special class officers under the regulations, while by such regulations the deputy collectors holding special class certificates are debarred such more lucrative positions; they maintain that holding such certificates, such special fitness should be recognized by increased remuneration over their co-labourers not holding such higher grade of certificate; this principle was formerly recognized by department; they feel that all deputy collectors who have qualified themselves to pass prescribed examinations for special class certificates should be classed as such, 415.

Excise Service, per Jamieson.—Showeth that the salaries at present paid them are totally inadequate, owing to increased cost of living, now fully

MEMORIALS—*Continued.*

Inland Revenue—Continued.

Excise Service—*Continued.*

50 per cent greater than formerly; rents from 50 to 100 per cent, and foods to an equal extent; all salaries are increased in keeping with increased cost of living; work and responsibilities of officers not understood or recognized as they should be; outside service collect revenue, often amidst distinctly disagreeable surroundings, long hours from 8 a.m. to 6 p.m., must be on duty in morning when distilleries open at 7 a.m.; for six months, officers to reach their work have to rise while it is dark, breakfast and go out into storms, often breaking the roads; married men prepare their own breakfast, single men find it difficult to find boarding places to get so early a breakfast; for this they are allowed 27 cents per day extra; they have to take care of goods, the duty on which amounts to nearly $10,000,000; to take care also of packages of spirits, giving each a name and followed through all stages of blending, reducing, &c., till removed from premises; unfair to place men in such positions of trust and temptation, on very low salaries; great bulk of revenue is from distilleries, tobacco factories, cigar factories and malt houses, 405. Government's interest in distilleries is about three-fourths and that of manufacturer one-fourth; government share, less the small cost of supervision, is clear profit, and manufacturer has to pay cost of all raw materials, expense of different processes, cost of labour and putting it on market; that in malt-houses, tobacco and cigar factories interest of government is one-half; respectfully ask increase of salary to equalize cost of living; not in increments of 5 per cent, but in a lump sum; that for superannuation where an officer is in receipt of duty pay, that superannuation be based on both amounts; that Superannuation Act be so changed that in case of death of officer before superannuation his heirs be entitled to an amount equal to allowance that would have been paid him had he been superannuated one year, 406.

Gas and Electric Light, per McPhee.—Containing reasonable suggestions and changes desired by service; increased cost of living makes salary question the main issue; while petition is not altogether mercenary, yet proper grading and classification are of equal importance, 429. Suggests following classes: (1) chief inspector be head of service of gas and electricity in Canada; (2) inspectors of gas and electricity and district superintendent of construction be the inspectors in their respective districts, and also have control of construction and erection of government apparatus in districts set apart by government; three such inspectors in Canada (*a*) in Quebec and maritime provinces; (*b*) in Ontario, (*c*) Manitoba and western provinces; (3) inspectors of gas and electricity be such in their respective districts only; should be two classes of inspectors (*a*) over first-class districts, (*b*) over second-class districts; (*a*) whose revenue exceeds $5,000, (*b*) whose revenue is less than $5,000; salaries of different classes be $2,500; classification necessary, for to be an efficient gas and electric light inspector, technical, mechanical and clerical knowledge is required; service is no burden on general tax-payer, and as only twenty-one officers would be affected by suggestions, department could stand increase; in 1896 when present salaries were arranged it was understood that when service produced a sufficient surplus, salaries would be re-arranged; new appointments should be men of quality and should pass necessary examinations, 430. Vacancies be filled by promotion, or transfer from another district; that

MEMORIALS—*Continued.*

Inland Revenue—Continued.

Gas and Electric Light—*Continued.*

boundaries be coterminous, i.e., inspectors of electrical districts be also inspectors of all gas companies in respective districts; that if Commission accepts these clauses or suggests others, increases be retroactive and calculated from the time each officer entered the service; two months' gratuity inadequate, also recommends that in case of officer dying while in active service 50 per cent of superannuation allowance be paid his widow during widowhood; if dying after superannuation, a fair allowance be given widow during widowhood; as evidence of increased cost of living banking institutions consider the least amount an employee can live on; they permit no clerk to marry on less than $1,500 a year, 431.

Gas and Electric Light, per Johnston.—Would call attention to assistant in office doing extra work at night; according to statute a test of the illuminating power of gas has to be taken between hours of seven and ten in afternoon in summer, and between five and eight in winter; this test is asked for by company, time taken is about two hours, so far he has received no remuneration only car fare; would strongly recommend that some addition be made to this officer's salary; would state also that gas company pays $12 weekly to department for this test, 432.

Gas and Electric Light Inspectors, London.—Would consider that the service would be greatly benefited by a change of regulations, and suggest the following: at inception of Act, 1896, gas inspectors became electric light inspectors; net revenue for year 1906 of $25,245.53 shows that work of inspectors has increased; as yet no salaries are paid for doing the work, and has resulted in united action by electric light companies to obtain reduction in fees; that salaries may bear relation to work performed inspection districts be classified on basis of revenue produced, 432. Assistant inspector may, on recommendation of inspector and passing required examination, become first-class assistant inspector, receiving annual increase of $100 till maximum $1,500 is reached; vacancies to be filled by promotion; districts for gas and electric light be coterminous, inspectors to give undivided attention to work; considering increased importance of work of senior gas inspector, his salary be increased $500 per annum; gratuity of two months' pay entirely inadequate, it is therefore recommended that in case of decease before superannuation 50 per cent of such allowance be paid to widow during widowhood, if decease takes place after superannuation a fair proportion be allowed widow during widowhood, 433.

Gas and Electric Light, per Roche.—Would submit that revenue produced from inspections during any fiscal year is not the standard by which services of inspectors should be gauged, but by competency and efficiency of the official; as practical knowledge and competency in the adjustment and use of the machinery is of greatest consequence, also length of service and performance be considered; officials should receive sufficient salary to live on without seeking extra work, 434.

Montreal Division, Excise Officers, 310.—(1) Present salaries are incontrovertibly insufficient owing to the rapid and enormous cost of living in Montreal; experts establish that during the last ten years the percentages of increase are: rents 50 per cent, provisions 50 per cent, clothing 25 per cent and fuel 22 per cent; we find great difficulty in meeting our legiti-

MEMORIALS—*Continued.*

Inland Revenue—Continued.

Montreal Division—*Continued.*

mate current expenses; (2) a higher grade of salaries than that paid to skilled workmen was granted to exicse officers, now it is inferior in some cases to that of an ordinary labourer; (3) department requires great qualifications from its officers, also great responsibilities attached to positions; an extensive knowledge of arithmetic, commercial and departmental accountantship, mensuration, computation of commodities in bulk; a complete knowledge of the laws and regulations of our department; to possess a technical knowledge of the working of distilleries, breweries, malt-houses, tobacco and cigar factories, &c., an excise officer is practically an assessor of duty on all articles subject to excise; incompetence or negligence cannot be tolerated as they would cause loss of revenue; must acquaint the manufacturer with the laws and regulations governing his establishment, and efficiently protect the revenue in preventing all irregularities and fraud; (4) we, in Montreal, collect yearly more than $6,000,000, or more than one-third of excise revenue of whole Dominion; on account of enormous volume of business transacted a continuous audit is going on in the office and the outside surveys; for above reasons we desire an increase of salaries, 310. A few suggestions that would help to overcome present difficulties: (1) a special scale of salaries be made to apply to Montreal division; (2) in reference to promotions, we urge that, qualifications being equal, preference be given according to seniority; (3) that increase of salaries from minimum to maximum be made at the rate of 10 per cent instead of 5 per cent, as at present; (4) that staff, as in other departments, be paid bi-monthly instead of monthly; (5) in lieu of present retiring system, some other provision more satisfactory to officers be inaugurated; if none other can be found, then let all be placed under provisions of old Superannuation Act; (6) desirable for sake of uniformity in classification of officers, and equal justice to all, that the special class be not restricted as to numbers; and any officer having passed the special class examination be paid the minimum salary of that class; at present an officer having passed this examination may have to wait ten years or more before being placed on special class list and drawing the minimum salary, 311.

Additional Memo.: This division passes about 20,000 entries annually, equal to 60,000 entries in some other division, about 20,000 requisitions ex-factory for stamps; collects over $6,000,000; has one distillery, four malt-houses, ten breweries, twenty-five tobacco factories, thirty-three cigar factories, three vinegar bonded factories; two acetic acid manufactories, three bonded factories for perfumes, three bonded factories for pharmaceutical preparations, twenty-six bonded warehouses, not to mention chemical stills and compounders; now this large number of licenses entails a great amount of work for office work and supervision; an excise officer who does his duty conscientiously renders himself disagreeable to the public; it being difficult to have competent clerks would advise special scale of salaries and suggest an extra allowance for such as are suitable for the work; would suggest that a deputy collector, class A, should rank with a chief clerk grade A of inside service; an accountant or special class officer with a chief clerk, grade B; a special class officer between grade B and a first-class clerk inside; first, second and third class excise officers with same classes in the inside; at present the accountant in Montreal receives a salary equal to a second-class clerk

MEMORIALS—*Continued.*

Inland Revenue—Continued.

Montreal Division—*Continued.*

in the inside; would be advisable to give salaries sufficient to compensate for 'duty pay;' government should pay cost of guarantee bonds exacted from civil servants; under Superannuation Act if officer dies widow and family receive nothing; would suggest an allowance be made the widow or children during widowhood or minority, to provide in a small way for the loss of wage earner, 313. Statistics annexed, from merchants and others, showing how cost of living has increased in Montreal in recent years, 314-315-316.

Montreal Division, Temporary Employees.—1° Qu'ils sont employés à titre d'officiers temporaires depuis huit, dix et vingt-quatre ans; 2° Que, comme tels ils n'ont aucun droit ni aux vacances, ni aux augmentations annuelles, et ne reçoivent aucun salaire en temps de maladie; 3° Qu'en considération de leur long état de service, ils solicitent (1°) une augmentation de salaire; (2°) d'être payés en temps de maladie; (3°) d'avoir des vacances annuelles, 320.

Quebec, Excise Officers.—Solicit consideration of following facts; (1) cost of living, food, clothing, fuel, light, furniture and rent have increased 55 or 65 per cent in the past ten years; (2) taxes, cost of education, services of liberal professions, rates of insurance and interest have considerably increased; (3) all railway, telegraph and telephone companies, all industrial and commercial establishments have granted reasonable increase to employees; (4) labourers formerly receiving $1 a day now receive $1.50 and $2; (5) Inland Revenue employees, especially accountants, bookkeepers, officers in charge of factories, require special qualifications entailing considerable study and expense; (6) for many it is utterly impossible to live on present salaries; (7) pray you would kindly report in favour of an increase of salary based on present high cost of living, 374.

St. Hyacinthe Division. 319.—(1) Considering cost of living is constantly on the increase, some sort of provision be made for future; (2) are not paid in accordance with the services rendered; this is borne out by comparing cost of collection and protection of revenue with business of any mercantile establishment in Canada; (2) considering standards fixed by which ability of officers is tested. the service has no attraction for class of men required by department, because of low salaries paid; (4) that men appointed as temporary officers and who by reason of age, &c., have passed no examination, yet are found competent to discharge duties assigned to them, should on recommendation of collector and inspector, be placed on permanent list at expiration of five years; (5) that special provisions be made for officers engaged in the supervision of the manufacture of fulminate of mercury and such other articles the manufacture of which is dangerous, by extra duty-pay or accident insurance; (6) uniform system of duty-pay for officers at distilleries or other surveys where duty-pay is given; (7) that pension system formerly in force be restored or offered to officers in lieu of the present retiring allowance system; (8) that some special provisions be made for the higher grades of distillery officers, as they are liable to be moved from one place to another; at present transportation expenses alone are paid and no sundry expenses are reimbursed for breaking furniture, &c.; great interruption takes place in the education of children, 319.

MEMORIALS—*Continued.*

Inland Revenue—Continued.

Three Rivers Division, Collector Hébert.—Représente humblement que les salaires du service civil devraient être augmentés, pour les considérations suivantes: 1° Augmentation considérable du coût de la vie: La moyenne de cette augmentation, pour loyer, vêtements, nourriture, chauffage, écoles, etc., est de 30 à 40 pour 100; 2° Echelle actuelle de salaire insuffisante aujourd'hui même pour le nécessaire, sans vouloir exagérer: Nous ajouterons des suggestions qui mériteraient votre considération (1°) que l'augmentation du salaire du minimum au maximum s'effectue à raison de 10 pour 100 au lieu de 5 pour 100; (2°) que le privilège soit accordé à tout officier qui le désirerait d'être mis sous le système de pension; (3°) que pour chaque dix années additionnelles passées dans le service une augmentation de 5 pour 100 soit allouée, à titre de gratification et d'encouragement, à celui-là qui se dépense au service de gouvernement; (4°) Qu'une augmentation de salaire d'au moins 25 pour 100 devrait être accordée, avec privilège de bénéficier de la dite augmentation aussitôt accordée; (5°) qu'il ne nous paraît que juste qu'un officier, ayant contribué au fonds de retraite trente années, ait le privilège de se retirer du service après ce terme d'office, et que les deux tiers du salaire maximum auquel il aura droit, dans la classe à laquelle il appartient, lui soit payé mensuellement, 372.

Weights and Measures Officers (Windsor Division), per Hayward, 420.—Scale of salaries was fixed twenty-five years ago; other branches of service have since then received increases in salaries; weights and measures offices alone were neglected; revenue now meets three-fourths of outlay; if salaries were fair then it is manifest they are not now; cost of living has increased 50 per cent, every article necessary to life and comfort has risen in price; mechanics then got $10 a week, now $15, the labourer then $1 a day, now $1.50 or $2, but assistant inspectors of weights and measures are held down to salaries of a quarter of a century ago, 420. Prosperity of country has made them worse off than before; they work nine hours a day in summer and seven in winter, and while doing country work twelve and thirteen hours a day and one or two hours' clerical work and no extra pay; work is hard, when handling iron standards they handle from ten to fifteen tons of weights per day; these hard-worked men, these skilled mechanics, these expert clerks, begin at $500 a year and hope after eight or ten years to reach $800; they are denied benefits of superannuation fund, those less than ten years on list were cut off; sums paid in for seven, eight or nine years were returned to them without interest; not creditable to government that while revenues are expanding some of its servants are so poorly paid that they cannot live in comfort or provide for declining years; when increase has been asked for the invariable answer is, 'service is not self-sustaining, cannot grant your request;' never contended that service should be self-sustaining, it is preventive, and has two objects in view, viz., to assure dealer that his weights and measures are correct, and to protect public from fraud; Mr. Brunel said in report, 1880, 'very likely cost will generally be more than double the revenue;' Mr. Miall, the then commissioner, said, 'it is hardly expected that this service can be made self-sustaining, neither is it desirable to render it so,' 421. If service is intended to be paying then increase the fees, and not by keeping employees at inadequate wages; government practically says, 'we have fixed fees so low that service cannot be self-supporting, therefore we will

MEMORIALS—*Continued.*

Inland Revenue—Continued.

Weights and Measures—*Continued.*

not pay you the salaries you ought to have;' weights and measures, gas inspector and electric light are grouped together, the receipts being $149,518.43 and expenditure $128,699.89; assistant inspectors think they are entitled to minimum salary of $800, with yearly increase of $100 to maximum $1,200; respectfully submit that 33⅓ per cent increase be made to present salaries; that gratuity of two months' salary to heirs of deceased officers is entirely inadequate, and recommend that in case of officer dying in service 50 per cent of superannuation allowance he would have been entitled to receive be paid widow during widowhood, and in case of officer dying after superannuation, a fair proportion be paid to widow during widowhood; that candidates, before appointment, in addition to their primary examination should serve three months in scale factory to get expert knowledge of his duties, 422.

Weights and Measures Division, Toronto, per Milligan.—Division comprises city of Toronto, counties of York, Ontario, Peel, Grey, Simcoe, Muskoka and Dufferin; they base their request for increase of salary on following claims: (1) that this branch is the most unpopular one in the service, in collecting fees, paid in most cases unwillingly; (2) inspection work is laborious and one-third of their time is taken up in clerical work connected therewith; (3) that salaries in all other business have been increased; (4) that present salaries were fixed over thirty years ago, yet cost of living has increased from 50 to 100 per cent since; they respectfully submit following increases: inspectors from $1,500 to $2,000; assistant inspectors from $800 to $1,400, 422-423.

Weights and Measures, Assistant Inspectors of, Montreal Division.—Present scale of salaries remains unchanged since 1878, though other branches have received readjustments; new industries, railway and navigation traffic have greatly increased, population more than doubled last thirty years, all of which have tended to increase varieties of weights and measures necessitated by changed conditions of business, thereby increasing labour of officers; in 1896, nine officers, salary $7,200, collections $7,777.50; in 1906, seven officers, salary $5,573.16, collections $13,364.60; notwithstanding that sixteen counties were taken off and added to St. Hyacinthe; though Weights and Measures Act primarily is for protection of people, yet this division has been no tax on government, it shows a surplus of receipts over expenditure since the beginning; officers do not participate in superannuation or retirement funds; impossible for assistant inspector to live honestly and not be indebted to merchants, let alone make provision for old age and family's safeguard; salaries paid in rural localities are altogether inadequate for those located in the chief commercial centres, where cost of living is double that of outside districts; ask to make scale of salaries for large divisions with a minimum of $800, with annual increase of $50 up to maximum of $1,200; retrospective from time of appointment, 320-321.

Western Ontario Excise Officers.—Respectfully ask increase of salaries to supply families with necessaries of life and to keep up to standard required both socially and otherwise as officials are deprived of certain civil rights, and being unable to pursue other callings, ask justice, especially as department demands all our time; submit

MEMORIALS—*Continued.*

Inland Revenue—Continued.

Western Ontario, Excise—*Continued.*

resolutions and statistics passed by different divisions in Ontario: (1) in view of marked increase in cost of living, responsibility attached to duties of office, often having to act as arbiters between government and manufacturers, daily determining quantities, assessing duties, &c., &c.; the severe and searching departmental examination (besides regular Civil Service examination), officers of excise branch are required to pass; are obliged to possess technical knowledge; desirability of attracting first-class men to service; it is respectfully submitted that there should be an increase at least enough to place us as we were in 1900, to give us relative worth of the purchasing power of one dollar; (2) endorse memorial of Civil Service Association of Ottawa relating to superannuation and retirement fund; (3) trust you will consider outside service of sufficient importance, as character of duties warrants, the staff having to deal with manufacturers, merchants, &c., thus requiring tact, judgment, and a high order of intelligence; such increase if granted be *en bloc* instead of annual increments of 5 per cent; recommend following: (1) maximum salaries of deputy collectors class A should equal minimum salaries of collector under whom they serve; (2) that deputy collectors, class B, have same salary with excise officers as soon as they pass required promotion examination; it would be well to see more appointments to this class; (3) that appointments on probation at a salary of $700 to enable them to live until they pass promotion examinations; (4) that preventive service be abolished, all officers acting in case of need; (5) that we adhere to system now in vogue and not promotion examinations; (6) that in large divisions messengers receive not less than $700, as they carry at times large sums of money; (7) that where stenographers are employed they receive a salary not less than $50 per month, with yearly increase of $50 till maximum of $800 is reached, 385. (8) That gratuity of two months' pay given to heirs of deceased officers is inadequate, and recommend that in case of officer dying in service 50 per cent of superannuation allowance he would have been entitled to receive be paid his widow during widowhood; in case of officer dying after superannuation, a fair proportion of his allowance be given to widow during widowhood, or if no widow to his infant children, if any; (9) conference be held in Ottawa every three years, of inspectors and collectors; (10) that granted that political appointments will obtain, considerable cause of friction might be avoided by consultation between patronage holder and officer under whom appointee would have to work, 386.

Western Ontario Collectors, per Alexander.—(1) Resolved that in view of marked increase in cost of living, responsibilities attached to duties performed; the severe and searching departmental examinations to be passed, the technical knowledge they have to possess, desirability of attracting first-class men to enter service, and to place service on a basis comparing with that of commercial and monetary institutions it is respectfully submitted there should be an increase of at least 33 per cent made to present schedule of salaries; (2) resolved that gratuity of two months' pay now given to heirs of deceased officers is entirely inadequate; that in the case of an officer dying in service 50 per cent of superannuation allowance be paid to widow during widowhood; and if officer dies after superannuation, a fair proportion of superannuation allowance be given to widow during widowhood, 383- 384.

MEMORIALS—*Continued.*

Technical Officers, per Sheppard, *et al.*—Lay before Commission following facts as to standing and financial position: have been employed continuously from eighteen to twenty-five years; have never been made permanent, and have nothing to look forward to if incapacitated for further work; work of technical character demanding special qualifications, and are appreciated, and honestly performed; considering insufficient pay, the special work, length of service, the increased cost of living and our special qualifications, should be appointed to permanent staff with rank of first-class clerks; and in event of superannuation, the same should be based on first appointment as temporary clerks, 504.

Justice.

Chaplains, Kingston Penitentiary.—Both suggest that the salaries of $1,200 are not sufficient and are out of proportion of those of clergymen in other prisons; both chaplains in Dorchester, Manitoba, British Columbia and Alberta had their salaries raised from $600 and $800 to $1,000; doing duty in above mentioned prisons for Dorchester 211 prisoners, Manitoba 190, British Columbia 139, Alberta 40; serve interests of 460; merchants, farmers, traders, judges, lawyers, doctors, &c., are all receiving either higher prices for goods, more wages for work or increased salaries; chaplains feel the effects of increased cost of living; prison chaplains unlike other ministers, are called upon to deal with the worst class of men; it is their duty to reform criminals, and so convert them that when they go out they may be less of a menace to society; clergymen ought to be able to live as gentlemen, 582.

Penitentiary Branch.—(1) Previous to 1895 estimates were prepared at penitentiaries, now at Ottawa; (2) previous to 1895 tenders prepared, advertised, opened, checked and scheduled by each warden, now all is done by inspectors at Ottawa; (3) previous to 1890 all work of construction and reconstruction was done on plans and estimates prepared by Public Works, since 1895 work is done entirely under supervision of inspectors and prison architect by convict labour; value of works under old system was $697,250, under later method $209,487, saving $487,763 during seven years; (4) since 1895 detailed lists of articles required are submitted to inspectors and revised by them before authority for purchase is given; this was formerly left to wardens; (5) previous to 1895 appointments of guards, &c., was made by wardens, now by Minister; (6) until 1902 all accounts were audited and paid at penitentiaries and nothing was done at Ottawa, now all that is done at Ottawa; (7) correspondence has increased from 900 letters in 1894, to 3,100 in 1906; (8) staff in 1894 was one inspector, one auditor and one secretary, now two inspectors, three accountants, one parole officer, one architect and one typist; (9) in 1894 salary of inspector was $3,200, franking privilege, liberal per diem allowance while travelling, those then receiving that salary were increased to $4,000; present salary of inspector is $2,800, franking privilege taken away, and system of payment for travel is done at personal loss, 547.

Kingston Penitentiary.—(1) The staff request an all around increase in salaries, amounting to at least $100 a year for each one; members of staff feel the stress of the increased cost of living; staff differs from other branches, because each time an officer goes on duty he takes his life in his

MEMORIALS—*Continued.*

Justice—Continued.

Kingston Penitentiary—*Continued.*

hands, as a soldier in battle, and he has to deal with the hardest and most dangerous class of criminals and lunatics; (2) gratuity at present consists in one-half months' pay for first five years of service, and one month's pay for each following year; no resignation will be accepted unless forfeiture of gratuity accompanies it; if officer is killed on duty, family has no claim on gratuity except three months' pay; they desire that this be so changed that family may receive full gratuity claimed on retirement; (3) present long hours be changed to a ten-hour day, 580. (4) Suggest that hours occupied in services on Sunday be given to men on Saturday or services shortened; (5) pay out of all proportion to work, e.g., in July and August one man worked 767 hours for $100, a little over 13 cents an hour, working day and night constantly exposed to death; Dorchester has 211 prisoners, Manitoba 190, British Columbia 139, Alberta 40, St. Vincent de Paul 410, while Kingston has 460; receives the worst of criminals, too dangerous for other prisons, 581.

Marine and Fisheries.

Meteorological Service, Toronto.—The Toronto Magnetic and Meteorological Observatory was established by British government in 1840, and taken over by provincial government in 1853, and by federal government in 1866; later some stations throughout Canada were started which sent in their reports to Toronto; these stations gradually increased and Toronto became the centre of the service; in 1876 regular forecasts and storm windings were issued; many previous ones proving insufficient; from this on improvements in the forecasts and growth of the service was rapid; the great use of this service is for mariners, and in a lesser degree forecasting rain or sunshine for public generally; in winter all railways are directly informed of approaching heavy snowstorms, or high winds that cause much drifting; of equal importance are the climatological statistics gathered from 511 stations in all parts of country; the preparation of these statistics, weather reviews, monthly and daily weather charts, require special care and training, and we would submit that the services of those trained in the work should be retained by adequate remuneration, 696. The magnetic observations may be considered as Canada's contribution to a great international work, the full importance of which will only be proved after many years' collection of data, the instruments for the purpose used requiring most careful manipulation; service requires proper offices and record rooms; officials of central office are, director, assistant director, secretary, special officers, observers, computors, telegraph operators and clerks, and of the 184 outside stations, observers and storm signal agents; for many years central staff have unsuccessfully asked for more liberal allowances, but ask for the privileges which scientific institutions enjoy in Ottawa, increased cost of living urges them to make this urgent request; and because their work continues both day and night and on Sundays; increase in cost of living has increased in Toronto quite 35 per cent; think the position of the small salaried man is far harder than those in receipt of higher pay; scale for salaries in weather bureau of United States is considerably higher than in Canada; in United States there are specialists and in Canada the services of each individual are varied; superannuation is as important as increased pay; many old members were not allowed privilege

MEMORIALS—*Continued.*

Marine and Fisheries—Continued.

Meteorological Service—*Continued.*

of superannuation; ask a proper retiring allowance; suggest that the Director of Meteorological Service be ranked as a deputy head; that outside influence for promotion be discouraged, but promotion should depend on merit and seniority in service; submits table showing names of staff, length of service, present salary, and average rate of annual increase, 697-698.

Militia.

Royal Military College, Superior Staff.—Submit following proposal for superannuation of members of staff as become disabled for performance of duty consistent with efficiency: that the conditions which obtain in the treatment of the civil and militia services are not analogous to those under which they serve, as the initial appointments to either of these services may and usually do take place at an early age, so that time is given for a pension scheme to mature before its application; the appointment of a member of Royal Military College staff presupposes a professional experience in similar fields, and age with its ripened judgment and experience is an essential qualification for the head of a department; consider their position parallel to members of the bench, and ask that the same principle of treatment be accorded them; a civilian member of Superior Staff of Royal Military College may be retired to promote the efficiency of the staff under the following conditions: (*a*)if of fifty years of age and has served for ten or more years, he shall receive a life annuity of 50 per cent of salary at retirement, plus 2 per cent of such salary for each year's service over and above ten, but maximum annuity shall not exceed 70 per cent of salary at retirement; (*b*) if under fifty years at retirement with at least ten years' service he shall receive above annuity less 2 per cent of salary for each year under fifty; (*c*) if service is less than ten years, he shall receive for each year's service a gratuity of one-tenth of annual salary at retirement; (*d*) if retirement is voluntary with approval of government, gratuity will be as previously stated, but annuity will be subject to a reduction of 20 per cent if retiring member has not reached age of fifty; (*e*) annuities payable in monthly instalments, clear of taxes and deductions, imposed under any Act of Parliament of Canada; (*f*) service on staff to count towards pension of an officer under Militia Pension Act, in the event of transfer to permanent force; (*g*) widow of a professor to whom she has been married at least ten years before his death shall receive one-half of allowance which would have gone to her husband, 760.

Dominion Arsenal Staff.—Beg to state their salary is too low, considering the functions, responsibilities and work, also cost of living has increased for some years back, also wish to state that in this lapse of time they have not benefited of a proportionate rise of pay as have generally the mechanics, machinists and foremen, 759.

Post Office Department.

City Post Offices, per Allen.—Statement asking increases of salaries, 805. Reasons which, we claim, entitle us to consideration: (1) the cost of living; (2) comparison of salaries; (*a*) senior second-class clerk, with family of four, salary of $1,200 a year, expenses monthly $126; salary $100; deficit

MEMORIALS—*Continued.*

Post Office Department—Continued.

City Post Offices—*Continued.*

$26 monthly, 805. (*b*) Junior second-class clerk, with family of six, salary $1,000 a year, expenses monthly $92.75, salary $83.33, deficit $9.42 monthly; (*c*) junior third-class clerk, with family of six, salary $800 a year, expenses monthly $82.71, salary $66.66, deficit $16.05 monthly, 806. (*d*) Senior third-class clerk, with family of eleven, salary $800 a year, expenses monthly $92.06, salary $66.66, deficit $25.40 monthly; (*e*) second-class clerk, with family of four, salary $900 a year, expenses monthly $77.76, salary $75, deficit $2.76 monthly, 807. (*f*) Senior third-class clerk, with family of nine, salary $900 a year, expenses monthly $97.07, salary $75, deficit $22.07 monthly; Charlottetown, P.E.I., expenses yearly $1,075.09, salary $800, deficit $275.09 yearly, 808. In city of Quebec for one year expenses $1,294.82; in Halifax living expenses for family of six for one year $1,012, salary $850, deficit $192 yearly; rents: an increase of 25 per cent to 30 per cent since 1890-96, 809. Extract of a letter by a leading real estate agent in Ottawa: On examining our books as far back as 1890, we find rentals are now from 25 per cent to 30 per cent higher than then, particularly in houses of medium size, and thinks his estimate is below the average; taxes at City Hall have risen 15 per cent in last ten years; J. Heney & Son's prices for coal and wood in 1890 coal $6.50, now $7.25; hardwood, 1890 $4.50, now $6; comparison in prices of market produce for years 1896, 1901 and 1906, and these prices are lower than store prices: steaks and roasts of beef have risen from 10 cents to 17 cents; mutton and lamb from 7 cents to 15 cents; poultry is out of reach of lower grades; eggs in 1890, 12 cents, now 25 and 30 cents; cheese 10 cents to 15 cents; store prices greater than market prices, 810. Groceries 10 per cent since 1890; dry goods, carpets, furniture, furs, bread, vegetables, clothing, school, doctors, church, insurance, light, superannuation, help, all have increased 5, 10, 20 per cent during last few years; above expenses in detail have been submitted to prominent business men, who all say they were not exaggerated; in statement (*b*) food per month $43, for family of six was questioned; on explanation it came to 8 cents a meal, and in jail on Nicholas street the meals for prisoners average 7½ cents, and goods are purchased wholesale, 811. Mr. Whitney, at Cornwall, said to school teachers that 60 cents a few years ago was equal to $1 to-day; it costs directors of 'The Old Men's Home,' on Bank street, $125 per head a year; witness has maintained a family of six for the last twenty years on $650 a year, taxes and rent included; six people in Old Men's Home would cost $750; United States Bureau of Statisticians figure the difference at 17·7 for that country from 1890 to 1905, and that $83 would go as far sixteen years ago as $100 would to-day; houses that were $15 only a few years ago are now twenty; a member of government once said to me that the 'outside service' was better paid than 'bank clerks;' now what are the facts, hours, holidays, sick leave and superannuation are about the same, but in salaries there is a great discrepancy; some banks start at $300, $250 and $200, also pay a bonus in addition to regular increase; one bank has received notice that the amount of salary a man must receive before he can marry has been raised $200, realizing the increased cost of living; another bank manager says that in a majority of cases a clerk would reach $1,000 in seven years; Bank of Montreal increased salaries 20 per cent to 30 per cent during the last five years, 812. Table comparing salary of bank

MEMORIALS—*Continued.*

Post Office Department—Continued.

City Post Offices—*Continued.*

clerk and a post office clerk: total bank clerk in thirteen years $11,250, total post office clerk in thirteen years $9,100, $2,150 difference in thirteen years; average salary of bank clerk $865, average salary of post office clerk $700, in thirteen years, 813. It is often said that school teachers are worst paid class of people, a comparison with post office clerks will not bear out the statement; table showing comparison: in ten years school teacher gets $8,200, in ten years post office clerk gets $6,250, $1,950 difference; average salary of teacher for ten years $820, average salary of post office clerk, $625, $195 difference; this is based on salary paid a second-class teacher, on a first-class certificate the difference would be greater; increase in teachers' salaries in city of Ottawa since 1899 is 27 per cent; salaries to clerks in Ottawa during the last five years have risen twenty per cent; in 1902 presenting our case to Sir William Mulock, it stated: in banks when business is prospering a bonus is paid, asks department to follow example giving post office clerks a substantial increase; if I could only express to you in words what I have witnessed in post office, the hardships, trials and anxieties of men with small salaries trying to make ends meet, in many cases failing, and how little their grievances have been remedied, I could touch your heart; it is getting serious with many, 814.

City Post Office Clerks, Answers to Delegation.—Sir Wilfrid Laurier: Considers request in petition a modest one and agrees with views of colleagues; Mr. Barker thinks with me there should be no difference between the two services; will give fullest consideration to grievance and will consult Minister of Finance; does not think it reasonable that a clerk in inside service with small family should get more than clerk in outside service with large family; cannot say why this difference exists; will endeavour to bring this matter up this session or next; thinks outside service work as hard as inside; might be right to inquire what it is required to be remedied, 952. Hon. R. Lemieux, reply to post office clerks: Congratulates delegates on bringing Mr. Zimmerman with them; has given this matter considerable attention; has been thinking over the salaries of the civil servants and will himself bring matter up before the government; thinks this class of clerks is not treated as it should be, and the case has been well presented on a former occasion as well as to-day; intends to *act* immediately; is receiving deputations from all branches in the department; you have a strong case as well as my sympathy and good will; your arguments are the strongest yet put forth on salary question; trust my good will and expect fair play and justice; give me a free hand and your loyalty; as head of department was perhaps rather stiff with Mr. Allen, but you should not have mentioned about the hours; it is a condition of discipline that men in the inside and outside service should do some overwork when necessary; Dr. Coulter will see that your wrongs are righted; tell your confrères high and low that they can trust Minister and that he intends to do something during coming session, 952-953.

International Money Order Exchange Office.—Submit (1) that as fourth-class clerks are appointed at $400 a year; (2) that minimum salary be $600 and maximum $800, or that they should receive a third-class appointment; (3) that on account of great responsibility they should be remuner-

MEMORIALS—*Continued.*

ated on same basis as clerks in banking institutions; (4) about $40,000 is daily converted, each clerk responsible for correctness; (5) that they are entitled to annual increase of $50, which is not always given; (6) that they are often obliged to perform night work without extra pay; (7) that for above reasons and increased cost of living they ask Commission to endorse their request, 829.

Letter Carriers' Federated Association of Canada, per McMordie, A.—Is composed of members of letter carriers in the several cities of Canada, with a membership of 498; its aim is to give moral and material aid to its members and improve their condition generally; a civil servant is practically attached to service for life, therefore the service should be made attractive to the young and ambitious; a letter carrier also has to assume his share of burdens and responsibilities; other classes of labour have their salaries adjusted every two or three years to meet increased cost of living, but salary of letter carrier is practically the same for the past thirty years; finds struggle of self denial greater every year, 966. Pay of a civil servant when at its highest point is insufficient, and at its lowest it is actual poverty; outside employment offers means of advancement, but a letter carrier can never hope to rise above a very limited income; well paid regular work renders efficient service; next to low pay, lack of promotion causes most discontent; submit that carriers be placed on same footing as third-class clerks as to pay and promotion, and promotions be made on efficiency and merits without favouritism; efficiency to be recorded and record open to inspection of employees concerned; service at present does not attract capable and ambitious young men; should be unnecessary to require more than an eight-hour day service, or forty-eight hours a week, exclusive of Sundays, 967. *Superannuation and retirement of officials.*—In 1898, Superannuation Act was abolished and Retirement Act passed, providing a 5 per cent reduction in each civil servant's salary, with 4 per cent interest compounded and held in trust till retirement; this is equivalent to a savings bank account drawing 4 per cent, and is considered a forced payment which employees think could be invested at a greater rate of interest; object of superannuation is to provide for the old age of faithful employees; Retirement Act falls far short of this; desire that an employee may retire after twenty-five years of service; or if retirement, resignation or death happens prior to retirement limit, the return of amount deducted to be paid him or beneficiaries with interest at 4 per cent. *Vacations.*—In other countries thirty days are allowed; now increasing work and strain on nerves is causing resignations from service; twelve days now is not sufficient time to recuperate; should be granted when the work is lightest, with its servants thoroughly alert mentally, would be an incentive to faithful service; in Great Britain government maintains at its own expense a pension system for all permanent employees, an eight-hour day and a system of promotion for letter carriers; government is also liable to its employees for compensation of injuries to its service in the discharge of their duties; Postmaster General recommends better salaries for postal service, as good men were leaving service; an increase of $200 on a $1,000 salary, and lower grades advanced to same scale as carriers, 969. First grade $600, second $800, third $900, fourth $1,000, fifth $1,100, sixth $1,200; establish-

ing a record for each one open to himself, so no unfair advantage may be taken of him on personal, political, religious or other reasons. *Cost of living, 1896 to* 1906.—Besides increased cost of provisions, clothing, shoes, &c., the increase of rents has gone up from 95 to 146 per cent in western Canada; cost of living in Hamilton is higher than in New York, many skilled workmen had left Hamilton for Pittsburg and New York; give statistics on cost of living, pension, sick leave, salaries of police and firemen, number of carriers to population; (1) statistics of increased cost of living, by Miss Ella M. Keys, Toronto University, 1896-1906; (2) conditions governing superannuation, work hours, sick leave, annual leave, &c., by Theo. Roosevelt, United States.; (3) conditions governing Civil Service in several provinces, as to sick leave; (4) conditions of pay of police forces of principal cities of Canada; (5) conditions of pay of fire brigades of principal cities of Canada; (6) showing population, number of carriers on city delivery, &c., &c.; *United States, official information,* 1906—(7) showing population, number of carriers on city delivery, &c., &c., 969-970-971-972-973.

Supplementary memo.: Submit (*a*) that no other country pays its servants on a per diem basis (South Australia excepted); (*b*) the system is vicious in the extreme, as when a man enters service of his country he gives up his rights and privileges whereby he may better his condition; such being the case it is the duty of the government who monopolize his services to so remunerate him that he can rely upon means of subsistence 'sick or well' while in their employ; (*c*) present scheme will not work well as long as there is distinction with other employees in the matter of salary, loss of sick pay, and curtailment of holidays; dissatisfaction is bound to be the result; (*d*) bonusing system is vicious, it being hard on those not receiving the bonus and sick pay, while new comers receive it through political influence; (*e*) it is an injustice to a man who has given the best part of his life to the service to be degraded instead of being superannuated; (*f*) that under present system a man may be absent through sickness should receive no pay and government is under no obligation to superannuate him; (*g*) ask for more liberal legislation and do away with present dissatisfaction (1) asks that carriers be placed on same footing with third-class, as to pay and promotion; (2) that promotion be on efficiency and merit, merit recorded and open to employee; (3) that eight hours be a day's work; (4) a more liberal scheme of superannuation; (5) that carrier may be superannuated after twenty-five years service; (6) that annual holidays be extended to thirty days; (7) that increase of salary be granted commensurate with increased cost of living, 973-974. The young men in Toronto are leaving the service, 975.

Letter Carriers not of Federated Association.—Reference to Civil Service List, 1903, page 238 chapter 28, 'An Act to amend the Post Office Act,' assented to May 15, 1903, Sess. Papers No. 30; Act to remain in force as it reads with few amendments: *Pay per day*: Section 3 to read, salaries grade 'A,' $1.75, grade 'B,' $2, grade 'C,' $2.25, grade 'D,' $2.50, grade 'E,' $2.75; *Annual leave of absence*: Section 7, those mentioned in section 1, twenty-two days with pay; *Additional leave or bonus*: part section 7, 'He——bonus,' be struck out; *Reduction in grade*: Paragraph 2, section 4, be struck out; reference to 'register of errors and irregulari-

ties' is made with regard to yearly bonus or promotion to higher grade; recommends suspension and investigation in case of inefficient or unsatisfactory service or conduct; also pay for sickness when legally quarantined, 979. *Salary of superintendent*: On same basis as second-class clerks; *Superannuation*: A Civil Service Superannuation Act in place of Civil Service Retirement Act; carriers under Retirement Act be refunded amount to their credit in Civil Service Retiring Fund; superannuation under new law to begin July 1, 1907; *Cost of living*: It is due to world-wide prosperity, people wishing to live better, but mainly the prices of materials have greatly advanced; *General increase of wages*: All wages of mechanics and all wage-earners have increased 30 per cent (Census by House of Commons, 1900-5); *Strike statement of Bureau of Labour*: Causes of strikes are thus classified, for increase of wages, against reduction of wages, for reduced hours; *Stated salary by legislation*: A letter carrier on a stated salary, ruled by legislation, can only be helped to meet this enormous cost of living by an increase in wages by legislation, 980.

Railway Mail Service Superintendents, 923.—The service was established in 1897; it was formerly under the control of several post office inspectors of Canada, the chief clerks looking after the details; chief clerk's maximum salary was $1,500; when the Railway Mail Service was formed the chief clerks were made superintendents of the various districts—nine in all—without increase of salary; duties of superintendents are, to arrange for all transportation by railway; the control of all mail clerks and office staff, their annual examination in duties and efficiency, the compiling of schedules, the reporting upon and organizing new services, assisting the inspectors in investigating irregularities; these duties are greater than those of an inspector; the difference in salaries of these officers puts the latter under a disadvantage; mail transportation is the basis of the whole postal system; to be superintendent a person must have served at least ten years as a mail clerk; the salaries should be equal to any in outside service and not on a par with the clerks of the staff; in 1903 the salary of superintendents was increased equal to that of assistant post office inspector, with a maximum of $1,800; this increase has not kept pace with the cost of living, nor improved the status of superintendents, but the contrary by placing them on same footing with assistant post office inspectors, whose duties are by no means responsible or as arduous, 923. Statement showing salaries of superintendents of railway mail service, post office inspectors and railway mail clerks in the United States; all inspectors except city inspectors are allowed $4 per diem; positions in the higher grades are filled by promotion of clerks in the lower grades; post office inspectors are selected from the railway mail service after examination, and are promoted in like manner, 924.

Railway Mail Service, Clerks in Offices of Superintendents of, per McNaughton, F. M., Quebec, 926.—The railway mail service was created in 1897; its duties are the despatch, transportation and delivery of mail by rail and water throughout Canada; duties of staff include control and instruction of mail clerks, preparation of distribution lists, books and schedules; organization of new services, the payment of transportation companies, and checking of registered letter

MEMORIALS—*Continued.*

Post Office Department—Continued.

Railway Mail Service—*Continued.*

returns; superintendents' offices are at Halifax, St. John, N.B., Quebec, Montreal, Ottawa, Toronto, London, Winnipeg and Vancouver; total office staff exclusive of superintendents consists of 39 employees, 626 mail clerks, transfer agents and train porters; clerical staff as to rank and salary are on same footing as clerks in city post offices and offices of post office inspectors; table of classification and salaries; the only increase being that maximum and minimum of third class have been raised; a young man entering service is worse off than formerly; the Act of 1903 gave increases in salary to almost every class of civil servant except to the clerical staff of the outside service of Post Office Department, whose remuneration remains practically as it was after confederation; still the classes benefited by Act, 1903, are again asking for increases; every word they say there applies with special force to us; it costs beyond a doubt at least from 25 to 35 per cent more to live now than ten years ago; the struggle for a decent existence is so arduous, that any measure of relief should deal with the immediate improvement of existing conditions, and suggest the following: (1) that present salaries be increased 25 per cent; (2) that maximum of classes be correspondingly increased and minimum readjusted where necessary; (3) that annual increases be $100 instead of $50; (4) that promotion be made easier, so that when maximum is reached promotion to next class should be without delay, if deserving; in banks and business houses deserving clerks have expectations of attaining after twenty-five years' service a salary of over $2,000; the civil servant has but few chances of reaching such a salary; has also great difficulty in maintaining a respectable social position; would like to see Retirement Act abolished and Superannuation Act restored, with a provision for the return of moneys paid in, to the dependents of clerk who dies while still in office; suggest that after thirty years' service or on reaching age of fifty-five an employee should be entitled to retire on whatever pension may be due him; statement showing number of clerks in each class employed in offices of superintendents of railway mail service, also average salary and average years of service, 926, 927, 928.

Railway Mail Clerks of Canada, per Hartley, 997.—They presented a request to Postmaster General on October 13, 1906, for an increase of pay, and received a most encouraging reply; railway mail clerks number about 448; their duties are little known and generally misunderstood; on entering he must qualify for appointment, then for promotion by yearly examinations till he is sixty years old; his duties are on a rapidly moving train and are most hazardous and trying; in the case of Bell Telephone Company and its employees in Toronto last year, the medical experts brought out that there was no occupation so exacting as that of a railway mail clerk; his position is exceedingly strenuous; subject not only to serious danger, but of succumbing to great nervous and physical strain, 997. There are a number of clerks whose nervous systems are shattered; a railway mail clerk is a higher classed officer than is generally thought; Sir William Mulock in letter 1903 says: 'The duties of railway mail clerks are onerous, hazardous and responsible, and with very rare exceptions have been performed with uniform cheerfulness, efficiency and fidelity. From careful observation I feel fully warranted in saying that Canada has no more deserving and worthy officers than her railway mail

MEMORIALS—*Continued.*

Post Office Department—Continued.

Railway Mail Clerks—*Continued.*

clerks;' the increase received in 1903 did not more than afford a relief to the conditions which existed for forty-seven years, but does not keep pace with continued annual increased cost of living; cost of living may be classed as follows: (*a*) food, (*b*) fuel, (*c*) clothing, (*d*) rents, (*e*) miscellaneous expenditure; details and tables under each head may be found on pages 998-999-1000-1001. Ask that salaries be adjusted, that annual increase be 100, and maximum be $1,500, 1001.

British Columbia Post Office Employees.—Ask an increase of salary to enable them to live, as the increased cost of living is so great; that system of promotion be amended providing $100 annual increase up to maximum; that clerks on reaching maximum be graded automatically to higher class without delay, providing their record is satisfactory; that provisional allowance of $15 a month be granted all employees in this district receiving less than $3,000 a year; that increase if granted be retroactive covering last fiscal year; at present $10 provisional allowance is granted mail clerks and $15 to other clerks on salaries up to $1,200; after that it ceases; all maintain that allowance be increased, not decreased, on reaching $1,200; table I shows increased cost of living; table II shows increased pay to branches of outside labour; wages being raised as cost of living increases; at present, country's prosperity means for them a period of comparative poverty, 1047-1048-1049-1050.

Hamilton Letter Carriers.—Submit remuneration is entirely inadequate to meet increased cost of living, and do not share in the general prosperity in Canada, as salaries are practically the same as twenty-five years ago; that through the increased volume of work and few men to do it, they cannot hope to stand the present strain mentally and physically for any length of time, 975. Recommend a definite system of promotion, with maximum and status of senior third-class clerks, if carriers show ability and able to pass examinations; cost of living has doubled the last few years, $900 to-day is no more than $600 was twenty-five years ago; all classes of labour throughout Dominion have had their salaries increased; our legislators, both Dominion and provincial, have had substantial increases to their sessional indemnity; not so the letter carriers; a substantial increase would better the service, 976.

Hamilton Post Office Clerks.—Point out that cost of living is 33⅓ per cent higher than ten years ago; they recommend reduction in number of classes to three, with an increase of the scale at a percentage commensurate with increased cost of living; the annual increase to be $100; Act of 1882 calls for mandatory promotion of competent officials, without waiting for vacancies; post office differs from other branches in that it gives continual service, day and night, Sundays and holidays, without any half-holiday being granted as in banks, mercantile and manufacturing concerns; when the service demands duty on Sundays, holidays and other times in excess of other branches of the service, then a sufficient staff be appointed to permit of time being allowed instead; hours of duty of night clerks not to exceed ⅛ of hours required of day clerks; increase of work, and actual preparation of examinations take up time in excess of work hours, therefore we suggest there be no examination for clerk after twenty years- service, unless deficient in knowledge of duties, 1024-1025.

MEMORIALS—*Continued.*

Post Office Department—Continued.

London Letter Carriers.—On entering service one may be told that he would soon stand for promotion; such is not the case, but 'once a letter carrier always a letter carrier;' in promotion seniority in service should have preference; if he fails in examination the next senior man should step in; to have an efficient clerk in the higher grades one should train up by deserved promotion men from the lower ranks; break down barriers between clerks and put them on an equal footing; *Post Office Act as it affects letter carrier*: The five grades, 'A,' 'B,' 'C,' 'D,' 'E' in detail; it takes almost seven years for a man entering service to reach maximum salary; one cannot live respectably, educate our families, support church on $391.25 a year; if sick, pay is withheld when he needs it the most; if applicable to one, should apply to all; rent for a house in London in 1896, $78 a year, same house in 1907 for $132; table giving increase in 1907 over 1896, in meat, flour, butter, eggs, potatoes, sugar, wood and coal; *Letter carriers retiring*: Carrier should have privilege of retiring after twenty-five years of service on his superannuation or retiring allowance; *Letter carriers' holidays*: That thirty days be given them to fully recuperate their strength that they may give department better service; *Letter carriers' uniforms and footwear*: That the carriers themselves control the money for that purpose; that orders for them be placed locally, enabling each one to leave his measure; cost of living has increased 45 or 50 per cent, but not wages, 977-978.

Montreal—Assistant Inspectors, 902.—Their duties as laid down in Postal Act are: (*a*) to superintend the performance of the mail service, taking care that all contracts for conveyance of mails are strictly carried out; (*b*) instruct new postmasters in their duties; (*c*) keep postmasters to their duty in rendering accounts and paying over their balances; (*d*) inspect every post office, see it is properly kept, that postmasters understand their instructions and perform all their duties well; (*e*) inquire into complaints, suspected cases of misconduct, or mismanagement, miscarriage or loss of letters or other mail matter; (*f*) do all and everything required by Postmaster General; above duties show that positions of inspector and assistant inspector are identical, but more responsibility on inspector; assistant inspectors' duties are of a general nature; the supervision requires full knowledge of duties acquired by long years of service; duties of an arduous nature, almost constant travelling, with considerable fatigue and discomfort; present composition of Montreal postal division comprises 38 counties, 900 post offices, 300 of which are accounting offices, and about 700 mail routes; shows what the inspector and assistant inspectors have to do; that maximum salary of assistant inspector is $1,800, attained by $50 increases from $1,200; makes comparison between salary of city assistant postmaster and that of an assistant post office inspector, e.g., of Montreal post office division; duties of assistant postmaster are not more numerous or responsible, often less arduous, than assistant inspector; though salary of assistant postmaster is fixed at $2,000, whilst salary of assistant inspector is $1,200, by $50 increases up to $1,800; if the salary of the former is to be increased the latter should receive the same; if in event of increase in salary in division that maximum figure be granted at once to the old employees; that the per diem allowance of $3.50 be restored would be far more satisfactory and would compensate for hardships endured besides the wear and tear of clothes; it is hard on returning from a trip to have to draw

MEMORIALS—*Continued.*

Post Office Department—Continued.

Montreal, Assistant Inspectors—*Continued.*

on our income to cover expenses; the undersigned, J. P. Chillas and J. A. Madore, are two long service men, one of thirty-seven and the other thirty-three years' service, and have contributed to superannuation for a number of years; they suggest the establishment of a provident fund, applicable to those dependent on them and whom they leave behind, 902, 903.

Montreal Inspector's Office Staff.—Submit: (1) that clerks require to know well English and French and have a thorough knowledge of post office administration and regulations; therefore should not be on same standing as clerks doing routine duties requiring less education; (2) that clerks in Montreal division be on same footing as clerks in other divisions; that Montreal division, the most important, has one inspector, two assistant inspectors, two second-class junior, one third-class junior, two fourth-class and five temporaries; therefore has no first or second-class seniors, yet they do the work here as in other divisions; (3) that conditions of life are so changed that old scale of salary is utterly inadequate; (4) that a pension free of charge be granted after twenty years of service, whether a clerk is in good health or not, and such law be retroactive; (5) that position of assistant post office inspector be filled by promoting a clerk in the office of the division where such position is vacant, 906.

Montreal Letter Carriers.—*Increase of salary.*—Think it useless to insist on necessity of increasing salaries, as statements proving increased cost of living have been placed before you so strongly, that you must admit the necessity; that there should be no difference in pay between them and third-class clerks; they do the same but letter carrier has greater responsibility. *Promotions.*—Consider it in the interest of the service if eligible to clerkship after five years on recommendation of postmaster; in doing clerks' work they lose the privileges of the carriers, and if appointed clerks, have to suffer the loss of another $100 to start a minimum. *Bonus.*—By Act, the leave of absence of a letter carrier was reduced from three to two weeks, but in place of third week was to receive a bonus of $20, or ten extra days vacation if services satisfactory; some carriers, through illness for more than twenty days, lost their pay and the bonus, though services were satisfactory. *Sick pay.*—Carrier is the only post office employee not paid in time of sickness; though he is more exposed to all sorts of weather; objection is there are too many abuses in taking a day or two; but you can control a serious illness of several days, the deserving man should not suffer for a few unworthy carriers. *Eight-hour day.*—If carriers cannot complete their day's work in eight hours they should get extra pay for overtime as is done in the Customs, 886.

Montreal Post Office Employees, 859.—Beg to submit since present scale of salaries was established the cost of living has increased 40 per cent, and that salaries be increased 33⅓ per cent, thus placing salaries on same footing as twenty years ago; beyond doubt all wayes have advanced at least 33⅓ per cent in last ten years, and more than 50 per cent since establishment of present Civil Service scale of wages; living costs more in large cities than in smaller ones; car fare alone being a large item monthly;

MEMORIALS—*Continued.*

Post Office Department—Continued.

Montreal Post Office Employees—*Continued.*

Examinations.—Recommend the preliminary examination for carriers and porters, and the qualifying one for clerks; as they bring a better class of men into service; *Classification.*—That the fourteen classes be abolished, that in addition to the assistant postmaster and superintendent three classes only be established, first, second and third; the third to include third-class clerks, letter carriers and porters, 859. The second to include clerks having had ten years' experience and having proper qualifications; the first, all clerks in charge of branches, or doing specific duties; *Salary.*—For above classes, third-class clerks to begin at $500, with annual increase of $100 up to $900, then advanced by $50 a year up to maximum $1,200; letter carriers and porters at same salary as third-class clerks, and if services are satisfactory, after five years to be given a clerkship on recommendation of postmaster, without being obliged to pass the qualifying examination; second-class clerks to comprise persons who have passed through the various stages of the third class; promotions in order of seniority, all things being equal; salary to begin at $1,300, with annual increase of $100 till $1,400 is reached, then by $50 annually till $1,600, the maximum of this class; the number of second-class clerks to be at least 25 per cent of the inside staff of office; first-class clerks to commence at $1,700, then by $100 increase up to $2,000, the maximum of the class; salary of superintendent to be fixed at $2,500 annually; assistant postmaster to have fixed salary of $3,500 annually; *Sunday work,* being of necessity and considered as extra work, should be paid for at rate of double time, as everywhere else; that overtime receive extra pay; *Legal holidays.*—That in the interest of the service office be kept open on legal holidays and give the same service as on other days; experience tells us it is an absolute impossibility to do the work properly by only working half a day on such holidays; this half day demoralizes the business of the office for the next day or two; as a recompense for those obliged to work on legal holidays we beg to ask that the annual leave be four instead of three weeks; *Age.*—Suggest that entrance age be between eighteen and twenty-five; *Temporary employees.*—Recommend that temporary employees now in service doing work of a permanent nature, and who entered under thirty years of age, be made permanent; those entering over thirty years of age be granted a per diem allowance of $2.50, with two weeks' annual leave; that no temporaries should remain in service as such over six months, and that pay be $2.50 per day, 860. *City sorters on mail trains.*—That the employees in this office who sort mail for city delivery on incoming mail trains be granted mileage, as railway mail clerks; *Superannuation.*—Recommend abolition of retirement fund and repeal of Superannuation Act, with the exception that clerks, after twenty-five years, and carriers after twenty-one years' service may retire if they wish; that the exhibit showing the increased cost of living covers increases only of recent years, that during this week alone bread has advanced 2 cents a loaf, milk 8 cents a gallon and coal 75 cents a ton; a table showing revenue from sale of postage stamps to local dealers alone, 861. Table showing British mail received and forwarded also registered letters and parcels registered during 1906-7; we point out that Montreal is a distributing centre for the Dominion, and handles large quantities of matter credited to the revenue of other places, 862. EXHIBIT 'B.'—*Superannuation fund.*—The principal reasons

MEMORIALS—*Continued.*

Post Office Department—Continued.

Montreal Post Office Employees—*Continued.*

for its maintenance and conditions under which it should be established: (1) its re-establishment would be in interest of department as well as of employees; (*a*) governments of other countries, directors of large financial, educational and religious institutions establish pension funds for their employees; (*b*) the department, through the pension fund, would insure the permanent services of better qualified employees, because after a few years it holds him to his post, and is not tempted to leave for better positions; (2) it would also be in the interest of the employee: (*a*) the salaries of this department being lower, it requires a serious inducement for a man to accept a position and to keep it when he has obtained it; past experience has shown that it was easier to retain the services of good men, for though pay is not great, a pension is a great inducement for them to stay; (*b*) though it is the apparent intention of government to increase the salaries, yet we could hardly hope that the increase would be in proportion to increased cost of living; if it was impossible to save money under present conditions prospects are not bright to do it after the increase; (*c*) pension fund gives security in case of illness, old age, or debility, we mention debility as a cause of invalidity in postal service; the work requires greater energy, it necessitates a concentrated and constant attention, and the means of recuperation, in most cases, are nil through the irregularity of the hours of duty, rest, meals and frequent changes of habits required by the service; if a man has to change day for night work, he must change his habits of living, the waste of nervous energy increases constantly and surely; (*d*) the papers stated that thirteen clerks in St. John, N.B., post office had become insane since 1893, the cause was attributed to unsanitary state of building; but a well-posted person on the nervous tension exacted for post office work will attribute it to the constant strain on him; what induces to-day several employees to choose the present system of 'retirement fund' is the fact that there is not a fair equilibrium between the contribution to the pension fund and the prospect of enjoyment of the superannuation; the chances are mostly all on the side of the department if the employee cannot obtain his superannuation before the sixty-year limit; number of superannuations is very small, therefore the men thought it preferable to draw a smaller amount of retiring than contribute to a fund with such limited prospects of enjoyment; we therefore ask that the pension fund be demandable after twenty-five years' service; England, France and Belgium have pension funds, so ought Canada; would suggest that at the age when a man has given twenty-five years to the service, his health is so shattered either through illness, or the exigencies of the service that he shortens his existence under these conditions; can affirm that the majority of employees under actual system would prefer 'pension fund system,' with the stipulation that it could be demandable after twenty-five years' service, 863. Tables giving advances in prices in merchandise; also a series of letters from merchants and others on same subject, 864-881.

Montreal Railway Mail Clerks, 914.—Request that annual increase of $50 be raised to $100 and that maximum salary of $1,200 be increased to $1,500 for following reasons: a mail clerk is required to possess the same education as confrères in a city post office or inside service, but unlike them he must pass yearly a strict examination in official duties, and to qualify

MEMORIALS—*Continued.*

Post Office Department—Continued.

Montreal Railway Mail Clerks—*Continued.*

for promotion must take as high as 90 per cent at those examinations; besides his work demands superior strength and stamina; they claim the difficulties and dangers while working demand superior qualifications and entitle them to higher remuneration; their duties compared with clerks in city post office, 914. The latter work in a well lighted and ventilated chamber which admits of a division of labour, one man takes charge of registered matter, another sorts the letters, a third the newspapers, &c.; not so with mail clerks where one clerk carries on all these duties often alone amid the tumult of a rapid moving train, the air of the car vitiated by burning lamps or smoke and dust and without accommodation; must consider also the hardships of winter travelling, sickness one is constantly exposed to, delays of trains by snowstorms; in post office can consult in difficulties, while a mail clerk has to act and think for himself, e.g., in the case of an accident; if mails fail to connect he must arrange to forward them with the least delay, &c., in fact a clerk in charge of a mail car performs the duties of a chief in a city post office; mileage does not pay expenses; with no superannuation there is greater reason for increase of salary to provide for old age and the increased cost of living; other employers of labour have recognized these conditions and have made generous provision for employees; as an immediate relief suggest a general increase of 25 per cent in addition to above, 915.

Ottawa Letter Carriers.—Staff is composed of 46 permanent employees, out of a total of over 600 stationed in the different cities of Canada, all working under same conditions as in Ottawa; the letter carrier has to accept full responsibility for all his acts; his work requires more physical and mental force than in any other branch of the service; this should be remembered in determining the standard of remuneration; his duties commence two hours before the despatch of delivery, during which time he has to set up his mail and be responsible for its safe delivery; does the same work before each delivery, and in addition keeps an up-to-date direction book of new-comers and removals, re-direct all necessary correspondence, keeps a letter of undelivered letters, collects insufficiently paid letters; the essential qualities demanded of him being a big physical standard, good character, honest, civil, punctual in dealing with matter passing through his hands and has to work in all kinds of weather; he feels that salary paid him is entirely insufficient to live on; rents have increased during the last seven or eight years 40 to 60 per cent and cost of living 33 per cent to 50 per cent; wages of other workmen have increased; sees other employees going to work at eight or nine o'clock, enjoying Saturday afternoon, the statutory and local holidays; is also aware that Sir William Mulock, late Postmaster General, stated that eight hours should constitute a day's work in the post office for both clerks and carriers; feels that present law governing his salary is unjust, being paid on per diem allowance; work laborious and exacting in all weather; liable to sickness from exposure; not allowed to engage in other gainful work; subject to loss of pay in accident and sickness; sees the striking contrast in the law regulating the permanent clerks; submits that upon efficient and faithful service the postmaster shall recommend him eligible for transfer to the service of clerk up to grade of junior second-class after passing an examination having reference to duties of office only; that there be increased compensation; a yearly salary in lieu of

MEMORIALS—*Continued.*

Post Office Department—Continued.

Ottawa Letter Carriers—*Continued.*

per diem allowance; pay during sickness as in all other branches; promotion to clerkship when recommended by the postmaster, 849-850-851.

Ottawa Mail Clerks.—Ask an increase in their maximum salary from $1,200 to $1,500 a year; that yearly increase be $100, also that all clerks who have served fifteen years be placed at present maximum $1,200 a year at once; a railway mail clerk on entering service must possess same educational qualifications as a clerk in city post office, and besides that must pass a stiff examination in official duties every twelve months; to qualify for promotion must take as high as 90 per cent; inside mail clerks at most pass three examinations; think the railway mail clerk should be exempt from examinations after reaching his maximum salary; that being surrounded by difficulties and dangers demands superior qualifications and entitles them to higher remuneration; contrast conditions of work of inside clerk with their own; the mileage allowance does not compensate them for small salary; in Toronto district average mileage is about $240 a year, out of that when he pays a large proportion for meals, sleeping accommodation when away from home on duty, there is a very small pittance left to compensate for inconvenience and irregularity of life; twenty-five years' service in a postal car is as hard on a man as thirty-five years in an office; that the age of railway mail clerks for superannuation purposes be reduced from sixty-five to fifty; object to postal car being placed next to engine; postal clerk must be sound in wind and limb, have more than ordinary intelligence, for his work is constant; must accurately know the country and all post offices that the correspondence shall reach its destination as early as possible; knows no day, no night, catching his meals as he may, at home only semi-occasionally, 793. Increase of cost of living in Toronto fairly represents conditions at Otttawa; classifies cost of living (*a*) food; (*b*) fuel; (*c*) clothing; (*d*) rent; (*e*) miscellaneous expenditure; (*a*) the principal articles of food consumed in workingmen's families at St. Lawrence market, Toronto, have increased 64 per cent since 1897; see table 794; gives table itemizing increase of each article since 1897, see table 795; or an average of 28 per cent; for some families net increase is greater than 28 per cent in proportion to consumption of those commodities subject to higher rates of increase; in local produce the chief cause is undoubtedly the increase of demand due to increase of population; chief advances have occurred in following commodities: eggs, 67 per cent, have advanced on account of increased shipping demand; fresh eggs are sent from Toronto to the mining camps at Cobalt; potatoes, 62 per cent, on account of small crop of last year or two; United States potatoes being imported to make up deficiency, 794-795. (*b*) Fuel, present price of coal is 24 per cent higher than in 1897, its causes external to Canada; (*c*) clothing, raw materials have advanced in price from 60 per cent to 100 per cent since 1897; (*d*) rent is the most conspicuous of all increases, 796; caused by increase of population and failure of house-building industry to keep pace with it; averages an increase of 95 per cent in ten years; reasons for increase may be the following, (*a*) absence of speculative building, since collapse of building boom in 1891, and recently to the dearness of money; (*b*) increased cost of materials; (*c*) other factors than wages seem to predominate; resumé of increase for last ten years, food, 28 per cent; rent, 95 per cent; fuel, 24 per cent; clothing, 20 per

MEMORIALS—*Continued.*

Post Office Department—Continued.

Ottawa Letter Carriers—*Continued.*

cent, 797. Above is increase in cost of necessaries of life in a normal workingman's family; in middle class households rents have not increased so much in proportion, but domestic service has increased very heavily; good clothing has increased in price; the salary class have suffered by advance of prices; rise in the wages of domestic servants has compelled this class to do without them; pressure of household accommodation has led large numbers of families to take in lodgers to increase their income and pay advanced rents, 798.

Quebec Letter Carriers, per Augé.—For last thirty years salary of letter carriers has been stationary, while cost of living has increased 40 per cent; at present salary one cannot keep out of debt and give his family the bare necessities of life; their work is most tiresome and unpleasant, being exposed to all sorts of weather entailing sickness for which they lose their pay; they are, of all branches in the service, the least paid and have the most responsibility, often delivering registered letters and parcels of great value for which they are responsible; their duties are more important, their work harder and hours longer than all other employees; they should therefore receive the same salaries, the same holidays and regular salary during sickness, abolishing distinction between letter carriers and clerks; why this discrepancy, this disparagement? will continue to ask for equal salary, same holidays and pay during sickness, 943. American Postal Law puts clerks and carriers on same footing, the salary is equal, beginning at $600, with annual increase of $100, up to $1,200, 944.

Quebec Post Office Clerks.—The question of salaries is the most important, not having received any increase since confederation, while all other branches have; other commercial institutions increased salaries of employees without being asked; a post office employee enters at $360 on condition of a statutory increase of $40 a year to maximum of $800, on attaining which he expects an immediate increase, he is badly deceived, for often after twenty-eight years' service he is still receiving same salary, $800; actual salaries are not enough to live on, 950. Commissioners are asked to compare postal service with other branches; it is by nature the most strenuous of all the Civil Service: (1) the early hours, being obliged to report for duty at 6.30 a.m. in winter and summer; (2) uncleanliness and bad atmosphere, exposure to draughts, doors in rear being opened for mail bags, and doors in front by the public; (3) rapidity in execution of duty, in opening and forwarding of mails; (4) work on Sundays and legal holidays; (5) irregular hours, often lengthened by shortness of staff through absence or sickness; (6) continual study of actual duties; for these considerations the petitioners beg (*a*) to be put on equal footing with inside service; (*b*) an immediate increase of 25 per cent on actual salaries of employees; (*c*) an annual increase of $100 instead of $50; (*d*) a fixed law that deputy postmaster be chosen from clerical staff of city post office; (*e*) appointment of superintendent at fixed salary of $1,500, with annual increases of $100 up to $1,900; (*f*) appointment of two first-class clerks, to which we are entitled by revenue; (*g*) Superannuation Act restored, age limit reduced from sixty-five to sixty, length of service reduced from thirty-five years to thirty, 950-951.

MEMORIALS—*Continued.*

Post Office Department—Continued.

Railway Mail Clerks, Quebec Division.—In April, 1903, the mail clerks laid before Sir William Mulock, a memo. showing the increased cost of living; the difference in 1896 and 1903 was shown to be 70 per cent; showing also the extra hazardous risk of life and limb, and the mental and physical strain sustained by them; as superannuation is abolished for the new employees there is need of a greater salary to enable the clerks to make provision for old age; wish chiefly to accentuate the increased cost of living; ask also that annual increase be $100 and maximum salary be $1,500; then follows list of prices of necessities of life in March, 1907, compared with same in March, 1903; the list was compiled after much investigation from leading merchants, 932. (1) That the salaries of mail clerks of Canada have not been increased for fifty years and are no longer adequate to meet the new conditions or the increased cost of living; (2) that banking, industrial and railway institutions considering the changed conditions have largely increased the salaries of their employees; (3) that for first time in history of Canada the revenue of Post Office Department has exceeded the expenditure; (4) the great increase of mail matter renders the life of the railway mail clerks one of more arduous and continuous toil; (5) that, unlike the Post Office Department, all railway and express companies, considering the extra hazardous risk of life and limb, together with the mental and physical strain of railway employees, are giving a greater salary to their employees than for men of similar capacity engaged in office work; (6) quotes excerpt from *Scribner Magazine,* signed by Thomas L. James: 'There is no position in the government more exacting than that of a postal clerk, and none that has so many requirements. He must be not only sound in "wind and limb," but possessed of more than ordinary intelligence and a retentive memory. His work is constant, and his only recreation study. He must not only be proficient in his immediate work, but must have a general knowledge of the entire country, so that the correspondence he handles shall reach its destination at the earliest possible moment. He must know no night nor day. He must be impervious to heat and cold. Rushing along at the rate of forty or fifty miles an hour, in charge of that which is sacred—the correspondence of the people—catching his meals as he may; at home only semi-occasionally, the wonder is that men competent to discharge the duties of so high a calling can be found for so small a compensation. They have to take the extra hazardous risks of their toilsome duties. There are no public offices which are so emphatically "public trusts" as those whose duties comprise that of handling the correspondence of the people, because on the proper and skilful performance of that duty depends, to a far greater degree than in the case of any other function accomplished through government agency, the business and social welfare of the entire community;' (1) present arguments in support of each clause in the order which they occur, 933. The salaries of mail clerks adopted in 1857 would to-day scarcely afford a bare existence; would therefore compare with 1896; list of provisions given in a table show increase of cost is from 25 to 166 per cent; real estate agents and brokers state that rental value of all desirable properties in Toronto have increased from 20 to 25 per cent, yet the class of houses required by men of small means have advanced from 35 to 40 per cent; thus a clerk to-day has to pay from $80 to $120 a year more than he did in 1896; cost of fuel has increased

MEMORIALS—*Continued.*

Post Office Department—Continued.

Railway Mail Clerks, Quebec Division—*Continued.*

nearly 60 per cent, surely then a clerk does not exaggerate in stating that present salary is inadequate; (2) would refer you to the Grand Trunk Railway, the Canadian Pacific Railway, the Dominion Express Company, the Canadian Express Company, the Montreal Bank, or Quebec Bank; (3) that through establishment of penny postage and reduction of domestic postage by one-third, the revenue is in four years, in excess of expenditure; formerly the demands for an increase of salary were met by the insuperable barrier of annual deficits, with the promise, when these barriers were swept away, of more material aid than sympathy, 934. (4) Table comparing increase between 1896 and 1902, number of post offices, of letters, registered letters, postal cards, free letters, revenue and miles travelled; most of the work for these increases has fallen on the mail clerks, yet with all this increase there are five fewer clerks and the remuneration has decreased during that period by $2,970.02; (5) salaries of any of our great railway corporations to their conductors and trainmen, station agents, telegraph operators, &c., whose occupations are less hazardous and involve less physical and mental strain are from 25 to 40 per cent in advance of mail clerks, which is the poorest paid branch in the Civil Service; see table, 935. Where the mail service is discriminated against to the extent of $500 for the first, $400 for second and $250 for the third class; on entering the service a mail clerk is required to possess same educational qualifications as his confrère in the inside service; has to pass yearly a stiff examination in official duties to qualify for all promotions; their dangers are greater, entitling them to greater remuneration; while in city post offices the clerks work in well lighted and well ventilated rooms; each clerk to a special work; thus confusion and liability to error in turning from one class of work to another is avoided; whilst in railway mail service one clerk carries on all these duties, often amid tumult and disorder of a rapidly moving train, air of car vitiated by the burning of lamps or reeking with smoke and dust, in cars without accommodation or convenience; in difficulties in a post office a clerk can consult his immediate superior and avoiding responsibility for action taken; not so with mail clerk, who has to act and think for himself, e.g., in case of accident or detention of train he must decide at once for advance of mails; or in failure to connect with other trains and this can only be done by a thorough familiarity with all trains and stage service at all points of connection along his route, united with coolness, accuracy and self-confidence; when mail clerk is seen off duty it is no criterion of not working; a memo. from mail clerks' journal of duty shows each mail clerk performs daily 6·2 hours of day work and 2·5 hours night work, or on an average eight hours and forty minutes a day; the mileage allowance does not compensate a clerk for smallness of salary, for out of it he has to pay for meals, sleeping accommodation, to say nothing of ever present risk of life and limb, 936. Statement made in the House that in five months there had been 142 railway accidents in which 179 lives were lost; in Toronto in past few years there are the most melancholy instances of the risks of a mail clerk, often death, mutilation, deformity and insanity happening to clerks while on duty; Congress in Washington granted a sum of $1,000 to family of every mail clerk killed on duty; and in future will bestow an equivalent to a pension upon the widows and children; with the exception of soliders and

MEMORIALS—*Continued.*

Railway Mail Clerks, Quebec Division—*Continued.*

sailors, their life is the most dangerous; the petition is not outcome of a mercenary spirit, but a logical sequence to conditions over which there is no control; other employers have made generous provision to alleviate the burdens which they entail; there is no longer a deficit as an obstacle to the increase of salaries; the work in railway mail service has greatly increased, yet the number of employees and the remuneration have decreased since 1896; finally the railway mail service is the hardest worked and poorest paid branch of public service of Canada; have not enlisted public opinion nor formed a union to promote our interests, but armed with justice feel that you will grant the increase in our salaries, as you deem just and adequate, 937.

Toronto Post Office Clerks.—Submit a request (*a*) for an immediate advance of salaries; of 25 per cent to lower grades, 20 per cent to second class, 15 per cent to first class, and same percentages added to maximum of each class, 1017. (*b*) That classes be reduced to first, second and third; (*c*) a system of promotion based on qualified seniority; (*d*) that the annual statutory increase be $100; (*e*) that eight hours constitute a day's work, including one hour for dinner; night work, seven hours, including one hour for lunch; (*f*) no payment to guarantee fund after three years' service; (*g*) when an officer does duty on a public holiday, a full day's pay be allowed; (*h*) Superannuation Act to be restored, age limit reduced from sixty-five to sixty years, length of service reduced from thirty-five to thirty years, 1018.

Toronto Post Office Inspector's Office Clerks.—(*a*) In view of advance in salaries generally and in wages of artisans, (*b*) of marked increased cost of living, (*c*) that salaries in this office have practically remained stationary since confederation, they suggest: (1) that they receive same salaries as clerks in inside service, or at rate of 40 per cent applicable to maximum and minimum of each class; (2) that statutory increase be $100 instead of $50; (3) that superannuation be restored at option of clerks; (4) in case of death while in active service, the total amount deducted for superannuation with three per cent interest be paid to legal representatives; (5) that number in any class of clerkship be not limited; Toronto grocers' detailed prices of commodities; Prof. Mavor's statement, 1028.

Toronto Letter Carriers.—Is almost the same as memo. of Federated Association; statement as to pay: A. Fleming, sta. G., 9 hours 44 minutes per day, works 67 days 5 hours 40 minutes without pay; and several others; also a statement from Mayor of Toronto giving salaries of police, firemen, works department, street cleaning and scavenging for years 1897 and 1907, 982. A statement from Division 113, Amalgamated Association of Street and Electric Railway Employees of America, for years 1897, 1902-3-4-7, 983.

MEMORIALS—*Continued.*

Post Office Department—Continued.

Toronto Mail Clerks—*Continued.*

increasing volume of matter necessitate exercise of physical strength and endurance as only young and robust men can stand, it is reasonable to increase salaries to make provision for old age as there is no longer any superannuation in sight; (*c*) dangers to health, as being subjected to extreme cold, in unheated cars, drenched in rain while opening letter boxes at stations and being placed in the most perilous part of the train; 50 per cent of clerks were laid off duty from sickness during the year; (*d*) remuneration should be in proportion to responsibility; (*e*) slow increase of clerk's salary prevents his marriage; or if married debars him and family from ordinary comforts of life, and educating his children; (2) a measure of superannuation ensuring stability, the retaining of desirable men in the service; (3) fixed number of work hours, also giving him his statutory holidays; (4) that senior qualified clerk in same district should be promoted to vacancy; the hardships of labourers should be considered; they are sent away from home, to where expense of living is as great or greater than their wages, 1006, 1007.

Extract from Toronto *World* on perils of the postal service, 1008.

Western Canada Railway Mail Clerks, per Barrett.—They cordially approve of memo. of Civil Service Association of Western Canada; railway mail service differs from any other service of Federal government; therefore we ask that (1) our maximum salary be raised from $1,200 to $1,500, and yearly increase advanced from $50 to $100; feel necessity of immediate increase of salary, and if granted, that same percentage should govern the maximum; that they be exempt from further examination till maximum is reached and also after twenty or twenty-five years' service; their work demands superior qualifications and demand higher remuneration; compare duties and conditions in city post office with tumult, and disorder of a railway train; mileage allowance does not compensate for smallness of salary, as extra expenses are often greater than allowance; mileage is not counted as salary; twenty-five years' service in a postal car is as hard on a man as thirty-five years in an office; age of superannuation should be reduced from sixty-five to fifty years, and length of service from thirty-five to twenty-five years; that superannuation be restored or give them the option of superannuation or retirement fund; Act should be amended to read 'may superannuate,' instead of 'may be superannuated;' that postal car should not be placed next to engine, but that baggage and express cars should intervene; postal clerk should be sound in wind and limb, of more than ordinary intelligence and retentive memory, 1061. Must have a general knowledge of whole country, so that letters reach their destination at earliest possible moment; he knows no night or day, impervious to heat or cold, eating his meals as he may, at his home only semi-occasionally; many dangers surround the mail clerk and serious accidents occur; and clerks are obliged to employ legal help to obtain compensation from railroad companies; are of opinion that if injured man makes good his case to departments, government should deal with railroad; insurance companies charge mail clerks 50 per cent higher premium than other civil servants; their dangerous occupations compel them to carry accident policies; ordinary premium is $5 per $1,000 while mail clerks have to pay $7.50 per $1,000, 1062.

MEMORIALS—*Continued.*

Post Office Department—Continued.

Winnipeg Letter Carriers.—Wish to direct attention of Commissioners to the following: (*a*) necessity of higher pay to meet increased cost of living; (*b*) impossibility for a letter carrier to be advanced in service; (*c*) benefits of superannuation; (*d*) injustice of withdrawing pay during sickness; (*e*) uniforms; (*f*) holidays; (*g*) present hours of work and what constitutes a day's work; efficiency of service depends upon the accuracy and fidelity of letter carriers; they are the hardest worked men in the service; besides severe discipline and the hardships of the service the postal laws prevent him from doing any other gainful work; cost of living has so considerably increased that present pay of the letter carrier is quite inadequate to meet all demands, 1056. Scarcity of houses has increased rents; ask 33⅓ per cent increase in wages; would refer to following resolution of Dominion Trades and Labour Congress, Winnipeg, (*a*) Congress regrets nothing has been done to remedy grievances complained of; calls attention of Postmaster General to legislation passed by United States Congress whereby salary of letter carriers is increased to $1,200 after five years' service, and after that they are eligible to promotion to the higher positions; (*b*) not creditable to Canada that promotion is refused to letter carrier who may be qualified for same; Napoleon stated that any soldier may have in his knapsack a field marshal's baton, therefore recommend an Act rescinding present Act making it possible for a letter carrier to be advanced to more remunerative positions; (*c*) recommends a more liberal Superannuation Act, present Act only allows superannuation after thirty-five years' service; should be twenty-five years; Retirement Act provides for 4 per cent interest on his own money, 1057. (*d*) Letter carriers are the only government employees docked pay for sickness; this is very severe on them, especially with the climate of Manitoba; (*e*) clothing is made far from Winnipeg; misfits occur often that several did not get summer uniforms up to October 3; recommend that carriers' uniforms be made where possible locally; (*f*) ask a longer period of vacation between April 1 and October 31; (*g*) at present carrier's day's work may be anything over eight hours, and is an injustice to them; would recommend eight hours a day, forty-eight hours per week, exclusive of Sunday, with overtime paid at rate of rate and a half, and double pay on Sunday; west is a country of young men, and staff is composed of young men under thirty years of age, and who have passed a strict medical examination, 1058. Table showing increase in cost of living since 1900, 1059.

Winnipeg Letter Carriers (Inside Staff) represent that while employed in clerical duties, yet they are graded and paid as letter carriers but without their privileges; to adapt oneself to the ever changing sortation one must possess a thorough practical knowledge of the city and a first-class memory; also to be familiar with the rates of postage and pass the same examinations as third-class clerks; the carriers chosen for this clerical work were the most efficient and reliable of carriers who took up their new duties hoping the department would place them on the same footing and grant them the same privileges as senior third-class clerks; this has not been done; the granting of this request would have a beneficial effect on the service, acting as an incentive to carriers to secure same promotion; last year they passed the third-class examinations, since which several had increases of from $50 to $100 a year; owing to the uncertain and late arrival of trains sorters are required to work at all hours and

MEMORIALS—*Continued.*

Post Office Department—Continued.

Winnipeg Letter Carriers—*Continued.*

cannot be sure of any definite time to themselves; they request (*a*) to be granted a senior third-class clerkship to date from passing of examinations, (*b*) that from now on all carriers promoted to inside work be granted an increase on promotion, and senior third-class clerkship after examination; (*c*) that new arrivals be given a chance to pass examination; think department may have overlooked them, as they are small in number, 1052-1053.

Printing Bureau.

Employees Protective Association.—Association is composed of all classes of mechanics, skilled and unskilled, and female labour; the increased cost of living alone entitles them to an increase in wages; according to an order in council passed in 1903, rates of wages in cities of Montreal and Toronto were for the future to be taken as a standard not to be exceeded; conditions then were reasonable, now they are far different, while Act calls for a minimum rate of $15 per week, the rate paid in outside offices far exceeds that; calls attention to the difference in prices paid to hand compositors and the machine operators, the latter receive greater pay yet class of work of the former is of a far more technical nature; some employees in the bindery who have only received an increase of $1 a week since 1896, eleven years of the greatest prosperity this country has ever known, yet that same rate of wages was paid in Montreal twenty-five years ago; the female employees do not receive sufficient compensation for the duties they perform, they are forced to use the rear entrance, are not allowed the use of the elevator, but have to ascend and descend five and six flights of stairs; in case of fire they are in great danger; request your consideration for certain employees who are not tradesmen, and receive only $10 a week; request to be put on same footing as the majority of government employees as to holidays; request that a flat scale of $20 be granted to all mechanics in the Bureau, 618-619.

Foremen's Association.—Represents a staff of over 450 people; all are subject to dismissal at an hour's notice; all are governed by same rules and privileges, except that the men are paid for overtime and deducted for lost time, while foremen receive two weeks' vacation in lieu of overtime, and deduction made for all lost time over that; most of foremen have been in the service over eighteen years, thus being out of touch with the commercial life of printing and allied trades, and would be placed at a disadvantage in securing similar positions in their calling; no real reward or superannuation is provided for faithful and lengthy service; submit they should be placed on permanent staff of at least first-class standing with superannuation consideration; United States government printing office is governed by the Civil Service Commission; foremen receive $2,000 a year, thirty days' vacation, sick leave, and no deduction for lost time; in Toronto foremen receive from $20 to $30 a week, two weeks' vacation, and no deduction for ordinary lost time; foremen of printing offices at Ottawa receive from $20 to $30 and similar treatment as Toronto as regards vacation and other privileges; comparatively the Toronto and Ottawa printing offices not equal in size and volume of output of the Government Printing Bureau, 608. The ten foremen in Printing Bureau receive $25 and deductions made for lost time exceeding two weeks' vacation; with over 450 operatives and pay-roll of $6,000 a

MEMORIALS—*Continued.*

Printing Bureau—Continued.

Foremen's Association—*Continued.*

week, machinery valued at $400,000, the individual oversight and executive duties of a foreman exact a faithfulness which a commercial printer will appraise; while outside employing printers look askance at any increase in wages at Bureau, yet we are pleased to show that we have the sympathy and endorsement of these same employers; in seeking this permanent employment they have tried to show the onerous duties of a foreman, the representative in the case, between the King's Printer and the Superintendent and the operatives; in past arrangements in scale of wages stipulated for the operatives themselves, the foremen were not considered, but were given increases at the discretion of their superiors, 609.

Proof-readers, per Belanger.—Their position is an anomalous one; department is divided into two branches (*a*) clerical, including the civil servants, (*b*) practical, including printers, pressmen, &c.; proof-readers do not come under either of them; they are not union men with power to insist upon consideration; nor are they permanent as members of Civil Service are; therefore they ask commissioners to be put on a proper basis, as a branch of the department, the first requisite of which is a rate of pay commensurate with services rendered; present rate is altogether inadequate, being paid $18 a week with the information that it is their limit; such pay might have been reasonable fifteen years ago, not now; the business of the departments is constantly growing, yet the putting of this on record all passes through proof-readers' hands; scale of pay given to Toronto proof-readers is given as answer to their expressed dissatisfaction; there is no analogy between the two cases; at Bureau they are required to have a far wider range of knowledge than newspaper proof-readers; they must keep abreast of political happenings; have a varied acquaintance with scientific and technical subjects; to use their own judgment and discretion in matter of incomplete and erroneous copy; for these and other reasons their work is on a higher plane than outside proof-readers, 598. During sessions of parliament they receive less salary than printers; proof-readers for House of Commons receive $1,500 to $1,600 per annum for session's work; all this matter is read again by Bureau proof-readers before being signed and sent to the press; there are young clerks in Bureau acting as timekeepers, &c., requiring no special ability receiving more pay than they; formerly departmental reports were all read before being sent to Bureau, a number are now read in Bureau only and signed for press; translation is also done at Bureau; they often work overtime without compensation, while printers and pressmen receive extra pay; requirements of position are of high qualification; as men who have made classical studies or are pastmasters of printing craft; they have entire responsibility for correctness of departmental and parliamentary publications, their imprimatur is the only one accepted by government presses; and yet they are paid little more, often less, than mere compositors; as proof-readers they request that they be made a class or included in one of existing classes of Civil Service, with increased remuneration, 599.

Public Works.

Ottawa, Mechanical and Labouring Branches.—Their position under government is an anomalous one, no plausible reason for it, only neglect on their

MEMORIALS—*Continued.*

Public Works—Continued.

Ottawa Mechanical and Labouring Branches—*Continued.*

part to present their case to competent authorities; gives details in a table showing difference in salaries paid to the different trades in the department and outsiders, always in favour of outsiders; why government employees should receive less than outsiders is hard to understand unless that the former have work the year round, while the latter have dull seasons; their present pay might have been reasonable years ago, but not now when everything has gone up in price; except for a very slight increase their salary has been kept at the old figure; present mode of living, and environments, mixing and living with higher classes of employees increase cost of living, yet salaries do not increase; yet they are only asking for the wages the government has agreed should be paid in their contracts; they wish to be put on the same footing; they are not less efficient workmen than others, and do as great a day's work, if not government should dismiss whoever is deficient in ability or energy, 1123-1124.

Montreal Elevator Men.—Demandent que leur salaire soit augmenté pour les raisons suivantes: (1°) leur salaire est le même que celui d'il y a 14 ans, alors que les ascenseurs furent mis en operation; (2°) leur ouvrage a tellement grandi qu'ils n'ont pas une seule minute de repos; (3°) il y avait toujours une différence marquée entre le salaire de ceux dirigeant les ascenseurs à l'usage du public et celui des personnes occupées sur les ascenseurs destinés au bagage; cette différence a été toujours à leur avantage; ces derniers, il y a deux ans reçurent une augmentation de salaire, qui les mets sur le même pied que les autres; dernièrement le coût de la vie est devenu lourd et excessif; le gouvernement a accordé Mr. Fitzgerald un salaire de $60 par mois ou plus de $120 per année; ils demandent que leur salaire soit augmenté de 25 pour cent, 1150.

Railways and Canals, Lachine Canal Employees.—Ask increase of salary according to the work they do; cost of living is so high they cannot make ends meet; gives table of expenses for a family of six persons, totalling $62.35, while their salary is $45; ordinarily a day's work consists of eight hours, overtime 50 per cent extra, Sunday's work double, but for them they work eleven hours in day and thirteen hours at night, and nothing for Sunday; gives table of prices for food in 1906 and in 1896, the prices in 1906 being 70 per cent higher; gives increases of salaries of other classes of workmen; it is just and reasonable they should receive pay according to the work they have to do, 1215.

METEOROLOGICAL SERVICE, Toronto.—See *Payne*, 693. *Memorials*, 696.

MILITIA AND DEFENCE, DEPARTMENT OF.—See *Fiset*, 699. *Lake*, 735. *LaRochelle*, 757. *Memorials.*—Dominion Arsenal, 759. Royal Military College, 760.

MILLER, W. F., Collector Inland Revenue, Hamilton, 398.

Has been thirty-four years in service; receives limit of salary; since 1890 salary has increased $200; one distillery in Hamilton, two vinegar factories, three bonded factories; revision of duty-pay, every officer who puts in extra time should receive same pay, differs from collector in Toronto; the subordinate officers are the ones who do the drudgery work, 398. Reads list of distilleries and tobacco factories, places and number of officers, and duty-pay of each;

MILLER, W. F.—*Continued.*

wishes to emphasize paragraph in memo. that maximum salary of deputy collectors be placed at minimum of collectors; cannot see, with respect to duty-pay, why the whole staff should not get same amount; the man who puts in the hours should get the money; thinks the subordinate officer is as much entitled to the larger amount as the officials above him, 399. Again there are officers who have passed special class examinations and are not yet in that class; the class being limited there are many who will be old men before they get in that class; outside branch is largely technical and thoroughly practical; appointments in this division have been satisfactory; officials seem satisfied with prospects with promotion examinations and are willing to give service a fair trial, 400. Temporary employees come in at $500; $600 salary after passing Qualifying examination is inadequate, 401.

MILLIGAN, R. J., Assistant Inspector of Weights and Measures, Toronto, 417.

Is assistant inspector of weights and measures, and has been twenty-one years in service; salary now $800, having begun at $500; considering duties to be performed $1,600 would be about right salary, 417. Has had very little travelling; does not see why an assistant inspector of weights and measures should have all these vouchers, considers his word as good as that of an hotel-keeper; would be better if paid a certain sum each day while on inspection duty; waste of time waiting for two vouchers for a fifty cent meal; as it is now a man is considerably out of pocket; car fare is now quite an item; entered service at forty-eight waiting for something to turn up, 418.

MINES, DEPARTMENT OF.—See *Low*, 227: *Memorials, Geological Survey, Fletcher*, 240; *Technical officers*, 242.

MONTIZAMBERT, DR. FREDERICK, I.S.O., Director General of Public Health, Ottawa, 1071.

Has been forty-one years in service and receives $4,000 a year; began as local medical officer in quarantine station in 1866, then of whole quarantine service of Canada, both coasts, in 1894; in 1898 was brought to Ottawa, and made sanitary adviser and inspector of Tracadie Lazaretto; now has rank of deputy minister; under Public Works Health Act administers on sanitary condition of workmen on canals and railways, and all leprosy cases in Dominion; quarantine deals with the exclusion of unhealthy people entering Dominion; has only one clerk and a stenographer in office, but has use of staff of Department of Agriculture as far as accountant and correspondence branches are concerned, 1071. When away, his location is always known to Col. Jarvis, so he can send instructions or go to the place required; has not had a regular holiday for ten years, though he could take one if he liked; has much travelling which he considers holidays; at Grosse Isle last year they had over 600 admissions of actual sick; ships coming up St. Lawrence report at Grosse Isle, an officer takes the report of ship's officer, inspects steerage passengers,—on ship arriving at Quebec an officer of immigration branch of Interior Department examines passengers; has strongly recommended that all matters connected with public health should be combined in one department; at present sick sailors are attended to by Marine Department, sick immigrants by immigration branch of Interior Department, sick Indians by medical staff of Indian Department and analysis of foods and drugs by another department, 1072. Should be a national laboratory at the capital where vaccine, serums, and anti-toxines could be made; these are now bought at druggists and people do not know what they are getting; country is becoming too large to depend on other nations, should be doing her own share in progress of science; petitions and remonstrances have been sent to govern-

MONTIZAMBERT, Dr.—*Continued.*

ment by associations; officer at quarantine goes very carefully into inspection; one question to ship's doctor is, have you on board any one who is deaf and dumb, blind, insane or infirm, if so he is deported at expense of steamer; ship's surgeon is supposed to inspect daily all passengers; our law is, if ship arrives at night at Grosse Isle we do not inspect passengers at all, but take the sworn certificate of captain and surgeon, 1073. But if that privilege is abused it will be stopped; so careful is the ship's surgeon that in doubtful cases has summoned witness for inspection; if passengers are numerous Board of Trade provides more than one doctor; the work of examination at Quebec is not hurried; witness examines for quarantinable diseases as trachoma or favus; trains have to wait till medical examinations are over; this examination for trachoma and favus is forced upon us by United States, 1074. They having a similar law, saying that if you do not have same restrictive measures at your ports of ingress as we have at ours we will put on inspectors at frontier and hold up all your trains till passengers are examined, we therefore work *pari passu* with United States; in all cases and places of entry the quarantine officer goes out to meet the vessel, and no vessel can enter until she has her quarantine clearance; that is the first paper she has to produce; at an unorganized maritime quarantine station the custom-house officer is ex officio the quarantine officer, and he has the power, it is his duty if he thinks the ship comes from an infected port or has infectious disease on board, to call in a doctor to examine the passengers; this applies to eevry port on both coasts; this as a rule is not abused, 1075. Feels very strongly on question of superannuation, on the fact that a man may serve thirty-five years or more and pay his percentage every year, if he dies in harness, all is lost and there is no provision for widow and orphan; the Militia Department is far better off than other departments; its abolition was an utter mistake; something giving stability to service should be put on statute-book; a man should not have to feel that if he dies in harness there is nothing for widow and orphans; thinks an all round increase of 25 per cent should be given, and commissioners left to deal with special cases; thinks the general subject of tuberculosis should become a matter for Department of Public Health; it would not be more *ultra vires* than leprosy, or hygiene in camps; but the real difficulty is a certain vagueness as to the authority of provinces in regard to public health; would say within a generation that people have regarded it as in any respect preventable and curable; does not see how a distinction can be made between tuberculosis and leprosy; would be well to place it also under Public Health Act, 1076. Officers at Grosse Isle work eight months in the year, all others the full year; if an inspector is found incapable, could not dismiss him, only report to Minister; has never been consulted as to appointments; higher officials are appointed by order in council, all others are ministerial; has no desire to interfere; at Grosse Isle the work has increased very much, they have now disinfecting appliances, water tanks for supplying hospital with water, this called for an increased staff but there are none too many, 1077. Outside medical officers are not permanent; some of them are allowed to practise, others not; could get resident doctor at Halifax for $1,800, but he would have to be taught; will say that although the whole system of appointment since confederation has been political, we have always had a splendid staff; suggests that annual increase in salary be $100, not $50, and promotion to any grade be accompanied by an increase of salary, 1078. Submits a list of permanent and temporary officers of Canadian quarantine service, of temporary small-pox inspectors at work on international frontier; also extract from order in council on his appointment to present duties, 1079-1080-1081.

MONTIZAMBERT, Dr.—*Continued.*

Memo.: Has been in Civil Service since before confederation; medical assistant at Grosse Isle, 1866; medical superintendent Grosse Isle, 1869; general superintendent of Canadian quarantine service, 1894; Director General of Public Health and sanitary adviser of Dominion government, 1899; deputy minister by order in council, 1899, and by statute, 1905; as general superintendent had $4,000 salary and $444 emoluments; when moved to headquarters lost emoluments, but got added duties and responsibilities; found quarantine service, chaos, built it up to great efficiency; claims that in originating, developing and perfecting this scientific work he has done more for good of Canada than any other civil servant; his services have been recognized in other countries; in England, as an Honorary Fellow of Incorporated Society of Medical Officers of Health; in Scotland, as a Fellow of Royal College of Surgeons; in France, as Honourary Fellow of La Société Française d'Hygiène; also in United States; other deputy ministers giving technical or professional services requiring special study are recognized by suitable salaries, e.g., railways (two years' service), $7,500; justice (law), fourteen years' service, $6,000; why should not medicine and sanitation, sciences continually changing and advancing even more than the others and demanding more continuous study out of office hours, be suitably recognized in his salary after forty-one years' service, instead of receiving a much smaller official income than ten years ago, and that in spite of the much higher cost of living and increases given to other officers, 1081-1082.

MORIN, JEAN PASCAL, Inspector, Weights and Measures, St. Hyacinthe, 362.

Seven years in service, one year in excise as deputy inspector, then was made inspector for new division of St. Hyacinthe; has three assistant inspectors; received a letter lately increasing their salaries; division of St. Hyacinthe was formerly part in Montreal and part in Three Rivers; in our division there are nineteen counties; officers travel over division during summer months, with all necessary expenses paid while on duty, 362. They hurry through their work, and do their writing at night, to get home as soon as possible; these officers work only five or six months and receive $750; while the inspector works all year round for $950; is fully occupied with duties of office, being alone to attend to correspondence and work that comes in; when men are not on road, has to prepare work for next season; would have done better by remaining in excise; expected better salary, being able to speak both languages, 363. Had a new man appointed who did not really know how to handle a hammer or tools for work; had to give him an instructor; this is one experience of getting new men, 364.

MUNRO, JOHN, Foreman, Printing Bureau, 605.

Is foreman of the press-room for the last six years, was formerly foreman printer at Winnipeg; was receiving the same salary at Winnipeg as he is to-day, he anticipated a larger salary here; shows a letter from former employer confirming the $25 salary, 605. Has to look after twenty-seven presses and three other machines; number of operatives in press-room is fifty-seven, of whom nine are women; thinks he has saved government thousands of dollars by putting an attachment to a press printing envelopes; though the attachment is patented it is working for government for nothing; it saves 5 cents per 1,000 envelopes; it also saves the delay in time of delivering the envelopes from press-room to bindery and from bindery to delivery room, as they now go direct to delivery room; has just secured patent in the United States, 606. Inks, oils, roller composition, benzine and coal oil, pieces from press builders, &c., are bought on his requisition; the order itself after he fills up the

MUNRO, JOHN—*Continued.*

requisition goes to the Superintendent of Printing; as a rule he patronized same firm as his predecessor; checks the paper coming in to see that he receives what the order calls for; would like, with other foremen, to be recognized as on executive staff, 607.

MURPHY, WILLIAM, Elevator Man at Postal Station A, Toronto, 1174.

Receives $50 a month; he and Mr. Gormaly work nineteen hours a day; thinks there should be a third to help them; have to have everything in readiness to start at 5 a.m., winter and summer; are requested to do work our appointment does not call for, and are working for two different departments; an elevator man should not do work of one of the staff of the Post Office Department; fails to see why they should not have proper hours; have only one warm meal a day; the elevator is exposed winter and summer, 1174.

Memo.: There are seven elevator men in Toronto; two at station A at $50 a month; three at warehouse at $50; one in Customs at $55; one in general post office at $45; hours at station A are 5 a.m. to 3 p.m.; from 3 p.m. to midnight; cost of living and rents in Toronto are treble what they were; the men ask an increase of pay at least 30 per cent; think they should be placed on same footing as others in the Civil Service as regards holidays; they now receive only one week's holiday; that in case of sickness pay should not be deducted, 1178.

NASH, A. F., Inspector of Gas and Electric Light, London, 426.

Recommends three grades of inspectors and assistant inspectors; thinks service could be improved by classification; the three grades being paid $2,400, $2,000 and $1,600, while assistant inspectors should receive from $800 to $1,200; that vacancies be filled by promotion; that inspectors be required to give undivided attention and not receive salaries from other sources, 426. Mr. McPhee's statement is that there are twenty-six people, Customs officials, inspectors of weights and measures, and excise officers receiving emoluments of $100 to $300 for gas inspection; thinks that two or three additional gas inspectors as such, would be sufficient for whole Dominion; in inspecting electric lights, private houses are not entered, but with an instrument carried by inspector he makes voltage tests at different points of city, where wires enter buildings; in residential districts the transformers are tested; if secondary wires should get the primary voltage, damage would be done, though there are fuses placed in these lines to protect from a discharge of that kind; if transformers are in proper condition there is no possibility of direct contact, because wires do not come together; it is out of the jurisdiction of government inspector to test the electric light wires in private houses; the electric light people are not responsible; if wiring is defective it is really the fault of the inspectors of the underwriters, who should inspect wiring, 427. Recommends besides these grades there should be a senior inspector; at present one man is held responsible for this; all one has to do is to write to department and complain that his prover or any of his instruments needs repairing; a new gas inspection office is needed at Petrolia; we have to find the gas company and not they us; they are not worried about an inspector; gas inspector's duty to see company is supplying proper gas and that there is a prover for testing the meters; that on creation of a new gas inspection office, department requires senior gas inspector to superintend and install apparatus, and suggests an additional salary of $500 be given him, 428. Though memorial omits mention of keeping of old offices in repair yet that was the intention; the recommendation in memorial applies to the keeping in repair of the apparatus in the old offices, as well as the installation of apparatus in the new ones, 429.

NELSON, FRANK, Clerk, Interior Department (letter), 492.

Suggests instead of three weeks' holiday to all employees regardless of length of service, would suggest a graded scale, two weeks during first five years' service; after five years' service three weeks; after ten years' service four weeks; after twenty years' service five weeks; three weeks annual vacation is not sufficient for officials of advancing years and long service; suggestion is borrowed from English Civil Service Act, which provides, that in the lower grades of service twelve working days shall be the annual holiday, and after five years, eighteen days; in the higher grades thirty-six working days, and after ten years forty-eight working days; a suggestion from Civil Service Act of United States provides that not more than two members of the same family be employed in service at the same time, 492.

NEWCOMBE, E. L., Deputy Minister of Justice, 525.

Deputy since 1893, at salary of $6,000; enumerates duties, 525. Part of his duty to read over all the Acts passed by the several local legislatures; draft all commissions issued under the Great Seal; draft or revise all contracts entered into by the several departments; has the superintendence of all matters connected with the administration of justice; capital cases reviewed, all cases of clemency; remission of sentence; question of life and death is carefully considered; is called to pass upon all cases presented for leniency, 526. Capital cases have to be reviewed whether application is made or not before sentence is executed; His Excellency can remit sentence upon advice of Minister of Justice; judge decides that execution takes place on a certain day, a longer period than in England, in the interval evidence is reviewed; His Excellency's prerogative is unlimited in respect to clemency; a judge has no alternative, if jury find prisoner is guilty, to sentence, if not guilty, to pardon; there are cases where jury recommend mercy, 527. A judge has no power of mercy; judges are appointed on recommendation of Minister; department has control of penitentiaries; a parole officer was appointed during the last three years; roughly speaking there are about 300 officials in penitentiaries; all vacancies filled by Minister, 528. Kingston is the largest penitentiary; judge sentences each convict to the penitentiary for the district in which he is tried, limits of district are defined by statute, if sentence is for two years convict goes to penitentiary, if under two years to local jail; regulates and controls all litigation for or against Crown; frequently cases are to be argued from court to court; expects to go to England in case of Martineau v. Bank of Montreal and other cases; in Martineau case the question is whether the bank can recover back from the government the moneys which it paid on those forged cheques; defence is that the government were negligent in not finding out that the system of forgery was going on, decided here in every court in favour of government, 529. Has to follow up all cases between provinces and Dominion; litigation is varied and very extensive and growing all the time; all business of the Intercolonial Railway, questions involving negligence, carriers' contracts, bills of lading and construction contracts; Transcontinental Railway will increase business; canals, &c., case of steamer *Arabia* stranding in St. Lawrence government was sued and case went to Privy Council; fisheries, both foreign and domestic vessels; case of claim came in the other day for the loss of a vessel up at the 'Soo' caused by reason of alleged negligence of lighthouse keeper in not keeping the lights burning; smuggling cases, customs frauds; in a case not long ago recovered $20,000 of penalties and duties for undervaluation of articles, no attempt to keep cases from public; many cases do not attract public notice, 530. Inland Revenue Department has many prosecutions for illicit distillations; Militia Department gives more work lately, having taken over services

NEWCOMBE, E. L.—*Continued.*

formerly administered by Imperial authorities; recent purchase of land at Petawawa; land for rifle ranges, drill hall sites, contracts for rifles, stores handed out and not recovered; Public Works gives considerable amount of litigation over contracts, has to settle many cases by compromise; government has an immunity that a private individual has not, in that it cannot be sued without its consent; cases require great consideration either to pay or make a prudent compromise; at times it is determined to resist a claim, then a fiat is issued; Interior Department requires much advice, in sales, patents, &c.; Agriculture also in the way of patent cases, copyrights, quarantine, &c.; State Department is not concerned in litigation, but necessitates a good deal of drafting commissions, forms, &c.; Finance Department has a great many Treasury Board and Civil Service references, insurance cases, &c.; often disputes between this government and those of Ontario and Quebec on financial matters; Indian Department has accounts between it and the various Indian bands going back to time immemorial as to status and treaty rights, 531. Has to advise on settlements of troubles between Canada and United States as to boundaries and waterways; there is a great question as to expropriation and titles relating to all departments; litigation pending involves about 200 cases; employs very frequently local counsel in distant places; has twenty-four officers now; Mr. Power reviews capital and remission cases generally, 532. Mr. Fraser deals with questions relating to Dominion lands, Indian affairs, and contractors' claims, and is one of the most capable men in the public service; the two latter receive a salary of $2,800; Mr. Leslie is oldest officer in department, has been confidential officer to each succeeding deputy, recommended him last year for chief clerkship; Mr. Fraser is not at all adequately compensated; could not get a man of his experience and efficiency for any such price; department is under-manned; all clerks do work of a highly important character; Mr. Côté, though not a lawyer, has had legal training; takes charge of criminal remission register, drafts preliminary reports, gets information from the judges and the jail; duties quasi professional, 533. Each of chief clerks has a specialty; thinks they are not adequately paid by the maximum of first-class clerks, so they were made chief clerks; helped to revise Dominion statutes and Civil Service Act; sees that assistance is needed before any one comes in, 534. Not bothered much by political pressure; conduct of clerks is satisfactory, they are appointed on probation and efficiency reported; no transfer of clerks to other departments, 535. Department is, beyond question, doing the largest legal business in the Dominion and doing it with success; if you take our salary list you will find it bears no manner of proportion to the income of men who are successfully engaged in outside practice; thinks classification of Civil Service Act is altogether wrong, and does not approve of automatic increase, 536. If, for instance, in Post Office Department the deputy postmaster general is satisfied that an officer who is getting only $500 ought to get $800, and that he is working in the class where salaries range from $500 to $600, public interests would be safeguarded by providing the increase on the certificate of the deputy, provided always the appropriation covers it; does not see why a deputy should shirk the responsibility, thinks the best incentive to do good service is the idea that a man stands well with his deputy chief by performing his duties faithfully and well and be rewarded as if deputy were owner of business, 537. Inspectors when visiting penitentiaries receive only out-of-pocket expenses; remote penitentiaries are visited once a year; Mr. Dawson is away visiting most of the time and Mr. Stewart rather looks after work in head office; accountant also visits penitentiaries; all who travel lose money; each inspector receives $2,800; thinks there should be some way of

NEWCOMBE, E. L.—*Continued.*

recouping officers for expenses necessarily incurred and cannot be charged up; should be some encouragement for an inspector to inspect; hands in a statement of facts relating to penitentiary branch; system is such that no official can travel as a business man would travel without serious personal loss; officials get three weeks leave of absence; department is always open to public from nine o'clock until six, 538. During session the chief men are always at work; there are no historical records kept in vaults; Mr. Narraway controls the records; many are of historical and permanent value, as in cases of disputed territory, should be handed over to Archives; all offices in East Block except Dominion Police; entered service before Superannuation Act was abolished; Militia Department and employees of Intercolonial Railway have had Pension Acts in their favour; thinks there should be reasonable provision for retiring annuities for the service; salaries of good men are small compared to what can be earned outside for similar work; but with a retiring allowance it is an inducement to many a good man, 539. Also it is a means of getting rid of inefficient men, for now as long as a man is able to hobble around, get to his office, sign attendance book, he will do so; in spite of due economy he has had to spend every dollar he has made, has been a good servant, yet if retired he has nothing to keep him out of poor-house; thinks abolition of Superannuation Act a mistake; has no doubt that reasonable provision should be made for retiring annuities; since abolition of the Act, judges have had their pensions modified, some can go out on full pay, formerly it was on two-thirds; militia and mounted police are pensioned; all departments except Civil Service have had its privileges increased; thinks Civil Service Act is pretty consistent now, the sections work consistently enough, but the quality of the Act is a different thing, 540. Operation of Act in regard to classification and salaries is open to objection; a deputy's salary is limited, but not the salary of a man coming in with special qualifications; before revision of Civil Service Act it was very difficult to find out what its provisions were, and there were many inaccuracies; thinks now there are no incongruities in it; under our commission we were to revise the law as it stood and give effect to the apparent intention, 541. Would suggest modification with regard to temporary employees; there should be no restriction so far as concerns examinations; set a limit to salary if you like, but if one has a pressure of work on hand and wants to get a person who is most qualified, to come to department for a week, or six months if you like, there should be no statutory obstacle to that; now you have to resort to a subterfuge; you may not be able at the moment to find one who has passed the Civil Service examination, or those you can find are not qualified for the work, and you have to take in somebody else; then you have to arrange in some way that the account for salary be passed without a certificate that he has passed the Civil Service examination; thinks powers should be enlarged in regard to the employment of professional assistance, as in case of Geological Survey Department; there should be power either defined by Act or delegated whereby a department, as Justice, might be exempt and placed on an established list, so far as professional services are concerned, 542. It sounds good to have appointments made by a Civil Service Commission, who when appealed to for a person with certain qualifications, would advertise a day for an examination on the subject, and send the name of the first passed on the list to the person applying; if person recommended did not suit, then send the second on the list, and so on; references for opinions from other departments in 1904 were 1,132, last year 1,800; some deputies give more trouble than others; he is responsible for these opinions, generally refers question to the officer who is specially qualified to deal with it, and is

NEWCOMBE, E. L.—*Continued.*

more or less satisfied to take his statement; some references are in department for six months, 543. Not the business of department to draft legislation, but of the law clerk of House of Commons and his staff, but sometimes Minister will come in and insist that we take charge of a particular measure; with regard to judges' leave of absence and payments, accounting branch of department has had a great deal put upon it through the changes in the law with regard to official travelling allowances; issues three times more cheques now than formerly; administration of Yukon is a heavy burden; applications for returns and extraditions of fugitive offenders have to be passed upon; purchase of Ross rifle, the deportation of immigrants, developments in Northwest; remissions; also have control over Dominion police, Supreme Court and Exchequer Court staffs; secret service of Dominion police; disallowance of provincial legislation, last year, with the two new provinces, had 4,856 pages of additional legislation to read and report on, 544. Provinces seem disposed to legislate right up to border line or a little beyond if not checked; they complain Dominion continually infinges on their rights, because they think they have rights beyond what are given to them as a rule; there is very little *ultra vires* legislation, 545.

Statement showing number of staff and amount of salaries paid during fiscal years 1891-2 and 1905-6, 546.

NORRIS, J. E. —See *Memorials, Post Office Department, Western Canada Railway Mail Clerks,* 1060.

O'CONNOR, GARRETT, Railway Mail Clerk, Bridgeburg, Ontario (letter), 1050.

(1) It was understood that clerks in railway mail service were to have maximum salaries increased, and annual increases raised beyond $50; the raise from $50 to $100 is very necessary as the clerks 'wear out' earlier, through the exacting, exciting and dangerous nature of their duties, renders it reasonable that they receive their maximum after seven and a half to ten and a half years' service rather than fourteen and a half years' service; also their minimum salary $400 should be increased; (2) should be amendment to Post Office Act giving clerk his legal standing; (3) they regret making future examinations 'easy' for new appointees, as it will lower the service; and while raising the pay should raise qualifications, 1050. (4) In United States clerk carries a 'commission' bearing photo, name, address, &c., giving free transportation, and superintendents obtain, when requested, half-fare tickets for families of clerks; such concessions are desired by Canadian clerks from the various railways; (5) post office authorities should provide cases and cards for annual examination; the cases would last a life time; (6) the service would gain if an inspector visited the different railway post offices once or twice a year; would see many things to improve upon; London district not visited for several years; (7) clerks ought not to leave cars to open letter-boxes at stations; surprising some are not killed, one man lost a leg some years ago; such duty belongs more to letter carriers or mail couriers than to railway mail clerks; (8) clerks should not call for or deliver matter at initial or terminal points; it is done at some places with little or no trouble resulting; (10) clerks should receive remuneration for suggesting valuable improvements; (11) mail clerks about 450 in all Canada; no other body of men could handle the volume of matter with so little loss; registered mail matter in transit from city post offices to railway post offices should be carried by post office transfer agent, not by mail clerks; and latter could give receipts; (12) mail clerks pass examinations before they are fully appointed, while in many other departments an educational test is not

O'Connor, Garrett—*Continued.*

demanded, e.g., Customs officers without examination commence duties with salaries and allowances as high as $900 or more; mail clerks with all examinations only receive half of that at starting, and it takes many years to equal salaries of Customs officers; mail clerks' duties are always increasing; Post Office Act should be amended to give clerks the legal standing of passengers on train, they are such of course, but the Act should say so, 1051-1052.

O'Halloran, George F., Deputy Minister of Agriculture, 51.

Has been deputy since May, 1902; department looks after trade marks, patents, census and statistics, experimental farms, quarantine, dairying, seed and live stock, creameries, cheese curing, poultry, fruit, tobacco, cold storage, refrigerator cars and cold storage warehouses to extend over whole country; not enough private enterprise to establish such warehouses, so parliament passed a measure for their creation; the Archives also are under the supervision of this department, 51. On June 30, 1906, there were fifty-nine permanent employees against fifty-three on June 30, 1902; sixteen extra clerks in 1892 and twenty-four in 1906, paid out of civil government contingencies; five chief clerks, ten first-class clerks, in 1906 as in 1892; patent examiners are graduates in science; some graduates have taken the electrical course, others the mechanical course; all must be specialists; promotion made no difference in the work, 52. Has simply enough clerks for the work; the principal offices are in the Langevin Block; others in the Canadian Building (Wood's building), another at corner of Queen and Metcalfe streets; the Archives are in a separate building; large number of temporary clerks in proportion to the permanent staff; temporary clerks are employed only on my recommendation; we try to get as good clerks as we can; have no faith in competitive examinations; all clerks are paid out of civil government contingencies; they are chiefly women; young men will not apply for so low a salary; as a rule once a clerk is in he remains in, 53. There is an attendance book in every building; clerks after probation are seldom rejected; the deputy minister reports on the fitness of clerks, but rely on the chiefs; present salary is $3,900, next year will be $4,000; before appointment was a barrister; all get the statutory leave of absence for three weeks; office hours from nine to four, allowing an hour and a quarter for luncheon; if required clerks stay until five o'clock, 54. Records are in very satisfactory state; staff is sufficient; finds that clerks work very much harder than he thought; thinks superannuation gives stability to the public service; would be desirable to restore Superannuation Act or some kind of pension system, as other large industrial and financial institutions do; Archives vote is not now subject to Civil Service Act, old clerks are goverened by it, but not the incoming clerks; Minister generally insists that all should pass an examination; work in Archives requires a technical education, and a knowledge of the history of the country, 55. New scheme on foot for conducting the Archives branch; a report is published; the last one contains what are termed the constitutional papers of Canada; it is proposed to publish historical papers of interest; Mr. Doughty receives now $3,000 a year; Census and Statistics Branch is in the Canadian Building; some twenty-nine at present on staff; the director receives $4,000 a year; he publishes a statistical year book; he is now gathering statistics for an agricultural census of the Dominion; when decennial census is being compiled there are as many as 150 or 200 clerks; has charge of census, 56. In this department there are several highly paid officers; takes nearly five years to complete a census; the Agriculture and Dairy Commissioner's Branch has been divided into three branches; all

O'Halloran, G. F.—*Continued.*

were united under Dr. Robertson; he broke down from nervous exhaustion; Mr. Ruddick and Mr. Clarke worked under Dr. Robertson, whose work became so important that it was considered advisable that the three heads communicate with the Minister direct, 57. Dr. Robertson was one of the greatest and most indefatigable workers; cow census is the method of selecting the most profitable cows in a herd by testing samples of milk; farmers willingly co-operate; improvement in cattle and horses; shorthorn the most popular breed; Dr. Rutherford has a staff of seventeen; four travelling inspectors and eighty correspondents, receiving constant returns of diseases; he deserves great credit, 58. National records kept here for horses and cattle, native as well as imported; Mr. Gilbert has charge of poultry; seed commissioner enforces Seed Control Act; sample seed sent out from farm to be reported on; dairy commissioner enforces Fruit Marks Act; tobacco is under charge of special officer; Mr. Ruddick enforces cold storage, 59. Dr. Saunders gets $4,000 a year and perquisites; farm diffuses experimental work in all its branches; bulletins published free to farmers; principal officers are married and live on farm; there are twenty-eight salaried officials; farm labourers appointed by director and are satisfied with salaries, 60. Products of farm sold; officers and labourers on farm pay for what they get; branch experimental farms; had exhibitions at St. Louis, Pittsburg, London, Liège, Milan and New Zealand: exhibition work is continuous; permanent exhibit at London; next year will have exhibit in London to celebrate *entente cordiale,* 61. Dr. Montizambert has charge of quarantine branch, and ranks as deputy, also administers Public Works Health Act; supervises Tracadie Lazaretto, and that on D'Arcy Island, Vancouver; has physicians at all the principal ports; is deputy minister of patents, 62. Process explained before a patent is issued; patent fees last year amounted to $177,000; hundreds of caveats every year; work in patent office is now caught up; was formerly very much behind; we receive very few complaints now about delay, 63. Three months from application to issue of patent; a judgment in Supreme Court changed the whole practice in the office; in consequence nearly all previous applications passed had to be dealt with judicially; patentee has one year during which he can import after patent is granted; after Patent Act was amended British license system was introduced, 64. By which system the patentee is not bound to manufacture, but if any one wishes to use his patent, and the patentee refuses to give him a license, this person may apply to the patent office, which may order the license on such terms as it sees fit: if the patentee does not comply with the order the patent office may cancel the patent; more work had to be done than was ever done before; the work of deputy minister of patents is equal to the work of the average deputy minister, therefore thinks he is entitled to ask for more than ordinary deputy minister; has had to decide many things; a patent is sometimes refused, 65. And no appeal except to Governor in Council; life of a patent: sometimes a patentee applies for a reissue, accompanied by an office full of counsel, whom he has to hear alone; patents sometimes expire and patentee tries to get special Act for reissue; such applications average ten each session; fee for a patent full term; about 3,000 patents issued each year: when Patent Bill is up before committee, is generally present; patents increasing rapidly; Mr. P. E. Ritchie is registrar of trade marks and copyrights who deals with all correspondence, 66. Signs certificates of registration of trade marks; copyright applies to books and music; copyright lasts twenty-eight years; department is not overmanned; present method of appointment satisfactory; opposed to competitive system; if one clerk is more capable than another Minister should have power to

O'Halloran, G. F.—*Continued.*

increase salary, 67. Great pressure to promote clerks; five or six of our patent examiners are worth more than $1,500 a year, 68. During five years in office has not taken three weeks holiday, 69.

O'Leary, D., Deputy Warden, Kingston Penitentiary (letter), 584.

Since appointment as deputy warden, ten years ago, the salaries of the warden, surgeon, accountant, and those of several other officers holding good positions were granted substantial increases, whilst salary of the deputy warden is the same as it was some thirty years ago, $1,500; was allowed as well as his predecessors, a certain parcel of land inside prison walls for garden and private purposes; within the past year this privilege was taken from him; feels, under the conditions it is not unreasonable that his salary of $1,500 be increased to $1,800, seeing that the entire responsibility of safe-guarding of the very large convict population, and the entire prison discipline rests on the shoulders of the deputy warden, 584.

O'Meara, J. J., Elevator man, Ottawa, 1110.

Has worked the Commons elevator for about four years; receives $50 a month; work hours during recess from 8 a.m. to 4 p.m., during session has to stay as long as there are any members; may have to work thirteen or fourteen hours; sixteen elevator men and twelve elevators, 1110. Ran the elevator at the Russell formerly; often has to act as messenger; members expect us to call cabs for them; everybody is our boss; no easy work during recess; has to come at 8 a.m., clean all brass work, polish floors, show visitors through the building; is under Mr. Ewart, but our direct boss is Nelson Smith, from the observatory, 1111. If anything goes wrong we have to fix it or help the electrician; pay is not sufficient on account of work hours and the clothes we have to buy; expects $2 a day or $60 a month; the elevator man at *Citizen* office gets $45 a month, with quarters or its equivalent, 1113.

Pagé, Dr. Joseph D., Medical Superintendent of Detention Hospital, Quebec, 1082.

An arriving ship has to report at Grosse Isle for quarantine purposes; quarantine medical service is under Department of Agriculture, and detailed examination of immigrants is under Department of Interior; there are four other doctors and witness supervises work; generally there are three doctors for each ship, two for steerage passengers and one for second-class, the latter examination is made on board, the former by steerage passengers passing in single file by two doctors; one to detect any defect in general physique, the other to examine the eyes for trachoma, a serious disease, though curable, yet not very contagious; contagious by washing in same water; if case is diagnosed as trachoma, it is not always deported, for it is a very chronic disease liable to last for years if not treated; if disease has passed a certain stage then he is deported, 1083. It is not a blood disease, but is confined to a special organ called the follice of the conjunctive of the eyelid; case of servant girl landing in Ottawa had measles three days after landing at Quebec; contends that any case of fever should be detained at Grosse Isle; the immigrants embarking in crowds are examined more or less by the doctor; more care is now taken and more are rejected, 1084. Very few tubercular immigrants have been detained, but a certain number passed undetected; in a climate like ours, rest, good food and fresh air would cure many in the incipient stage; salary is $3,500; has no private practice; began at $150 a month with privilege of practice, later changed to $3,500 without practice; duties of inspecting physician and medical inspectors should be amalgamated, 1085. There is

PAGÉ, Dr.—*Continued.*

often conflict of authorities on technicalities; has no time to cultivate private practice; work goes on smoothly; it has been suggested that detention hospital might be used in winter for incipient cases of tuberculosis, but nothing official yet, 1086.

Letter: Correspondence between Dr. Pagé and Dr. Logan, the shore inspector for the Dominion Line in Liverpool, 1086. First letter, Dr. Logan to Dr. Pagé: refers to case of deported passengers in ss. *Dominion,* in which case both agree; admits the case of two passengers deported as he had marked them 'rejected,' but through a mistake of a steward they were permitted to go; cannot complain they were sent back; appreciates reference to good record by Dominion Line, and will endeavour to maintain it; glad you differentiate in favour of persons about to settle as farmers in open healthy country; will keep fact in mind; good record has been secured by many rejections; yesterday rejected twelve I thought you would not accept; second letter, Dr. Pagé to Dr. Logan: if discrimination has sometimes been made in accepting people affected with trachoma; does not mean an encouragement to let such people pass even in slightest degree; in circumstances when an immigrant is found very desirable otherwise it would be inhuman to send him back; if a case is diagnosed as trachoma immigrant must invariably be rejected before embarking; idea of a joint conference of health officers of different provinces not abandoned; will lay it before authorities, hoping you will visit our country and give us a substantial scientific contribution, 1087.

PAGEAU, CHARLES, Examining Officer, Customs, Quebec (letter), 150.

Nommé 'examining officer' à Quebec en 1905, ensuite 'landing waiter,' à un salaire de $700; salaire insuffisant pour les besoins de sa famille, demande une augmentation, 150.

PARADIS, EDWARD, Employee, Lachine Canal, 1222.

Wishes to speak for the men who work only seven months; government has work to be done in winter and it is given to outsiders; there are repairs to be done, shovelling snow, &c.; the work of repairs and cleaning up in winter time should be given to these men who are laid off the canal instead of bringing in other men to do this; then the Sunday watch for which they get no pay, if they are absent they have to pay a substitute, 1222.

PARENT, PAUL, Assistant Inspector of Weights and Measures, Quebec (letter), 375.

Was appointed as messenger and caretaker of weights and measures office in 1904 at $600; in 1906 was assistant inspector at same salary; in 1907 received $50 increase for the three positions; work is assiduous; supports two sisters; present salary insufficient to make ends meet and keep out of debt; attends to heating of office for nearly ten months in the year, 375.

PARMELEE, W. G., I.S.O., Deputy Minister of Trade and Commerce, 1260.

Deputy minister since 1892; expenditure last year was about $3,850,000; department looks after culling of timber, the inspection of staples, commercial agencies, Chinese immigration, bounties on pig iron, puddled bars, steel ingots and articles manufactured in steel, bounties on lead, binder twine and crude petroleum; mail subsidies and steamship appropriations; salary is $4,200; has two chief clerks, two first-class clerks; all clerks have passed the Civil Service examination, 1260. Most of them are very superior clerks; staff rather under-manned, offices in Western Block; all who were promoted passed promotion examination; has been thirty-one years in service; the Act says in case of promotion 'the head of a department may select or reject,' if

PARMELEE, W. G.—*Continued.*

words 'on advice of deputy minister' be added, it would be putting responsibility on the deputy, who is quite willing that the head of department should assume it; inspection of staples was placed in department from Inland Revenue; this branch has grown enormously, 1261. Many more applications from women than men; as young men do better outside than in; even if the maximum salary was raised to $700 thinks there would still be more women than men; holidays three weeks; always some one in office during lunch hour; office hours from 9.30 to 4.30; in statistical branch many clerks are obliged to work at nights; abolition of Superannuation Act was not a good move, has kept a good many out of the service; it was an inducement to enter; its abolition has shown a want of stability in the public service, 1262. Institute a Pension Act; thinks the doing away with third-class clerks, reducing the minimum and abolishing superannuation were very bad moves for the service; the culling of timber is only carried on in one province; cullers' office produces little revenue, but expense is large; there is inspection of staples at Fort William; grain is the chief staple; at Winnipeg over 62,000 grain cars were inspected, this inspection cannot be entrusted to people who do not know what they are about; chief inspector gets $5,000, assistant $3,500; grades are established by Act and grain has to be kept up to requirements; no board of trade has control over these inspectors; Mr. Horne and Mr. Craig have been in service since its inception; Mr. Craig traces wheat coming from the west to see that it is not mixed with any other and that it goes on board as certified, 1263. To develop trade with other countries there is a system of commercial agents; there are nine at $3,000, two at $2,500, and some less; the higher salaried officers have to give their whole time, the others not; expects letters from them every month reporting on outlook of trade; these agents help the trade of the country very much; they are practically political appointments; their work is shown in the great increase in our foreign trade; before government had very little knowledge of what was required in foreign countries, 1264. Has heard no complaints from agents about their work; is ex officio chief controller of Chinese immigration; in Vancouver and Victoria there are two controllers, two interpreters, two customs officers, a stenographer and a caretaker; those are the paid staff, yet collectors and principal officers at frontier ports are officers of department; tax on each Chinese entering is $500; Japanese are allowed in free according to treaty; the tax stopped them for a while, some come in as students and after attending school for a year the tax is returned to them; in 1905-6 only twenty-two Chinese entered paying capitation; main expenditure is for bounties on pig iron, steel, lead, petroleum; an appropriation covers administration of Act, but regulations provide that expenses connected with it shall be refunded by concerns over whom officers are placed in supervision, 1265. There is general supervisor in Nova Scotia at $1,750 a year, he has an assistant at Sydney Mines at $900; Dominion Iron and Steel Company received in bounties last year $246,000 on their pig iron, $301,000 on steel wire rods and $406,000 on steel ingots; the chief supervisor is a customs inspector; the system of paying bounties is this, every pound of any ingredient that goes into the stack is taken account of and output is taken account of; as a check on that the ore that goes in is sampled, sample analysed, and if the two practically agree you may consider it is pretty near right; in a large establishment there are a dozen different heads, each keeping his books and those books must correspond one with the other; our men not only keep their own account, but check every one of those different departments from the company's books—not only in head office, but those of workmen outside, 1266. Bounty on lead has run out; there is a bounty payable only when the price

PARMELEE, W. G.—*Continued.*

of lead in London is down to £12 10s., then it starts at £15 to the ton, and as the price goes up the bounty recedes until at £16 per ton it ceases entirely; for nearly two years past there has not been a dollar of bounty earned; now lead is worth £20 6s., or £4 beyond the limit; there has not been a dollar of bounty paid within the last year, and yet we are obliged to keep the supervisor there at Kaslo at $2,400 a year; no interest in lead since bounty ceased; thinks it is increasing as increase in price stimulates production; the man at Marysville, B.C., having nothing to do was allowed to go; there is a supervisor at Petrolia of petroleum at $1,200, also one at Moncton; crude petroleum bounty is a fixed sum, 1½ cents imperial gallon; total number of persons or firms claiming bounty on petroleum was 595; that does not refer to the number of wells; one concern may have one or a hundred wells, so they may run up to thousands; has to keep track of output of well when sold to a refining company, for which a cheque is received payable in accountant's office; a duplicate carbon cheque is kept; if amount covered by carbons equals the amount a firm is claiming, it must be correct, if correct one man certifies; bounties on petroleum amounted to $291,000; bounty on binder twine is fixed by Act, it being equal to export duty on manilla hemp from Philippine Islands, because Americans allow it to come in free; there is an export duty on manilla hemp coming to Canada, our duty offsetting that, duty not to exceed ⅜ of 1 cent per pound consumed; inspection in connection with the bounties is efficient, 1267. Suggests better pay for supervisors, they save their salaries over and over again by check put on the companies; mail subsidies last year were $1,250,000, having about sixty contracts with steamship services, some in Canada and others outside; the service of these companies is certified to by collector of customs at the port; the checks in Dominion are by collectors of customs; there is no friction; ports of call are constantly changing at discretion of Minister; department publishes three reports which are extensively circulated; the weekly report amounts to about 3,000 and is in constant demand; annual report is now in two volumes; department is under-manned but clerks are decidedly efficient, 1268. Suggests increase of salaries to correspond with increase in cost of living; thought formerly the under grades were under-paid, now it is the higher grades; such men outside would get far more money; was fifteen years bank manager; statements for years 1896 and 1906, showing increase in ten years, 1269. Department not in operation 1892; statement of staff 1896-1906; expenditure 1905-6; inside staff 1906; administration of Chinese Act; outside service, commercial agents, culling timber, bounties on iron, steel, lead and crude petroleum; inspection of staples, 1270-71-72-73. Department publishes annual, monthly and weekly reports; annual contains trade statistics of Canada and her trade with foreign countries; departmental work; a synopsis of trade of all countries; monthly contains comparative statistics from month to month and general commercial information; commercial agents' reports and tariff changes in foreign countries; weekly is distributed every Monday, contains agents' reports and information thought desirable to be known promptly to Canadian exporters and importers.

Letter W. G. Parmalee to commission.—Department through exchanges receives annual reports of all countries in the world that publish such, from which our figures are compiled; previous no such information was available in Canada, have proved of much value to mercantile communities; the monthly comprises figures showing progress of Canada and tables including month of publication; tables are unrevised and are subject to future adjustment, though they are generally correct; in the monthly all new tariffs as they come out are published; object of monthly is to get information to the public

PARMELEE, W. G.—*Continued.*

earlier than through annual report; weeklies are samples to give scope of information given therein; there is a great demand for the weeklies, every day demands for them are received, 1274.

PATENT OFFICE.—See under *Memorials, O'Halloran.*

PATTENSON, ALEXANDER, Jr., Appraiser, Customs, Toronto, 161.

Listed as assistant appraiser, yet performs work of appraiser for years; thus causing him to miss the increase given last year; receiving only $100 instead of $200 increase; is twenty-six years in service and is receiving less by $200 to $400 than those entering later; passed same examinations as the later ones; appraises stationery, fancy goods, drugs, &c.; acting as appraiser, wishes to be ranked as appraiser, 161. Is at maximum as assistant appraiser; Mr. Davidson is on same list as assistant appraiser, though on list at Ottawa as appraiser and got his increase; apologizes for troubling commissioners, yet department is satisfied with services; entered at $600 with prospects of receiving more, 162.

PAYNE, F. F., Secretary of Meteorological Service, Toronto, 693.

Is secretary of Meteorological Service; has been thirty years in service, and salary is $1,350; no one now receives any emolument but salary; seven of principal officers have all served over thirty years; our work in preparing daily weather charts is hardly known in Ottawa; grant for service this year is $110,000, spent mostly in telegraph service, circulating weather forecasts, and collection of data on which we base them; staff is small, but were helped this summer by three university students; would sooner have permanent officers, 693. Qualifications of officers are highly scientific; lots of complaints as to weather forecasts, as it is not yet by any means a perfect science; about 82 per cent of forecasts are verified; have the best instruments and very well equipped; more expense as country is opened up; in wheat growing Northwest people are always asking for new stations; present observatory is in Queen's Park; editions are published monthly and daily; presents copy of forecast printed every morning and sent to all parts of Ontario; exchange reports with United States; observatory itself is in a very bad condition, 694. Considers that director's position should equal that of a deputy head; and that men of thirty years' standing should have more recognition; our kind of work is not appreciated in any country; tries to predict the weather for the general public, and the hardest thing to do is to predict rain; far easier to predict temperature and storms; expresses wish that staff be put in a better monetary position and also in regard to superannuation, 695.

Personal letter: Upon appointment of present director of the service, in 1894, salaries of the four senior officers were, three at $1,216 and himself at $800; though the work has not changed relatively, the same officials now receive $3,000, $2,400, $1,450 and $1,350; director has frequently recommended witness better treatment, without result; work of secretary is not same as that carried on by an officer of same rank of business, for besides dictation of practically all letters sent out, many of which are technical, has secretarial work, the care of all accounts, as well as his share of scientific work; in United States the secretary receives same salary as any other officer excepting chief, 695.

PAYNE, J. L.—See *Civil Service Association.*

PEARCE, E. J., Pressman, Printing Bureau, 611.

The Act referred to does not state the minimum nor does it debar those in authority from paying whatever wages they wish; the scale is not adhered to, for some are getting $18 and others $20; wages have not gone up in the last three years in proportion to the advance in outside offices; $16.50 is the minimum rate, yet many offices are paying $25 or $30 in special cases; the Act either has to be amended or the government has to show a sympathetic spirit and pay in the Bureau at least the wages that are paid in outside offices; we ask if the Commission can see its way to have the Act amended, on the ground that it is not fair to compare the cost of living in Ottawa with Montreal or Toronto; under present conditions would approve of the Act being amended by substituting the rate paid in printing offices in Ottawa instead of in those of Montreal or Toronto; the reason for putting that limitation in the Act was on account of an agreement reached in Toronto on a revision of the last scale of wages; the Act was then amended to put the wages in the Bureau on a par with those in Toronto; that amendment governs the Bureau far more than the Act, for it is always brought forward against us when we approach authorities in regard to wages, 612. We contended all along that Montreal was not a fair city on which to base the rate of our wages; there is one alternative which would solve the whole question, for the government to make the employees in the Bureau permanent, granting statutory increases; is offering that as a solution, 613. The press girls have to stand all day and keep up with machines, while the bindery girls can sit all day and do their work leisurely, 614.

PEDLEY, FRANK, Deputy Superintendent General of Indian Affairs, 248.

Appointed November, 1902; total staff about 1,100, including doctors and teachers; receiving $4,000 per annum; Indian population about 110,000, and is stationery; 15,000 or 20,000 Indians outside treaty limits, still we help them when necessary; Mr. Bray is surveyor and surveys or arranges for them, 248. Work of department is increasing; more applications for positions from women than from men; thinks $500 salary is detrimental to encouraging good men to come in, 249. Have one or two ladies in department who are capable of doing the high-grade work; would rather the higher positions were filled by men, for control of an office and maintenance of discipline chances are in favour of the men; the temporary clerks, also junior second-class clerks have passed the Civil Service examinations, 250. Staff has increased, the work also; spend lot of time and money trying to make Indians live better; after treaty great care is to be exercised; as they become more civilized and adopt working habits, our management changes; as management expenses increase, relief and rationing expenses decrease; are looking forward to time when the Indians will be self-supporting; then reserves would cease to exist and agents disappear; many are self-supporting now, 251. In case of filling a vacancy or making a promotion the deputy minister should make a report or give his opinion; would be wise for Minister, in making a promotion, to consult some one who has practical knowledge of working of department, 252. No third-class clerks; question is whether the power of raising minimum salary on appointment from $500 to $700 would induce to bring in more men; recommended that temporary clerkships be converted into third-class clerkships so that we could promote; staff get three weeks of absence; attendance book kept and signed, 253. Office hours from half-past nine till four; individuals occasionally break down from nervous exhaustion; public may go through department; all offices are in one building; records not required for work of department sent to Archives; some date back to 1759, 254. Most applicants for promotion come to me; some

PEDLEY, F.—*Continued.*

ask frankly to go to Minister; is under Superannuation Act, which is susceptible of a good deal of modification for benefit of service; desirable that persons entering service should be encouraged to remain; desirable to make Superannuation Act a Pension Act for others than the recipients; pension should not die with wage-earner; thinks the number of classes should be reduced in number; at present there are six classes, three classes would be enough, 255. Does not say we could dispense with some of staff if others worked harder; that number of officials is regulated by the requirements, but the number of classes is a theoretical thing made up by government; Indian agents are appointed as others under Civil Service Act are; but with no examinations; nearly all our agents receive a salary now, and no other remuneration; in receiving and transmitting money to Ottawa agents give bonds; some agents have small salaries with little work, while others have larger salaries with work requiring their whole time, 257. Most of teachers for Indian schools have some qualification; Indian language is not taught, but English, in province of Quebec, French; government contributions to Indians are for management, schools, annuities, general expenses, agricultural implements, seed and live stock, not to keep them from starving but to enable them to work for self-support; no truth in rumour that Indians held up Grand Trunk Pacific in connection with purchase of land for terminus, 257. A little more latitude is allowed deputy heads and inspectors in appointing farm instructors; in Manitoba and Northwest destitute Indians are decreasing; these Indians are undergoing a betterment; British Columbia Indian is of a different stripe; we have no treaties with them, yet we give them a little relief; they seldom cross international border; the employees of the department, both inside and outside, should not be treated differently; they are giving equally valuable service and should be made permanent; the inspectors receive their actual living and travelling expenses, 258. Inspectors should be moving around sufficiently to know well their inspectorates; department should demand from inspectors a return from every point inspected; the 10 per cent of the purchase money from sale of Indian lands now amounts to about $180,000; it is supposed that the Indian Department will soon be self-supporting; trust funds of the several bands amount nearly to $5,000,000; the Six Nation Indians pay the running expenses of the superintendency out of their own band funds; this band has a capital of nearly $1,000,000, is settled in and around Brantford, and will soon be no longer a charge on Federal treasury, 259. Northwest Indians are establishing trust funds, we sell the lands for them and after making usual deductions, fund the balance for their benefit; an exact record of everything and of every Indian under treaty is kept; we act as a surrogate court for them; trust funds as a rule go to the support of a medical officer and their schools; the department is the fourth largest spending department, handling about $6,000,000 or $7,000,000 every year; bands in Ontario, Manitoba, Saskatchewan and Alberta are under treaty; the maritime provinces, Quebec and British Columbia are not, 260. Indians still hold their own in numbers; advantage in having a treaty; Indians of British Columbia have received their allotment of lands; they knew where to get the best land and chose it, 261. Practically all bands in Manitoba and Northwest have been settled on reserves; regard Esquimaux as Indians; by the end of this year a treaty will be made with Indians, rounding off the two new provinces, thus practically almost all the Indians in the Dominion now have treaty rights or have lands set apart for their use, 262.

Return of officers and employees for the year ended June 30, 1906, 263.

PELLETIER, P. A., Letter Carrier, Quebec Post Office, 940.

Number of letters on hand after first round is very small, if a house to which a letter is addressed is closed it is kept till next morning and then delivered; if a registered letter, takes it to post office before returning home; we work about two hours a day longer in winter than in summer, by reason of trains being late, greater amount of darkness; in summer 9½ hours, in winter 11½; there are five or six letter carriers doing clerks' work in the post office, but have no uniforms or car tickets; they have a less wage and do higher class of work, 940. A letter carrier's highest salary is $2.25 a day for six days; his district was changed before Christmas, a man in office fell sick, another was put in his place, and witness replaced the latter; change is sometimes made as a punishment; on one occasion only in his knowledge a letter carrier was made a clerk; was first made superintendent of letter carriers and then made a clerk, 941. Passed Qualifying examination, but cannot become clerk unless he has influence; their lives are insured in an accident company, but they are charged more than inside clerks because more exposed to accident; therefore they are hampered with this disability, that once a letter carrier always a letter carrier, have to pay more for accident insurance and have to work 9½ to 12 hours daily; this year could not properly dress wife and children, or pay insurance this month, on present salary; can only stop one hole by making another leak, 942.

Memo.: Their salary is not a regular one, but depending on health, accidents, misfortunes in their families requiring absence from duty; they receive from $1.25 to $2.25 a day and lose pay for absence; an old letter carrier, Mr. Victor Houde, after two months' sickness, during which he lost his pay, was in such a state of want that he could not buy the medicines ordered by the doctor nor bread for his family, who were in the utmost poverty; collection was made by fellow letter carriers, which allowed the family to live for a few days, the poor man died leaving a large family having nothing to eat; many other similar cases; since government cut off pay in sickness there are far more deaths, for men are obliged to work when sick to get bread for the family; if in good health and working all the time the salary is not sufficient to put anything aside for rainy days or keep out of debt; witness on account of increased cost of living has every year to go into debt to meet the strictest expenses of his household; cannot give children the education desired; have more responsibilities than clerks in the higher branches; there is no hope of a letter carrier after long years of service reaching a higher class; a faithful letter carrier whose strength is worn out in the service has to carry loads that young men can hardly carry; and will see poverty troubling the last moments of life; they ask for pay during sickness, that salary be increased to $1,200, and be allowed twenty-one days' holidays instead of twelve; witness' monthly account is as follows: expenditure per month, $62.05, salary, $56, deficit monthly, $6.05; in above expenditure are not included clothing, shoes, sickness, doctor, house linen, carpets, crockery, help, schooling or taxes, 944-945.

PENNOCK, WILLIAM HENRY, Clerk, Ottawa Post Office, 815.

Is a first-class clerk in city of Ottawa post office; first appointed in 1878 at $800, and after twenty-nine years is receiving maximum of his class, $1,500; cannot remember number of examinations passed, and now has to pass one every year to retain his rank; is chief of money order and savings branch, and takes in all the money in his office; amount of cash received last year at the city post office was $1,279,717.76; free matter is government correspondence, 815. Postal notes are payable to bearer and are not transferable; a money order can be endorsed and redeemed by banks; our sales of postal notes are about $250 a day, and we keep a month's supply, or $7,500, on hand; these postal

PENNOCK, W. H.—*Continued.*

notes are only given for the sums named on face of them; has custody of these postal notes; they are kept in a vault and witness carries the keys; when absent or on holidays assistant checks over the account and satisfies himself he has got all that is on the books; every month the stock is balanced, 816. Supposes postmaster is really responsible, but witness would be held for it; these postal notes are numbered consecutively and we have also the check letters, that is they are numbered in series; when paid they come back to us to be checked and sent to the department; a postal note payable in Toronto goes back to the department through the city post office; sends a return to Post Office Department of all notes issued by him, they compare the two returns and mark them off; has nothing to do with the adjusting of accounts between the different post offices; we put through our office in a year about $1,279,000; this with value of postal notes, $7,500, of different denominations are kept in vaults; is the sole custodian, amounts checked over once a month by postmaster; we render a daily statement to department of sales of postal notes, issue of money orders and deposits in the savings banks; post office inspector inspects our office twice a year; gets the postal notes from accountant of Post Office Department, 817. He in turn gets them from the American Bank Note Company who print them; they are very much like currency; when they are once signed if a responsible person gets them he can hand them over as cash, if presented by somebody we know; difference between a money order and a postal note is the latter has its value printed on its face, and money order is in blank; accountant issues twenty books with one hundred orders in each; advises superintendent of the daily issue, and advise the post office at which they are payable; so that if a person buys a money order payable in Montreal, we advise that office with a postal note for the value demanded, it needs no further advice; non-accounting offices, where no account is sent to the department, are supplied with postal notes; they issue these reports but send in their cash with the order; denominations of postal notes used to avoid sending cash by mail, 818. Not much chance of money being lost when registered, but often happens that a man receiving registered letter says he only got $5, and man at other end sent $10; commission on postal notes and money orders; in Yukon they charge double commission; can transfer money abroad or to England at same rate; Italians and Austrians appear a thrifty lot and send their spare money this way; money to England is issued in our currency, goes through exchange office; $5 sent to England from here is equal to £1 0s. 7d. there, 819. Does not know who is in charge of International Money Order Exchange, it was formerly in Montreal, now it is here; his office is attached to city post office; as soon as deposit is made the savings bank branch is notified, and it notifies depositor amount received; a pass-book can be presented at any savings bank office, only application for withdrawal has to go to Ottawa; they charge the account and send cheque to postmaster at place of withdrawal; in opening an account a person makes a declaration and makes his signature, states occupation, married or single and other particulars; if there is any doubt or suspicion of withdrawer he must be identified before receiving cheque; in local deposits and withdrawals the cash passes through our hands and is deposited daily to credit of Receiver General, 820. Postage stamps of all denominations are received from chief clerk of postal stamps branch, about $5,000 worth at a time; stamps are verified every day, not the big stock in office, but stock every day in use; taking branch cheques and everything else, the daily deposit in Bank of Montreal runs up to $5,000 or $6,000 a day; cities depositing yearly over $1,000,000, 821. More than half the amount in Winnipeg is in money orders; that is on account of the immigrants; same in

PENNOCK, W. H.—*Continued.*

Vancouver; now while there is this great increase of business throughout Canada, the salaries have remained the same since confederation; for all this work witness only receives $1,500 a year; there is no further promotion possible except in the event of Mr. Bates dying; the scale of $1,500 as maximum for a first-class clerk was made at confederation; could not get the postmastership at Ottawa, or if moved elsewhere the local patronage there would object, 822. Is under the old system of superannuation; if anything happened his family would get nothing; a person entering now comes under the retirement fund; he contributes and four per cent is added to it; there is an unwillingness on the part of young men to enter service on account of small pay on outside service; a person on inside service gets $400 more than a person of same class in the outside service; no one can understand it, and the man outside has far more responsibility; mentioned to Sir Wilfrid a year ago, he said it was the first he had ever heard of it, and would have it righted; young men who have passed Qualifying examination will not enter the service at $400; so they appoint men graded A. at $1.25 a day without having to pass examination; the result is they get a lower class of people; the change was made two years ago, 823. If these men show any ability they are promoted to clerkships on passing a preliminary examination in reading, writing, &c.; it opens the door to filling the outside with an inferior class of employees; and it often happens if these men cannot do the work the experienced clerks have extra work to do; office hours are from 8 a.m. to 6 p.m.; these hours are very disagreeable, especially in winter time; could not do it, had to take turns week about with assistant in coming down at 8 a.m.; we balance our cash at five after rush of work is over, work practically stops then and the money is locked up; up to two years ago the hours were from 9 a.m. to 4 p.m.; one or two people only enter office between hours of 8 and 9 in the morning; but of course as long as the office is open the number will increase; it is the same with the late hours, late people will get in the habit of coming in late, 824. Thinks there would be no difficulty in keeping same hours as the bank; they have to stay till 6 p.m. on Saturdays also; takes his three weeks' holidays; would like to mention the case of the young lady clerks; there are two in the office; the same injustice to people in outside service is apparent here; these lady clerks do responsible work in the office and cannot go higher in outside service than $800, whereas if they were in inside service they could get $1,100; women are certainly not able to handle mail bags, but they are very useful in the money order branch; would like to recommend that they abolish the mode of entrance to outside service without qualifying examination; they will never elevate the service by present means; if you insist upon a high standard of entrance, with corresponding pay, you will get good men in, 825. Suggests following scale of classification of clerks and increase of salary: fourth class to begin at $600 with yearly increase of $50 up to $800; third class to begin at $800 with yearly increase of $50 up to $1,100; second class to begin at $1,100 with yearly increase of $50 up to $1,500; first class to begin at $1,500 with yearly increase of $50 up to $1,900; to meet present conditions increase of ten per cent should be allowed; new rules laid down in regard to leave of absence of newly appointed employees: (1) no leave of absence until after six months of probationary appointment; (2) after six months of permanent appointment, one week of statutory three weeks; (3) after one year of permanent employment, if he has had one week, he may take the remaining two weeks; or the three weeks if he did not take any before; it is recommended that the annual leave to newly appointed employees be granted as follows: that annual leave due an employee be granted within that year, and so on for each year; if clerk is

PENNOCK, W. H.—*Continued.*

appointed during first quarter of year he should receive 75 per cent of annual leave; if appointed during second quarter he should receive 50 per cent of leave; if in third quarter he should receive 25 per cent; that in case of absence through sickness and upon production of a medical certificate to that effect, thinks the salary of the employee should not be withheld, 826.

Memo. of first-class clerks in outside service.—Draws attention to the pay of first-class clerks, outside service, in charge of money order and savings bank business in city post offices; maximum salary is $1,500, same as at confederation, though the work has increased to over $1,000,000 a year; thinks maximum should be increased to $1,900 as in inside service; also a chief clerkship should be made for clerk in charge of money order and savings bank business in cities whose revenue is over $1,000,000; table giving details in cities whose revenue is over $1,000,000, 827.

POPE, JOSEPH, C. M. G., I.S.O., Under Secretary of State, 40.

Under Secretary of State for eleven years; assistant Clerk of the Privy Council for seven years, twenty-eight years in the service; was connected with Behring Sea arbitration, the Alaska Boundary question and the International Commission at Washington in 1898; received $4,000 a year for the last four years; no extras; staff in 1892 was forty and in 1906, thirty-one; the revenue for the department increased from $60,700 to over $95,000, received principally from fees on charters for joint stock companies; a charge of $225 is made on a capital of $100,000, and from that up; a capital of $1,000,000 pays $500, and each additional $1,000,000 pays $100, 40. Revenue is about two and a half times the expenditure; in 1892 expenditure was $37,000 and revenue $6,000, in 1906 revenue was $109,000, with no increase in expenditure, revenue increasing all the time; in fact it is a revenue-producing department, with a net result to the good of $70,000 after paying all expenses; work under Naturalization Act involves much work, with unpronounceable and badly written names; there are two branches, with three chief clerks: the correspondence branch and the registration branch; in 1892 the Board of Civil Service Examiners had a separate organization, staff of several clerks costing $1,600 or $1,800 a year; now the board is administered by this department by two clerks at a cost of $300 or $400 a year; my experience shows that it is not always the most highly educated men who make the best clerks; would not have competitive examinations for the entrance, 41. No difficulty in filling vacancies by promotion; difficulty in getting good men from outside; there is an inordinate number of women entering the service; three women in this department; when women marry they give up their position; the employment of women, with some exceptions, is not desirable as a general principle, for as a rule women claim the rights of men and the privileges of their own sex as well; have never rejected clerks appointed on probation; after probation clerks receive automatically annual increments of $50 a year, 42. For increase of $100 a year a special vote of parliament is required; does not interfere with the Civil Service Examiners at all; statute says board shall be administered by the Secretary of State; never re-employs a man who has resigned; does not believe in present system of promotion examinations at all; when a man enters the service his promotion should be largely in the hands of the deputy; would be better if appointed by the Minister on the report of the deputy head, 43. Approves of transfers, but with concurrence of ministers of both departments; in the advancement of clerks with respect to rank or salaries, the deputy should have a greater say than at present; would be better for the department and should be well understood by the clerks that the deputy is the man they have to deal with;

POPE, J.—*Continued.*

practice now is that all get the increase who are not undeserving; it should be that no one should get it who is not deserving; deputies should be given larger powers with adequate salary, 44. Deputy should be at liberty, in the case of an exceptionally clever young fellow, to start him at $600 or $700 if he deserves it; section 86 allows you to suspend annual increment for misconduct; has in rare instances been compelled to advise suspension and stop salary during suspension, but has never taken away clerk's annual increment; with sanction of Minister interprets three weeks' holidays as including twenty-one working days; some clerks' hours of labour are longer than from nine to four, such clerks need a good rest; would insist on clerks taking their holidays, 45. Statute says 'deputy may, in absence of Minister suspend, words 'in absence of deputy minister' should be eliminated; Interpretation Act says ' head of a department includes the deputy,' and if those words were struck out the deputy could suspend at any time; for security of clerk would have an order in council for dismissal, because we hold office during pleasure; all without exception sign attendance book, which is closed at 10 o'clock; clerks work till the work is done, with one hour and a half for luncheon; as a rule office is open from 9 in the morning till 6 at night; is working under old Superannuation Act; those appointed since 1897 have an abatement from their salary but no superannuation; thinks it is very unfortunate and unjust to those who have entered service since 1897; thinks service has suffered greatly in consequence; many good men have left because of no superannuation, and many are being held in the service for the sake of superannuation which they expect, otherwise they would leave service to-morrow, 46. Sooner the Superannuation Act is restored the better; new appointees feel aggrieved that old officials have superannuation and they have none; thinks that the superannuation system should not only be restored but improved; many men here in a military capacity, if these are superannuated they draw their pension, if they die their widow and each child up to a certain age draw an allowance; civil servants have no such advantage if they die, their widows and children derive no advantage from the moneys they have contributed to superannuation fund; the Militia Act being enacted since Superannuation was abolished; number and salaries of clerical staff; under Naturalization Act in year 1906, 10,778 names of naturalized subjects were registered, classified, indexed, and returns filed for reference; under Ticket of Leave Act some 600 applications were dealt with in 1906; 294 tickets being granted, 47.

Memorandum: Would refer to desirableness of establishing a more systematic mode of dealing with *external affairs* of Dominion; it is a misapprehension to suppose that such matters are dealt with by this department; Secretary of State is primarily and principally the official mouthpiece of the Governor General in respect to *Canadian affairs;* is the channel of communication between Dominion government and the provinces, as Colonial Secretary is of the colonies; all communications he receives for transmission to England or a foreign country are forwarded by him to the Governor General, requesting him to transmit same to destination, &c., such communications relate to domestic matters; much, however, bears upon *external affairs,* such as our relations with foreign countries, Behring Sea Seal question, the Alaska Boundary, the Atlantic fisheries, &c., or questions, though within the empire which extend beyond the bounds of the Dominion, as the difference with Newfoundland over the boundary of Labrador; in such case the Colonial Minister addresses a despatch to Governor General, and by him sent to Privy Council or Cabinet, who sends it to Minister interested, who replies in form of a report to Privy Council; who if they approve advise that a copy

Pope, J.—*Continued.*

of the minute be sent to the Secretary of State for Colonies for information of His Majesty's government; thus far no uniformity of system or continuity of plan; practical result of system in vogue is that in no department is there to-day any complete record of such correspondence; it will soon be too late to change the system; even non it would be an extremely difficult task to obtain a complete record of any international question with which Canada has been concerned during the last fifty years; for instance, we would not know to-day in what department we could obtain information as to the ownership of the Island of San Juan; would suggest that all despatches relating to *external affairs* be referred to one department whose officials would be in close touch with other departments when to draw the raw material for their work; but the digesting of this information and its presentation in diplomatic form should rest with them, through, of course, the same channels as at present; no wish to change in that regard; every effort should be made to collect from the beginning all papers bearing on the questions indicated from offices of Governor General, Privy Council, the various departments, and from foreign and colonial offices; if not begun now it will be too late; the few men thoroughly conversant with these questions are growing old, and so far as I know will leave no successors; much information will thus be lost; would recommend that a staff of young men, well educated and select be attached to the department and specially trained in the knowledge and treatment of these subjects; such department could be under supervision of Secretary of State, whose department could be divided into two branches, one for Canadian and one for *external affairs,* 48-50.

Pottinger, David, I.S.O.

Hands in statements; for year ending June 30, 1906, $4,923,000 were paid in salaries; salaries vary from $150 to $6,000 a year; about 400 subordinate officers all recommended by members or influential persons; they pass no

POTTINGER, D.—*Continued.*

Civil Service examination, but the head of the office gives them a test as to their fitness, 1240. If not fit he tries to get rid of them; if he had more efficient men he could do with fewer; offices at Moncton are not overmanned; no stock registers and no board of directors; the work for a railway company does not require a very large staff; but there is the red tape of the government including the Finance Department, the Auditor General's Department, to look after, which other railways have not; Mr. Shannon is controller and treasurer; no great changes made except in the mode of keeping the accounts, 1241. An application book is kept; have twenty-seven different branches of the service at Moncton; in the offices the clerks are permanent, but in track department there are temporary employees; the pay of most of the higher grade officials compared with the Canadian Pacific Railway and Grand Trunk Railway, is very much less; the pay of other companies is higher because our men leave to go there; some cannot go as families, houses, relatives make it inconvenient for them to go, 1242. There are forty-three outside offices belonging to the traffic department and are used for securing business; a man in Ottawa going to Chatham, N.B., would go to Grand Trunk office and buy a through ticket; has four district superintendents over the four railway districts; officers were originally appointed on recommendation but now promotions are made according to a contract with the Telegrapher's Order; in transferring a despatcher from one district to another the affair is regulated by the schedule and are taken away from the political class; if a vacancy occurs it has to be 'advertised' by telegraph to all stations and the senior man who applies gets it, provided railway officials think he is competent, 1243. Rules were made between the railway people and the men; these rules and schedules have increased the pay of the men; in August there were 1,059 employees on whole line; the statements do not include the Prince Edward Island Railway, which is practically another district of the Intercolonial Railway in everything except capital account, 1244. All the breakmen, baggagemasters, yardmasters and conductors have their societies; if a brakeman is wanted he is recommended by the member, he is then soon got hold of by the union; union has never said anything about taking on new men; promotions are kept within the district; cannot be overmanned in the train service, as the men are only paid when they work; there are four shops; at Moncton there are 424 men in the offices and 1,083 in the shops, also track employees, 1245. Intercolonial Railway runs through twenty-nine counties in Quebec, New Brunswick and Nova Scotia; the demand for mechanics outstrips the supply; has power to secure the services of mechanics coming out as immigrants if they were needed; the Moncton shops are considered to belong to the whole line, and not merely to the county in which they are situated, the employees are brought from other counties; station masters, telegraph operators and baggagemen are paid monthly, porters by the day; if a station master's position were vacant, it would be 'advertised' over telegraph line and senior applicant who was qualified would get it; telegraphing is one of the principal duties a station master at a small station has to perform, 1246. Junior employees are learning all the work of a station on the railway; always many applications for vacancies, even from a man at an inferior station for a more lucrative one; moving expenses are paid; most stations have residences attached to them and considered part of pay; the schedule shows that where there is no residence an additional amount is paid in lieu of rent and fuel; the Intercolonial Railway is divided into sections running up into the hundreds, six miles to a section; the mileage of the Intercolonial Railway is 1,500 miles, in each section is a foreman and two trackmen; the number of trackmen required is regulated by the engineer

POTTINGER, D.—*Continued.*

of maintenance; can employ temporary men and dismiss them when no longer required, 1247. A very large number of men were employed in Truro last August, not on account of vacancy in Colchester though; August is one of the busiest months; the temporary men employed on the track are usually farmers in the neighbourhood; often the same men are taken on as extra men year after year; they have small farms, get through their work quick; district includes city of Halifax, where there is a good deal of work going on, enlarging the yard, also at Truro, that is why the number of men is greater at those places than in other districts, 1248. The employment of a larger number of men in certain places is simply due to the wants of the locality, not to pending by-election; spends about $5,000,000 a year in wages and yet are not overmanned; higher employees are all paid less in proportion to the other railways; but ordinary employees receive about the same; in purchasing stores the general storekeeper sends out circulars to the different persons in the trade recommended by members in regard to ties and lumber, posters are put out all along the railway and everybody can tender, the larger works are advertised in the newspapers for tenders, 1249. Tenders for coal are called from all companies in Nova Scotia and New Brunswick, and generally get a price below the lowest tender; the offers sent in by the principal coal dealers are the same in price; the other railways keep their business to themselves, nor do they publish their transactions; on the Intercolonial Railway every 5 cents is published in the Auditor General; publicity may be good sometimes; about 500,000 tons of coal are burnt yearly, costing $3 a ton; does not know if other large consumers get coal any cheaper; about $1,500,000 is spent annually on coal; there is no coal on hand now, generally try to have about 100,000 tons on hand in the fall; the Springhill mines strike affected our supply, 1250. Thinks the government pays more for the coal than it should, difficult to better it; pays duty now on coal, the policy of all governments has been that when an article is produced in the country to count the duty, if imported, add price of duty to it to compare with local price; posters for ties are put out every year in August or September for public tender; prices will be higher this year; the other railways also buy ties in the eastern provinces; castings are got by tender; circulars are sent out by general storekeeper to iron founders in the locality, and lowest tender is accepted for one year, if satisfactory contract extended, 1251. The prices of general stores fluctuate very much, and in contracting for a year the contractor or the railway might lose, and it is difficult to hold a contractor if he is losing money; we believe our credit is good, that merchants will sell us stuff in small quantities at wholesale prices; the locomotives are supplied by the Canadian firms, 1252. The supply is always called for by tender; rolling stock is called for by circular; no locomotives are got now from the old country; for lumber, posters are put up at all stations on the railway; the rough lumber is required for the repair and erection of buildings, also for rebuilding and repairing cars; thinks they get the lumber, ties, and castings as cheaply as they ought; under Act passed last year establishing a retirement fund 103 men have been retired; government contribute to the fund the same amount as the men, not exceeding $100,000 a year, the men contributing 1½ per cent of monthly salaries; has been in operation about seven months, 1253. On retiring a man receives 1½ per cent of the average monthly pay for eight years before retirement; if a man's pay is reduced, the reduced price is not considered in granting allowance, but the pay before reduction; Act provides that in no case shall monthly allowance be less than $20; fund is managed by a board of the employees, the general manager is ex officio a

POTTINGER, D.—*Continued.*

member of the board and chairman; the Minister appoints two members from the officers and the men the other two, making a board of five members; rules were primarily drawn up by the employees and officials of the railway and revised at Ottawa; draft Act went through hands of lawyers and actuaries; 103 have retired under the fund at their own request; a man is not retired before sixty years of age unless disabled, or physically or mentally incapacitated, 1254. About 100 more it is desirable to let go; this being the first year there are naturally more retirements; if not able to retire all who ask some must wait till funds are sufficient; most of those retired will have to be replaced; men at seventy or seventy-five can look after a crossing, or be a watchman as well as young men at twenty; in getting rid of some men by retirement the fund will tend to economy; is certainly in favour of system; doctors are appointed by the board, 1255. Applicants for retirement are sometimes sent a distance from their homes for medical examination; Act applies to all who are considered permanent employees, labourers, clerks, &c., 1256. Sends statements showing number of employees, permanent or temporary, with salaries paid: also statement showing various grades of salaries paid to officers in the several services, 1256, 1257, 1258, 1259.

POWELL, J. B., Collector Inland Revenue, Guelph, 396.

Has been thirty-four years collector of inland revenue at Guelph; Mr. Kenning is inspector of this division; with regard to 'duty-pay' one case especially, Berlin, where collections average $100,000 a year, there is only one officer there who does his work satisfactorily; revenue of Guelph division is about $700,000; six men in Seagram's distillery; in this division there are six malt-houses, seven breweries, eight cigar factories and three large bonded warehouses; duties on Seagram's whisky are collected in the divisions to which it is removed; total volume of business is not really represented by collections; thinks the per diem allowance when travelling is a better system than the present one; exigencies of travel entail expenditures which cannot very well be put in, especially with relieving officers who feel that allowance for board does not by any means cover personal expenses; officers in this district are occasionally removed to other districts, being allowed transportation and personal expenses, 397. Including a week; board for family; thinks it would be more beneficial to have frequent changes.

PURCELL, JOHN, Railway Mail Clerk, Ottawa, 788.

Is a railway mail clerk since 1888, receives now $1,000 and mileage, and is out four days a week, his run is from Pembroke to Ottawa and return, 105 miles each way; is on work two days and one day off; is on this run for ten years; there are nearly fifty railway clerks in Ottawa division under one superintendent; a controller is the only officer above the superintendent; about 450 mail clerks altogether under the one controller; highest pay a railway mail clerk gets is $1,200 and mileage, 788. On run between Toronto and Ottawa there is a man leaving at night from each end, and they run right through in pairs; on a run like the Ottawa and Fort William where a man has to sort for every railway post office and post offices of cities and towns, a good deal of headwork is required; the older a man is the more the jarring and vibration of the train affect him, very few living to be superannuated; thinks the English system of changing from outside to inside service is beneficial to the state and the men, 789. Under present system there is no hope of a man getting any promotion; for being constantly on the road their nerves are shattered and they become unfit, at an early age, for public service; is supposed to get three weeks' holidays, but to get them has to double up time; a man has to know every post office in Ontario and to do 90 per cent of distribution correctly; all sorting of mail is done on cars, except through bags; in 1903 the scale was changed, classes abolished and $240 added to maximum; complains that mail car being next to engine is much harder to ride in, would like it further back, 790. Cannot sort the mail sitting down; one is all the time making up mail bags and taking in mails, sorting newspapers and h ndling registered matter; at present there is a dearth of candidates for vacancies in railway mail service; does not think restoration of Superannuation Act would encourage men to remain in service; witness was in wreck, saved most of mail but lost his own clothes, but received no recompense, 791. Does not know whether any annuity was ever given to a widow of a railway mail clerk killed on duty; there is no provision made for widows or dependent young children, it is at the option of government; no system of government insurance on our lives; only labourers at $1.50 a day are doing the work of railway mail clerks; they are a very poor class, 92.

Memorials.—Railways and Canals, Lachine, 1215.

Reed, Alexander H., Messenger, Railway Mail Service, Toronto, 1045.

Was appointed messenger fourteen months after entrance in 1902, passing examination in November of that year; received $1.25, now $1.75 a day; complains of delay in his appointment which kept him back in his advances, also that he is doing the work of three departments, the railway mail service, the dead letter and post office inspector's departments, all are on same floor; office hours 8 a.m. to 5 p.m ; receives about $550 a year less 5 per cent for retirement fund; or about $10 a week, not enough to keep up his home on; has to handle valuables, registered letters and valuables, government money to and from bank, also does a good deal of secret service work, 1045. Works on holidays but not on Sundays; did not know on entering what the salary would be; did not think it would be a boy's pay; his predecessor was getting $12 a week, 1046.

Registrar of Trade Marks, &c.—See *Memorials, Agriculture, &c.*

Reid, M. P., Keeper at Penitentiary, 569.

If prisoners were doubled up Kingston would hold 800 or 900, 564. At time Act came into force the Minister appointed certain officers and the warden appointed the guards, 568. Difference between keeper and guard; there is a limit to number of persons entering penitentiary; they are shown the buildings, but would not come in contact with prisoners; has been in service ten years; salary $700; the keeping of the gate is considered a responsible position, 569. Always on the *qui vive;* prisoners seldom escape; cites one case; keepers suffer the same as the guards as to disabilities, 570. Presents statement of M. J. Kennedy, messenger; was removed from his quarters at west gate, the house was tumbling down, this man was one of the few that did not receive any increase of pay under last Act, still there is no better man in the service; recalled: is thirty-six years of age; was appointed under new Act to new position of gatekeeper and armourer, is responsible for the arms, and for everything going in and out of prison; as keepers go off the guards get promotion in point of seniority, which means an additional $100 a year, and upon retirement an increased gratuity based on salary, 571. In many cases criminals on release go back to place of conviction and are soon sent back to us, 575.

Renaud, Oscar, Elevator Man, City Post Office, Montreal, 1154.

Submits case of elevator man working from 7.30 a.m. to 7 p.m.; there are three, and are paid $50 a month each; last man appointed on elevator receives $60; took up 2,987 persons in elevator in six hours; they run the passenger elevator and do more work in one day than freight elevator men do in two weeks, and should have 25 per cent higher salary than they; both elevator men, passenger and freight receive same pay, $50, 1154.

Ridout, J. G., Assistant Receiver General's Office, Toronto.

Produces memo. from Mr. Creighton, assistant receiver general; was appointed in 1872; a teller in Bank of Commerce was wanted, the previous teller left suddenly, parents being in Toronto; entered service at twenty-seven years of age, three persons composing staff; in connection with office had a savings bank branch, which being found unnecessary was abolished two years ago; there are only four in office now, 216. Entered at $800, receiving now $1,700; Mr. Creighton, a very capable man, succeeded Mr. Campbell; Mr. Creighton was financial critic for Opposition in local House, 217. Clerks at various places get different salaries; is not aware Mr. Kane passed any examination; receives $600 a year; no chance of promotion as in the banks; holi-

RIDOUT, J. G.—*Continued.*

days three weeks, during which we relieve each other; inspectors come from Ottawa; they count the bags of gold and weigh them; count also the bags of silver, which are as they came from the mint, 218. They count the copper and the notes; mutilate the notes by gouging out the signatures with a chisel; once a note is not fit for circulation it is destroyed; the $1 and $2 notes are signed at Ottawa; the big notes, $500, $5,000, are signed by an officer from Ottawa, they are not trusted through the express company; our work greatly enlarged by increase of branch banks, 219. Larger portion of our work is from notes taken in by large stores and railways put up in one hundred notes at a time; if an error in counting is found it is reported to the store or railway; bankers say it is our business to sort notes, and we say it is not; we say if you have too many notes for issue we will exchange for large notes; if you have many unfit for circulation we will redeem them; it is marvellous what becomes of coppers from children's savings banks; we do not take in any coppers; big stores take from us many coppers; there is a shortage of small silver just now, particularly ten cent pieces, 220. We are frequently asked to take in the small silver from the banks; we do not always take it, but send them orders from other banks; present circulation of small notes, ones and twos, is about fourteen millions, 221.

RILEY, CAPTAIN JONES, Superintendent of Pilots, Montreal, 682.

Went to sea in 1856; in August, 1878, engaged in marine insurance business, when he returned four years ago and got government position; is superintendent of pilots, examiner of masters and mates, and director of Nautical College; district extends from Montreal to Quebec; reports examination papers to chief examiner at Ottawa; gets no salary as examiner or as director of Nautical College; lectures each year; government took over the pilotage in 1894, was first superintendent at salary of $1,600; keeps record of superannuated pilots; pilots when under control of Harbour Commissioners accumulated a fund out of which they are superannuated as they become old, 682. $63,997.75 to the credit of the pilots' pension fund: the shipping interests are taxed for pilotage of this district; the different lines select their own pilots; those not selected are called 'tour de role' men, and take their turn; some pilots earn as much as $3,000, others as low as $240; pilots can only enter at sixteen; they apply with parents' consent, send certificate of physical ability from family physician; baptismal register; certificate showing their fitness in sight and hearing; must speak English and French; must serve as apprentices for five years; ten senior apprentices are selected in rotation to form the 'ten select list' who go in the big ships with branch pilots and learn to handle the big vessels; when a vacancy occurs those who have served five years or more are examined; after passing examination they still continue on roll of selected apprentices and are not branched until there are vacancies in regular roll of fifty; *Bavarian* was not stranded in this district, was a case of gross carelessness, for which the captain is as much responsible as the pilot, because having a pilot on board does not relieve the captain of responsibility, 683. Every case of stranding is investigated, and witness is called upon to act as assessor without remuneration; more beneficial to fine pilots if guilty, if they are regular line pilots they are reduced to 'tour de role' men and fined as well; in case of drunkenness or gross incapacity they are dismissed; it is better to discipline the educated men you have than to try to get new ones; after dismissal they are never reinstated; for all his work witness gets $1,600, same as at his appointment; man must serve as mate for twelve calendar months before he gets a master's certificate; a pension fund is certainly desirable for the service generally and for the

Riley, Capt. J.—*Continued.*

men, 684. Thinks $2,500 a year would be a proper emolument for the services he performs; he left a position of $6,000 on retiring from business; is called upon to act as assessor; is an expert in marine insurance; would like to mention case of his assistant; entered four years ago at $75 a month, he keeps all the books, draws all the Trinity due bills for every ship coming to our office, &c., has had no increase, all have had an increase but he; nor does he know why he was left out; has a family of twelve children; a very efficient man, knows that he was promised a raise of $300 a year, 685.

Rinfret, Dr. C. J., District Inspector, Inland Revenue, Quebec (letter), 373.

Classification of service; work in Excise office of technical character, officers appointed on probation without passing Qualifying examination be appointed as third-class; a special case in Quebec office: a bookkeeper appointed twenty-seven years ago, has done work of accountant, is a third-class officer; has no superior in Canada, has only $850 a year; submits when a man has for a period of twenty years or over been in charge of the books of a first-class division as accountant be dispensed of promotion examination; present examinations best way of testing an officer's capacity; maximum salaries of district inspectors not increased since 1873; since then cost of living has increased 60 or 70 per cent, revenue doubled; duty of deputy head to show importance of this position and responsibilities; that he is head of all the excise, weights and measures, gas and electric light, all of which require a deal of attention, 373. Mr. Coleman was transferred from Montreal, here as surveyor of tobacco and cigar factories; position that of a special officer, but given to a first-class officer; one of following alternatives is just, either put a special officer there, or leave responsibilities to a first-class officer and give him salary of the special class; he is a first rate officer and filled position for fifteen years with entire satisfaction, 373.

Evidence, 375.—Submits memorandum of collector of Three Rivers and one from Paul Gravel, all asking that annual increase of salary be ten per cent instead of five; of five per cent for every one in service over ten years, also that any officer should have right to take superannuation and retire after thirty or thirty-five years' service, 375. Travels between ten and twelve weeks every year; is obliged to go to these places four times a year; thinks correct system would be to pay actual expenses; revenue in 1899 was about half the present year; there is now a distillery in the division, 376. Four breweries; production of cigars and tobacco more than doubled; present salary $2,500, other salaries were increased four years ago; claims increase of salary not on personal merits but on increased cost of living; is of opinion that the organization is a little better than formerly; thinks that people wanting to enter service now are as good as formerly; the bookkeeper is a third-class clerk; passed no examinations, entered service twenty-seven years ago; kept books all the time; is an advocate and fifty-three years of age, 377. First-class exciseman; entered department twenty-two years ago; was transferred from Montreal to Quebec; passed first-class examination; wishes to go back to wife and family in Montreal; receives duty-pay at Quebec but would rather return to Montreal without duty-pay; thinks in some cases officers passing Qualifying examination should receive third-class grade; people doing work of a technical character should be made permanent and entitled to maximum salary; is not in favour of present system of retirement; would suggest a system of superannuation entirely at cost of government; a business man when he gets old is still carried on by firms; but public officer can

RINFRET, DR. C. J.—*Continued.*

do nothing when he retires; a man grown old in service of government should be allowed something to help him, 378.

ROCHON, ALDERIC, Montreal (letter), 1154.

Works thirteen hours every night, Sunday included; has worked for six years at Côte St. Paul power-house; works ninety-one hours a week for which he thinks he is not sufficiently paid, 1154.

ROLSTON, E., Letter Carrier, Hamilton, 963, 983.

House rents in Hamilton have doubled the last ten years, and in some cases trebled, 963. Represents carriers under old Bill and who did not come under new Bill; the carriers in Hamilton cannot live on $49 a month, clothe and educate their children properly; states his own domestic misfortune, has been in service twenty years and is no further ahead than when he started; there are twelve other carriers still under old Bill, not wishing to give up privileges, such as sick pay, &c.; on entering service they worked for a small salary, understanding that one of their privileges would be sick pay; asks for more pay for these men as they cannot exist on present salary, 983-984.

ROSS, GEORGE, Chief Post Office Superintendent, Toronto, 1035.

Does not think there are too many grades, as young men entering must be trained in various branches passing from the lower to the higher and more responsible grades according to ability; there are over 11,000 post offices to be learned before a man can be 'routed,' also distribution to United States is very extensive; carrier is at first put on less important 'walks,' then the more important; one man lately from Scotland is a wonder and made great progress; were appointments made on merit we would be charged with favouritism; there are about 700 carriers; was appointed superintendent of the post offices of the Dominion; is in service thirty-two years; entered Hamilton post office as stamper and sorter, appointed superintendent of Hamilton post office, transferred to assistant postmaster at Toronto and then to present position; duties of his office, 1035. Inspectors as a rule have either grown up in service or appointed from outside; his salary is $3,800, with rooms in building; system of authorized medical examiners was tried for men who claimed sickness, question arose whether certificate of one doctor was not as good as another, controversy became warm and system dropped, 1036. Has happened that carriers through poverty or one reason or another have had pay deducted on account of sickness and not calling a doctor; is of opinion that the department would recognize claim of a carrier who merited receiving his pay; suggests a revision of the scale of salaries of stampers and sorters; that in an office having a revenue of $100,000, a superintendent of letter carriers be appointed; there are 150 carriers and twenty-five relief carriers; also assistant postmasters in offices with revenue over $500,000, have a higher salary; letter carriers without bags, is against regulations, 1037. Bags should invariably be used to protect valuable mail matter from weather; carrier entering hotels in uniform is first cautioned, reprimanded and dismissed; loiterers are treated the same way; observations from over thirty-two years are contained in his report; does not know if Deputy Postmaster General will endorse his views; has not gone into the subject with him, but made report, recommending a new scale of pay for letter carriers, 1038-1039.

Memo.: During thirty-three years of active life has frequently been called on to express his views on questions affecting employees of city post offices, conditions of their employment and pay; with regard to first demand of letter carriers, the pay of between 600 and 700 men has received careful considera-

Ross, George—*Continued.*

tion; paying 'grade' men by the day was adopted not with view of stopping pay for absence, but to promote regularity of attendance and steady application to duty from day to day; formerly when not under 'grade' pay, but yearly salary men did not feel obliged to observe regularity in performance of duty required by the public; carriers knowing they would receive their pay did not report for duty on the plea of slight indisposition; also notice of inability to take duty just in advance of hour set for commencement of delivery, was sent to the office, thus throwing on management the responsibility of rearranging or subdividing a route for a substitute at short notice; would not be to interest of public to revert to old system; simulation of disease—malingering—is an old story and difficult to detect, many instances of medical certificates granted that men were ill, though proved afterwards that examination had been negligent, and indispositions were result of overdose of stimulants; this, however, is not the rule, but in majority of cases doctors do their duty; medical profession is becoming overcrowded, and holding their clientele more difficult, yet some are found even in the medical profession, desiring to hold their clientele yield to temptation to sign a paper to please the malingering employee on his statements as to symptoms, &c., without serious examination; nearly all cases are detected later on; the old saying 'an ounce of prevention is worth a pound of cure,' and the withholding of pay has solved the problem of dealing with malingering employees; policy of department in dealing with each case of illness on its merits was adopted in best interests of the public, and its success justifies its continuance; it is still the privilege of department to grant full pay to deserving carrier in every genuine illness of any duration, and there are many instances on record of carriers even under 'grade' system being thus paid, 1040. There is no discrimination against letter carriers in dealing differently with them and other classes; the special cases of the letter carriers demand special treatment, the work cannot go on by default, even a single delivery; each 'route' or 'walk' must be represented by a carrier acquainted with the arrangements of those residing on it, some wish mail matter delivered at one door, others at another, some in boxes, others personal delivery; thus a temporary substitute cannot give satisfaction, and must make many mistakes, and takes a longer time to effect delivery; the same conditions do not exist on 'inside' service, where if a clerk absents himself his work falls on his associates for a time; but there are instances where pay of these clerks has been withheld; yearly pay-sheets show that during 1905-6 only $4,542.80 was deducted for absence from entire staff of carriers, under the 'grade' system, or an average of $8.33 per man; the Act rather favours the men, that besides the two weeks' leave of absence with pay, each carrier is granted an additional leave of absence with pay of ten days, or a bonus of $2 for each day of additional leave; the carrier having option of pay or bonus; the latter ten days given with the object of allowing the carriers day 'to come and go on,' to compensate for occasional absences; amount paid in cash bonuses 1905-6, was $8,754.24, or $4,211.44 in excess of deductions for absences; the carriers gain instead of losing by present policy; they are more punctual in reporting for duty, and are giving the public a more efficient service; with reference to the 'sick pay' of the carriers the present policy be continued; every effort is made to give an 'eight-hour day' but cannot fix a hard and fast rule, the aim is to give a prompt and effective service where free delivery is in operation; service should be elastic, to be adapted to the irregularity of train and steamboat connections, 1041. Pay for overtime cannot be entertained; public demand an early delivery; 'routing up' or arranging mail in order of delivery is now done as much as possible by night work to relieve

Ross, George—*Continued.*

carrier from too early morning arrival; nor can a later hour for beginning day be considered; thinks the comparisons of carriers with unskilled labourers should not be made, as many of carriers are unfitted for heavy manual labour, or as policeman or fireman, doubts if 7 per cent of carriers would be physically equal to task; thinks also that 75 per cent of carriers would not be employed by employers of labour, with their present pay and allowance of clothing, boots, street car fare, and holidays; among letter carriers all trades are represented by one or another; then why did they leave their former employment to enter service; either they were misfits or the wages were not as good as that paid by department; in other trades hour wages may be higher, but there is no broken time, 1042. Gives details of pay and physical requirements of Toronto police and firemen; carriers' uniform and boots save a great outlay on the part of the men; in addition to above, $180 yearly is given to men as living allowances in Winnipeg, Calgary, Edmonton, Vancouver and Victoria; has considered question long and carefully and concludes it would be in the interests of the service and the public to grant a reasonable increase of pay to carriers and all employees in the same graded class, as follows: grade 'A,' $1.75 a day subject to probation of one month; grade 'B,' $2 a day for eleven months; grade 'C,' $2.25 a day for one year; grade 'D,' $2.50 a day for one year; grade 'E,' $2.75 a day for one year; above scale granted by increased cost of living, as well as past good conduct; but considers that no radical change in policy of department is warranted; also that salaries of clerks in city post offices, as stampers and sorters, be on appointment $500, with annual increase of $50 up to $600; gives scale recommended for salaries of fourth, third, second and first-class clerks, 1043. For messengers, packers, porters, carriers, mail transfer agents, box collectors of inside or outside division and paid according to 2 Edw. viii c. 28, shall be paid: grade 'A,' per day $1.75; grade 'B,' $2; grade 'C,' $2.25; grade 'D,' $2.50; grade 'E,' $2.75; in grade 'A' on month probation period; in offices with revenue of $100,000 a superintendent of letter carriers may be appointed at $900 with increases of $50 up to $1,000; in offices with revenue of $500,000 assistant postmaster's salary $2,000, with increases of $100 to $2,600; provision should be made in Act transferring carrier to clerkship and vice versa; and conditions under which it could be carried out; every branch of service should be within reach of any civil servant with requisite ability, industry and push; merit alone being password for promotion; the Superannuation Act should be restored; it was a great incentive to good men to remain in the service, giving department benefit of experience and knowledge, knowing that after a term of years they would receive superannuation at an amount which would, with economy, enable them to live in comparative comfort, 1044.

Ross, James W., Letter Carrier, Ottawa Post Office, 847.

Has been in service seventeen years; since his entrance has received the Irishman's promotion; on entrance had passed the Qualifying examination; worked as a letter carrier for twelve years, was then put inside to do clerk's work; did not want to go inside, but obeyed and asked to be made a clerk, but never got it; when new Bill came in took benefit of it, got $2.25 a day, but lost his free boots and free rides on the cars; has no black mark against him, nor been suspended; has asked both Mr. Coulter and Mr. Bates about being appointed clerk, but nothing has been done; is married, with a family; has a house of his own, but government should not take advantage of what a man has, if he gives his labour honestly and truly he ought to be paid for it; Mr. Warwicker claims that letter carriers who have studied their duties and

Ross, J. W.—*Continued.*

out from table how many dollars he would have to pay; the advice of every are acquainted with the work of the branch make better men for inside than by bringing in outside clerks; it would take a man from outside two years to do work of sorting efficiently, 847. Is competent to do clerk's work, having been a school teacher for nine years; thinks twenty-five years long enough service before retirement; must have served thirty-five years to get full retiring allowance, which is seven-tenths of our salary; thinks he would have been better off if he had not entered the service; went into it because at the time was troubled with rheumatism and wanted to work in the open air as letter carrier, 848. The work seventeen years ago was far easier than now, and more carriers in proportion to do the work; could not have stood the work then if it had been as heavy as now; failed in first examination and tried a second time and passed, 849.

Ross, W. L., Temporary Excise Officer, Montreal (letter), 321.

In service seven years, a widower with five children, and cannot afford a servant; expenses monthly $83.39, receives small monthly salary of $41.66; impossible to make both ends meet without other employment; asks sufficient salary to live on; if found satisfactory in his present position that he be made permanent, 321.

Rowan, Walter, Superintendent, Money Order Branch, Ottawa, 829.

Is superintendent of the money order branch of Post Office Department, has been in service thirty-three years; receives now $2,150; money order business has trebled during last few years; advices of money orders issued on a foreign country are sent to Ottawa to be converted into the money of the country in which they are payable; if money is for Italy it is converted into francs; then it is listed into the lists which give the whole particulars, the number of the order, place of issue, name and residence of payee, name of remittee; Italian department selects place of payment; full address of person to whom payable is given and they make it payable at most convenient office, 829. Each individual order is thus listed; Canadian order does not go to the foreign country, but a new order is issued at international money order exchange office in Italy; but to start again and make up the list at Ottawa for Germany say; there are two columns for money, one is for dollars and cents, the other for marks and pfennings, the two columns are added up and the total is converted at table rate, if individual calculations are correctly made they agree; another clerk also goes over the figures to check the first; this money order exchange was started in Montreal in 1883; then all orders went to Montreal; branch was brought to Ottawa last November because at Montreal at Christmas time office was always overcrowded, business would get two or three days behind, now it can be watched every day and help obtained from the money order branch, 830. 'International Money Order Exchange' is a term used in United States; does not think it is used in England; all foreign work is done in comptroller's office in London; only in one case in his memory has an error occurred, the slip accompanying the advice giving all the information had been detached from the one it belonged to and attached to another, and thus the clerk made the order payable to wrong person; every clerk working on foreign list is responsible; Mr. Larivière, who is responsible for rest, was a second-class clerk in Montreal and made a first-class clerk here, 831. Suppose a man in Montreal wishes to send money to Germany, he goes to the regular money order office, pays his money and gets his receipt, the advice containing the particulars of the order is retained here; the money order is written right there in the post office; the money is collected there; if you said you wanted to remit so many marks, you find

ROWAN, WALTER—*Continued.*

foreign money order is sent up to Ottawa; he gets his receipt which says it is payable there; on receipt money has been changed into foreign currency; Post Office Department of Canada has made an arrangement with these foreign countries, and we have to abide by the convention; a convention is made with each country and signed by the Postmaster General here and Director General of Posts in the different countries, 832. Every three years all the nations of the world meet together in postal conference; they arrange about international despatch of money orders, &c.; all are parties to the agreement; there is sometimes a special agreement with individual countries. like Canada and United States, these two countries have a special arrangement; in settling with foreign countries, we deduct our credit from theirs and the balance is paid by the High Commissioner for Canada in England; all who signed this memorial are new people appointed here in Ottawa; thinks $600 is only a fair wage in the beginning, 833. Thinks a man cannot live like a respectable man on $400 a year; and that $600 should be the minimum; two women are employed, but the hours are too long, from 9 a.m. to 6 or 7 p.m.; the work is very heavy, as fifty men were at work from November to first of January, 834. Office is on fourth floor in post office; the staff are under witness, but they are on the Ottawa city post office pay-list, as they were previously on Montreal local pay-list; does not want them on the inside service, but it is advisable to have them at Ottawa to carry on work promptly; took on any one at Christmas who could write a decent hand and add up figures; recommended by politicians; these people are examined as to their qualifications for the permanent positions, but not for temporary positions, 835. There is the same rush of work in New York at Christmas. extra hands are engaged till work slackens down; on coming in at $400 one must pass Qaulifying examination, the law allowing them an increase of $50 a year; a promotion is supposed to take in the judgment of the superior officer, who makes a report on the qualification of a man; still does not believe that a young man should start off at too high a salary; a start of $600 with the opportunity of going to $800 would be satisfactory; these men on money order exchange are not regarded as esteemed foreigners but as part of the city post office staff, 836.

ROY, CHARLES E., Inspector of Weights and Measures, Quebec, 369.

Present district includes twenty-one counties and city of Quebec; nine assistant inspectors, seven permanent and two recent appointments not; salary $1,400 since July last year; officers travel year round except in December, January, February and March, being expensive to travel in winter time, 369. Assistant inspectors receive only actual cost of travelling; in some cases they inspect annually, in others every two years; inspector on going into an establishment ascertains capacity of scale, the work is stopped, all scales inspected, and then given certificates; on first inspection scales are marked. then every two years certificate given not to destroy scale; one scale factory in Quebec visited every day; some scales are brought in Quebec from outside; in a place like Bic or Cacouna law provides that scales without being inspected may be sent by the Intercolonial Railway or by boat, a merchant being allowed to use scale till next visit of inspector; scales are stamped before leaving Fairbanks' Company; if any were found unmarked are reported to department, 370. Has been increase of inspectors in proportion to increase of work; scale of salaries fixed by Act in 1872, and no increase of salaries for thirty-five years; now salaries should be increased in proportion to increased cost of living; in some places there is a deficit, in others a surplus, 371.

Roy, George, Chief Inspector of Hides, Quebec, 1275.

Presents memo. supporting compulsory inspection of hides; is the only inspector at a fixed salary, others paid five cents a hide and cuttings; assistants can make $250 or $300 a week; no revenue for government; acts as judge; seven cents a hide is charged in Quebec; is chief inspector for whole Dominion; was appointed in 1897; position created at request of tanners; was formerly a tanner; has had no increase of salary since appointment; salary not worth as much to him now as when appointed on account of increased cost of living; travels a good deal in Quebec, visits tanneries at London, Toronto, Montreal, &c., 1275. On travel he receives bare expenses; visits localities in city of Quebec four or five times a week; does not visit outside of province unless requested by government; requests same salary as inspectors of grain, having more responsibility than they; has no assistant in office, reports yearly to Ottawa; incloses memoranda regarding hide and leather trade, 1276.

Memo. regarding hide and leather trade.—Canada produces from 2,500,000 to 3,000,000 large green hides a year of a value of from $15,000,000 to $18,000,000; amount increases 60 or 70 per cent when tanned and finished into leather; advantages of good inspection to parties interested are from 1 to 1½ cents a pound; cannot have uniform inspection without chief inspector's interference; a tanner on a carload of 40,000 pounds weight of hides wrongly inspected may lose from $100 to $600, for bad classification, and matter of all kinds put on hides to increase weight; in places from 60 to 70 per cent of hides that could have been of best quality are classed as No. 2 and No. 3 on account of knife cuts; in Montreal and Toronto they produce from fifteen to eighteen carloads of hides per week, and through good inspection they get the highest prices; fresh hides, weighed by inspector are cured with salt only, when not officially inspected, sand and other weighty matter is added to salt for extra weight; hides well cured give tanner from 5 to 12 per cent more weight in leather; often goes to tannery to see hides weighed; green hides are the raw material necessary to supply the largest industry existing in Canada; there are about 500 important tanneries in Canada; his position is one of great importance, but salary is not in proportion, in fact less than other chief inspectors; grain inspector at Winnipeg gets $5,000.96; at Fort William, $3,449.92; at Montreal, $3,000; local hide inspector at Montreal makes $5,000 a year, the one at Toronto a like amount; his expenses have doubled on account of high price of living, 1277-1278.

Roy, Jean, Caretaker, Post Office, Quebec, 1165.

Salary of $700; has to pay his charwoman $300; does his work at night; has quarters, also fuel and light in the building; without the help of his relations could not live on present salary; thinks $500 a year net would be reasonable pay, 1165.

Royal Northwest Mounted Police.—See *White*, 761.

Royer and Crochetière, Mrs., Charwomen, Montreal (letter), 1153.

Petition for an increase of wages on account of great cost of living in Montreal; they receive now 75 cents a day and ask for $1.25; one of them has been charwoman for nineteen years, the other about ten years, in the post office building, 1153.

Samson, A., Dockmaster at Lévis Graving Dock, 1166.

Has been for eight years dockmaster at Lévis; started at $1,000, now $1,500; has built about fifty vessels; Lévis is a modern dock in good condition; more vessels enter now than formerly; the dock pays its own way; has a chief

SAMSON, A.—*Continued.*

engineer, assistant engineer, fireman, messenger, clerk, two carpenters and a labourer; gets prices of coal from merchants and submits them to chief engineer; thinks he ought to get a little more salary, 1166. The same as his predecessor, $2,000; gets nothing but his salary; time is fully occupied on the dock; in winter repairs the slips, pontoons, houses, engines and boilers, cut away ice; dock is practically open for seven months in the year; staff is not too large; chief engineer, fireman, watchman, the clerk and witness are paid by the year; when tides are high can take in vessels drawing from 22 to 23 feet, 1167. Does not think it desirable to take in the government vessels at Quebec for repairs rather than a large steamer of the Richelieu Company; cannot get men at same pay as formerly; wishes to mention the case of chief engineer, who is only getting $75 a month, has been in the service twenty-four years; he is a first-class man, 1168. Would get $100 a month outside; second engineer, besides being a mechanical man only gets $60 a month; could act as an engineer on a ship going across the ocean, getting $70 a month; fireman gets $40 a month, should get $45, 1169.

Letter: Further remarks: Mr. McDougall, first engineer, worked first for government in 1877 as engineer of lifting barge, later transferred to graving dock in 1886, his salary from 1877 to 1893 was $50, and from 1893 to now, $75; is a first-class engineer, with great amount of work and increased cost of living $100 would only be fair for a man like him; Despres, second engineer, began at $45, two years later received $60; has to work night and day, without extra time; is a good machinist; can get from $80 to $85 at the cartridge factory, Quebec; Lemelin left last year as he could not live on the $40 a month he was receiving; his successor, C. Bourassa, hopes to get $50 soon; thinks all employees placed by official letter should get reasonable salary to save something, as they are not in the pension fund, 1170.

SCOTT, THOMAS, Collector of Customs at Winnipeg, Man., 175.

Twenty years collector; revenue over $4,000,000; had a salary of $3,000 with free house, fuel, light, &c., now receives $4,000; could earn more outside; salary limited; if revenue amounted to $40,000,000 salary would not vary; there are seventy-eight officers at Winnipeg, or whom forty are permanent; rest are permanent temporaries during good behaviour; surveyor appointed two years ago, put over the heads of others, 175. Mr. Thompson is the principal officer, and is acquainted with the management and working of the port; all the officers were appointed without examination; when another officer is required application is made to Ottawa, a man is sent and put to work; beginning on the temporary list at $800; during last two years these employees have been getting an annual increase, but no sum is fixed; sum is arranged each year at Ottawa; the Act does not give annual increments to outside customs officers; of the appropriation granted last year Winnipeg received about $8,000, 176. Lost, three years ago, the best men we had on account of salary question; has not lost any since then; Mr. Eadie was appointed appraiser two years ago, was formerly preventive officer at $1,200; preventive office is a misnomer; extra pay is allowed for extra service; they get 30 cents an hour for overtime ,177. Men do not consider 30 cents an hour any emolument for overtime; if we had more competent men we could do better work with fewer men; men feel there is nothing to look forward to having no retiring allowance; Inspector Young examines our office whenever he likes; in the appointment of officers the member exercises the patronage with consent of executive committee, 178, 179.

SECRETARY OF STATE, DEPARTMENT OF THE.—See *Pope*.

SHEPPARD, N. B., Clerk, Interior Department, 492.

Is a clerk in the lands patent branch, wishes to become permanent and an increase of salary; such is also the impression of all the draughtsmen in the topographical surveys office, 492 Was a surveyor for several years; desires vacancy caused by resignation of E. W. Hubbell; his qualifications for the position; is now preparing descriptions in the Dominion lands patent branch, 493. Prepares patents for homesteads, sales, special grants, in fact all patents except railway lands; topographical surveys branch is under control of surveyor general; was transferred from surveyor general's office to take charge of the fiats and descriptions in connection with the patents in the head office; thinks there are others in the service as long, who desire salary of $2,000 and permanency, 494. Once conducted a party in the field in province of Quebec on a cadastral survey; having the position that was left vacant would like to have salary attached to it; seventy or eighty people in the lands patent branch, most of whom are permanent; a greater number of temporaries should be made permanent, 495. Many got positions through a circular which was sent to certain colleges and universities asking them to lay before the students the proposition to enter government service under certain conditions; some of the people who did not pass the examinations of Dominion land surveyors have not had any experience outside of what they have gained in the office; those who have been appointed within the last two or three years or so are suppposed to be graduates of some technical school or university; the term draughtsman is a general term used in the branch, 496. Low salaries in the lithographing branch; but some getting very low salaries did very good draughting work; one man getting $300 a year in department a few years ago now receives outside for a coal company $1,500; is doing same work as E. W. Hubbell, who was paid as a surveyor; difficult to keep young men, no prospects for a young man, 497. Should be some difference in classification of those clerks a long time in the service and those recently appointed; there are some employees twenty-four years in service, though not professional men are much more capable for certain work than professional men; besides the actual preparation of the descriptions there is a great deal of other work involved; has four clerks and the work has so increased that staff is not sufficient, 498.

Memo. as to bettering his position both as to classification and salary: Entered topographical branch in 1883, employed there till 1903; early in 1903 position of technical officer in charge of preparation of the descriptions for the patents of land becoming vacant; chief clerk sought a substitute and on recommending himself was gladly accepted; he got the position not the salary, since then the work has doubled, does more work than his predecessor, yet only receives $1,550; during these twenty-four years has never been made permanent, and considering his poor prospects, the increased cost of living, thinks he should rank as a first-class clerk at salary of $2,000 a year; the work requires special knowledge and is of a responsible character, 499.

SHERWOOD, LT.-COL. A. P., Commissioner of Dominion Police, 548.

Has been commissioner of Dominion police for twenty-two years, and three years superintendent before that; has charge of public buildings, distinguished visitors, &c.; salary $3,000; has forty-eight men under him; two inspectors, four sergeants, twelve first-class constables, nine second-class, seven third-class, balance are fourth-class; has charge also of leased buildings; men divided into watches of eight hours, three men cover the twenty-four hours and service is perpetual; buildings all open to public from 8.30 a.m. till 6.15 p.m.. 548. Has trouble from petty thieving, not much from loafers; from

SHERWOOD, LT.-COL. A. P.—*Continued.*

6 p.m. till 8.30 a.m. all doors are shut, no one can enter without a pass from his deputy; a permanent pass includes all chief officials, and a periodical pass for a day or week; a book is kept in which exact time every one enters and leaves is recorded; during day any one can enter; was in England at War Office but could not pass door without card; at Washington public admitted up to two o'clock, 549. Speaking of petty thefts from buildings, it would be well to adopt system in Washington, that any one going out a building with a parcel should have it checked; some authority should be given with regard to closing doors; a sort of commission to regulate these buildings, 550. Charwomen are under our control, they come at 6.30, get the keys from officer at door and return them when done; constable on duty opens door for clerks, who begin to arrive at 8.30; besides care of buildings, there is work in criminal cases, e.g., against the currency, and all sorts of post office offences; also in looking after fugitive offenders and arrest them; if in secret service information is wanted, it is in our discretion to buy it; has authority to employ detectives, but usually use our own men; has just detected case of fraud in connection with Fruit Marks Act; is at service of all departments; also prevents sale of intoxicants to Indians or post office burglaries, and ticket of leave, 551. Ticket-of-leave system is working well, with few abuses, percentage of people falling back is very small; states pay of men on force; requires the best of men, good moral character, good habits, and physically strong, to stand extremes of temperatures and draughts in doorways, &c.; men occasionally leave to better themselves; Chamberlain likely to become chief constable at Vancouver, had attained as high a position as he could here, was twenty-two years on force, and was a really good man, none better, 552 There is no pension for men; Chamberlain would never have left the service if he thought a Pension Act was to come into force; was getting $3.25 a day; gives a list of officers who resigned or died in service and what gratuity each got; no special ability is required for a sergeant, 553. Chamberlain looked after secret service work, was twenty-two years in service and was on all the important cases for years; requires a peculiar type of man for a detective, he must know when to speak, when to be silent, always affable and firm when necessary; during night men patrol all the buildings from top to bottom; one of our duties to prevent fire and our men have charge of all fire appliances; to test them and record date of test; men are instructed in use of fire apparatus, 554. An accumulation of petty offences leads to dismissal; slightest infraction of duty leads to a reprimand, if infraction grows more important it leads to loss of pay and may lead to dismissal, 555.

SHIPMAN, J. C., Foreman, Printing Bureau, 600.

Has been in service since the opening of the Bureau in 1889; all foremen have served about the same time, except one appointed a few years ago on the death of the previous foreman; all have gone through the lower ranks, and were made foremen by the King's Printer; some of them came from the former contractors; gist of memorial is that they be made Civil Service clerks; to do so would require an amendment to Civil Service Act; yet there are some clerks employed by the King's Printer who are finally made permanent, 600. Operatives under each foreman in Toronto are on an average twenty-two, in Ottawa 20, whereas in Bureau the average is forty-five, or double the others; responsibility of foreman increases in proportion to the number of employees under him; in his room, the linotype room, the number has more than doubled since 1900; volume of work is so great that they are able to keep the men employed right along; hours of foremen are forty-eight

SHIPMAN, J. C.—*Continued.*

or eight hours a day; time is rigidly kept, especially during sessions when much overtime is required; counted up his overtime last session and it amounted to the equivalent of over eight weeks; gets no pay for that overtime, only two weeks' holidays; if lost time is deducted from holidays equal to your holidays, the holidays are wiped out; but workmen are paid for overtime, but if they are five minutes late they lose an hour; it would take too long to sign an attendance book; there is a check system under which the checks are numbered, each man having his own number, he takes his check from a box and puts it into a receptacle, from which it is taken five minutes after, 601. Mr. Cross is night foreman of the room during session; press-room is small at night, having one pressman and giving him an increased remuneration; he is not classed as a foreman and does not get foreman's wages; submits letters from employing printers at Ottawa, all approving special consideration to foremen, 602, 603. Since 1891 the remuneration of foremen has gone up from $20 to $25; cost of foreman per operative in Toronto $1.10 per week, in Ottawa commercial offices $1.05, in Bureau 55 cents per week; the workmen in Bureau have not increased in number in proportion to the increase of work; during session the surplus of work is covered by putting on a night staff; in the Bureau at Washington the foremen receive forty per cent of the Public Printer's salary, that is $2,000, the Public Printer receiving $4,500; the foremen here receive thirty-two per cent of the salary of the King's Printer; in view of the way foremen are treated in commercial offices, the foremen at Bureau might well be treated as an executive staff and be placed on a permanent basis; their case was presented to the management of the Bureau, who looked favourably on it; they approached the King's Printer last April and again two weeks ago on this subject; he knows they are approaching the commission, and urges them to convince the other people of the advisability of it; he is perfectly willing that it should take place, 604. The King's Printer sees the advantages of our case, but we have to convince the Secretary of State; one advantage would be that the foremen would have a better standing before the men, and could handle them better; have not approached Secretary of State yet but they intend doing so, 605. In the linotype room we have only one firm to buy from, 607.

SIMARD, LOUIS E., Railway Mail Clerk, Quebec Division, 929.

Entered service as letter carrier in 1885; then a clerk in inspector's office, afterwards on recommendation of superior was transferred to the assistant postmastership for eight months, the position was too hard and took again the position of railway mail clerk; his run is from Lévis to Campbellton, 305 miles, starting at 5 p.m. and return at 1 p.m. following day, being about twenty-one hours on duty, and may have to start out again next day; the trip is hard on his nerves; has been seven years on that run, taking about five trips every two weeks; the route though the most paying is the hardest on the health, 929. The position of car next to engine and the smoke are very troublesome; is constantly sorting between stations; does not think the English system changing positions around would be advantageous; has a case examination every year, if one fails he loses annual increment; some runs are longer than others; would be pleased if there were more clerks in the district; and two trips a week would be better for our health; would be well if the postal cars were longer and more suitable; thinks government should have interfered with the cars used on the Atlantic and Lake Superior Railway, there was not a place where a man could wash; thinks government might do more for the comfort of the employees on the cars; presents memo-

SIMARD, L. E.—*Continued.*

rial; since revision of salaries four years ago the cost of commodities has increased another 30 per cent; would like to see old Superannuation Act restored, and maximum pension paid after twenty-five years' service, 930-931.

SMITH, DR., Customs, Windsor, Ont., 152.

The departments having outside officers are the Inland Revenue, the Post Office and Customs; the two first allow annual increases, while in the Customs there are limits for the salaries of the officers; Minister cut the gordian knot by giving each man $100 a year increase; custom-house proper opens at 9 o'clock and closes at 4; if work is to be done clerks remain later; on frontier ports, where trains arrive there is a twelve hours' service, of which two hours are overtime; railroads pay for Sunday service only; steamboats pay for service from six to eight in the morning, and from midnight until two o'clock next morning; but they are granted service free of charge from eight o'clock in the morning until midnight each day; the freight coming in passenger trains is manifested and put in bond; an officer's certificate is required or trains are held; if passenger is with baggage it is supposed to be examined at frontier; if he is not with baggage the officer manifests baggage to its destination, 153. Same men are on duty week about or month about; the the eleemosynary gift of $100 has not produced the greatest efficiency, we should have a minimum and a maximum salary with a statuotry increase; men are leaving service though not in great numbers; thinks the class of men coming in compares favourably with those of former times, 154. Entered service without examination four years ago; if officers were demanded would forward names to department; would presume government would put their friends in; at frontier ports officers have to work ten or twelve hours, two of which are overtime and paid extra; when the extra time is on Sundays railways pay; when overtime comes to $33 or under the department pays it; sometimes extra pay mounts to over that sum, but the men do not receive anything in excess of $33, 155. This we claim is unfair; ferry between Windsor and Detroit; thinks eight hours should constitute a fair day's work for outside officers, three shifts of eight hours each; personally likes the idea of the retirement fund; though in that we are divided in opinion; with regard to the superannuation system there is this point, that the family of a person who dies in the service should receive some benefit, 156. At present a man who is dependent on a salary pays to the fund, and yet when he dies his family gets nothing; in the interest of efficiency all branches of the service should be placed on equal terms; no difference in the matter of appointments; Inland Revenue officer is paid far in excess of our own officers; may be argued that they may come back and pass an examination; but these men did it in their youth and go behind counters and receive their annual increase; but the Customs officer has to walk right out and meet the public; should be entitled to same remuneration as officers in Inland Revenue; both branches are technical; would not object to a practical examination, 157. Is in favour of a continuation of existing retirement fund; only one object in a superannuation fund and that is a man must live to enjoy it; would like to see it extend to himself and possible dependents, 160.

SMITH, GORDON J., Superintendent Six Nations, Brantford (letter), 276.

Cost of living has increased from 25 to 40 per cent; the work of an Indian agent is extremely harassing and requires much tact and great patience, requiring more administrative ability than men engaged in mere clerical duties and should therefore be better paid; Indian Act, chap. 81, R.S.C., 1906, defines

SMITH, GORDON J.—*Continued.*

duties of agent; has large semi-judicial powers, hears appeals from Indian council, acts as justice of the peace in liquor cases, arbitrates and settles disputes and family quarrels, keeps land register, supervises all wills, prepares leases of Indian lands to white men; presides at all meetings of council of chiefs, &c.; is adviser of department affecting interior economy of the reserve; Six Nation reserve is largest in Canada, with population 4,200 and a capital of $881,850; has to attend monthly council lasting sometimes two and three days; about 10,000 acres of whole 43,696 are under government leases to white men; each lease requires an agreement between locatee and lessee; has to collect rents amounting in 1905-6 to $3,471, 276. Has to see that all buildings under loans are insured and the premiums kept paid up; has to distribute $15,000 annuity money; is a barrister and solicitor of many years' standing; has to overlook ten schools, being chairman of Six Nation school board; predecessor appointed in 1902 with salary $1,200, later increased to $1,500 per annum, his clerk $900, present clerk appointed in 1904 at $600 and still at same salary, is an Indian and acts as interpreter; my present salary is only $1,400 and $125 for travelling expenses; has to pay $40 a year for indemnity bond of $20,000; would suggest following increases: superintendent $2,000 and travelling expenses, clerk $900, and stenographer $500, 277.

SMITH, J. OBED, Commissioner of Immigration, Winnipeg, 513.

Is commissioner of immigration, Winnipeg; was formerly in service of Manitoba government; salary $3,000; one of travelling agents of department accompanies the immigrants to Winnipeg, he gets on train at Ottawa; no medical man is attached to the train, but there is one in Winnipeg; system of medical inspection; there is generally one surgeon and probably an assistant on board, and from 2,000 to 3,000 immigrants, 513. Voyage is made in a week, it is manifestly plain that it is a physical impossibility to make an examination as you would like; there is seldom a train arrives during rush season without a case of measles, there is a special ward in the hospital for that disease, there is such close contact in the trains the wonder is that we have not more infectious diseases; Dr. Pagé is hurried in his inspection by the transportation companies and by the immigrants themselves, 514. Cites case of a man sent out by a society in England for southern Alberta, tuberculosis was suspected, the man passed good examinations by doctors, was found afterwards apparently all right, four days afterwards he was brought to the hospital having galloping consumption and died within twenty-two days after leaving Quebec; Dr. Pagé stated there had been a microscopical examination of sputum, &c.; have always more places than we have men to supply; our agents are posted all the time winter and summer; have 300 or 400 officials in the west, 515. If immigrant having passed medical inspection at Winnipeg has to go further west he is often accompanied and located on the farm, then if we receive no complaints we presume everything is all right; last winter we had to patrol middle of Saskatchewan 175 miles from railway, had men out there in stormy period looking for any one in distress; had to team cordwood and provisions 75 miles; had to bring a whole family into Battleford to the hospital, 516. It is immigrant's fault if he is not paid wages when season is over; they are instructed when they go out there if you cannot get your wages go to the justice of the peace; we have people out west to meet arrivals from continental Europe; department is opposed to forming communities; these foreigners bring in more money now than formerly and are a better class of people, 517. We have a trust account, settlers entrust their money to us until they are finally located, they do not feel safe with it,

SMITH, J. O.—*Continued.*

fund amounts at times to $3,000 or $4,000; cost of steerage ticket from Winnipeg to Liverpool; we try to satisfy new-comers who induce others to come 518. Scores of stonemasons, bricklayers and stonecutters leave in the fall because their work is done till winter is over; they have been receiving 60 to 65 cents an hour for their work and they save enough in three weeks to pay their passage to England and back; civil servants cannot do that; the lowest pay we give our officers is $2 a day; all are temporary employees; all men who travel have uniforms with brass buttons and official caps; every train that comes into Winnipeg from west is boarded by one of our officers in uniform, catechises the passengers, 519. Sometimes passengers do not like the catechism; we do not mind a man being poor if he is healthy and able to work; if a man is in bad luck and needs provisions or wood we give it to him; certain boards of guardians in England are allowed to emigrate children to Canada, subject to inspection not paid for by Canadian government, but bill is sent on to England; if inspector finds children are well looked after he leaves them, if not he takes them right away; we have some Barnardo boys out west, but there are always places for them, 520. Thinks these officers should come under general memorial presented; the outside temporary man has nobody to fight his battles in parliament; our outside agents have some grievances as officials in Winnipeg; our officers of the outside service are not classified under Civil Service Act; over 2,000 officials west of Lake Superior, bankers and others, have increased salaries; railway companies have also given increases to their employees during the last three years; cost of living far greater in Winnipeg than in Ottawa, Toronto or Montreal; regrets there is no provisional allowance, 521. Whereas in all other classes of work wages not only in the west but all over Canada have been increased, the salaries of civil servants have remained stationary; may state there are at least 1,000,000 people to-day west of Lake Superior; agrees with Dr. Barrett as to superannuation; politics has not played a conspicuous part in appointments, because we have got to have men who are skilled; appointments are made with a view rather to efficiency than to political proclivities, 522. Vast sums of money have been paid out on account of immigration, and not directly traceable to the service for the year in which they were paid; the western country is growing so rapidly that it is almost impossible for us to keep pace with requirements of the service; asks consideration for all branches of public service in the west, 523. Suggests that commission procure a copy of a report of last meeting of Grand Trunk Railway at London; new arrivals feel when they come here that they are among friends, 524.

SMITH, NELSON, Foreman, Electrical Staff, Public Works Department Ottawa, 1124.

Foreman of electrical staff, i.e., elevators and their operation, wiring, motors, &c.; has twenty-five men under him, sixteen of whom are on elevators; has been two years in the service; was previously electrician for Montreal Light, Heat and Power Company; receives $1,100 salary; was also an electrician in Alexandria, 1124. The work here is quite different from outside, having to handle current varying from 2,000 down to 110 volts; work hours from 7 a.m. to 5 p.m., during session some have to be on duty all night; the Ottawa Electric Company supply the current; has nothing to do with the bells; have to be ready at all hours when called upon; thinks Montreal a cheaper city to live in than Ottawa; the elevator staff is a different line altogether from the other members of the electrical branch, they know nothing about the current or the size of wire or their capacity, they simply run the elevator and if out

SMITH, NELSON—*Continued.*

of order the others have to fix it, 1125. His predecessor was transferred to Western Block, to chief architect's branch; when vacancies occur they expect promotion; has under his control 12,000 lights, has to look after all these lights and motors in all departmental buildings, including Rideau Hall; when there are functions there one man from the staff goes down there and remains after midnight without pay, 1126.

SPEAR, W. J., Secretary of Officers of British Columbia Ports.—See *Memorials, Vancouver,* &c.

SPENARD, AMABLE EMERY, Letter Carrier, Ottawa, 837.

Is a letter carrier, and reads memo.; there are two classes of salaries attached to the letter carriers' branch; there is what is called the old Bill which applies to those who come under Civil Service Act, with a minimum of $360 a year up to maximum of $600 with yearly increase of $50; the latest is $1.25 a day for probationary period of three months; and on appointment as a permanent employee the carrier is paid $1.50 a day for two years; then he gets $1.75 for next two, and for another two years $2, is the maximum; except for efficiency and good conduct one may get $2.25; men are never paid for Sunday work, 837. A staff of five men works every Sunday, taking turns about; but those on the per diem allowance are paid for every day they work; though under the old Bill, witness after fifteen years' service never got a cheque for more than $48.25 a month; a man requires to be at work at 6.30 in the morning if he wants to get through with his work and give efficient service; if train is on time one should leave office at eight o'clock; the trip round lasts on an average about three hours; returns after dinner for second trip at 12.30, and for third trip at 3.45; in all about nine hours steady work a day, 838. As city and population increase more letter carriers are appointed; all have to pass the Preliminary examination; and must have political recommendation; they receive one summer suit; an overcoat and winter tunics every second year, two pairs of boots, 839. Though paid a per diem allowance it is steady work as long as conduct is good; those under the old Bill receive three weeks leave of absence, and those under new Bill receive twelve working days and two Sundays; for absence beyond these times pay is deducted; if politics were excluded a better class of men could be secured, but the greatest drawback is the small pay at the beginning; witness is leaving to become assessor for city of Ottawa; could not pay life insurance or educate his children at present salary, 840. The staff is inferior to what it used to be; convenient to have both languages; to be a good letter carrier one must have good mental intelligence; before leaving office the letter carrier has to pay to the office the insufficient postage of letters and collect it from owners of the letters or lose it; if letter cannot be delivered you get credit for insufficient postage and letter is sent to dead letter office; in case of accident or pleurisy, would like that everybody be placed under the yearly allowance instead of per diem allowance, because in the case of those who are under the old Bill and Civil Service Act a doctor's certificate will guarantee wages during sickness, while if on the per diem allowance you get nothing; the effect is that under the new Bill if you are not at work you cannot expect anything, except if you have not used your holidays, 841. But if a man has to keep his holidays until end of the year in order to ensure himself against possible sickness and he falls sick, it means he gets no holidays at all, and is compelled to work all the year round without the rest so essential to a carrier; the new system of the per diem allowance came in in 1901; under new Bill they reach the maximum quicker than formerly; once a letter carrier always a letter carrier; thinks that if

SPENARD, A. E.—*Continued.*

one is an exceptional man and doing good work he should be able to pass from grade to grade to the top, and have the privilege of being promoted to clerkships upon recommendation of postmaster and passing an examination on duties of office alone; there is on the staff now a man who has passed an examination as to the duties of office on the same question paper as the second or third-class clerks have passed, so that man is good enough for promotion, 842. Many have left the service and are getting better salaries; some of the new-comers are efficient and stay in the service, but they are not contented; a few are content because they are too young and not well educated enough to take positions outside, nor have they ever earned $1.25 or $1.50 a day, so they think it a good position and remain, 843. Never drew more than $48.25 a month, or $50 less 3½ per cent superannuation; expects on leaving to get a few months with pay, but has no reason to ask for money retained for superannuation; has already subscribed $196 to the fund without interest; when living alone paid $11 a month rent; now rents a larger house and rents rooms, which if all are rented brings in $40 a month, 844.

STAFFORD, J. P., Immigration Office, Quebec, 511.

Receives $1,000 a year, has been fourteen years in the service, came in at $900, got increase in May last; claims to be an expert on immigration; speaks two languages, was connected with passenger business formerly; if there is to be an increase all round, expects to get it also; was told by superintendent last spring not to say anything about salaries, or we might as well resign; this is his grievance, that he is considered a good employee, there being no bad marks against him, and is kept for so many years at $900, 512.

STEIN, L., Immigration Office, Quebec, 511.

Chief clerk, Civil Service Act says minimum pay shall be $2,000, does not ask $2,000, though his predecessor, Mr. Doré, forty years ago had $1,900 and agent had $2,400; then there were two steamers a week and arrivals about 6,000 for the season, whereas now they are 114,000; receives now $1,400; has been a chief clerk since 1874; on entering service received $1,000 thirty-four years ago; expects as chief clerk to get $1,800; could live better ten or fifteen years ago on $1,000 than now on $1,500; pays $35 rent for same house he used to get for $14 a month, 512.

STRATTON, W. C., District Inspector and Inspector Bonded Factories, Toronto, 392.

A bonded factory is one where material is used upon which there was originally a duty; operations are all conducted with object of preventing spirits from going into use for potable purposes; must be in all about thirty or fifty bonded factories in Dominion; visits them about once a year, 391. has been inspector since 1900, was formerly acting inspector; has been thirty-six years in service; inspectors receive merely actual expenses when travelling; no inducement to travel; is also district inspector for weights and measures office and for the gas and electric light office and receives no salary for such duties; in this district there are two branches of weights and measures; three branches with respect to gas, 392.

SUTTON, FRANK R., Winnipeg Post Office (letter), 1060.

Is one of lowest paid officials in postal branch; has salary of $400 with usual allowance, less five per cent for retirement fund; pays $25 a month for rent, leaving $21 to provide fuel, light, food and clothing for wife and children; has no longer at his disposal any private means; makes his case public as a

SUTTON, FRANK R.—*Continued.*

means of saving others from disclosure; the problem of how to live decently has really become acute; last two years has had heavy expenses with doctors, nurses' fees and medicines; has merely touched on a few of the disadvantages under which he lives, 1060.

SWEETNAM, G. B., Clerk, Toronto Post Office Inspector's Office, 1026.

Two assistants, one first-class, three second-class and three third-class clerks; produces memorandum; inspector's staff here is composed of experts grown up in the service; annual statutory increase is $50; was made a first-class clerk last year; gets now a salary of $1,300; was sixteen years in grade below; would like to speak of case of late Geo. Thos. Gurnett, who was head of second class for twenty-two years without increase; never got promotion, as only one first-class clerk was allowed; he had a family of seven, did not leave a dollar or carry a dollar of insurance; widow will get two months' gratuity of $196, while he paid over $700 into superannuation fund; witness thinks widow should get this $700, but under existing circumstances it cannot be done, 1026. Conditions of living here are higher than elsewhere, especially rent; price of commodities has increased 64 per cent; should be placed on same basis as inside clerks as they do the same work and have equal intelligence; Civil Service to-day is not attractive; dubs come in who soon will be our first and second-class clerks; two lady typewriters in office working from nine till four, 1027.

See *Memorials*, 1028.

ST. AMANT, J. B., Quebec Customs Office, 144.

On permanent list since 1904; recently received increase, when we pass examination should get increase each year and be paid more than a messenger, 144. To get an increase one must get recommendation of a politician, experience is against applying through local collector, 145.

ST. DENIS, MR., Lockmaster, Lachine Canal, 1221.

Has been eleven years in the service; is working under the same conditions as Mr. Giroux, and has same grievances, 1221.

ST. LAURENT, ALFRED, Montreal Customs Staff, 131.

In express department, looking after parcels and collecting duties; passed examination for appraiser; was in hardware line; brought in as expert, 131. Was appraiser at post office, appraising every parcel; hardware in shape of tools pass through post office; sent to express department to deliver parcels; been ten years in Customs department, 132.

ST. PIERRE, BRUNO, Clerk, Marine and Fisheries, Ottawa, 658.

Was appointed in 1905 a temporary clerk at $600; had ten years' experience; applied for a first-class clerkship and received a third, 658. Acted as assistant secretary to International Waterways Commission at $50 a month; was considered a first-class stenographer and typewriter; was promised a first-class clerkship by Mr. Préfontaine before he went to Europe; was named a third-class clerk by Mr. Templeman, so he has three examinations to pass before becoming a first-class clerk; now acts as secretary to the chief examiner of masters and mates, the superintendent of marine schools, and superintendent of government wireless stations, 659. Refers to paragraph in petition.

Memo. of above clerk: (1) has had ten years' experience as telegraph operator, bookkeeper, stenographer and typewriter operator in both languages; (2) has

St. Pierre, Bruno—*Continued.*

acquired valuable experience in the mercantile, political, professional and municipal world of both provinces; (3) in 1905 entered service on strength of a promise of higher appointment; (4) has passed Civil Service examination in 1905; (5) his work has been highly appreciated and very satisfactory; (6) has lately filed application for vacant first-class position and was promised recognition; (7) unknown to himself was appointed by order in council third-class clerk at same salary; (8) recommends that all members of Civil Service be treated as 'free men' and consulted in anything which may affect their status in the service; (9) those passing in optional subjects are more entitled to consideration than the ordinary man, as they are more useful and competent; (10) after two and a half years' service is remunerated on same basis as a newly-appointed 'former stableman,' and must suffer the prejudice of the unjust treatment of the questionable competency of a high-handed class of officials ,660-661.

St. Pierre, W. L., representing Mechanical and Labouring Branches, Public Works Department, 1119.

Speaks on behalf of one Edward Gorman, acting as stock-keeper, yet is only paid $1.50 a day; he minds the tools and all the materials for construction of thirty-five or forty men and makes a yearly report, he is not a mechanic but he is a practical man filling the place of one who would get $3.50 or $4 a day, 1119. Every foreman has an assistant who is paid $3.25 or $3.50 a day; Mr. Gorman is not a mechanic, so they refuse to pay him more than $1.50 a day; this is a special case and a great injustice; wrote to department once or twice and they say he is not a mechanic; submits to the commission that this man is not being rightly dealt with; he is not called on to do any mechanical work; does not understand why he should be paid for work he does not perform, while he is not paid for work he does perform, 1120.

Talbot, Octave Z., Superintendent Railway Mail Service, Quebec District, 917.

Thirty-two years in the service; began at bottom with $400, passed through all grades up to present at $1,800; passed examinations for appointment and for promotion; twenty-two years on train as mail clerk; ran on every route in Quebec district, found that his nerves suffered; examines the mail clerks in this district, of whom there are fifty-five; seven or eight are temporary, three or four others are called labourers receiving $1.50 a day; on entering with the status of labourer they sign a document to present themselves at first case examinations; after passing, are reported to Ottawa, then appointed probationary mail clerks on six months' probation at $400, and later receive mileage; there are many applications for position of mail clerk; a man entering at $1.50 a day works under very poor conditions, he is put on the poorest routes, away all night and has to pay for supper, bed and breakfast out of $1.50; many of these leave to better themselves; they are appointed by order in council at Ottawa; knows they are all appointed by political influence; they are not as efficient as formerly; a good clever man easily betters himself outside, 917-918. Thinks mail clerks on entering service should receive $800 and rise to $1,600; all clerks very much prefer the system of superannuation; a man's constitution gives out very soon; is strongly of opinion that Superannuation Act should also make some provision for family if clerk fails to pass case examination, the addition to his salary is stopped; thinks some provision should be made whereby a disabled mail clerk should be retired, 919. Thinks in future no man should be appointed as a labourer, the system is a failure; his mind is on the obligation to pass the Civil Service examination instead of learning his duties; such a man has not had the

TALBOT, O. Z.—*Continued.*

necessary education, and the examination so far as the mail clerk is concerned is quite different from what it should be; the young men applying generally have only a common school education; thinks there is no possibility of a man living on $1.50 a day; thinks it would be better to adopt the English system of moving the clerks around; a man on returning from a trip goes to the office, looks at order book or book of instruction, or list of officers; that book gives every man his duties for the week; he also signs a book that he has been on duty, 920. The men as much as possible are kept on the same route, beginning on a poor route, then later promoted to a better or more paying route, a route with mileage, e.g., there is a route from Lévis to Campbellton, 305 miles; a man leaves Quebec at 5 p.m. and returns at noon following day, having got a cent a mile for every mile travelled between 8 p.m. and 8 a.m.; but such a man lays off at least a day and two nights; this constant travelling and standing in the car certainly injures a person's health, strongly recommends that the habit of placing car next to engine be given up, for the shaking of the car in that position is double what it is in any other part of the train; another difficulty with car next engine is that when stopping at stations the mail car may be many yards from platform, so the clerk in his shirt sleeves in winter has often to tramp through snow and rain to deliver and receive the mail bags; on a long route there is often an accommodation car; orders were given years ago not to have any kind of bunk or bed put in a car; they may at times sit on a stool or on the mail bags, 921. Thinks the best position for the mail car is behind the second-class passenger car; no arrangement for accident insurance, and the Post Office Department has notified its employees that in case of accidents, that their claim be made against railway company; would suggest the appointment of a railway mail clerk inspector; would recommend that the Railway Commission be appointed to inquire into the suitability and durability of the railway mail cars, 922.

THIESSEAULT, J. A., Collector of Canal Tolls, Lachine, 1230.

There is another office at west end of canal, besides Mr. Bourgoin's office, does same kind of work though not so much, salary $1,000; has one assistant; at Lachine the Ottawa and St. Lawrence join and that is the reason there is an office there; scows or steamers get their pass at Mr. Bourgoin's office and report again at the other office, 1230. Their manifest is on their pass; there are lots of vessels that take cargo in the canal after passing Mr. Bourgoin's office or they do not go as far as his office; canal runs from Montreal to Lachine; all boats coming down the rapids above Lachine give in their manifests and we issue a 'Let pass' wherever they come from; this office gets the cargoes entering at Lachine and going eastward, and cargoes entering at Lachine and going westward; the timber business at Lachine adds to the work; has one assistant with whom he divides the twenty-four hours' work, 1231. Assistant gets $700; entered service on recommendation of members; has had no increase in salary; the salary is the same as it was thirty years ago; vessels do not vary very much in number, but in size; they pass just as other vessels at all hours, 1232. Presents memorial concerning wages; in summer time canal is closed only on Sundays from 6 a.m. to 9 p.m.; after September it is open all the time; when the timber business at Lachine are doing a big business it gives a great deal more work; the timber is brought down in rafts to Lachine and from there as required by the mills; the lumber is stored in the government basins at Lachine, for which storage is paid; All that is sawn is called lumber, if not sawn it is called timber, 1234. the timber stored in the Lachine basins comes from the Upper Ottawa, 1233. Timber from Ottawa comes through the canal, it would not stand the rapids;

THESSEAULT, J. A.—*Continued.*

the St. Lawrence rafts are different, they are built strong so as to come down the rapids, they are made of oak, pine and heavy timber; his duty begins when the lumber gets into these basins; there is a boom-master who reports to the office how much timber came in for so and so; when they want that timber they have to ask for it; thinks from the cost of living to-day his salary should be $1,300 or $1,400, 1235. Assistant should get a raise of a couple of hundred dollars; thinks the owners of the pleasure boats should pay something for the accommodation they get; it affects the work of the canal in two ways, very often traffic in a hurry has to wait for these little boats, and the lockmasters on the lock are so much bothered with them that they do not take the trouble to send them into the office; not one-half of them are reported; it is becoming an abuse, also the canoes and paddle boats will go through the locks as it is free to paddle in the Lachine canal; has to issue passes for these boats; first come first served; if a big cargo boat that would occupy lock itself, the others if they were before her would have to go through first; some of the owners of these boats are very cantankerous and demand their rights; it is a case of a man-of-war waiting for a canoe, 1236.

THOMPSON, JOHN, Engineer at Printing Bureau, Public Works Department, 1133.

Has been engineer since opening of Bureau, in 1888; Mr. Graham is second engineer and Mr. Montgomery assistant; during session the former takes charge in the day time and the latter at night; there are three engines; receives $108 a month; night engineer reports if anything goes wrong; was promised a salary of $1,500, and made permanent, 1133. The three engines in engine-room supply all the power for all the machinery, the large one of 150 horse-power runs the light, the others the elevators; there are four boilers supplying steam; the building is fire-proof; that engines have not been stopped since 1888; all repairs, except breaks in the iron or metal, which has to be sent to the shop, are done at Bureau; is paid by Public Works Department, 1134.

THORBURN, DR. JOHN, Chairman of the Board of Civil Service Examiners, 11.

Receives $500 per annum the same as the other examiners; was examiner of Royal Military College for seventeen years, has been chairman since its inception; has had twenty-five years practical experience in that connection; the Entrance examinations take place in November and Promotion in May; never had an intimation, before an examination, that in case of certain candidates it would be desirable to give them the benefit of every doubt, repeatedly asked to modify judgment and, on refusal, has been threatened to have the matter brought up in House of Commons, 11. After candidates have passed has nothing to do with their appopintment, would be desirable to publish names in order of merit; candidates who have made the worst showing at examination have frequently the best chance of appointment owing to the intervention of friends; thinks there has not been a falling off in the class of candidates in the last twenty-five years; graduates of Canadian colleges, universities and Military College are now frequently taken into the service, more so than formerly, 12. Such go up for appointment to some technical position; however does not think they are a better class now than twenty-five years ago; candidates are more and more numerous at Ottawa than at other places, though from Winnipeg and other places in the Northwest they are increasing; of the 206 candidates who passed in Ottawa 121 were probably women. 13. Superintends examinations at Toronto; Dr. Glashan at Ottawa; examinations generally held in House of Commons; no

THORBURN, DR. J.—*Continued.*

other building large enough; if Commons not large enough to seat the candidates sufficiently apart then we use the Senate, 14. Dr. Glashan had assistants to superintend; examinations at Toronto were held in the 'Forum Hall'; we get one testimonial as to the moral character of a candidate, in England they get three; would be safer to increase the number of testimonials; a certificate of age is also demanded, obtained generally from the parish register or by a declaration sworn to by the candidate; practice of 'cramming' is growing; a candidate who has 'crammed' is apt to forget as quickly as he learns, 15. Our questions are generally of such a character as to test the general knowledge of the candidate; has been a pretty steady increase of university graduates presenting themselves since 1889; some probably for transcontinental surveys; thinks the examination papers are no harder than in the beginning; sets the questions for penmanship, English grammar, English composition and typewriting; Dr. Glashan sets the questions for orthography, arithmetic, transcription and bookkeeping; Dr. DeCelles sets the questions for geography, history, stenography and French grammar, 16. Students are examined in the history of Great Britain, France and Canada, but not on the sciences nor geology; papers are stiffer than the entrance papers for high schools and collegiate institutes, they cover more ground; thinks Qualifying papers are sufficient to test the average intelligence of a beginner; sample paper of geography given, which if answered correctly shows a person is pretty well informed in regard to the physical features of Canada, 17. Cases of personation are dealt with by the 14th section of Civil Service Act; have recommended that cases of personation be handed over to Department of Justice; many cases of personation; one case in Toronto described in full, 18. Entrance examination hours are from nine to twelve in the morning; candidates are not allowed to take out their examination papers; papers must be handed in before a candidate leaves the room, 19. Prepares papers, also Dr. Glashan and Dr. DeCelles; these are sent to the Bureau and printed; one case of information being obtained at Bureau before Dr. Dawson had charge of Bureau; formerly Mr. Lesueur himself used to go down and supervise the work, but Dr. Dawson considered it a reflection on his men, 20. Tetreau case cited; candidates are examined by numbers, names are not known, nor are they allowed to appear on the paper; an applicant to write at an examination must apply in his own name, forwarding a certificate from some prominent person, a clergyman or a justice of the peace, as to his character, 21. Copying unfortunately is very prevalent; would not like to say that students taboo one who is found guilty of such practice; in promotion examinations a French Canadian can demand to have the papers in his own language; in the process of translation there should be no chance of a candidate obtaining knowledge of the papers; cites cases where sub-examiners had acted as 'coaches' to candidates previous to the examination, 22. Would not be advisable to vary the existing practice of the same examiners going to the same places every time, for Dr. Glashan could not well get away, as he is inspector of public schools here; a system of competitive examinations would be more satisfactory to the government; have always had that idea, 23. Desirable to have competitive examinations and getting the best man you can for the position; in England application is made when vacancy occurs to the chairman of board, who sends a candidate who has passed to the department; politics being entirely eliminated; would be a relief to ministers here, for weak candidates frequently get the position because they are backed up by friends, members of parliament, or members of their church; was formerly librarian in the Geological Survey; records valuable in case of opening up a new country are not sent away, but

THORBURN, DR. J.—*Continued.*

kept in the department, and printed, 24. Each department, the Geological Survey, the Post Office, Public works, Marine and Fisheries, also Militia and Defence, prepare their own maps, each requiring different characteristics; not in a position to say anything in regard to the dismissal of government employees; attendance book very serviceable in certain cases; with regard to attendance would rather have the whole thing definitely settled for all departments alike, as some deputy ministers might have different views in this and other matters, 25. Deputy ministers have to report the papers 'on efficiency and duties of office,' thus practically taking the whole examination into their own hands; such practice is unfortunately growing worse; some deputy ministers assign the full number of marks for 'efficiency' and others do not; the candidate with the highest number of marks should get the first chance, 26. Some deputy ministers allow a certain percentage gained at the first examination to qualify for chief clerk without undergoing another examination; it may be a dozen or fifteen years before a man qualifies for that position, and if not further examined may become careless and indifferent, whereas if he passes an examination before each promotion he will be on the *qui vive* all the time and keep up to the work; Department of Justice gave the opinion that the original examination was supposed to carry them to the highest step; this is not desirable because the first examination may have been a very easy one; if a candidate knows he has no chance of promotion unless he gets thoroughly proficient in his work, that is an incentive to him, 27.

TOUPIN, FRANÇOIS X. J. A., Collector of Inland Revenue, Montreal, 323.

Has been in service twenty-four years, last four years being collector at Montreal; there is one distillery in Montreal district, the Canada Sugar Refinery, they distil alcohol; whisky here is made from molasses, 323. There are three excise officers here; has over fifty officers in his division; revenue increasing all the time; has hardly staff enough for increased work; fifteen years ago had a staff of forty-eight; while revenue has increased 50 per cent staff has increased 4 per cent; salaries paid to employees on outside service are all regulated by Civil Service Act, 324. Collector gets from $500 to $2,400; a deputy collector from $400 to $1,700; a special class exciseman from $1,400 to $1,800; in justification of request for increased salary, Inland Revenue division at Montreal now equals what Customs collections were when Collector of Customs received $4,000 per annum, 325. Inspector visits twice a year; every one knows he is coming; some balances carried over in books for over twenty years; office is closed at 4 o'clock; has twenty-nine regular officers and six temporaries; staff not sufficient for duties; applied for more help some time ago and again recently, 326. Generally staff is from Montreal, on patronage system; does not get as good men to enter service as formerly, lately they are mostly temporaries and not up to the mark; has remonstrated with department for sending inefficient men; all however as far as known were of good character; at times temptations for warehousemen are strong, but so far has not noticed anything wrong; salaries are not high enough for good men and there are better openings elsewhere for good men, 327. If Superannuation Act were restored it would tend to stability of service; money contributed to retirement fund is returned to a man on leaving; if a provision were made for future would be an inducement for young men to come in and remain; would say the cost of living has increased at an average 40 per cent; salaries were laid down in 1892 when cost of living was low; they should be increased in proportion to cost of living; twenty-six bonded warehouses in division, 328. Three men at Parkers, one is in charge, others subordinate to

TOUPIN, F. X. J. A.—*Continued.*

him; stuff spoiled must be destroyed in presence of two officers; no chance of fraud, for the two officers would have to agree; not much tobacco destroyed except in case of fire; sour beer is destroyed but there is no duty on beer; does not happen often that malt becomes musty; principal malsters; once duty is paid on malt, have no idea of how beer is disposed of; if a batch of beer turns sour it is an entire loss to brewer, no refund whatever, 329. Would require a very large vault to store all the stamps in, 330. Mr. Mainville has custody of stamps and gives satisfaction; stamps sent down in sealed packets, with denomination on outside of packet; officer does not open packets till required; inspector checks stamps every six months; clerks are shifted around, but Mr. Mainville has remained stationary; he is a good, steady man and is left in charge, 331. Wishes to correct previous evidence *re* Canada Sugar Refining Company's distillery, whether the spirits distilled there were the same as those distilled by Walker or Gooderham; they ship spirits, potable spirits, the same as the others, though not same quantity; another point to be corrected is with regard to the destruction of duty-paid articles; stamps counted last by inspector in June; stamps are received in packages which are counted then considered all right; when package is opened stamps are counted in detail, 332. Local inspector checks stamps every six months and reports to department; an officer doing his duty renders himself disagreeable, because the public want favours or they want to discuss the question with officer, and if officer does not consider it right they do not like it; present salaries do not attract good clerks, and in order to retain good clerks scale of salaries should be revised; also thinks that the government should pay the costs of guarantee bonds, 333. Officers should organize a fund, as there would be less temptation to steal, and each employee would act as detective, 334.

TRADE AND COMMERCE, DEPARTMENT OF.—See *Parmelee,* 1260. *Roy,* 1275.

TROWBRIDGE, J. C., Pressman, Printing Bureau, 609.

Has been a pressman since Bureau started, receives $16.50 a week, when Bureau started got $11, two years later $13, next increase was $14.50, and three years ago he received $16.50; there are twenty-five pressmen; in Toronto union rate of wages is $16.50, 609. Has read the Public Printing and Stationery Act, which forbids higher wages than at Toronto or Montreal, but thought the commission was appointed to get the Act amended, or could make a recommendation to that end; in Ottawa the commercial offices are paying a higher rate of wages than the Bureau; they could not employ any more pressmen; the Bureau pressmen get a time and a third for overtime; during session of parliament three pressmen work all night, receiving $20.65 a week, 610. A pressman working on a platen press is not really a competent pressman; the pressmen have all the statutory holidays; if late an hour is deducted; besides desiring the commission to look into the question of wages we wish to be granted a vacation like other government employees; pressmen in Ottawa, Montreal or Toronto do not get holidays; but all the government employees in the Printing Bureau at Washington receive holidays; hours at Washington are forty-eight a week; thinks by consulting the King's Printer it would not work to advantage as he quotes the Act and says he cannot go beyond that, 611. The reason for the insertion of that amendment is this: the authorities thought the unions were demanding increases too often, and they established a rule whereby they would always be governed, so the unions in this city would practically have nothing to say what the rate of wages should be; would like to say a word on behalf of those feeding the presses;

TROWBRIDGE, J. C.—*Continued.*

there are twenty-five of them, half of whom are married, with families, and only receive $10.50 a week; it requires a year to become an expert feeder; then the girls who feed the presses receive only $5.50 a week, some having been there since the starting of the Bureau; they have to stand all the time, most of them have to keep themselves and pay their board; most of them are over twenty-five or thirty years of age; they can read and write, they are all good intelligent girls, 613. If they are absent they lose their time; there are eight in press-room, they formed a sick benefit association; some girls in bindery get $6, the foreladies get $10; thinks the girls need an increase more than the pressmen, 614.

TRUDEAU, I., Gardien de l'Hôtel des Postes, Montreal (letter), 1151.

Que depuis cinq ans il est gardien; que la responsibilité est devenue d'autant plus grave et plus lourde, que les affaires dans chaque département ont augmenté à un degré étonnant; qu'il est occupé tout le jour et souvent la nuit, à rencontrer à toute minute le haut public, les chefs et les ministres, il lui fallait observer dans ses habits et la toillette un decorum qui exige une partie appréciable de ses gages; que le coût de la vie est élevé de 50 à 100 pour cent comparé à celui d'il y a 10 ans, un salaire de $50 ne lui permet pas à faire face à toutes les dépenses necessaires de l'existence; qu'il demande une augmentation de 25 pour cent, 1152.

WEBBER, JOHN A., Hamilton Post Office, 1023.

Extra help is granted at Christmas on account of increased mail; thinks a sufficient increase in the permanent staff to permit time being given in lieu thereof would answer the difficulty of getting rid of the strain of Sundays and holidays; Sunday work is necessary because the public demand it; does not think the change of day work with night work would be beneficial; in Hamilton night work is confined to young men; has been twenty-six years in the service, 1023. was increased in rank but not in salary, 1024.

See also *Memorials*, 1024.

WENSLEY, THOMAS, Engineer of Parliament Buildings, Ottawa, Public Works Department, 1128.

Work hours from 7 a.m. to 5 p.m., or later; during session till House adjourns; outside sessions works all day long; there are six furnaces in the Central Block; receives $85 a month, goes through the buildings on Sundays; is under control of Public Works Department; there are eight firemen; fires at night are kept going by a watch coming on at seven in the morning until three in afternoon, another watch comes on then till eleven at night, a third watch from then till seven in the morning; they never cease firing in the buildings, a fire goes on the year round; certain portions of buildings are heated by steam in summer months to keep dampness out, 1128. In summer three firemen take their regular watch, the others do the cleaning for next season; the assistant engineers have to do the packing of all the valves in every room in the building; the ashmen leave in middle of May and return about middle of November; during the session three steam fans driven by steam engines are to be attended to; then there are six motor-driven fans; also two motor-driven pumps for the 'air washer;' a new system of ventilation by which air comes in from the towers, passes through a set of tempering coils, then it is passed through a spray of water, supplied from the pumps, then the air impinges against what they term the eliminators which knock the water out, and if it is cold weather the air has to go over another bank of coils to bring it up to the temperature we want in the chambers. 1129.

WENSLEY, THOMAS—*Continued.*

There is also a motor-driven fire pump to keep the supply of water going in the building; thinks salary is not sufficient to look after these buildings, besides he has about 300 bosses; thinks he should get a 25 per cent increase; has had $85 a month for nine years; has been thirty-four years in the service; was saving more money on $55 a month than now on $85, 1130. Since he came to Ottawa, forty-one years ago, cost of living has more than doubled; could get a house then for $5, for which he would have to pay $15 now; the increase in salary has come to him gradually; when he began work in the service it was in the government machine and repair shop, where he worked for ten or twelve years, 1131. The first engineer in charge of this building received $75 a month, so that in forty-five years the increase of salary has been only $10 a month, 1132.

Salaries of Staff—Heating and Ventilating Parliament Buildings.—Engineer in charge.—All hours from nine upwards as required, salary $85 a month. *Three assistant engineers.*—One in charge of each watch of eight hours; two at $62, one at $60; eight firemen; two ashmen, former $50, latter, $45; boiler plant consists of six return tubular boilers, 5 feet diameter by 14 feet length; during sessions they operate three steam-driven fans, six motor-driven fans, two motor-driven pumps for air washers, and two small motors in lavatories, and one motor-driven fire pump to maintain water supply in building, 1132.

WESTMAN, S. J., Assistant Hardware Appraiser, Customs, Toronto (letter), 168.

(1) Thinks services are entitled to recognition by an increase of salary and in view of length of service (sixteen years) and profficiency; (2) as more special and important appraisements are made at port of Toronto in the hardware department than in any other, sees no reason why he should not receive the maximum salary set by law for his position; (3) if a proficient senior officer of a great number of years' service cannot obtain maximum set by law, what is use having a maximum set by law? (4) thinks present salary is not commensurate with the responsibility and dignity of the office or the efficient service he renders; (5) that his salary is not anything like equal to that paid by other governments or commercial houses for like service; (6) that at present age should be paid a salary commensurate with services rendered at a time of life when he is able to live and enjoy it, 168.

WHALEN, THOMAS, Fireman, East Block.

There are seven men employed in that block; is in charge of boilers and buildings; has been nineteen years in service; there are three boilers in Eastern Block; during summer have to clean and fix up the boilers, examine all the valves, pack them when necessary, take out any that are damaged and have them repaired at repair shop; are also sent to other buildings to replace men on their holidays; have also several smaller buildings to look over; formerly got $45.62, with disposal of wood ashes; now the ashes are taken to Experimental Farm and men get $48; ashes are now taken over to the park; on entering was promised $48, but only received $30; says the plant is poor and injurious to health; there is a sewer there that is open all the time into which all sewage of the building goes; coal bins are badly constructed, as it is now the day staff gets all the good coal and night staff gets the slack, 1138. The close proximity of sewers is the reason of the close atmosphere; his colleagues are frequently sick; suggests better pay, also another room where they could change their clothing; the draft in the flue could be improved, 1139. They have a diligent and punctual staff; they burn the notes in the furnace

WHALEN, T.—*Continued.*

in the Eastern Block; a messenger from Finance Department puts in the fire, 1140. Coal bins are badly constructed, at times there are about fifteen tons of slack coal staying in one place; bins are filled every four days from government supply; gets ten days' holidays, to pay for which they work overtime; can take many a man's place in many of the buildings; night work is harder on the constitution, 1141. Gives statement of staff, positions, and length of service in Eastern Block.

Memo.: Has had no increase of pay for nineteen years till last year; present pay does not meet household requirements of to-day; men in charge of steam plant and building get same salary as his assistant; has very few holidays and has to pay for these by working overtime; complains of poorly equipped plants dangerous to the health; leaves the scaling or raising of pay to good judgment of Commissioners, 1142.

WHEELER, C., Guard, Kingston Penitentiary, 572.

Has been fifteen years in service as guard, at $400, raised now to $600; goes on duty in morning at 6.30, and in winter at 7 o'clock; gets two uniforms, coat and pants, no vest, two pairs of boots a year, an overcoat every fourth year, and fur cap when necessary; no extras, or extra time; sometimes twenty-four hours on duty, part of time in guard-room asleep, 572. Is fifty-one years of age; no age limit now for retirement; would mention case of farm instructor, Mr. McCaugherty, who on his appointment was allowed use of a house and light; they gave him an increase of $100, but charged him $100 rent, 573.

WHITE, LT.-COL. FREDERICK, C.M.G., Comptroller of Royal Northwest Mounted Police, 761.

Has been Comptroller since 1880, is also Commissioner of the Northwest Territories; receives $4,000 as comptroller and $1,000 as commissioner; has been thirty-eight years in service; has the same chief clerk, first-class clerk and accountant as in 1892; has half a dozen men at Ottawa, non-commissioned officers or constables, work done here more economically and avoids duplication of labour; these check and classify expenditures, pack and distribute clothing, &c., 761. Ranks as deputy head; department would undoubtedly have been more efficient under Superannuation Act; abolition was a mistake; 765 names on roll; wishes the old staff to pass out during next four or five years; those on force are engaged for five years; they often leave to better themselves, some of them are members of new provincial legislatures; is glad to see them better themselves; some of men are married and form a small colony outside of barracks and are allowed rations; officers have a pension on retirement, 762. The Act granting pension came into force in 1902; previously the officers were under Superannuation Act; out of fifty-two officers forty-nine adopted the pension; no difficulty in getting officers, but the difficulty is to resist applications; the Act followed the same lines as for the militia; Act provides in case of death of an officer pension goes to the widow in a reduced amount; children get a proportion also; non-commissioned officers and constables contribute nothing to fund; officers contribute five per cent of salaries; in case of a constable pension amounts to one-fiftieth for every year of service up to twenty years, then it is increased so that after twenty years' service will give a man two-thirds of his pay; ten years ago the average term in service of men was twelve to fifteen years, but now it is less than five years; they take up land and become prominent men in their districts; the arrangement is to have 500 men in old organized Northwest, now Alberta and Saskatchewan, 763. Under arrangement with new provinces thinks their proportion would be about $150,000,

WHITE, LT.-COL. F.—*Continued.*

the police are to continue to perform police duty in the two provinces for five years from September 1, 1905, each province contributing to Dominion revenue $75,000 a year from July 1, 1906: as soon as the provinces can get their appropriation and build jails they will take over their own prisoners; much work has to be done for other departments; thinks that as the Northwest becomes settled and new municipalities formed the police will cease to exist within next five years; that after that time there will be a detective force, not mounted police; Hudson Bay Company helped the natives while hunting to get their skins, but when government put up a flag the natives were told to apply to the government, 764. Thinks the 500 police in new provinces will gradually disappear, but there is this one question about it, the Dominion government has retained control of the land, immigration and the Indians, therefore they are to a certain extent responsible for law and order, such is the argument of the provinces; estimates show a reduction of $415,000; officers are paid allowances in the far north; when an inspector is retired he is paid a retiring pension on the basis of his pay and the value of his privileges; there are monthly returns stating number of men at each station; our neighbours to the south are mystified at our prompt administration of justice; of the $1,000,000 expenditure $400,000 went to the pay of the force, the rest for forage, fuel and light; in many cases there are men living at hotels whose board is about $18 a month, and a like amount for his horse; frequently there are married men at detachments, you cannot expect a man to remain unmarried for twenty-five years, so they are given places to make a little home, and instead of feeding them as in barracks they are allowed $18 or $20 a month and feed themselves, 765. Contracts for uniform are given to lowest tenderer; getting five per cent security deposited with Finance Department; as a rule an inspector is not promoted until he has been in that office ten or fifteen years, and has received confidential reports; no fixed age for retirement as long as officer is efficient; official staff is in Western Block and stores on Wellington street; there is a semi-annual stock-taking; every article in store is examined; everything used up is destroyed and proof given; cannot get even a broom without showing old one, 766. Stores of the whole force would be about $100,000, nothing in store except clothing; the department began in 1873 at Fort Garry before any Indian treaty had been made; force is always on the move; inspectors who go out on trips are out of pocket as a rule; all sign attendance book; the men work from 9.30 till work is done, 767. Details of inside service vote; and amounts paid from outside service vote, 768.

WHITE, ROBERT SMEATON, Collector of Customs, Montreal, 117.

Appointed twelve years ago at $4,000 a year; $25,000 distributed in salaries, affecting about 200, 117. Wants a permanent increase of salary; was consulted with accountant and assistant commissioner, 118. Salaries of higher officers are lower than thirty-five years ago, though now more work is done and cost of living greater; to increase salaries of tidewaiters, Minister made them preventive officers; staff, 119. Filling up vacancies comes under political system; fewer applications than ten years ago; not as efficient; no women on staff; want intelligent young men, 120. Deficiency of $32,000 occurred thus; Hobbs falsified invoices, with these invoices he received a cheque for the duty upon the goods, by forgery upon the invoices was able to enter a much larger quantity of goods than he paid duty on, 121. Hobbs formerly in jail in Scotland; amount lost has not been returned; considers system of checking revenue admirable; Inspector O'Meara spends six months in the year in his office at our port, and inspects when he likes, 122. Hobbs' defalca-

WHITE, R. S.—*Continued.*

tion described at length, 122-123. Cannot advise or suggest any safeguard which does not at present exist; has 273 clerks at port, 124. Revenue collections run from $55,000 to $60,000 a day; money deposited in Bank of Montreal the same day; we cease taking money at four and bank arranges for two officers to receive money at 6 o'clock; sends a copy of every entry to Ottawa daily; entries are in duplicate, one is retained, other sent daily to Ottawa; almost every man under bond from $500 to $10,000, 125. Would suggest more salary, having less than collector of thirty years ago; no assistant collector; has not many applications nor are men as good; nearly all men are employed in winter now, 126. Uncertainty about promotion one of the weaknesses of system; a matter of luck or pull; David Tuff receives small salary, is a good officer and very satisfactory; James Sherritt, through political influence in 1896, was given a salary of $1,000, is not more efficient than three or four others who do the same work; he was fortunate while the others struggled along without similar recognition, 127. Has recommended increases; knows no other way in which salary question can be adjusted than by statutory increase; that officer go to maximum of class as vacancies occur and found worthy; one cannot ignore ever present political element; in higher positions in Customs always danger of an outsider coming in to prejudice of men already in service, 128. In a private business when manager discovers ability in a junior he avails himself of it, not always thus in government; deputy should have same responsibility in dealing with his men as manager of bank or corporation has; we have a number of old servants who have served from twenty to thirty years; practically impossible for Minister or himself to remedy that state of affairs, 129. Minister is often worried with patronage system; present Minister of Customs has done his utmost to ignore politics in Civil Service; three things which officers of this port would urge as desirable, 130. No proper incentive to good work, no assurance of more pay through merit, nor higher rank; Minister to deal with questions of policy and permanent officers with questions of administration, 131.

WOOD, SIDNEY J., Registration Department, Winnipeg Post Office (letter), 1055.

Entered service in 1893, passing Civil Service examination 1894, as letter carrier; rose to be assistant superintendent of carriers, having charge of all registered matter for city distribution for fourteen years; has repeatedly asked for recognition and transfer to a clerkship; had correspondence with members of parliament, and Mr. Ross; has not for twelve months received a reply from the latter; three months ago was removed to registration department doing the same work as first and second-class clerks, but is still rated as a letter carrier, 1055.

Letter: Asks if Commissioners require letters of recommendation from prominent business men, or leading officials; would be glad to furnish such; assures them that his conduct and strict attention to duty warrant his promotion to second-class clerkship; states that this is a matter of the gravest importance to him, 1055-1056.

ADEBONCŒUR, CAMILLE *et al*, Mail Elevators, Montreal Post Office, 1151.

Qu'ils sont employé à conduire l'ascenseur pour les malles du bureau de poste de Montréal de 5 a.m. à 8 a.m., de midi à 5 p.m., et de 5 p.m. à minuit; qu'ils demandent une augmentation de salaire, parceque les heures sont en partie de nuit, qu'ils travaillent toutes les fêtes civiles comme religieuses et les dimanches; il y a deux ans ils étaient mis sur le même pied que des conducteurs des ascenseurs des passagers; qu'ils ont travaillé pendant 10 ans pour

VADEBONCŒUR, C.—*Continued.*

$1.25 par jour; qu'il est raisonable de demander la coutume tels que les conducteurs des passagers qui n'ont ni travail de nuit, de dimanche et fêtes; en sus le coût de la vie est devenu lourd et excessif; que les mêmes nominations que la notre faite récemment aux entrepôts des douanes à Montréal, l'employé s'est vu accorder un salaire de $60 par mois; ils demandent que leur salaire soit augmenté de 25 pour cent, 1151.

VALIN, EDMOND, Guardian of Immigration, Quebec, 510.

Has been appointed for eight years; receives salary $700, allowed uniforms and caps; has five men under him, thinks his salary is too low, considering increased cost of living, salary should be increased, thinks he is the only chief guardian in Dominion, 510.

VEZINA, ULRIC, Clerk, Quebec Post Office (letter), 953.

Desires commissioners to know his complaints as to his position as senior clerk in Quebec post office, and his services; four years as letter carrier, eight years as chief letter carrier and twenty-four years as clerk in different departments, total thirty-six years; is in registered letter department, conduct is exceptional, has passed promotion examination as first-class clerk now due him four years; wishes to obtain it; for four years has had no increase in salary, 953.

ROYAL COMMISSION ON THE CIVIL SERVICE.

OTTAWA, WEDNESDAY, May 15, 1907.

The Royal Commission on the Civil Service met this morning at 10.30 o'clock.

Present:—Mr. J. M. COURTNEY, C.M.G., Chairman.

Mr. THOMAS FYSHE, Montreal, and

Mr. P. J. BAZIN, Quebec.

Dr. A. D. DECELLES, General Librarian of Parliament, called and sworn and examined.

By the Chairman:

Q. You are one of the Board of Civil Service Examiners ?—A. Yes.

Q. And you have been since 1882 ?—A. Since 1882, since the board was started.

Q. You and Dr. Thorburn are the survivors of the original board ?—A. Yes.

Q. And you have been holding examinations more or less since 1882 ?—A. Twice a year—the two examinations, the Entrance Examinations and the Promotion Examinations.

Q. The Entrance Examinations are held in November?—A. Each year.

Q. Each year. And the Promotion Examinations in May of each year ?—A. In May, yes.

By Mr. Fyshe:

Q. Have you any rigid method of conducting your examinations ?—A. What do you mean by 'rigid method?'

Q. I mean have you a regular fixed system ?—A. We have a fixed system. It was established when the board was organized and our regulations are submitted to the Government who approved of them.

Q. Were your recommendations generally accepted ?—A. Yes.

By the Chairman:

Q. What is your remuneration for the examinations you conduct?—A. $500 a year is the remuneration.

By Mr. Fyshe:

Q. To begin with ?—A. It is a fixed salary not subject to increase as in the Civil Service.

By the Chairman:

Q. In addition to your salary as librarian?—A. Yes, in addition to my salary as librarian.

By Mr. Fyshe:

Q. I suppose your duties as a Civil Service Examiner take up a good deal of time ?—A. Yes, the duties take up a great deal of time. The examinations are held

twice a year but we have to supply information all the year round in answer to applicants.

Q. There is a regular office for the Board then?—A. Yes, there is now an office and a secretary.

By the Chairman:

Q. On the occasion of the last investigation in 1892, you stated that you did not approve altogether of competitive examinations?—A. Yes.

Q. Are you still of that opinion?—A. Yes, after examining and studying the system in England and in the United States. I saw that they were opposed to it to some extent although they kept it up. It was supposed that the candidate coming out of the competitive examination with the highest number of marks would generally take the place offered to him but his success as a rule would give him ambition and a successful candidate would not accept the office offered to him when the salary was small, and then they would have to omit the best qualified man and fall back on another person.

By Mr. Fyshe:

Q. And in that case the man rejecting the situation, was he given something better?—A. No, he was dropped from the list.

Q. He was dropped altogether?—A. Yes.

Q. Would that not result in the selecting of inferior men?—A. It would give, I suppose, a second-class man, an average man.

Q. Then any man who declined what he was offered, was dropped altogether from the lists?—A. He was dropped from the lists.

By the Chairman:

Q. Do you believe in examinations to some extent?—A. Yes, to some extent.

By Mr. Fyshe:

Q. Would not there be a possibility of the appointers having the power to shelve a man whom they disliked, even if he had higher marks?—A. I do not think so.

Q. That would be in their power you know?—A. I could not say.

Q. Unless the offices were fixed in advance, in rotation? If they were fixed in advance, the contestants would have what they looked for.—A. Of course, what I say is not true of every case. Some will probably accept the offer. But I regard that as one argument against competitive examinations. On the other hand, I hold that a man coming out best at an examination is not always the best fitted.

Q. It does not follow that he is superior in a particular thing?—A. Of course the Government have to look for a certain rule.

By the Chairman:

Q. Do candidates repeatedly try now?—A. Yes.

Q. They do still, do they?—A. Yes.

Q. They come back and back again to the Entrance Examination?—A. Yes.

By Mr. Fyshe:

Q. They are allowed to do that?—A. Yes.

By Mr. Bazin:

Q. At any time?—A. At any time. If they have failed in one subject only, they are allowed to come up again for examination in that subject alone.

By Mr. Fyshe:

Q. Just as they are allowed to do sometimes in the University examinations?—A. If they fail in more than one subject, they have to undergo the whole examination again.

By the Chairman:

Q. Does it often happen now that people come up again ?—A. Yes, I suppose I might say one-fourth of them come back again.

Q. You go to Montreal do you ?—A. Yes.

Q. You superintend the examinations in Montreal ?—A. Yes.

By Mr. Fyshe:

Q. Do the candidates as a rule come from any special class ?—A. No, they come from all classes of society. I do not think they are the best of the young men in any case.

Q. They are not ?—A. No.

By the Chairman:

Q. I see there were 17 points at which examinations were held last November ?—A. Yes, we have increased the number.

Q. And there are only three examiners ? Where does Dr. Thorburn preside over the examinations ?—A. He presides over the examination in Toronto.

Q. And where does Dr. Glashan preside ?—A. Over the examination here in Ottawa.

Q. And you go to Montreal ?—A. To Montreal. Of course we have sub-examiners at other points. There are only three examiners composing the Board. One of them presides in Montreal—that is myself; a second in Toronto—that is Dr. Thorburn; and Dr. Glashan presides here. The board is represented by sub-examiners at other points.

By the Chairman:

Q. Halifax, Charlottetown and other places ?—A. Yes. I might mention here that six years ago there were more candidates in Ottawa than the rest of the Dominion put together.

By Mr. Fyshe:

Q. How is that ?—A. Perhaps it is because of the view of the buildings.

Q. They are in a better position to realize the advantages ?—A. To realize the advantages, and they don't hear the grumbling of those who are in the service. Another fact I might mention here is, that for the last five years the number of lady candidates has been superior to that of the men.

Q. Are you generally employing women now ?—A. Some departments have a very large number.

Q. What is your experience in regard to them; is it satisfactory ?—A. I would not express any opinion on this point because in my department there are only three.

By the Chairman:

Q. In the Library there are only three lady employees and you do not know what the experience is in other departments after they pass the examinations and receive appointments ? Do you think there is much copying now in these examinations ?—A. Not much, no.

Q. There is not much, you say, but still there is a little copying ?—A. Not much, the great danger in the examinations now is the personation of candidates.

Q. I was coming to that. There is still personation going on ?—A. There are a few cases, but the number has diminished because they are invariably caught after they are appointed. The cases of copying have diminished but there are still some cases of personation. We had three cases of the latter during the last two years.

By Mr. Fyshe:

Q. Where was that ?—A. One was detected at Montreal. The candidate was a man who had been up before and who had passed and of course we turned him out.

In the case of two other candidates, they had been appointed on the strength of their examination but they were found to be so weak that the chief of the department where they were employed wrote to the Board asking how it happened that two men so utterly bad——

Q. Should pass the examination ?—A. Should pass the examination. We said that we had no explanation to give, but we examined the papers of the two individuals in question and we found that their writing did not tally. They had exchanged numbers with personators.

By Mr. Bazin:

Q. Is every candidate who wishes to become an employee of the government subjected to examination ?—A. Yes.

Q. He has to pass an examination ?—A. That is the law.

Q. Before getting his appointment?—A. That is the law. There are a few exempt.

Q. I mean any class ?—A. Those that hold a certificate from the Royal Military College, Kingston, and those that hold the certificate of Bachelors of Universities are exempt.

By Mr. Fyshe:

Q. They are not required to pass an examination ?—A. No.

By the Chairman:

Q. Reverting to the subject of personation, section 14 of the Civil Service Act reads as follows:—

Every person, who, at any examining held under this Act, personates any candidate or employs, induces or allows any person to personate him, is guilty of an offence against this Act, and liable, on summary conviction, to imprisonment to a term not exceeding six months, or to a fine not exceeding two hundred dollars, and, if he is employed in the Civil Service, to be dismissed therefrom.'

Did you ever exact that fine ?—A. Yes.

Q. Did you ever get it ?—A. Yes. There was some years ago a professional man who was fined $50.

Q. Why did you compromise ? When the fine is $200 why did you compromise on $50 ?—A. It is within the discretion of the magistrate to fix the fine.

Mr. Fyshe.—The section says the fine shall not exceed two hundred dollars.

By the Chairman:

Q. Is that the only occasion when criminal proceedings were taken during your experience of 25 years as an examiner?—A. No, there were several instances. A large number of candidates—not a large number but a certain number of candidates—who were copying or being personated were dismissed from the service in Montreal and in different other places. The trouble is we cannot always get the personator. We tried to do so in the last investigation we made in Montreal, and we found that one personator had gone to the States and of the other there was no trace at all.

Q. Have you ever got a hint that it is desirable you should give, say, Mademoiselle Dubois, for illustration, the benefit of every doubt?—A. No, we never have any doubts.

Q. I would not like to contradict you in that. Possibly it is done in the case of English speaking people ?—A. It would not be of any use going to Dr. Thorburn at all.

Q. You have nothing to do with the selection for employment of passed candidates ?—A. No, although I have been asked sometimes to point out from the list of successful candidates a man I would consider well up in a certain branch of the examination. For example to find out if a man is well up in literature and mathe-

matics. I would glance at the record and say 'this man'—without knowing who he was—'seems to be competent.'

Q. Here is a list of the candidates that passed successfully last November. There are 349 altogether, of whom 193 live in Ottawa. They are not published in order of merit are they, after passing ? A. No, not at all.

Q. The list published is simply the names of the passed candidates ?—A. Yes.

By Mr. Fyshe:

Q. Are they published in alphabetical order ?—A. Yes, in alphabetical order. The government gets a list of the candidates with the number of marks gained by each.

By the Chairman:

Q. The Secretary of State gets that ?—A. Yes.

By Mr. Fyshe:

Q. Do you not arrange the successful candidates in order of merit ?—A. No.

Q. You never do ?—A. No.

Q. That is not wanted ?—A. That is not asked for. We have not been asked to place the list of candidates in that manner. The Government have before them the list of candidates with the number of marks secured by each. If they want to consult that list they are able to do so

Q. The list is not put before them in such a way as to carry its maximum of effect ?—A. No.

Q. And that is not wanted because they desire to introduce the political way ? No answer.

By the Chairman:

Q. Do you find the candidates that are coming up now are equal to those of 20 years ago ? Is there an equally strong desire to compete at the examinations ?—A. I find that these examinations cause the young men to study more than they formerly did. They now prepare for the examinations.

By Mr. Fyshe:

Q. Do you think they have improved ?—A. They have improved. They have more advantages than the earlier candidates enjoyed.

Q. The same thing gets more systematized ?—A. The questions prepared every year are subsequently published in pamphlet form and those who desire to enter for examination have the advantage of studying those questions.

Q. Of course you do not have the same questions ?—A. No, but after an interval of 25 years we have been obliged to go back. Candidates have to study history for example and if they consult the published questions they have to open up their text books and study all around.

Q. Are the questions recorded every year ?—A. Yes.

Q. Is that desirable, do you think ?—A. I think so.

The CHAIRMAN.—They do that in the Annual Report of the Civil Service Examinations in England.

The WITNESS.—I think it is important. If a man studies each of these questions, he will certainly go through the history of England, the United States and Canada.

By Mr. Fyshe:

Q. Of course an examination of that kind in history is more or less a test of memory, but with mathematics it is different. When women are employed what do you give them to do ?—A. Copying.

Q. And typewriting ?—A. Typewriting and shorthand writing.

Q. Are they good shorthand writers ?—A. Yes. That is their best point, as a rule, in my experience, although my experience is very limited; we have only three ladies in the Library.

By the Chairman:

Q. When examinations are held do you get testimonials as to character from the candidates ?—A. Yes, as to character—in the examinations.

Q. How many testimonials do you get as to character?—A. One from a clergyman. We generally get a testimonial as to the character of the candidate.

Q. In the competitive examinations in England the candidates get three testimonials ?—A. We exact three, one as to the character as I have just stated, one as to health——

Q. Apart from that, the candidates at the competitive examinations in England get three testimonials as to character ?—A. Three ?

Q. One from a clergyman, and two from friends, justices of the peace and similar persons. You only get one testimonial as to character ?—A. We only get one.

Q. Does that not help the persons interested ? An individual, for instance, like the one you spoke of, that personated, might write out the character himself ?—A. Yes, he might but how can we find out?

Q. If you had a greater number of testimonials ?—A. Yes, I think we might increase the number.

Q. Is that in your power?—A. Yes.

Q. You would have to get an order in council ?—A. We would have to get the sanction of the Government.

By Mr. Fyshe:

Q. Does the applicant as a rule, provide recommendations from members of parliament and so on?—A. No, not from members of parliament.

Q. From whom then?—Very often from clergymen or a well known person in the locality to which the candidate belongs.

Q. People of local influence?—A. Yes.

Q. But often are they not members of parliament?—A. No, I have not seen any from members of parliament.

Q. The members of parliament come in afterwards? The political influence comes in after the candidate has passed? Are these testimonials as to character obtained perfunctorily and just filed away?—A. They are examined.

Q. What do you call 'examined?'—A. The Board takes cognizance of these certificates of course.

Q. In addition to a testimonial as to character, you have a medical certificate in each case?—A. A medical certificate, yes.

By Mr. Bazin:

Q. In the case of both sexes the law is the same?—A. Yes.

By the Chairman:

Q. Then we ought to have in the public service, as the result of the examinations, candidates of good moral character and good physical ability?—A. Well their testimonial carries that.

Q. Although frequently they obtain leave of absence almost immediately after appointment on the ground of sickness?—A. That has not been my experience.

Q. In the matter of health, although for the examinations they get certificates from their doctor that they were in sound health successful candidates have often got leave of absence, on the ground of sickness, after having been appointed only 12 months?—A. That does not mean always that they are sick.

Q. What other testimonials do you require besides testimonials as to character and health?—A. As to age.

Q. You get a certificate of age?—A. Yes.

By Mr. Fyshe:

Q. Have you any restriction as to age?—A. Yes, they cannot go through the entrance examination before they are 18.

Q. Will you take anybody into the service after they are 25?—A. The age limit is up to 35 for the inside service.

Q. Do they have to have special qualifications?—A. No.

Q. They do not?—A. No.

Q. Are you familiar with, or have you any knowledge of, the kind of examination that is required in a bank for instance?—A. No.

Q. I was going to ask you how your examinations compare with those of a bank?—A. I have no knowledge at all, of the examinations of clerks in banks.

Q. The subjects at your examinations would be Grammar, Arithmetic and History?—A. Yes, and Composition.

Q. Yes, Composition?—A. English or French, and Arithmetic.

Q. Geography?—A. Geography, Writing and Orthography.

Q. It is practically the three R's? According to my experience our educational system is terribly deficient in the commoner things?—A. Yes.

Q. It is getting to be almost impossible now to obtain a man who writes a decent hand. In this connection I find the French are far better writers than the English?—A. My experience is not the same.

Q. Is it not?—A. No, I find that in the province of Quebec, the writing is not as good as in the other Provinces.

Q. That is not my impression. I think the French are well taught?—A. You must have come across some very good candidates, or very good men.

Q. I do not mean to say that they are generally superior, but they seem to write a good hand?—A. The writing has improved during the last few years.

By the Chairman:

Q. There are also optional subjects at the examinations?—A. Yes.

Q. How many are allowed to count?—A. They do not count for anything now. The candidate before the regular curriculum may take some optional subjects.

By Mr. Fyshe:

Q. That he has made a specialty of?—A. Yes.

By the Chairman:

Q. But that does not count now?—A. It does not count. Formerly the Government would give some advantage to those passing in optional subjects.

By Mr. Fyshe:

Q. I think in the schools they try to teach them too much and do not succeed?—A. No.

By the Chairman:

Q. Do you know whether there is much coaching for the Civil Service?—A. In Ottawa there is a great deal of coaching—a great deal.

Q. Cramming?—A. Through retired school teachers, and some that are in active teaching, who open schools.

By Mr. Fyshe:

Q. They may be very effective?—A. Yes. Of course those teachers have a great deal of experience in the way the questions are put, and I should fancy they are of great help to the candidates.

Mr. FYSHE.—It develops a kind of experts, you know. In the United States they have regular expert coachers.

The CHAIRMAN.—What are called in England 'crammers.' There are men in Ottawa who cram up for the civil service. It is like cramming a turkey. Now do these candidates who come from the 'crammer' and pass the Civil Service Examination, remember, in subsequent life, what they learned?

The WITNESS.—Not much.

Mr. FYSHE.—I do not think the cramming system develops the thinking faculties.

By the Chairman:

Q. That is just what I was trying to get at; I have not looked at your questions for some years, but I have heard it is rather a favourite form of amusement to give what are called 'catch questions'?—A. I have heard that same objection, but my experience is that for quite a number of years large questions have been given.

Q. The larger and broader questions?—A. Questions of a very general character, I know that at the start such a question was asked as 'Who was the first Mayor of Toronto' was given, but I objected to it.

By Mr. Fyshe:

Q. There is nothing in that?—A. That is not history.

By the Chairman:

Q. But it is gaining so many marks, you know?—A. Well that was done.

Q. The board prepared the different examination papers for the different departments?—A. For promotion?

Q. No, for entrance?—A. Yes.

Q. You would not want a man in the Finance Department to be a literary character, but you might want such a qualification in the Department of the Secretary of State?—A. We suggested, a few months ago, a re-arrangement to the Government. Experience has shown us defects in the existing system of examinations. For example, it is not fair to subject men who are to be employed as railway mail clerks to the same examination as in the case of candidates who will have to attend to correspondence, or duties of that kind, or of a higher character. We have therefore suggested to the Government to let us arrange three scales of examinations according to the work of the department in which the candidate intends to enter.

By Mr. Fyshe:

Q. You do not want them to be the same?—A. The questions would be the same but the board would not exact the same number of marks to qualify for employment in the different branches. For example thirty per cent should qualify a railway mail clerk, and fifty per cent, a clerk in the inside service.

By the Chairman:

Q. Do you know whether any examination papers ever get out of the Printing Bureau now. You formulate your examination papers and send them to the Printing Bureau to be printed?—A. Yes.

Q. It has been stated that some examination papers get out. Has anything of that kind happened?—A. No. We take the greatest precautions to have the papers printed on the same date. We count the number of papers that are sent to the Bureau and those papers and even the type set out are put under lock and key.

Q. And the number of sheets, are they counted?—A. They are counted.

Q. Of course the examination papers are printed in both languages?—A. In either language.

By Mr. Fyshe:

Q. It goes without saying that you do not get any applicants from the class of people who go in for college courses?—A. Oh, yes. We have lawyers sometimes and we get candidates from all classes.

Q. I should have thought that people who had ambition enough to take a college course with a view to following a professional career would not want to join the Civil Service?—A. Several of them come every year; lawyers and students-at-law.

Q. Is it not the fact, in those cases, that they are what you might call 'failures?'—A. Well, some of the professions are over crowded now and people often get discouraged and pass our examinations in the hope of getting employment. Of course it is seldom that we find first-class subjects. We even have to give certificates to men who hold University degrees as Bachelor of Science.

Q. You would pass such candidates without examination, would you not?—A. Of course.

By the Chairman:

Q. That is laid down in the Civil Service Act?—A. That is laid down in the Civil Service Act.

Q. In the promotion examination, a candidate, if he is a French Canadian may request the papers to be printed in his own language?—A. Yes.

Q. That is to say if it were the Department of Finance for example, to take a concrete case, where there is an English deputy who prepares the papers, the candidate for examination if he happened to be a French Canadian, might require the papers to be translated into French?—A. Yes. As a rule we provide for that. If we find from the list there are no French candidates we have the papers printed in English only.

Q. But if there are French candidates you have the papers printed in French?—A. Yes.

Q. Is there any method by which the candidate could get hold of these papers during the process of translation?—A. No.

Q. I see that the same question was asked by the Commission in 1892?—A. It would be desirable if as the candidates from the different departments passed a promotion examination on the same subjects. The same subjects ought to be required from all and ought to form part of the regular examination. Because in some departments, candidates get through by being examined simply in one or two subjects whilst in other departments they have to take the whole course. The deputy heads can dispense with the examination in certain subjects.

Q. I was coming to that. That is to say, a deputy head, in response to political pressure and his own desire to pass candidates for examination, might simply examine them in the duties of their office, the papers being prepared by himself?—A. Yes, barring political pressure.

Q. And that contracts the thing out of the Civil Service Board of Examiners altogether?—A. It annuls our examinations altogether. The paper on efficiency and on the duties are prepared by the deputy head and he can annul our examinations altogether.

By Mr. Fyshe:

Q. You have nothing to do, I understand, with Engineers?—A. No, nothing to do with them. They come before a special board.

Q. I thought they were not examined at all?—A. Yes, they are examined. They have to have certificates, I understand, from some board of examiners.

By the Chairman:

Q. They do not come before you, those who are exempt from examinations?—A. They come under the Special Qualification Clause.

By Mr. Fyshe:

Q. They are what is called 'experts'?—A. Yes.

Q. They do not belong to the Civil Service?—A. Yes, they do.

Q. They do belong to the Civil Service?—A. They do.

Q. And are they under Civil Service rules?—A. The requirements are not the same.

By the Chairman:

Q. In the case of the promotion examinations, some departments take it in the fullest extent, while with respect to others it is narrowed down to examination in the subject of efficiency and duties which are prepared by the deputy head?—A. Yes, and they might simply ask the candidates to conform themselves to the smallest extent to the wishes of the Board.

Q. Has that habit grown?—A. It has not changed. It is not growing; it could not grow any more.

By Mr. Fyshe:

Q. There is a large amount of discretion given, I suppose, in regard to appointing people?—A. In regard to appointing people?

Q. I mean to those who have authority to make the appointment?—A. The Government have it altogether in their hands, I suppose. We pass the candidates but we have nothing to do with their appointment. After we pass the candidates our duty ends; we have nothing further to do with them.

Q. You have nothing further to do with them?—A. Oh, no.

Q. Who has the appointing power afterwards, the Deputy Minister?—A. No. I suppose the Minister on the recommendation of the deputy head.

By the Chairman:

Q. It is practically the minister?—A. Yes, the minister.

The CHAIRMAN.—In England, a department when a vacancy occurs, applies to the Civil Service Board, and the latter sends the most meritorious candidate.

Mr. FYSHE.—The department has nothing to do with it?

The CHAIRMAN.—The department has nothing to do with it.

Mr. FYSHE.—And the sub-head of the department has nothing to do with it?

The CHAIRMAN.—He has nothing to do with it.

Mr. FYSHE.—That system might be abused, because you might not be able to get exactly the kind of man who is wanted.

The CHAIRMAN.—There is of course a period of probation. That is always six months, and if the man is not suitable he is sent back and another appointment made.

The WITNESS.—There is a period of probation also here.

The CHAIRMAN.—There is a period of probation here.

The WITNESS.—But it always establishes that the man is all right.

By the Chairman:

Q. The Canadian Board of Civil Service Examiners simply forwards to the Secretary of State the list of successful candidates with their respective marks?—A. Yes.

Q. And they have nothing to do afterwards with the appointment?—A. Nothing at all.

Q. And in point of fact, as long as the candidates pass, the selection of the man for office may be made without reference to the candidate who has the greatest number of marks?—A. Certainly. All the candidates are eligible in the same degree.

By Mr. Fyshe:

Q. Of course it would be too much to ask whether there is any consideration in such cases?—A. Oh, no.

Q. That would be too much to ask?—A. Yes.

Q. Whether it was a matter of prejudice—whether the minister really thought that the appointee had special qualifications or whether it was just because he was a friend of his?—A. Of course I have nothing to do with that whatever.

Witness dicharged.

The Commission rose.

OTTAWA, May 15, 1907.

The Commission resumed at 2 o'clock p.m., Mr. Courtney, Chairman, presiding.

Dr. JOHN THORBURN called and sworn and examined.

By the Chairman:

Q. Have you any other occupation in the public serivce of Canada than that of Chairman of the Board of Civil Service Examiners? Have you left the Geological Survey?—A. Yes.

Q. What are you paid as a member of the Board?—A. $500 per annum, the same as the other examiners.

Q. Were you an examiner for the Royal Military College?—A. I was for seventeen years, till the examinations were given to the Professors of the College.

Q. Is this your sole emolument in the public service now?—A. At present it is, but the Militia Department is organizing a system of examinations for officers who do not go through the Military College, and I was applied to by Col. Fiset, Deputy of the Department, to see if the Civil Service Examination Board would do that work.

Q. But in the meantime your stipend as a Civil Service Examiner is the only emolument you enjoy?—Yes.

Q. You have been Chairman of the Board since its inception in 1882?—A. Yes.

Q. And you have had 25 years' experience of practical work in that connection?—A. Yes.

Q. The Entrance Examinations take place in November and the Promotion Examinations in May?—A. Yes.

Q. You occasionally have had, I suppose, an intimation that in the case of certain candidates it would be desirable to give them the benefit of every doubt?—A. No, not before the examination.

Q. Or has it been done afterwards in computing the marks?—A. Yes.

Q. Afterwards you have had occasional hints?—A. When the candidates failed.

By Mr. Fyshe:

Q. You have been asked if you could not modify somewhat your judgment?—A. Yes.

Q. So that candidates would pass?—A. Yes, repeatedly. I could give you the names of some of the candidates and on my refusal on some occasions I have been threatened to have the matter brought up in the House of Commons.

Q. Have you ever done so?—A. Done what?

By Mr. Chairman:

Q. You have never strained your conscience?—A. I will give you an instance of the danger of conferring a favour on a candidate. Immediately after the initiation of the system of Civil Service Examinations, a lady applicant failed to pass by a few marks. I forget what subject it was in now, because the instance occurred away back in 1883 or 1884. She came to my house, and begged of me to give her the few marks necessary to pass; she told me she had a young family dependent upon her. She said to me 'Of course no one will know except myself and yourself' as if that made any difference to me. In my good heartedness, I gave her the few marks necessary to pass, and next day, two ladies came and demanded the same privilege. So I made up my mind there and then, that that was a very unsafe course to pursue. It was a lesson to me for the rest of my life.

Q. Then, Doctor, you have nothing to do, as I understand, with the candidates after they have passed, you have nothing to do with their appointment?—A. Oh, no.

Q. The candidates who passed the Civil Service Examination last November numbered 375?—A. I presume so, but I have not counted them.

Q. They are not published in order of merit but alphabetically?—A. Yes, alphabetically.

Q. Would it not be desirable to publish them in order of merit?—A. I think very likely it would.

Q. It never struck you that way?

Mr. Fyshe.—I have no doubt it struck him.

A. You know I have been in favour of competitive examinations, but I cannot say, in connection with the Civil Service Examinations, as at present conducted, that I ever thought of the point you mention. I never thought of having the names printed in order of merit.

By Mr. Fyshe:

Q. Perhaps you know it was not desired by the powers that be?—A. Well, I have my own ideas in regard to that.

By Mr. Chairman:

Q. At all events, the names of successful candidates are not published in order of merit?—A. No.

Q. And the names of the candidates who made the worst showing may be submitted afterwards for appointment to office?—A. Very frequently these are the persons that have the best chance of getting appointed because they get their friends, also members of parliament, and the Church to which they belong to intervene; whereas a good man, you know, is above that kind of work.

Q. You have been engaged in connection with these examinations since 1882?—A. Yes.

Q. Is there as good a class of candidates coming up for examination now as there was 25 years ago, or has there been a falling off?—A. I do not think that there has been a falling off. I might mention this: Those taking degrees in Canadian Colleges or Universities and the graduates of the Royal Military College, Kingston, are now exempt from examination. They were not so at first. There has been quite a number of them taken into the service.

By Mr. Fyshe:

Q. Is there a larger proportion of them now than there was formerly?—A. Yes, there is.

By the Chairman:

Q. But they go up for appointment to some technical position, as an engineer or surveyor, as a rule?—A. I believe so, but of course we have nothing to do with that.

Q. But the ordinary rank and file of the candidates that present themselves, those who go in as copyists, &c., have they as much ability now as they had 25 years ago?—A. I could not say that very definitely. I may state that, as a general rule, now candidates put themselves under a coaching process to prepare for the examination which gives them a better chance of passing.

By Mr. Fyshe:

Q. And of course you do not follow them in their subsequent career, therefore you have no knowledge of how they turn out?—A. Very frequently I do, because there are quite a number of those in the Civil Service that I have known ever since they entered.

Q. But it was not your business to keep track of them?—A. No.

By the Chairman:

Q. What I am trying to get at, Doctor, is this: Do they compare in point of ability—the class entering now—with the class of 25 years ago?—A. They are no better, anyhow.

Q. They are no better?—A. I do not think they are any better.

By Mr. Fyshe:

Q. Of course the facilities for education in the country are increasing all the time?—A. Yes, that is true.

Q. And, therefore, there ought to be a better class of applicants than you were formerly accustomed to?—A. Yes, there should be, but there is such a large number coming up for examination now.

By the Chairman:

Q. There were 17 points at which examinations took place last November for entrance into the Civil Service. Of this number 206 passed at Ottawa, and one at Sault Ste. Marie. Gradually the whole number of candidates at the Entrance Examinations is being furnished by Ottawa?—A. They are getting more and more numerous here.

By Mr. Fyshe:

Q. How do you account for that?—A. Well, I do not know but such is the case.

Q. Does it appear to the people generally that the public service is a very desirable service?—A. Well, the country is opening up, you know, and there is more demand for public servants. In Winnipeg we have quite a large number of candidates now and other places in the Northwest are coming along.

By the Chairman:

Q. I see that 21 candidates passed in Winnipeg?—A. Originally there would be only one or two.

Q. To have 206 candidates pass in Ottawa, out of 375, is a big proportion?—A. Yes.

Q. Now 121 out of that 206 were probably women, but from some of the names you could not distinguish of what sex the candidates were?—A. We know that at our office.

Q. I take it that 121 out of the 206 are undoubtedly women, but there are a greater number even than the former figures would indicate. The list should give the names in full?—A. We have that information down at the office. Of course they are required to give their names in full on the form they fill in.

Q. Such names as K. C. Arnold, J. C. Breton, and E. M. Babin might mean anything?—A. I fancy those are names of men. I think as a general rule you will find those are names of men.

Q. We do not know. There are more women present themselves now than formerly?—A. Yes.

Q. You superintend the Ottawa examinations?—A. No, I go to Toronto.

By Mr. Fyshe:

Q. You live in Ottawa?—A. Yes, I live in Ottawa.

By the Chairman:

Q. There were only 20 that passed in Toronto?—A. Yes. Those passed the Qualifying or Higher Grade Examination.

Q. Would that be because you had a stricter supervision of the candidates?—A. I do not think so. I do keep a strict oversight, but the reason more pass in Ottawa is because there are more candidates who write.

Q. Who looks after Ottawa?—A. Dr. Glashan.

Q. And Dr. DeCelles after Montreal?—A. Yes.

Q. Then there are 14 sub-examiners?—A. Yes, we have sub-examiners.

Q. Where is the examination held in Ottawa, in the House of Commons?—A. In the House of Commons generally.

Q. Do you know whether the last examination was held there?—A. Yes.

By Mr. Fyshe:

Q. Why should it be held there?—A. Because there is no other building sufficiently large to accommodate the candidates.

Q. Referring to the large proportion of college graduates applying for appointment in the government service, how do you account for that? One would think that people who are ambitious enough to secure a University degree would be above undertaking the ordinary service of a Government office?—A. If you send for our last report, I mean the last Civil Service report, you will see the number of those that have taken University degrees.

Q. Does it not appear to you that a man who has obtained a University degree should have an ambition higher than that of filling the position of a government clerk?

The CHAIRMAN.—Dr. Thorburn is a University graduate himself.

Mr. FYSHE.—I know, but he is not a Government clerk.

By the Chairman:

Q. In the House of Commons there is seating capacity for about 216. Now as 295 persons presented themselves for examination there could not have been seats enough to go around?—A. I was not present at the Qualifying Examination in Ottawa. I was referring in my last remark to the Promotion Examination recently held.

Q. Then Dr. Glashan had charge in Ottawa?—A. Yes.

Q. Well, 295 persons exhausted the seating capacity of the House of Commons?—A. I think for the Qualifying Examination a number of candidates were sent to the Senate Chamber. I made application for the Senate Chamber in case we would require it at the recent Promotion Examination.

By Mr. Fyshe:

Q. You hold the examinations in the Commons Chamber in order to have all the candidates, as far as possible under the eye of the examiner?—A. Yes. But in some cases the House of Commons was not sufficiently spacious to have the candi-

dates placed at the requisite distance from each other so we used the Senate Chamber as well.

By the Chairman:

Q. Dr. Glashan was the only person who had them under supervision, I suppose? —A. No, he had assistants.

Q. How many assistants had he?—A. I cannot say exactly. He has had two or three and more if required.

Q. In Toronto, where did you hold the examinations?—A. I held them in the Medical Hall till the last examination, which was held in 'Forum' Hall,' Yonge street.

Q. There were 20 candidates passed? Do you recollect how many candidates entered?—A. There were 41 according to the report for the Qualifying Examination.

Q. Was the hall sufficiently large to keep the candidates separate from each other?—A. Yes.

Q. There was no chance of copying there?—A. No, I have very reliable assistants in Toronto. (Report of the Board of Civil Service Examiners produced.) In this report you will find a list of the graduates of Canadian universities for each year since 1889.

Q. You only get one testimonial as to the moral character of the candidate?—A. Yes.

Q. In Great Britain the candidates require to have three testimonials. The person who testifies as a rule is the clergyman or curé?—A. Yes.

Q. We heard yesterday of a professional man who personated a Civil Service candidate. Is it not possible that such a personator might give the candidate a testimonial of character?—A. It is possible enough.

Q. Do you not think it would be better to increase the number of testimonials of character as in England, such testimonials being from an old friend of the family or a justice of the peace?—A. It would be safer.

Q. Then as to the candidate's health, a certificate from a doctor is required?—A. Yes.

Q. Does it not occasionally happen, after a candidate has passed and been appointed to the service, that he or she is found to be in weak health?—A. I could not say as to that.

Q. Furthermore a certificate of the candidate's age is required?—A. Yes.

Q. How is that certificate obtained?—From the parish register, the registrar of births and deaths, or from the family Bible?—A. I forget just now. I think it is from the registry of births and baptisms or by a declaration sworn to by the candidate. We require to get their age at any rate.

Q. Dr. De Celles yesterday stated that there is a practice growing up, especially in Ottawa, of having 'coaches' or 'crammers,' like the army 'crammers,' who 'cram' candidates for the examinations?—A. Yes.

Q. Now you have lived in Ottawa for many years and have had the opportunity of seeing the candidates that have passed the examinations. What is the effect of the 'cramming' system? Do not the candidates forget as quickly as they learn?—A. They are apt to.

Q. They are apt to?—A. Yes. Excuse me just for a moment while you are on this subject. A number of years ago, a man, who is dead now, but then was a 'coach', came to me, I remember, and commiserated me upon the amount of work I had to undergo in examining so many papers and he offered to assist me. I thanked him, but told him I could not do that. I found out afterwards that he was. . . . .

By Mr. Fyshe:

Q. He was a 'coach'?—A. Yes, he had been coaching candidates, and, besides that, he was assisting Dr. Glashan in supervising the examinations.

Q That was simply giving him an insight?—A. Yes, it afforded him a chance of helping his pupils.

Q. You did not agree to it?—A. Certainly not, nor do I suppose Dr. Glashan knew of his having pupils writing at the examination.

By the Chairman:

Q. He is too high minded for that?—A. Yes, I am satisfied he is. The arrangement made by this man with the candidates was that, if they passed, they were to pay him. If the candidates failed, they were not to pay him.

Q. The statement is made—I have heard it myself in Ottawa two or three times—that in these examination papers there are occasionally what are called 'catch' questions. For example, question like 'Who was the first mayor of Toronto' and that kind of thing.—A. Our questions are generally of such a character as to test the general knowledge of the candidate.

By Mr. Fyshe:

Q. To test the general intelligence of the candidate, and not question him upon mere insignificant things?—A. Yes, our questions are meant to test the general intelligence of the candidates.

Q. About the question of the number of University graduates presenting themselves, I find that from 1889 to 1906, there has been a pretty steady increase—not so much for the first few years but latterly the number has become more conspicuous. There were three for 1889, two for 1890, one for 1893, five for 1894, three for 1895, six for 1896, four for 1897, three for 1898, seven for 1899, seven for 1900, eight for 1901, ten for 1902, ten for 1903, nine for 1904, eleven for 1905, and seventeen for 1906.

By the Chairman:

Q. I suppose they might not all be appointed for one thing?—A. I should suppose not.

Q. Some of them might go into the transcontinental surveys?—A. I fancy so.

Mr. Fyshe.—That shows the college graduates are gradually getting more numerous.

By the Chairman:

Q. That includes the graduates of the Royal Military College?—A. I should think so. If they applied for positions in the Civil Service their names would be included. The graduates of the Royal Military College as you know are exempt now. The statement is headed 'List of Graduates of Canadian Universities who have exhibited their diplomas to the Board and who, in consequence, are qualified for employment in the public service without examination.' Probably, therefore, none of the Royal Military College graduates are included. Mr. Foran, our secretary, could give you definite information in regard to this.

Q. As to the examination papers, are they quite as stiff as they were in the beginning or have the bars been lowered?—A. I think not. I think they are just about the same, so far as my recollection goes. Of course I can vouch decidedly for my own questions.

Q. Do you set the question for Arithmetic or Grammar?—A. I set the questions for Penmanship, English Grammar, English Composition, and Typewriting.

Q. In what subjects does Dr. Glashan set the questions?—A. He sets the questions for Orthography, Arithmetic, Transcription and Bookkeeping.

Q. And for Geography?—A. No. Dr. DeCelles sets the questions for Geography, History and Stenography.

Q. And French grammar?—A. Yes.

By Mr. Fyshe:

Q. The students are examined in History of course?—A. Yes. We have the History of Great Britain, France and Canada.

Q. And Geography?—A. And Geography.

Q. You do not examine them on the sciences I suppose?—A. No.

Q. Nor on Geology?—A. No.

Q. Are the papers about on a level with the entrance papers for high schools and collegiate institutes or are they stiffer?—A. I think they are stiffer. I think they cover more ground. You can see the questions in this report. The questions are printed as you will see. We have special examinations, but you will come to that, I suppose, later. For example here is Penmanship, Orthography, and Arithmetic. This is the Preliminary Examination for the lower grade. The Arithmetic is simple Arithmetic of the first four rules. Then for the Qualifying Examination there is Penmanship, English Composition, Arithmetic, Geography, History, English and French Grammar, Orthography and Transcription. Then there are extra optional subjects. There is Book-keeping for example, Typewriting and Stenography.

By the Chairman:

Q. I was coming to that. There is nothing gained by taking optional subjects?—A. I was not aware of this. There used to be an allowance of $50.

Q. There is nothing about it now?—A. I have not been paying much attention to that matter.

Q. In Great Britain, I know, they have different examinations for the different departments?—A. Yes.

Q. That is to say the examination of a candidate for appointment to the Treasury would be different from that of a candidate for appointment to the Foreign Office. Do you think our plan of having the same papers all around is desirable or could it be changed with advantage?—A. It would entail a very large amount of extra work, preparing papers for different examinations, it would multiply the work indefinitely.

Q. To get at the average intelligence of Canadian candidates you think the qualifying papers are sufficient?—A. I think so for beginners. You might hear some of the questions. Here is Geography for example:—

'Name the principal rivers and chains of mountains of British Columbia?'

'What are the principal rivers and lakes of Manitoba?'

'What are the great districts of Canada which have not yet been formed into provinces?'

'What are the straits, isthmuses and principal bays of the provinces of New Brunswick and Nova Scotia?'

'Name the three principal towns in Prince Edward Island?'

'Name the largest islands in the St. Lawrence river?'

'What are the principal mountains in the province of Quebec?'

'Give the exact situation of the towns of Fort William, Sudbury, and Sault Ste. Marie?'

'Name the great railways of Canada?'

'Name the four largest rivers of the United States?'

'Name Canada's principal seaports?'

A person that can answer all these questions is pretty well informed in regard to the physical features of Canada.

Q. It would indicate a full knowledge, but certainly not a very extensive knowledge?—A. Well, it is a general knowledge.

Q. And that is on one subject?—A. Yes.

Q. Still referring to the Entrance Examination,—we will come to the Promotion Examination later,—you have had experience of personation?—A. Yes, of personation.

Q. You know the 14th section of the Civil Service Act deals with personation, and provides for a penalty not exceeding two hundred dollars. We have heard from Dr. DeCelles than a man in Montreal was fined $50 for personation?—A. Yes.

Q. Is there any other case of the kind? I do not recollect anybody being prosecuted under that section?—A. I do not think so either. Of course, we report the result of the examinations, and that is all we have to do, I presume. I have recommended repeatedly that cases of that kind be handed over to the Department of Justice.

Q. Was it in your memory that this section of the Civil Service Act existed?—A. Yes, I know it was there. At the last examination, four candidates, whose papers were put aside for copying should have been prevented from coming up at any subsequent examination, as shown by section 41 of 'Regulations.' App. 2, but there was a change made—in the department—that the papers for that examination were to be cancelled, but the candidates were to be allowed to come up again. I am in favour of the guilty parties being kept out of the service altogether after their offence.

Q. Is there very much personation?—A. Yes, there have been too many cases.

Q. Compared with the number of candidates that come up?—A. There are a good many cases, and I am afraid we do not find out all of them. The first case that we had was in Toronto—at least the first that came to my knowledge. My assistant there thought that one of the candidates who was writing had been up at a previous examination and passed. I went to the candidate and asked him, and he said no, that he had not been up at a previous examination.

By Mr. Fyshe:

Q. He said that he had not been at the previous examination?—A. He said that he had not been at the previous examination. Well, I noticed that he kept watching me after that with a suspicious look as if there was something troubling him, so I sent my assistant to examine the names. I thought if the candidate had several initials, and if he were not the right man, he might not be able to give the correct initials. Unfortunately, there was a considerable number of candidates present, and before my assistant got round to him, this particular candidate had finished his paper and handed it to me. Then I touched him on the shoulder, and said I wanted to see him in my private room. He came, and I told him I suspected there was something wrong. He got into a blazing passion and asked me how I came to that conclusion. Finally, he toned down, and said he would come down to the Queen's Hotel and bring a friend to identify him. I took my assistant down to the hotel with me to be a witness. We waited and waited, but the man did not come, and I returned home none the wiser. Well, I do not like to be beaten, so when I came home I looked up the form on which the candidate's application had been written and I found that the handwriting on it was different from the handwriting on the papers the suspected man had handed in. I took the papers and showed them to Col. White, who was then Deputy Minister of the Post Office Department, and he concurred in my view that there was something wrong. Then I wrote to the Postmaster at the place where the man lived who should have written at the examination. I described his appearance, and asked if he, the Postmaster, would be good enough to tell me if that was the man who came from that place. The man who wrote had on a particular kind of coat and he was stylishly dressed. I described his appearance to the Postmaster. The Postmaster wrote back and said he wondered how I suspected there was anything wrong; that this was the man who should have written. I went to Col. White, having found out, as I said, that there was a difference in the handwriting, and asked him to send up the case to the Inspector of the district where the candidate came from. The Deputy Postmaster General did so. The Inspector went around making inquiries, and when the postmaster to whom I had written, found this out, he wrote down to the Postmaster General, regretting that he had misinformed and misled the board in regard to this matter; that this was not the fellow at all. I discovered afterwards that the

same person had been in the habit of writing for teachers' certificates and getting $25 or $35 from those whom he personated. That was the first case I found out.

Mr. FYSHE.—I think you gave an account of that in your evidence of 1892?

The CHAIRMAN.—Yes, you gave the circumstances of that case fifteen years ago. —A. I had forgotten that I did so.

By Mr. Fyshe:

Q. You were asked if that postmaster was still in the service and you said yes? —A. I forgot about this.

By the Chairman:

Q. You try to give variety to the papers?—A. Yes.

Q. They are framed to find out a man's general intelligence?—A. Yes.

Q. In regard to the Entrance Examinations at what hour do they begin in the morning?—A. At nine o'clock.

Q. When do they break up, at twelve?—A. We break up generally at twelve and meet again at half past one.

Q. I suppose you give so many sheets of papers to a candidate?—A. We give as many as they require.

Q. Can they take their examination papers out with them?—A. Oh no, they are not allowed to do so.

Q. You could not keep a watch outside on the papers?—A. At Toronto, if any one wants to go out during the examination, one of my assistants goes out along with him.

Q. At twelve o'clock, if the Arithmetic paper had not been completed the candidate could not take the paper out, consult a friend, and come back at one o'clock?—A. No, this would not be allowed.

By Mr. Fyshe:

Q. In connection with the banking system of examinations we had papers prepared on different subjects, Arithmetic, History, Grammar, Geography, and so forth, and each subject was limited to one paper. The applicant only got one paper at a time, and after he got it he could not leave until he had finished that paper and handed it in?—A. It is the same with the Civil Service Examination.

By the Chairman:

Q. There is a blank paper put down before the candidate. Could he take what he had written of the questions and go out with that to a friend?—A. As will be seen from Appendix 2 'Regulations for the governance of the Board, &c.,' no candidate is allowed to leave the room during the treatment of a subject, nor is he allowed to re-enter until the time for the next subject, save in cases of extreme necessity.

By Mr. Fyshe:

Q. Under our banking examinations the applicant had to finish the paper at one sitting. That was the condition we insisted on. He could not take the questions away even in his memory and come back and answer them?—A. Neither can our candidates.

By the Chairman:

Q. So the candidate at twelve could not take anything out with him?—A. Certainly not. That paper on which the candidate had been at work must be handed in before he leaves the room.

Q. There are only a certain number of sheets allowed to each candidate and they have to make a return of that number?—A. We do not give any definite number of sheets. They get as many sheets as they require.

By Mr. Fyshe:

Q. But what check have you in order to see that you get all the papers back?—A. It makes no difference how many sheets are returned, the only ones we want are those containing the answers to the questions. In Toronto, for example, the papers are gone over and counted and we know all the candidates that are present. Before they break up, if any paper has not been handed in, the candidate possessing it, whose number we have, is applied to.

Q. And he would have to account for it?—A. Yes.

By Mr. Bazin:

Q. You give each candidate a fixed number?—A. Each candidate writes under a given number but we give them as many sheets of paper as they require.

Q. Have you a means of checking that, when they come back, you can determine whether you have the same number of papers?—A. We know whether all the written papers are returned by counting them, but we do not require to count the number of sheets returned.

By the Chairman:

Q. Take a concrete case: You give questions in Arithmetic?—A. Yes.

Q. Some of the questions would relate to exchange transaction, buying at sixty days and all that sort of thing?—A. Yes.

Q. Could a candidate write those questions out in duplicate, leave a sheet behind him and take a copy out to a banker or a financial firm?—A. No, they must be handed in before they leave.

Q. If you did not know how many papers there were some of them might go out?—A. Each candidate gets only one copy of each question paper and the candidates have to suffer if they do not hand in all their papers before they leave.

By Mr. Bazin:

Q. But how can you know that?—A. We find out when we count the papers. Cases have happened where a candidate came up with a paper and said he had overlooked it. Supposing for example, a candidate was writing before twelve o'clock and on returning at half past one came to me and said: 'I find I have a sheet that was not returned. Will you allow me to put it in?' I would say 'No'. So the paper is not handed in.

By the Chairman:

Q. You would not receive such sheets when returned?—A. No.

By Mr. Fyshe:

Q. You do not check the number of blank sheets? It might be possible to do that?—A. It would not serve any good purpose.

Q. It would serve this purpose: It would show they did not use the sheets to place questions on and carry them outside?—A. Supposing they did?

Q. Supposing they did it might not affect their examination but another person's examination?—A. No, because they are all examined at the same time. If a person was coming in afterwards to a second examination that might happen.

By the Chairman:

Q. We are still on the subject of the entrance examinations. You, Dr. Glashan, and Dr. De Celles prepare the papers?—A. Yes.

Q. They are sent down to the Bureau?—A. Yes.

Q. And they are printed there?—A. Yes.

Q. What precautions are taken at the Bureau to see that examination papers do not go out? There have been such cases have there not?—A. Yes, there was one case

in particular. In former days Mr. Lesueur himself used to go down to supervise the work of safeguarding the examination papers. When Dr. Dawson came to the Printing Bureau he did not approve of that; he thought it was a reflection on his men. Before Dr. Dawson came I think there was a case where examination papers were taken by parties in the Bureau and sold. One of the candidates was examined and he owned up to it.

Q. That he bought the papers?—A. Yes, he bought them and if I recollect aright, he was fined and dismissed from the service.

By Mr. Fyshe:

Q. He got the papers in advance?—A. Yes, down at the Printing Bureau. When this was found out, the guilty party who sold them, decamped, went to the United States and remained there for quite a while and then came back. He was again taken into the Printing Bureau. I heard that this was so and I went down to see if such was the case. Dr. Dawson told me it was so, and said 'It is very wrong.' I went and saw the minister in regard to this. He made a memo. of it, send down to the Bureau and the fellow was dismissed.

By the Chairman:

Q. Then you have no control yourself of the examination papers from the time they are sent to the Bureau until they come back again?—A. No.

Q. But you have no reason to think that any paper is obtained surreptitiously out of the Bureau?—A. There was that Tetreau case for example. That fellow was brought up last year and examined for personation. In his evidence he swore that he knew of parties that had got papers before the examination from the Printing Bureau. I went down and saw Dr. Dawson about it. He called his man who had charge of the papers and he denied that there was anything in it. He said there was no possibility of that being done.

By Mr. Bazin:

Q. I hear a good deal about that. Have no steps been taken to prevent such a practice?—A. These cases have all been reported to the Secretary of State. If everyone were punished who was guilty of such work it would stop the practice, but, unfortunately, the guilty parties are not being punished.

Q. You do not know the names of the candidates when you examine them?—A. No. We examine them by numbers. We do not know the names.

By the Chairman:

Q. But the number corresponds to the applicant?—A. Yes.

By Mr. Bazin:

Q. Is the application signed or simply numbered?

The Chairman.—The applicant to write at the examination has to apply in his own name?

A. He has to fill out a form. Candidates are required to give their name and age and produce a certificate from some prominent person, such as a clergyman, or justice of the peace as to their character.

By Mr. Fyshe:

Q. You must have their names otherwise they cannot be identified?—A. We must have their names. They are kept in a book at our office, but they are not on the papers.

Q. They are not on the papers you handle?—A. No, they are not allowed to appear there.

By the Chairman:

Q. In regard to copying, you have detected it by the answers being the same?—A. Yes.

Q. Is copying pretty prevalent?—A. Unfortunately it is, nor is it confined to the Civil Service. You will find it also in connection with examinations for medical degrees every now and then.

By Mr. Fyshe:

Q. It is a weakness of human nature, disclosed in a great many cases. As a rule I think students taboo any fellow who is found to be guilty of the practice?—A. I would not like to say that.

By the Chairman:

Q. Of course at the Entrance examination it does not matter whether a candidate is French speaking or English speaking. But it is different when you come to the Promotion examination. Take a what you might call an English department like the Post Office Department, or the Finance Department, where there are English deputies and French Canadian clerks, or take a Marine Department where there is a French Canadian deputy and English speaking clerks, the French speaking candidate can demand to have the examination papers set in his own language?—A. Yes.

Q. In the process of translation, is there a chance of a candidate obtaining knowledge of the papers?—A. There should not be.

Q. When I was in the Finance Department, I would write out the papers for the Promotion examination, and they would then go to Dr. DeCelles who would set them in French. In the case of the Marine Department Col. Gourdeau would write papers in French and send them to be translated into English. Take the case of a French Canadian deputy is there any chance of the papers getting out?—A. I have no means of knowing it. There should not be. I do not know what Dr. DeCelles does with his papers, when they are being translated.

Q. Are you ever asked to recommend a 'coach' by any candidate?—A. No.

Q. I recollect asking you the question fifteen years ago as to whether you did not think it would be desirable to vary the place at which you conducted the examination so that you might occasionally go to Halifax, for example, and get sub-examiners at Toronto. Do not the candidates begin to expect that Dr. Glashan will have charge in Ottawa, Dr. DeCelles in Montreal and you in Toronto?—A. I think it is possible.

Q. Do you think there would be any weakness they would get on to?

Q. I was coming to that. The sub-examiners are appointed politically?—A. Yes.

Q. I do not know anything about the sub-examiners. But supposing there should be a sub-examiner at Halifax and there was a candidate who was strong politically, the former might be desirous of getting that candidate passed somehow or other?—A. Yes, I remember an example now that you speak of it.

Q. This question suggested itself to my mind?—A. I will refer to a case that happened in Kingston. It was a good many years ago now. It was in 1889. The brother of the sub-examiner there had coached a number of the candidates and what does the sub-examiner do? He wrote out the answers to the questions in his own hand-writing, and instead of the candidates who had taken the lessons from the brother, copying the answers for themselves, they sent in the papers written by the sub-examiner. I went up to Kingston to investigate the case. I swore the sub-examiner, and got the facts. I reported these to the department and he was dismissed. There was another case in St. John. We had representations from there that things were not altogether straight. I went down to St. John and summoned the candidates whose papers were similar and gave evidence of copying. I found out that the sub-examiner had been coaching half a dozen of them, and allowed the questions to be discussed in the hall during the examination. Of course I reported him and he was dismissed.

By Mr. Fyshe:

Q. Do you have the same examiners all the time at these places?—A. Yes, if they do their duty.

By the Chairman:

Q. You have no opportunity of knowing this. They simply return the papers from the candidates?—A. Exactly.

By Mr. Fyshe:

Q. Is there no means at these places of having a check on him?—A. No. Of course in a city like Montreal, Toronto, Quebec or Ottawa, there is generally a young man or a couple of young men to assist and to oversee. But unfortunately we cannot always depend upon these. There was a case which happened in Montreal many years ago, I think it was in 1894. At that time I found out that this rascality was going on, so I went down to Montreal, and I discovered that a number of men were in the habit, before the examination began, of being around and offering their services for $25 or $30.

Q. To the applicants?—A. Yes, to any one that would employ them. Well, there were two assistants to our sub-examiner there. One was a medical student and the other a law student.

Q. They were assistants to the examiner?—A. Yes, assistants to the sub-examiner. They were employed to assist him. I found out that one of them demanded $10 from one of the candidates who was personated. I examined, under oath, the man who demanded the $10, the Assistant Postmaster, Mr. Palmer, translating the questions into French. He swore he had not demanded $10 from any one.

Q. You mean the assistant to the sub-examiner?—A. Yes. Well, the one from whom he demanded the $10 was in an adjoining room. I had obtained his evidence before, so I sent for him and placed him under oath. He swore that the assistant had demanded $10 from him. I then turned to the fellow and asked him how he dared to forswear himself thus. He excused himself by saying that he did not understand the question, although the questions had been asked in French.

By the Chairman:

Q. And he claimed that he did not understand the question?—A. Yes.

Q. Do you not think it would be advisable to vary the existing practice and, instead of your going continuously to Toronto, Dr. Glashan remaining continuously in Ottawa, and Dr. DeCelles, continuously having charge in Montreal, to occasionally take charge in other cities such as St. John, Halifax and Quebec?—A. The trouble is, Dr. Glashan could not well get away. He is inspector of Public Schools here. There is the trouble.

Q. But you and Dr. DeCelles could get away?—A. Yes, we could get away.

Q. There are sub-examiners at 14 places. At one place only one candidate passed. That was at Sault Ste. Marie, and the successful candidate was Osmonde Roy Smith. Did you have a sub-examiner in that case?—A. You will find the list of sub-examiners in the report. I think they are given there.

Q. At Sault Ste. Marie the sub-examiner is James Bassingthwaighte?—A. We have had him for a considerable time a sub-examiner there.

Q. Well now, Doctor, take the general question. There is an examination to be passed. As a good citizen do you think that is sufficient or would you advocate a system of competitive examinations?—A. I think it would be more satisfactory for the government.

Q. To have a system of competitive examinations?—A. Yes, I have always had that idea.

Q. You have always been in favour of competitive examinations?—A. Yes.

By Mr. Fyshe:

Q. Do you think it would be desirable to raise the limit and to make such examinations a little more difficult?—A. It is not so much that as having competitive examinations and getting the best men you can for the position. They do that in the United States now largely.

Q. They do it there?—A. Yes. One of my old boys went to the United States and studied at Cornell University. He came out as head man there in his work, and went to Washington where there was a vacancy by competitive examination, and he told me when he came back, that he had been appointed to the position.

By the Chairman:

Q. In the mother country, as you know, Doctor, when a vacancy occurs in a department, the Under Secretary or some other official, applies to the chairman of the Civil Service Board, and a candidate who has passed the necessary examination is sent to the Department in question?—A. Yes.

Q. There is no political interference in one way or the other?—A. Not so far as I know.

Mr. FYSHE.—The official applies for the kind of man he wants.

The CHAIRMAN.—The official says he has a vacancy and the Civil Service Board send him a man. That man is taken on probation and if he does not come up to the standard of the department he is returned. That is to say, politics are entirely eliminated in England.

The WITNESS.—Yes.

Q. Do you think that system could be adopted here with benefit?—A. Not if the ministers retain the power of appointment in their hands.

By Mr. Fyshe:

Q. Do you not think it would be a great relief to the ministers to be relieved from the pertinacity of applicants?—A. Certainly it would. The trouble is, as I said before, that weak candidates frequently get the positions because they induce their friends, members of parliament and the church to which they belong, to back them up. That is the great trouble.

Q. But you know that in giving an appointment like that to a man, who perhaps should not have it, while making one friend the government are as likely as not to make several enemies?—A. I have never noticed that.

Q. But it stands to reason. The applicants cannot all get the appointment, and no doubt the applicant who succeeded did so by influence. It stands to reason that while the successful applicant is satisfied there will be several persons dissatisfied?—A. Possibly.

Q. So it can be shown that it is in the interest of the politicians themselves to have nothing to do with patronage.—A. One would suppose so, but I do not like to sit in judgment upon public men in that way. One knows that when there are aspirants for a position the Government would naturally require to consult their strongest friends.

By the Chairman:

Q. You were until recently Librarian in the Geological Survey?—A. Yes.

Q. Did you have custody of the records of the explorers?—A. No.

Q. You did not have them? Do you know how the records, valuable in case of the opening up of a new country, are preserved? They are in the department, are they not, and are not sent away?—A. No, they are not sent away, they are kept in the department.

Q. Are they carefully guarded?—A. Yes, I think the records to which you allude are incorporated in the reports of exploring parties and are printed.

Q. They could not be lost sight of?—A. No.

Q. The Geological Survey prepares maps?—A. Yes.
